PREFACE.

IN presenting this History of Philadelphia to the public no apology is necessary. As a record of events, as an exhibition of men, as a chronicle and exposition of institutions and resources, the work in this particular field, it is believed, will be found a complete and satisfactory record, in its every department, of the growth, development, and expansion of a municipality. This is asserted with a thorough knowledge of what has been done elsewhere since the revival of public interest in and enthusiasm for local details, and with a consciousness also of the suspicion of arrogance and self-assumption naturally incidental to such pretensions. To accomplish so much, and with such a degree of self-satisfaction, has been no holiday task. Of the labor, expense, and responsibility involved, very little need be said. The proof is presented in these volumes. In their preparation more than twenty times the compass of material, expressly procured and arranged, in addition to the great collection of books read and examined for collateral information, was digested, condensed, and, in the pertinent newspaper phrase, "boiled down" to the present limits. In no sense of the word is this work founded upon, built up out of, or repeated from, any previous one on the same subject, or any of its branches. It is a new book, treating its theme in a new, comprehensive, and original manner, after exhaustive research, thorough examination, and critical comparison of the best authorities, and the most authentic documents and authoritative records. This digesting and assimilating process has not, perhaps, been carried as far as exigent critics might demand, but in this busy and bustling world there is not time enough to polish the front of a city hall as nicely as one would a mantel ornament of Parian marble. The proprieties of style have, however, not been neglected, for carelessness in that respect would have been equally unworthy of a theme so dignified, and of the liberality and beauty of form of the publishers' work.

A history so comprehensive in its objects and scope, and embracing such an infinitude of details, must necessarily have its limitations and defects, because of the impossibility of discussing fully a great variety of subjects without occasional errors. It would have been easy to escape from them by making the work less copious, by avoiding dangerous or controverted themes, and so gliding swiftly over the surface, generalizing and summing up instead of displaying all the facts.

The desire to leave nothing untold which could in any way throw light upon the history of men, events, and institutions in Philadelphia has made it impossible at times to escape repetition. Facts, which fall within the proper cognizance of the narrative of general events, will sometimes reappear in another shape in the records of institutions or in special chapters. But the fault will claim the reader's indulgence, because intelligent persons prefer a twice-told tale to one neglected or half told.

Several of the themes or chapters of the homogeneous whole have been treated by those who have some particular association or long acquaintance with the subject. In the diversity of writers there will of course be variety of opinions, but they make good the poet's description,

"Distinct as the billows, yet one as the sea,"

and may not be the worse for each offering a reflection, according to its turn to the light, without marring the unity of the general expanse.

Without Mr. Westcott's indispensable aid and invaluable stores of material on the History of Philadelphia, which he has been diligently collecting for the past thirty years, and which have been used in every department of this work, it would have been impossible to present the history of this great city in the satisfactory shape it now assumes. Indeed, as has been frequently stated in the following pages, Mr. Westcott has devoted a lifetime to the faithful, industrious, and intelligent pursuit of this history; few records have escaped him, and he has supplemented their evidence with recollections of a trustworthy character, and with testimony from a thousand sources, such as none but the most indefatigable antiquarian would seek or could procure. Mr. Westcott has also contributed to the work many valuable and unique drawings, portraits, maps, plans, etc., which are now printed for the first time; and during its progress he has also been constantly consulted by all engaged in the preparation of the special chapters, and besides furnishing important suggestions, facts, and items, he has read and corrected all the proofs, from the first page to the last. Besides the very efficient aid thus rendered during the various stages of the work, he has specially prepared for it the chapters on "Progress from 1825 to the Consolidation of the City, in 1854;" "Music, Musicians, and Musical Societies;" "Charitable, Benevolent, and Religious Institutions and Associations;" "Military Organizations, Armories, Arsenals, Barracks, Magazines, Powder-Houses, and Forts;" "Municipal, State, and Government Buildings;" "Court-Houses, Prisons, Reformatory and Correctional Institutions, and Almshouses;" "Public Squares, Parks and Monuments;" "Roads, Ferries, Bridges, Public Landings and Wharves;" "Telegraph," and many other minor subjects.

The authors would be unjust to themselves, and to the city whose history they have written, if they did not acknowledge, in this place, with feelings of profound gratitude, the cordial aid extended to them and to their undertaking by the press and people of Philadelphia. They have given the fullest encouragement throughout, and have helped materially in elaborating and perfecting the work. Important and valuable assistance and information have been received from the following persons, to whom also particular recognition is due:

To Frederick D. Stone, librarian of the Pennsylvania Historical Society, for valuable memoranda and suggestions made to the authors during the progress of their work; to Frank Willing Leach, for biographical sketches and details in regard to the press and libraries of Philadelphia; to Rev. W. B. Erben, for the preparation of the history of the Episcopal Church in Philadelphia and its institutions and church work; to Martin I. J. Griffin, for the history of the Catholic Church, and its institutions, societies, schools, and church work; to Bishop Matthew Simpson, of the Methodist Episcopal Church, Rev. William Cathcart, D.D., of the Baptist Church, Rev. Charles G. Ames, of the Unitarian Church, Rev. W. J. Mann, D.D., of the Lutheran Church, Rev. W. M. Rice, of the Presbyterian Church, John Edmunds, of the Congregational

Church, and Rev. Chauncey Giles and T. S. Arthur, of the Swedenborgian Church, for essential assistance in the preparation of the history of their respective denominations; to Albert H. Hoeckley, for his chapter on "Clubs and Club Life;" to Charles R. Hildeburn, the librarian of the Athenæum, for many kindnesses of various sorts; to Isaac H. Shields, attorney-at-law, for his complete chapter on the intricate and important subject of "The Municipal Government of Philadelphia;" to Lloyd P. Smith, librarian of the Philadelphia and Ridgway Library, for many kindnesses and courtesies in smoothing the way, and contributing to the work the details for the history of the libraries under his charge, including free access to and use of valuable documents; to William Perrine, who contributed to the work the chapters on "Progress from the Consolidation Act, in 1854, to the Civil War," "After the Civil War," and "Education;" to Rev. Jesse Y. Burke for sketch of the Pennsylvania University; to Hon. James T. Mitchell, who kindly revised the chapter on the "Bench and Bar;" to John Hill Martin, author of "The Bench and Bar of Philadelphia," who furnished valuable Civil Lists, and, with a kindness and courtesy not to be forgotten, allowed the authors to extract all that they wanted from his able work; to Wm. B. Atkinson, M.D., who revised the chapter on the "Medical Profession," and S. D. Gross, M.D., LL.D., who read the proofs of the same; to Charles A. Kingsbury, M.D., D.D.S., for materials on Dental Surgery and Institutions; to Lewis D. Harlow, M.D., for sketches of Pennsylvania and Philadelphia Medical Colleges; to Miss May Forney, for the chapter furnished by her upon "The Distinguished Women of Philadelphia;" to Professor R. M. Johnston, who prepared the chapter on "Literature and Literary Men;" to Robert R. Dearden, A. J. Bowen, J. H. C. Whiting, and John A. Fowler, for much valuable material on the history of insurance in Philadelphia; to Clifford P. MacCalla, Charles E. Mayer, Edward S. Roman, John W. Stokes, George Hawkes, Walter Graham, William H. Hollis, John M. Vanderslice, and John Magargee, for valuable assistance in the preparation of the chapter on "Secret Societies and Orders."

Among others to whom acknowledgments are especially due may be mentioned the late Edward Spencer, Charles H. Shinn, Nathaniel Tyler, Professor P. F. de Gournay, John Sartin, Samuel W. Pennypacker, Dr. W. H. Burke, Professor Oswald Seidensticker, James J. Levick, M.D., Rev. W. M. Baum, D.D., Frederick Emory, and Professor W. H. B. Thomas, who have furnished much valuable information and assistance.

The publishers have most liberally met every desire, in respect of letter-press and engravings of portraits, maps, and other illustrations; they have spared no expense or effort to make the mechanical execution of the volumes equal to its subject, and they have helped in every difficulty while the work was in progress.

HISTORY OF PHILADELPHIA.

CHAPTER I.

TOPOGRAPHY OF PHILADELPHIA.

"Pulchra duos inter sita stat *Philadelphia* rivos ;
Inter quos duo sunt millia longa via.
Delawar hic major, *Sculkil* minor ille vocatur ;
Indis et Suevis notus uterque diu.
Ædibus ornatur multis urbs limite longo,
Quæ parva emicuit tempore magna brevi.
Hic plateas mensor spatiis delineat æquis,
Et domui recto est ordine juncta domus."

—THOMAS MAKIN, *In laudes Pennsylvaniae poema*, 1729.

HISTORY, as men have come to learn, is not simply the annals of kings and queens, of factions and parties, nor must it rest with recording the battles and movements of armies and the proceedings of parliaments and assemblies. To satisfy intelligent inquiry, to instruct as well as amuse, it should present a picture of the country and the people, and show how external circumstances and internal relations have reciprocally acted one upon the other to mould character and determine events. The court, the forum, the public assemblage are not to be neglected, but the full history of a country or a period cannot be written until we have accompanied the people to their firesides, and seen how they lived, ate, dressed, thought, spoke, and looked. The historian should be an artist, full of sincerity, full of imagination, and even a degree of sentiment for his work, but that work must be founded in the first instance upon close, accurate, exhaustive study of the age, the men, the manners and customs, and all the private concerns, as well as the public performances of the community which is dealt with. In the pursuit of such inquiries nothing which is relevant can be trivial, for history resembles a *post-mortem* examination, which must be so conducted as to enable us not only to reconstruct an

actual living frame from inanimate remains, giving accurately all the details of race, age, sex, complexion, frame, general conformation, and individual peculiarity, but to show also with firm and irrefutable demonstration what was the lesion under which the vital powers were extinguished, what organs were affected, and how their disorder came to be climaxed in dissolution. An era or an epoch is as the life of a man, and must be studied with the aid of the scalpel and the microscope. In no other way can an accurate and vivid reproduction of the past be effected. Especially should the historian avoid interpreting a past age by the feelings, sentiments, and experiences of the present. He must, as nearly as possible, assimilate himself to the times and the men he is describing, analyze their shortcomings and prejudices in the same atmosphere and light that engendered them, and enter into the period as if he belonged to it. Thus, as Taine has acutely said, "through reflection, study, and habit we succeed by degrees in producing sentiments in our minds of which we were at first unconscious; we find that another man in another age necessarily felt differently from ourselves; we enter into his views and then into his tastes, and as we place ourselves at his point of view we comprehend him, and in comprehending him find ourselves a little less superficial."

The historian who holds this opinion of his duty and his task must always look with peculiar pleasure upon all that concerns the birth, growth, and development of cities, for it is in these congregated and crowded communities that man is seen working at most freedom from the restrictions and limitations of nature and evolving the greatest results from that complex and co-operative force which we call society. Civilization itself is the product of civic and social life, and depends for its continuance upon the maintenance of society in a healthy civic condition. The city is the fountain of progress; it is the type, however, and exemplar of the State, though often its forerunner.

The city of Philadelphia must always be an object of particular and inexhaustible interest to the student of American history and American institutions. Peculiar in its origin and initial institutions,—a city which was made and did not spring spontaneously from the concurrence of circumstances and surroundings,—it yet took its place at a very early day as the focus of

NOTE.—The author wishes to state in advance that not only the present chapter, but much of all that succeeds it, has been prepared in association with Thompson Westcott, and with the indispensable aid of his manuscripts, his collections of material, his researches, and his extensive publications on the subject of the history of Philadelphia. He has devoted a lifetime to the faithful, industrious, and intelligent pursuit of this history; few records have escaped him, and he has supplemented their evidence with recollections of a trustworthy character and testimony from a thousand sources, such as none but the most indefatigable antiquarian would seek or could procure access to. Such aid, such cheerful co-operation, such fruitful products of untiring industry in special investigation cannot fail to make the present work luminous in respect of that intimate local information and those obscure but essential particulars into which so few historians descend.

American tendencies and aspirations, and became the centre and the birthplace of the United States as an independent Commonwealth. In the military and in the political history of this nation Philadelphia occupies the foremost place. It was founded as an asylum of peace and the home of pacific industry, but it became not only the sport and the prey of contending armies, but the arsenal of the war-making power of the continent during seven years of eager and fluctuating contest. The greatest of deliberations were carried forward to national conclusions within its venerated walls, and from it as a centre were derived those impulses to sublime action which attain even grander proportions as they recede in the vista of time. Here, too, American industry was first fostered in a peculiarly national and American way, until a continental policy grew out of local practice and the successes which attended local experiment. Philadelphia has besides a history of its own, which catches in a peculiar manner the light of the *genius loci*. In many respects of constitution, institutions, municipal rule and law, construction, manners and customs, it is dissimilar from other cities and possesses a physiognomy all its own. It is the aim of the present work to give the history of Philadelphia with accuracy and intelligence, omitting nothing that will contribute in any degree to illustrate its origin and growth, its national importance, and its peculiar local features,—to paint a portrait of the city as it was and as it is, in which every lineament shall be truthfully portrayed and represented with life and vigor enough to make its fidelity acknowledged by all. If these objects can be attained by zeal, sincerity, and faithful, patient, and exhaustive research, the author has no fear of the reception which awaits his formidable undertaking.

"Philadelphia," says the worthy Dr. James Mease, in his "Picture" of the city, published in 1811, "lies on a plain nearly level, and on the western bank of the river Delaware, in 39 degrees 57 minutes of north latitude, and 75 degrees 8 minutes of longitude west of London. It is about one hundred and twenty miles distant from the ocean by the course of the river, and sixty in a direct line; its elevation above low-water mark ranges from two to forty-six feet, the highest part being between Seventh and Eighth Streets from Schuylkill." This topographical description is not, however, so accurate as that of Mr. Makin, the learned schoolmaster, quoted at the head of this chapter, and which his successor, Proud, the historian, has rendered into stanzas after the style of Alexander Pope,—

"Fair Philadelphia next is rising seen,
Betwixt two rivers plac'd, two miles between,"—

and so on. This is not precisely what Mr. Makin says, but it will serve. The peculiarity of the site proceeds from the fact that the city, placed upon the western side of one great river, lies almost immediately upon the delta of another stream not so large, yet of considerable length and volume, and draining a wide sec-

tion of country. The Delaware empties at a distance below into a wide bay, but the Schuylkill has a true delta, comprising several mouths. When the Swedes first came upon the spot these outlets were still more numerous than now, and it has been conjectured, not without probability, that in some prehistoric period some one of the main debouches of the stream was from Fairmount, or some point between that and the Falls of the Schuylkill, eastward across to the Delaware at or about Kensington, by the beds of the streams, creeks, and coves now or formerly known by the names of Frankford, Cohocksink, Pegg's Run, Gunner's Run, etc.¹ If this were the case really, Philadelphia would properly be described, so far as the original city is concerned, as occupying the upper part of an island in the delta of the Schuylkill, where its several mouths empty into the Delaware.

The range of hills and mountains in Virginia, Maryland, and Pennsylvania is invariably from northeast to southwest. The streams of these sections, on the other hand, flow in a general course from northwest to southeast. They are thus forced to cut through the ranges transversely in their course to the sea. What the Potomac does at Harper's Ferry and Point of Rocks and the Susquehanna between Harrisburg and Port Deposit, the Delaware repeats at the "Water-Gap" and the Schuylkill at Fairmount. The Potomac, in bursting through the South Mountain of Maryland and Virginia, needed the waters of the Shenandoah to aid it. In the same way the Schuylkill is reinforced by the Wissahiccon before it cuts through the Fairmount barriers. The Delaware and the Susquehanna neither of them have risen as far west as the loftier and broader breastworks of the Alleghanies, their upper streams passing to the eastward of these ranges and descending almost on north and south parallel courses from the neighborhood of the noble table-lands of central New York, where the flattening out of the mountains has enabled an easy artificial stream for commerce to be constructed from the great lakes to the Hudson River. The Schuylkill rises in the eastern foot-hills of these mountains, and, fed by many small streams and forest rills, makes a tortuous way through an uneven country to the Delaware, with which it mingles by mouths so obscure and insignificant that the Dutch called it "hidden river," and the early Swede cartographers confounded it with the minor coves and creeks which indent the western bank of the Delaware in so many places from the Horekill to the Neshaminy. Leaving

¹ On Hill's map of the city, 1796, the approach of Falls' Run to the head of Wingochocking, which flows into Frankford Creek, and the ponds and hollows stretching across on the line of Pegg's Run, are marked in such relief as to give a topographical plausibility to this idea. A canal was at that time cut across part of the peninsula in such a way as to show a design to unite the two rivers at that point. An original cut-off of the Schuylkill at the Falls would account for this insignificance of the river's mouth where it actually and finally empties into the Delaware. The assumption that there was such a cut-off, however, must be left where it belongs, in the domain of pure conjecture.

out the strictly alluvial country, we may assume that it is the general topographical characteristic of Philadelphia County to consist of gentle ranges of hills running from northeast to southwest, separated by valleys or low plains, and cut transversely by numerous streams flowing from northwest to east and south-east, except where the water-shed deflects them into the Schuylkill, in which case their course is from a little east of north to a point or two west of south. This of course is the general description only. There are many exceptions, the character of which will be shown farther on. Each of these streams, cutting through the ranges of high ground, had its own conterminous valley, and these valleys interrupted and broke up the bluffs bordering on the Delaware, which otherwise would have been continuous. These bluffs, it must be remarked, on the Delaware side had the true characteristics of river dykes or levees, the result, in part at least, of glacial action. They rested upon gravel, and were higher than the land back of them, so that the original ground upon which Philadelphia stands did not drain to the river directly, but backwards to the smaller streams, which broke through the dyke at intervals. In the tide-washed flat lands near the debouch of the Schuylkill the minor streams originally flowed indifferently between the Delaware and the Schuylkill, with openings into both rivers, like canals. When there was a freshet in the Delaware that river must have overflowed by Hollandaer's Kyl and half a dozen more such estuaries into the Schuylkill.

The true latitude and longitude of Philadelphia we give from a compilation made by Prof. B. A. Gould for one of the numbers of "The American Ephemeris and Nautical Almanac." The data are determined for the observatories in each case (Independence Hall being here taken):

PHILADELPHIA, N. Latitude, $39^{\circ} 57' 7.5''$. (MS. communication from Prof. Kendall); Longitude E. from Washington (U. S. Coast Survey):

	m.	s.
By 5 sets Eastern clock-signals . . .	7	33.66
By " Western " . . .	33.60	
Mean	7	33.63

The mean, by comparison with the next East station (Jersey City), is $7^{\circ} 33.64$

Hence the longitude in arc is $358^{\circ} 6' 35.4''$ from Washington, and from Greenwich, $75^{\circ} 9' 23.4''$.¹

¹ On July 5, 1773, the Right Honorable the Earl of Dartmouth, who was at that time Colonial Secretary (he had succeeded Lord Hillsborough one year before) in the cabinet of George III., wrote to the Deputy Governor of Pennsylvania (John Penn, the son of Richard Penn, who was the fifth child of William Penn by his second wife, Hannah Callowhill) propounding certain "Heads of Enquiry relative to the present State and Condition" of Pennsylvania. The answers to these inquiries were transmitted to Lord Dartmouth under date of Jan. 30, 1775. In the communication the following occurs: "The City of Philadelphia, situated near the Conflux of Delaware and one of its chief Branches, the Schuylkill, is the most considerable Town in the Province, or indeed in

The city is 96 miles from the Atlantic Ocean, 125 miles in a direct line northeast of Washington, and 85 miles southwest of New York. Its greatest length, north-northeast, is 22 miles; breadth, from 5 to 10 miles; area, 82,603 acres, or 129.4 square miles. The surface between the rivers Delaware and Schuylkill varies in elevation from 30 to 300 feet, the alluvial flats, however, having originally no actual relief above the line of high tide, while in the district west of the Schuylkill the face of the country is undulating to a degree which is almost rugged in contour and romantic in aspect. The valley of the Wissahiccon and the reservations made for Fairmount Park have long been celebrated for their effective scenery and the fine composition of forest and stream, rocky hillsides, deep vales, and wild ravines.

Penn's original city was laid off in the narrowest part of the peninsula between the Delaware and the Schuylkill Rivers,—the belt of the irregular-shaped urn or vase, so to speak, which is thus formed,—and five or six miles above the mouth of the latter river. If we might take the peninsula to be a guitar, and could place the strings across the instrument instead of lengthwise, they would represent the contour of the old city's streets, bounded on the west by the Schuylkill, on the east by the Delaware, determined on the north by Vine Street, and on the south by South Street, or Cedar Street, as it was formerly called. The distance between the Delaware and the Schuylkill on Market Street was 10,922 feet 5 inches ($2\frac{1}{10}$ miles). The distance from north side of Vine Street to south side of Cedar (or South) Street was 5370 feet 8 inches, being 90 feet 8 inches over one mile. Excluding the width of streets the space was divided thus: From Cedar to

North America. The State-House in this City lies in North Latitude, $39^{\circ} 56' 53''$; its Longitude from the Royal Observatory at Greenwich, computed West, $75^{\circ} 8' 45''$; or, in time, 5 hours and 35 seconds. This Latitude and Longitude were both fixed by accurate astronomical Observation at the Transit of Venus, 1769." In the Journal of Mason and Dixon, November, 1763, we learn that these surveyors established an observatory in the southern part of Philadelphia, in order to find the starting-point of the parallel which they were to run off. Their point of departure was "the most Southern part of Philadelphia," which they ascertained to be the north wall of a house on Cedar Street, occupied by Thomas Plumstead and Joseph Huddle, and their observatory must have been immediately adjacent to this. The latitude of this point they determined to be $39^{\circ} 56' 29''$. 1 north. In 1845, when the northeast corner-stone of Maryland could not be found (it had been undermined by a freshet, and was then taken and built into the chimney of a neighboring farm-house), the Legislatures of Maryland, Pennsylvania, and Delaware appointed a joint commission, who employed Col. Graham, of the United States Topographical Engineers, to review Mason and Dixon's work so far as was requisite in order to restore the displaced corner. Col. Graham, in the course of his measurements, determined the latitude of the Cedar Street observatory to be $39^{\circ} 56' 37.4''$ north. This is $8.3''$ more than the latitude given by Mason and Dixon. If we add the distance from Cedar Street to Chestnut Street, 2650 feet, we have for Independence Hall latitude as determined by Mason and Dixon, $39^{\circ} 56' 55''$; as determined by Col. Graham, $39^{\circ} 57' 03''$. The slight variation in these calculations is surprising. That reported by Governor Penn may have been based upon data differing from those of the surveys of 1761 and of Mason and Dixon. The house selected by Mason and Dixon was on the south side of Cedar, east of Front, No. 30, standing in 1883.

Lombard Street, 322 feet; to Pine, 282 feet; to Spruce, 473 feet; to Walnut, 820 feet; to Chestnut, 510 feet; to Market, 484 feet; to Arch, 664 feet; to Race, 616.5 feet; to Vine, 632.3 feet, making, with the width of the streets added, an area of nearly two square miles, or twelve hundred and eighty acres. The width of the squares from the Delaware to the Schuylkill varied from three hundred and ninety-six to five hundred feet.¹ In 1854 the limits of the city were widely extended, so as to embrace the whole of Philadelphia County, including the area and dimensions given above. This was effected by the "consolidation" of all the suburbs and outlying districts and townships with the city proper. Consolidated Philadelphia is bounded on the east by the Delaware River, on the northeast by Bucks County, on the north-northwest and west by Montgomery County, on the west and the south again by Delaware County and the Delaware River. The northeast boundary line follows Poquessing Creek from its mouth along towards its source, the ancient boundary of Byberry; just northwest of the old road to Newtown the line corners and runs southwest in a straight line to the Tacony at what was called Grubtown; from this point it goes straight northwest on the boundary of Bristol township to a corner more than a mile northeast of Mount Airy; thence a mile southwest to the line of German township; thence northwest four miles to a corner; thence southwest straight to the Schuylkill at the point of the old soapstone quarries, crossing the Wissahiccon about half a mile northwest of Chestnut Hill. The line now follows the bed of the Schuylkill southeast to a point just below the mouth of the Wissahiccon, from this corner crossing southwest in a straight line to Cobb's Creek at a point a mile and a fourth west from Haddington; thence by Cobb's Creek to the junction of Bow Creek north of Tinneum, and by the east bank of Bow Creek to the Delaware. The distance from the extreme northeast corner of Byberry to the extreme southwest corner of Kingessing is between twenty-three and twenty-five miles. From League Island northwest to the Chestnut Hill corner is very nearly fifteen miles; from the soapstone quarry on the Schuylkill across to the mouth of the Poquessing it is fifteen miles; and from Gloucester Point to the ford at the old Blue Bell tavern is seven miles. The general statement of the "face of the country" in the old maps, made on the basis of townships, is: City, "level;" built part of Northern Liberties and Southwark, "level;" Blockley, "gentle declivities;" Bristol, "hilly;" Byberry, "pretty level;" Dublin, "gentle declivities;" Germantown, "hilly;" Kingessing, "mostly level;" Moyamensing, "level;" Moorland, "pretty level;" Northern Liberties (out part), "mostly level;" Oxford and Frankford, "gentle declivities;" Passayunk, "level;" Penn, "mostly level;" Roxborough, "hilly." Of the townships,

Blockley and Kingessing were west of Schuylkill, bordering on Montgomery and Delaware Counties; Kingessing, Passayunk, Moyamensing, Southwark, City, Northern Liberties, Oxford, and Dublin were touched by or bordered on the Delaware; Byberry bordered on Bucks and Montgomery; Moreland, Dublin, Oxford, Bristol, Germantown, and Roxborough bordered on Montgomery; and Roxborough, Penn, City, and Passayunk had the Schuylkill on their west.

The most picturesque and agreeable approach to Philadelphia is from the northwest, crossing the Schuylkill above the Falls, and descending by way of the Ridge or the Germantown road. The least imposing approach, so far as the land surface is concerned, is by the west bank of the Delaware, following the line of the old King's road and the Philadelphia, Wilmington and Baltimore Railroad. This road, however, is made beautiful by the aspect of the noble river lying upon the right in broad and generous reaches, and seeming to rise above the level of the foot-passenger as he looks across its populous and busy bosom; by the multitudinous evidences of a gigantic industry, employing force and machinery with an intelligent usurpation that inspires new conceptions of man's power over nature; and by the gentle beauty of the margin of firm land in Delaware County parallel to the river at about an average distance of a mile inland. This, called "the water-shade," marks the bank of the prehistoric river before its present margin of flats was upheaved, and its moderate elevation and rounded slopes afford many fine building sites, while contributing largely to the advantage of the adjacent manufacturing establishments. This line of approach, moreover, was that by which the early settlers came to Philadelphia, the route of the Swedes and of William Penn. We cannot do better than follow in their footsteps in attempting to trace up the topography of Philadelphia.

The circle of twelve miles radius from New Castle as a centre which defines the boundary of the State of Delaware on the northeast, touches the banks of the Delaware River a few rods northeast of the mouth of Naaman's Creek or Kill, a stream whose several forks rise not far inland of the water-shed line. The land through which the body of the creek flows is flat and diluvian in its origin, as is all the land from the river's margin to the "water-shade," from this point until Crum and Ridley Creeks are reached, when we begin to encounter marsh, swamp, and pure alluvium or mud deposits. The Swedes held most of the land in this section at the time of Penn's arrival. Oelle (or Woolley or Willy) Rawson owned the mill-site on the creek where the King's road crossed it. Naaman, it is supposed, was an Indian chief who gave his name to this kill, a fact which Lindstrom's map seems to show. He was one of the sachems treating with Governor Printz on his first arrival, and Campanius quotes a friendly speech he made on that occa-

¹ Hazard's third volume of Watson's Annals.

sion. The arc of the boundary circle dips into the river in what was the land of Nathaniel Langley. Adjoining him on the northeast were plantations sold by Penn to William Hewes, Robert Bezar, William Clayton, William Flower, Sandeland, and other old settlers. These lands lie in Chichester township. The main public road from Concord to Chichester (or rather to Marcus Hook landing), which was laid out as early as 1686, reached the Delaware between the lands of Clayton and Sandeland, and here was doubtless a landing and a shipping place from a very early period. Marcus Hook, with the adjacent creek, variously called Marrieties Kill, Chichester Creek, Memanchitonna (*La Rivière des Marikes* is Lindstrom's translation of the name), was deeded by Queen Christina to Lieut. Hans Amundsen Besh, the deed including all the land to Upland. It afterwards fell into various hands. The Marrieties Kill, like Naaman's, was the main channel of several forks rising in the front part of the water-shade. All the rivers in this section which have been or will be described are, without exception, tidal and salt-water streams from their mouths to the rising ground of the water-shed, where they lose their character of coves or estuaries and become brooks, rills, or inland rivers, with volume ample for milling purposes but too much fall for navigation. The Swedes gave the name of "Finland" to this entire township, the Indian name of the district being Chamassung.

Several creeks or kills of minor importance, but all of which extend inland across the railroad and the ancient King's road, succeed one another to the northeast of Marcus Hook—Middle Run, Stony Creek, Harwick's Kill, Lamako Kill, etc.—until we come to Chester Creek. The character of the face of the country hereabouts as it was originally may be gathered from the fact that before Upland (now Chester) acquired its importance as the seat of the colonial court, the old King's road diverged to the left to avoid the low lands, and crossed the creek at Chester Mills, at the foot of the water-shed. Afterwards it was continued along the water-front, passed through the town, and then made a sharp angle to the left in quest of firmer ground. On the southwest side of Upland Kill, from the mill and ford to the Delaware, the land was originally owned by Holbert Henriksen, John Bristow, and Robert Wade, the latter a Quaker early settler, who entertained Penn at his house, Essex House, the site at least of which had been formerly occupied, and the house probably built, by the daughter of the Swedish Governor Printz, Armgart Pappagoya. Chester Creek, Upland Kill, or Mecoponacka was called by Lindstrom Tequirasi (otherwise Techoherasi), from the Indian name of a property bordering on it and fronting on the Delaware, which had been patented by Ole Stille, and was later the home of Rev. L. Carolus. This Stille property, however, some of it marsh or flooded land, extended northeastward probably from

Ridley Creek to Crum Kill, and Lindstrom seems to have wrongly named it Stille's or Priest's Kill, being the alternate names of Ridley Creek, and the stream was most likely called also after Stille's property. The streams which give volume to Chester Creek rise some of them in Chester County, flowing through several townships of Delaware County, and furnishing a good deal of water-power to factories and mills. Many of Penn's thrifty followers—Caleb Pusey, the Sharplesses, Crosby, Brassy, Sandeland, etc.—took up land on it or adjacent to it. Ridley Creek and Crum Kill, the next streams northeast of Chester, were also important for mill purposes. The neck of land at the debouch of these creeks upon the Delaware was marshy, and this was mostly occupied by Swedes. Mattson, Van Culen, Johnson, Hendrikson, Cornelis, Mortenson, Nielson are names of settlers along this water-front from Ridley Creek to Tinnecum, while back of them, on the water-shade, we find the Quakers took up large tracts,—Simcock, Harvey, Maddock, Steadman, Ashcom, Hallowell, Whitacre, etc. The Swedes called the settlements northeast of Finland "Upland," then came "Carcoen's Hook" lands, then "Tennakong." Amesland comprised a portion of Darby and Ridley townships. Crum Kill was, as Lindstrom interprets, *La Rivière Courbée*, or Crooked Kill, otherwise Paperack or Peskohockon in Indian dialect. These names on the Delaware present almost insuperable difficulties from their variety and confusion, the fact that the Indians seem to have had no standard titles for their streams, and the want of any rule in guiding the attempts of Europeans to give a phonetic interpretation to the Indians' indistinct, guttural pronunciation. Amesland Creek (Amesland, or Amas-land, is said to mean the "midwives' land") was formed by the junction of Darby and Cobb's Creeks. It flowed southeast into the Delaware, separating Tinnecum from the mainland and Amesland. But at this point we find a network equally of names and rivers, all equally running into swamp and confusion. The delta of the Schuylkill begins here, and here also Philadelphia begins, for, though Bow Creek is the formal county line at the Delaware, the actual boundary is Darby Creek, after it has united with Minquas Kill, Cobb's Creek, and the true Amesland Kill, the Muckinpattus or Mokornipates Kill, a smaller stream than the Darby, flowing into it between its junction with Cobb's Creek and its mouth.

The topography of this lower part of Philadelphia is peculiar and must not be slighted. There have been great changes in the face of the country, in its levels and contour, and in the direction and beds of its water-courses since the days of the Swedes and the early Quakers. Some streams have disappeared, some have changed their direction, nearly all have been reduced in volume and depth by the natural silt, the annual washing down of hills, by the demands of industry for water-power, the construction of mill-

dams and mill-races and bridges, the emptying of manufacturing refuse from factories, saw-pits, and tan-yards, and by the grading and sewerage necessary in the building of a great city. In this process old landmarks and ancient contours are not respected, the picturesque yields to utility, and the face of nature is transformed to meet the exigencies of uniform grades, levels, and drainage. The Board of Health, the Police Department, the City Commissioners, and the Department of Highways have no bowels of compassion for the antiquarian and the poet. They are the slaves of order, of hygiene, of transportation, of progress.

Darby and Cobb's Creeks both rise in the slate beds of the upper corner of Delaware and the adjacent townships of Montgomery County and flow eastward towards the Delaware, each augmented in volume as they descend through the mica, slate, and gneiss regions parallel to each other. After they reach the margin of the "water-shade," which is here as far inland as Heyville on the Darby and the Burd Asylum on Cobb's Creek, the two streams approach each other in the diluvial lowlands, uniting just below the towns of Darby and Paschallville. The common stream, now called the Darby, flows east with serpentine course until it touches the edge of the alluvium and marsh section, when it turns more towards the left, and with two or three sweeping curves reaches the Delaware. Just after the turn is made the Darby receives the waters of the Amesland or Muckinpattus Kill, and the neck of land between was well known to the Swedes under the name of Carcoen's Hook, a name it still retains.¹ This section at the bend, a low, marshy flat, is cut by several canal-like streams or guts, forming the two islands, Hay and Smith's. The neck was early occupied by the Swedes, and the names of the Boons (Bondes), Mortonsons, Keens, Streckets, Cornelis, Jonsens, Mounsens, Jörans, Petersons, Hanssens, Joccums, Urians, and Cocks may be found on all the old land-plats of that region. Darby Creek was called by the Indians Nyecks, Mohorhootink, or Mukruton; Cobb's Creek, named after William Cobb, a contemporary of Penn, was also called Kar-kus or Carcoen's Creek by the Swedes, a corruption of the Indian name of Karakung, or Kakarakonk, and by the English, Mill Creek. This name came from the old Swedes' mill, built by Governor Printz, at the ford where the old Blue Bell tavern and Paschallville now stand, the crossing of the Darby road. Cobb took the mill after Penn came in, and gave his name to the stream. The mill was used by a wide circuit of people, from the Swedes at Upland and Tinneum to the Welsh at Haverford and Merion and the first Quakers in Bucks County. From its bend towards the left to its mouth Darby Creek flowed west and south of Tinneum Island, dividing it from

the main land. This tract is all alluvium, except one spot of firm ground, where the underlying gneiss rock comes boldly to the surface. Tinneum, Tennakong, Tutenaiung was the site selected by the Swedish Governor, Johann Printz, for his fort of Nya Götheborg, and for his residence of Printz Hall. The channel used by vessels at that time probably flowed on the west side of the Delaware, in which case Printz's fort commanded it. Off Tinneum in the Delaware was a long, narrow sand and mud and marsh spit, designated by the name of Little Tinneum Island, and somewhat above it, in the river channel, was Hog Island, as it is now called, but which the Indians knew as Quistquonck, or Kwistkonk, and the Swedes dignified with the title of Keyser Island, or Iledes Empereurs, as Lindstrom explains on his map. Tinneum Island is cut in half by a kill of many forks, uniting it with the Darby, and traversing the island in several directions. This stream is known as Plum or Plom Hook, and its branches are variously called Long Hook, Grom Creek, and Middle Creek. On the Delaware side of Tinneum were situated Printz's Hall and the first Swedish Church and churchyard on the Delaware, consecrated in 1646. This spot is now occupied by the Philadelphia Quarantine station and the Lazaretto Hospital, the site of the ancient fort and grounds belonging to it being adjacent to what is now Tinneum Hotel.

On the right or east side of Darby Creek, midway between the junction with the Karakung and the sharp bend of the creek to the left, Minquas Kill enters it. This once broad tidal estuary, which united the Schuylkill and the Delaware with the Darby by a four-pronged fork, is differently called Mincus and Mingo's Creek, and derives its name from the Indian nation, the Iroquois, whom the Delawares called Minquas or Mingo's. The Susquehannocks, who were of this race, frequented these swamps, probably to facilitate their military operations against the warlike Nanticokes of the Delaware peninsula. The Swedes called this kill with its southernmost fork Church Creek, because they used it in going by boat from Kingessing, Karakung, and the islands near the Schuylkill to the church at Tinneum. At the elbow of Darby Creek, where it turns to encircle Tinneum, it is joined by Bow Creek, another tidal estuary, which connects it with the Delaware opposite Hog Island. Bow Creek or Kill, the southern boundary of Philadelphia, was called by Lindstrom Boke Kyl, Beech Creek, and also Kyrke Kill, or Church Creek, as it was another route to Tinneum. Bow Creek, with Church Creek, Bonde's Creek, and another small kill, one of the mouths of the Schuylkill, combined with the Minquas Kill, the Delaware, and the Schuylkill to form three small islands, more or less entirely marsh land and liable to floods and tide overflow. These were Minquas or Andrew Bonde's Island, Aharommunny Island, and Schuylkill Island, the first occupied by Andrew

¹ Carcoen's Hook, Kalkonhutzen, place of wild turkeys. Calcoen's Hook was the neck formed by the junction of Crum Kill and Little Crum Kill.

Boone or Bondé, and the other two by Peter Cock, both of them Swedes and among the earliest settlers. All this region is now fast, firm land, and the streams we have been describing, once so considerable, have dwindled into insignificance or disappeared. The Swedes called the district east of Darby Creek and Minquas Kill, Tennacong; that west of Minquas Kill, between Cobb's Creek and the Schuylkill, was King-sesse or Kingssessing, a Swedish hamlet, where the Duke of York's court used sometimes to hold its sessions instead of at Upland, and west of that, and divided from Kingssessing by the Darby road, was the district called Arunnamink. Above Quistkonk or Hog Island, and immediately at the mouth of the Schuylkill, on the west, was Mud Island, a bank of tide-washed alluvium, where Mud Fort was built and offered such a gallant resistance to the English during the Revolutionary war. This island is now fast and solid and united to the mainland.

We have now reached the point of junction of the Schuylkill and the Delaware Rivers. The Schuylkill was called by the Indians indifferently Manayunk, Manājunch (Swedish spelling), Manaiunk, and Lenni Bicki (having some allusion to the linden-tree or its bark). Lindstrom terms it the Menejackse Kill (another Indian name), but also designates it as the Skiar-kill, *elle* (or) Linde River. *Skiar-kill* in Swedish would be "Brawling Creek," a derivation no better than that from the Dutch of hidden or "Skulking Creek," from its insignificance and obscurity of its mouth. On Lindstrom's map, indeed, the river is marked as if it were no bigger than Crum Kill or Plum Hook. It is really, however, a stream of extensive drainage, having its source in the coal-fields west of the Blue Mountains, descending by Pottsville, Reading, and Norristown, by beautiful valleys, to the Delaware. Its chief tributaries—Maiden Creek, Manatawny, Monocasy, Tulpehocking, Little Schuylkill, Norwegian, Mill Creek, Perkiomen, and Wissahiccon—flow through a goodly expanse of territory. From its junction with the Delaware to the Falls above Fairmount no important affluents are received by the Schuylkill upon either side. Opposite the mouth of Minquas Kill there is still a small stream draining through the swamp, called Sepakin Kill, and above it the Piney or Pinneyes (an Indian name, interpreted to mean "sleepy"), a small creek, emptied into the east side, at the site of the Swedish fort and trading-post, Korsholm, now occupied by the Point Breeze Gas-Works. Drainage has obliterated this stream; the old Passayunk road used to border it. Nearly opposite, marking the boundary line between Kingssessing and Arunnamunk, the Inkoren Kill (named after Andries Inkhooren, a Swedish landholder) flowed from the west side of Schuylkill. The next stream on that side which was important enough to bear a name (excepting the runlets called Botanic Creek and Peach Creek, on the property of Peter Joccum and Moens Jonson, which afterwards John

Bartram owned) was Mill Creek, a brook large enough to support two mills. It rose in Upper Merion township. Near its mouth was the property of Hans Moens, containing such an eligible mill-seat that the Upland court gave the owner the option of erecting a mill upon it or surrendering the land to his neighbors who would build. Gray's Ferry bridge is three blocks below the mouth of Mill Creek. This ferry was for the convenience of travelers to Darby by the Darby road. In the neck between Mill Creek and the Schuylkill is situated Woodlands Cemetery, which was laid out upon the fine grounds of William Hamilton's country-seat, called "The Woodlands." Mill Creek, in the course of its descent from Merion, passes through the grounds of the Pennsylvania Hospital for the Insane and a corner of the Cathedral Cemetery. This stream, now obliterated, was once romantic and attractive. A branch of it, called George's Run, nearly touches the southwestern extremity of Fairmount Park, and bisects Hestonville. In the part of Philadelphia (Twenty-seventh Ward) we have been speaking of only one brook of importance—Thomas' Run—flows into Cobb's Creek. Beyond the Almshouse grounds, on the north, is Beaver Creek, then no more streams on the west side of the Schuylkill until Fairmount Park is reached. On the east side used to be Minnow Run, flowing from Bush Hill through Logan Square, and reaching the Schuylkill by a winding route, in the course of which two or three spring-heads lent their waters to it. Another small brook emptied into the east side of the Schuylkill below Fairmount; a third, Darkwoods Run, below Lemon Hill; a fourth, Falls Run, reached it at the Falls.

About half a mile beyond the Falls the Schuylkill receives the waters of the romantic Wissahiccon. The Quakers gave this stream, which has delighted both poets and artists, and is the most charming accessory to the beauties of Fairmount Park, the unromantic name of Whitpain's Creek, from the original settler on its bank, John Whitpain, who built a "great house" in Philadelphia, too big for his humility, and in the large front room of which the Provincial Assembly used to meet. The Indian meaning of Wissahiccon, however, is said to be "catfish," and certainly "Catfish Creek" is not susceptible of adaptation to poetical forms of speech. The Wissahiccon rose in Montgomery County, in the same water-shed which supplies the sources of Stony Run, the Skip-pack, Pennepacka Creek, and the southwestern branch of the Neshaminy. Its chief branches were Paper-Mill Creek, on which the father of the astronomer Rittenhouse built the first paper-mill in Pennsylvania, a mill that supplied the presses both of William Bradford, of Philadelphia, and Christopher Saur, of Germantown, and Cresheim Creek, named for the Rhenish town from which the earlier settlers of Germantown came. The northwest corner of Philadelphia approaches, but does not touch, the banks of the Perkiomen.

The Delaware River, the eastern boundary of Philadelphia, which the Indians called by several names not having any especial relevancy,¹ rises on the border of Greene and Delaware Counties, N. Y., on the western slope of the Catskill Mountains, in two branches, the Popacton and the Ognago, which unite at Hancock, on the line between Pennsylvania and New York. It flows southeast, continuing to form the boundary between those States, until it reaches Port Jervis, where it turns southwest, flowing at the western base of the Kittatinny Mountains until it bursts through these at the Water Gap. At Easton it receives the volume of the Lehigh River, and from the Water Gap to Bordentown speeds southeastward as if intent upon reaching the Atlantic at Barnegat or Egg Harbor. At Bordentown it encounters the bluffs, however, and turns southwestward again, until at New Castle it resumes its seaward direction, soon widening into Delaware Bay. Between Port Jervis and the mouth of Naaman's Creek it is the boundary separating New Jersey from Pennsylvania; below that it divides New Jersey from Delaware. It has many tributaries within the limits of Philadelphia, besides inclosing several islands in the arms of its channel. The first of these islands above the mouth of the Schuylkill is that low-lying mud-bank (as it used to be) called League Island, a tract of over nine hundred acres, which during the civil war the city of Philadelphia purchased and presented to the United States government for a navy-yard, in order to expedite the removal of the existing navy-yard from its place on the river-front in Southwark. League Island is separated from the mainland by a narrow sort of canal called the Back Channel. Into this Back Channel empties Hollandaer's Creek, named for Peter Hollandaer, second Swedish Governor on the Delaware. This stream also flows into the Delaware at the beginning of Oregon Avenue. It is a tidal estuary traversing what was once a swamp, and is considerably diverted from its original course, since there seems to be no doubt that it once crossed the neck, also uniting the Schuylkill as well as the Back Channel with the Delaware. The Swedish records make mention of Rosamond's or Roseman's Kill, which cannot now be traced with certainty, beyond the fact that it was one of the branches of Hollandaer's Creek. Hay Creek was another of these intersecting streams; a third bore several names, among which were Dam, Hell, Holt, Float, or Little Hollandaer; Jones' Creek was a fourth, and Malebore fifth of these marshland conduits for the tide. Malebore's Creek was called by the name of an Indian chief; it was also called Shakanoning, or Shakaning. The Indian name for Rosamond's Creek was Kikitchimus, meaning the woodchuck. Hollandaer's Creek and its branches made two islands of the extremity of the peninsula, the one on the Delaware side being originally called

by the Swedes by a name which Lindstrom interprets as Ile de Rasins, Grape Island, now Greenwich Island, and the one on the Schuylkill side Manasonk or Manayunk Island. Careful study of the old surveys and narratives will enable all these points of interest in the southwestern necks to be made out with sufficient accuracy, and their relations to one another determined. Moyamensic (Moyamensing) marsh, which also had a kill of its own, we read, comprised sixty-four acres, lying between Hollandaer's and Hay Creek. This latter creek was 93 perches south of Hollandaer's and Rosamond's Creeks, 158 perches south of Hay. Bonde's Island is called $1\frac{1}{4}$ Swedish miles—8.31 English miles—from the old Swedish Church at Wicaco; Matson's Ford, $17\frac{1}{2}$ English miles from that central point of Swedish associations; Kingssessing, 5 miles; Carcoen's Hook, 9.9 miles.

Dock Creek, the next stream towards the northeast after passing Hollandaer's, was in many respects the most interesting of all the Delaware tributaries within the limits of Philadelphia. A street now covers its bed, a wharf marks the place where it emptied into the Delaware, but its course may still be distinctly traced. In fact, the Philadelphia of the primitive Quakers was built quite as much with reference to this stream as to Penn's plans and the plats of Surveyor Holme. The Indians called it Cooacanoon, but the name of Dock Creek was shorter and more descriptive from the time of the English settlement, for the obvious reason that the stream was used as a dock or quay for all the smaller craft. Boat-yards and tanyards were established along its banks, it was encumbered with depots for lumber, and the first landing-place and the first tavern of Philadelphia were planted at its mouth. In those early days it was thought to be a good thing for the well-to-do merchant of the Quaker City to build his mansion on the slope in sight of the creek, his garden and lawn extending down to its green banks. One of its branches rose west of Fifth Street and north of Market Street, another began west of Fifth Street between Walnut and Prune Streets, the two uniting about where the Girard Bank now stands. At Third Street the creek widened into a cove, receiving here another branch, which flowed into it from the rear of Society Hill. Penn and the early inhabitants were anxious to have this creek become a permanent dock, but it lost its usefulness from being filled up and made shallow with rubbish and tan-bark, it became foul and unwholesome from accumulated filth, and the doctors raised an outcry against it as the fruitful source of malaria, typhus and yellow fever, and the summer diseases of children, so that in 1784 an act was passed requiring it to be arched over. At the northeastern mouth of this creek was the sandy beach known as Blue Anchor Tavern landing, for several years the chief public wharf the city had. Opposite the wharves on the Delaware front between Fitzwater and Arch Streets, and in mid-

¹ See Chapter III. for the names and dates of discoveries, etc.

channel of the river, was one long, narrow island, since separated into two by a canal. Smith's Island and Windmill Island, as the upper and lower ones were subsequently named, are really but one island of gradual growth and importance. On the maps of Thomas Holme, the first surveyor, the island is put down as bars or shoals in the river's bed, extending from opposite Spruce Street to a point below Cedar Street. The accumulation of sand, silt, and refuse brought down by the ice and by spring floods united these bars and flats and lifted them above the surface and the overflow of tides. They became fast land, and the new island was leased unto an enterprising man. John Harding built a wharf and a windmill on it, and it took its name from the latter structure. The island was not exactly a permanent establishment for some time, as it washed away at one end as fast as it grew at another; however, bathing resorts were stationed upon it, willow-trees were planted and flourished on it, and Thomas Smith, an old occupant, became so identified with it that it finally took his name. A canal was cut through the island in 1838 to promote the rapid transit of ferry-boats, and railroad companies now own the southern section, that to the north of the canal being called at present Ridgway Park, and used as a public resort. The present Treaty Island, which belongs to New Jersey and lies in the bed of the Delaware opposite Kensington, was patented as early as 1684 by Thomas Fairman (an early Quaker, in whose house Penn spent the first winter in Philadelphia), under the name of Shackamaxon Island, of which name Treaty Island is a reflection, Shackamaxon or Kensington being the place where Penn's reputed treaty with the Delawares was negotiated. After Fairman's death it was called Petty's Island, from John Petty, the then owner.

Willow Street, as laid out at present, represents part of the bed of the stream called Pegg's Run, named from Daniel Pegg, who owned extensive tracts of meadow, marsh, and upland in the Northern Liberties on the Delaware border. The Indian title of this stream was Cohoquinogue; one of its branches rose about the neighborhood of Fairmount Avenue and Fifteenth Street, the other west of Eleventh between this avenue and Green Street; at Vine Street east of Tenth Street they united to flow northeast to the Delaware. Much of the ground bounding on this stream was marshy and alluvial, liable to be flooded both by tides and freshets, and requiring dykes and ditches to fit it for cultivation even as meadow. At the next bend of the Delaware above the mouth of Pegg's Run the river received the waters of Cohocksink Creek, a stream composed of Mill Creek (so called from its being the site of the mill built by Penn, where the Globe Mills were later) and the Coozaliquenague, rising above Jefferson Street near Broad, where the Gratz property lay. Cohocksink (Cuwenasink) is supposed to mean "pine grove." About the northern limits of Kensington another kill flowed into the

Delaware from the west, by the English called Gunner's Run, after Gunner Rambo, a Swede settler who held adjacent lands; the Indian name was Tumanaramaning; its sources were found on the west of Fair Hill, near Harrowgate, where was a mineral spring, and near Nicetown and the old Cedar Grove property.

At "Point-no-Point" is the mouth of Frankford Creek, the product of the Wingohocking, Tacony, Little Tacony, and Freaheatah Creeks. The Swedes called the whole stream Tacony (Taokanink), and gave the same name to all the districts north and east of Wicaco, or, as some say, and the tax-lists of the Dutch and Duke of York's Governors show, from Carcoen's Hook to the Falls of the Delaware. The source of the name is doubtful; some take it from Tekene, a Lenape word supposed to mean "inhabited." On Lindstrom's map the Swedish and French equivalents are Aleskyns Kilen, "*La Rivière des Anguilles écorchées*," Skinned Eels River. The Wingohocking (Winge-hacking) is thought to mean "a good place for planting." This stream is also called "Logan's Run," because it flows by Stenton, the country-seat of James Logan, Penn's secretary; it rises near Mount Airy, and the Tacony in Montgomery County. Indian dialects afford the philologists the same chances to disagree which they seek in more polished tongues. A small stream rising in Dublin township and entering the Delaware near the United States Arsenal staggers under the triplicate *alias* of Sissinlockisink, Wissinoming, and Little Wahank, derived, says one, from Wischanmunk, "where we were scared;" says another, from Wissachgamen, "vineyard."¹

Above Frankford Creek what is called Dublin Creek empties into the Delaware, a stream which is the product of four small forks, and which is often called by its Indian name of Pennipacka or Penniceacka. Two miles north of this is the Poquessing, the northeast boundary of Philadelphia, a stream

¹ Very little dependence can be placed on the spelling or interpretation of these Indian words, and particularly little upon attempts to get at the meaning of Indian names of things and places by analysis and recombination of their roots. Some illustration of this fact may be found in the vocabularies collected by Maj. Ebenezer Denny, and inserted in his journal, which has been lately published by the Pennsylvania Historical Society. Maj. Denny collected these words in Ohio in 1785-86, while at Forts McIntosh and Finney, from Delawares. One gives for "very bad" the word *machelesso*, the other *matta-wissah*; the words are similar, but the consonants differ. Probably Maj. Denny heard the same word each time, but the pronunciation was not distinct enough to enable him to catch the proper form of spelling. So, again, "woman" is in one place *ochgwee*, in another *auquawan*; evidently the same word, with the same difficulty in writing it down phonetically. "Sleep" in one place is *napaywah*, in the other *caaweela*: "pipe," *ohquaky* and *hobocaw*; the numerals are *gutter*, or *neenotay*; *nechshaa*, or *neeswoy*; *nochhaa*, or *nethwoy*; *neava*, or *newaway*, etc. When it comes to give these Indian sounds an English form and interpretation after reaching us through a Swedish, Dutch, or French medium, the difficulty is increased almost immeasurably, and a decent skepticism is the only defense behind which criticism can shelter itself if it would avoid absurdities and escape glaring contradictions. It is for this reason that in this chapter Indian words and their translations are treated as allegations rather than facts; and this will continue to be done throughout.

coming down from Montgomery County by a circuitous course, in which it receives the waters of Byberry Creek and several minor brooks. The ancient spelling of this name is Poetquessingh and Pouquessinge, interpreted by Lindstrom as "*Rivière de Kakamons*," or (as a variation) "*Rivière des Dragons*."

We describe an eligible farm as being well watered, and having due proportions of meadow, intervale, upland, and forest, with a various and undulating surface, all susceptible of tillage. By well watered a farmer means "water in every field." The description suits the topography of the site of Philadelphia exactly. If the city as Penn found it had been divided into twenty-five-acre lots, it would have been so proportioned as to have water in every field. A perfect network of small brooks and spring-heads inland joined one another on their way to the main trunk arteries, the Delaware and the Schuylkill. Their courses were various, their volumes now small now great, and the surface of the city's site was like a complicated map, yet the general topography of Philadelphia obeyed the general rule of the Atlantic States,—streams flowing from northwest to southeast, hills ranging from southwest to northeast. In this case the Delaware from Burlington, in its changed course, represented the ocean, the common receiver, and the Schuylkill flowed southeast into it after taking up the small streams on its eastern side, which were prevented by the water-shed from reaching the Delaware directly. The intersection of the valleys between hills by the valleys following water-courses apparently cut up the surface into detached elevations and depressions, but there was still a regular rise from tide-level at the Schuylkill delta to three hundred feet in Bristol, and three hundred to four hundred feet in Germantown and Roxborough, and there was besides a regular "water-shade" at the margin of the alluvium, beginning at Point Breeze on the Schuylkill, and tending northeast to Society Hill. From this point the "water-shade" ran flush with the bank of the Delaware, except where the stream valleys cut through it, up to near Kensington, where it receded inland for some distance. The first spot in the southeast where the underlying gneiss rock broke through the alluvium so as to form an elevation was at a point midway in Kingessing, east of Minquas Kill. Here, at a place called Blakeley, and near by the old Bowling Green, was a considerable hill, a spur repeated opposite on the west side of Darby Creek, and again just by the mouth of the Schuylkill, where the old pest-house used to be. This was Peter Cock's land at one time, and his house may have been here. The next elevation on Cobb's Creek was a spur adjacent to the bridge at the Blue Bell Tavern, called Pleasant Prospect. St. James' Church was built on it. This elevation corresponded with that which began on the east side of the Schuylkill below Gray's Ferry. It was the beginning of the "water-shade" which extended east toward South-

wark. From Society Hill the bluffs on the Delaware front were continuous, except where streams cut through, with an elevation of fifteen to fifty feet, averaging about thirty feet. A line drawn from the Blue Bell Tavern bridge to Southwark would touch Point Breeze, which is the beginning of continuous rising ground on the Schuylkill. The Passayunk road, midway between Schuylkill Lower Ferry and Cedar (now South) Street, passed over another considerable elevation. The plateau of the original Philadelphia laid out by Penn was not broken much except on its eastern and western sides, where it came to the rivers. On the line of the Northern Liberties, however, Philadelphia County showed a sort of terrace, extending from Cobb's Creek almost to the Delaware, and rising into occasional domes, as at Fairmount and Bush Hill, with corresponding elevations west of the Schuylkill. North of this terrace another rose still higher, beginning with Green Hill on Cobb's Creek (the Morris property), then, as we pass eastward, George's Hill, Lansdowne, Belmont, and Mount Prospect, and east of Schuylkill, Fairmount, Lemon Hill, Mount Pleasant, Edgely Point, Vineyard Hill, Laurel Hill, Green Hill, and several other elevations. From the spurs of Lower Merion township another terrace stretched eastward, having among its domes various gentle rises, but not so steep or abrupt as near the Schuylkill River. Still another terrace rose to the northward, conspicuous in which range were Mount Airy and Chestnut Hill.

The hills and streams are included in the class of natural landmarks. Roads are artificial landmarks, which nearly always are found to be as old as any settlement, and almost as enduring. A certain habit of use clings to all old-established roads, making a change in their bed very difficult. We have elsewhere spoken to some extent of the oldest roads in Philadelphia County. The first of these was the Darby road, though it is possible that there was a still older road of the Swedes from the Lower Schuylkill Ferry between Tinnecum and Wicaco. The Darby road crossed Cobb's Creek at the Swedes' mill and Blue Bell Tavern; it ran northeast towards the Schuylkill, crossing it at Gray's Ferry, but originally, it is supposed, only at Middle Ferry, where High Street touched the river. The old York road followed the bed of this road from Upland, proceeding through Market Street (High Street) in Philadelphia to Front Street, and thence by the bed of the road to Bristol. Another route was to go north by way of Second Street to the junction of the Germantown and Frankford roads, and follow the latter. Later the York road followed the margin of the Delaware from Chester, crossing Tinnecum, and crossing the Schuylkill by the Lower Ferry, where it could either pass eastward, striking the Moyamensing road to Wicaco on the Greenwich and Gloucester Point road, or else follow the Passayunk road to Dock Creek draw-bridge, and so get into

Second or Front Street. What was called the "Federal road," from Gray's Ferry to Southwark (to meet the Darby and Great Southern road), was not laid off until 1788. The "Baltimore Post and Stage Road," however, long preferred the line from Middle Ferry (Market Street bridge) to the Blue Bell Ford. At Middle Ferry (or Woodlands, just west of it) the Chadd's Ford road began, running southwest, crossing Cobb's Creek where the Philadelphia, Wilmington and Baltimore Railroad now crosses it, and thence to Kellysville. This road, now Baltimore Avenue in Philadelphia, became Delaware County turnpike after crossing the county line. The Westchester road ran due west from Middle Ferry, on the line of the present Market Street, for some distance. The road to Lancaster ran northwest from the same ferry, crossing Cobb's Creek at West Haverford. The Haverford road ran northward above the Lancaster and the West Chester roads, passing through Haddington. The Manatawny or Ridge road, running from the corner of Vine and Ninth Streets, in Philadelphia, to Norristown, in Montgomery County, had its counterpart in the River road, which started from the Lancaster road and followed the west bank of the Schuylkill into Montgomery County. From Vine Street and Schuylkill Front Street a road proceeded to Fairmount, then diminished to the narrow dimensions of a country lane, turned northward, rounding Lemon Hill, and cutting the Ridge road at Turner's lane, which latter extended to the Germantown road north of Fair Hill. There were several minor roads, all now streets, between the Germantown and Ridge roads north of Turner's lane, and between that and the county bounds. The Germantown road passed from the end of North Second Street through the Northern Liberties to Fair Hill, nearly due north. Just beyond this elevation the Township Line road left the Ridge road at the old Botanic Garden, and went northwest in a straight line, dividing Roxborough township from Germantown. This road crossed the Wissahiccon at Dewees' mill and went to Perkiomen Town. Another Township Line road crossed the Germantown road at Logan's Hill, and the Wissahiccon at Weiss' mill, going thence to the Lutheran Church at Barren Hill, where it intersected the Ridge road. At Naglee's Hill the Germantown road parted with Fisher's lane, running northeast across the Old York road. At the market-house in Germantown Indian Queen lane led off southwest; parallel to it, a little more north, was School-house lane, opposite which Church lane branched off north-eastward to Lukens' mill, where it struck the Limekiln road running north. Farther up Germantown road, at Green Tree Tavern, was Meeting-House lane running east, and Rittenhouse Mill lane running west; the road to Abington crossed at Chew's house; Trullinger's lane and Gorgas' lane at Beggarstown; Miller's lane went east from Mount Airy; Allen's lane west from the same point; Mermaid lane east and Kerper's and Weiss' Mill lanes west from Chestnut

Hill. At this point the Germantown road forked, one branch going towards Reading, the other towards Bethlehem. Mermaid lane going northeast intersected the Limekiln road, and the two became the road to Skippack, a more easterly branch running towards Bethlehem. The old York road (one branch of it) followed the Germantown road to Sunville, and thence went north by Miles Town through Bristol township. The Frankford road ran eastward from Front Street, passing farther east by Harrowgate and Holmesburg. It had many branches and feeders leading to various points in Bucks and Montgomery Counties.

The sites of forts afford another means for clearing up the topography of any locality. They are ordinarily put in commanding places, where lines of travel or a wide sweep of country may be kept under control of their guns. The Dutch, the Swedes, the English, and our own countrymen have all erected forts at different epochs within the present limits of Philadelphia. The history of these forts belongs to subsequent chapters, as part of the regular account of events to be narrated. Their sites, however, are part of the topographical history of the city. The earliest of these structures was Fort Beversrede, erected by the Dutch, and, it is affirmed, before the Swedes established themselves upon the river. It was built where it would be convenient for the beaver trade with the Indians, and it must have served that purpose, for we find that the Swedish Governor Printz went the length of building a trading-house directly in front of it, not a biscuit-toss away, in order to destroy its utility. Fort Beversrede stood on the east bank of the Schuylkill, in the district of Passayunk, opposite the debouch of Minquas Kill, where the river-bank begins to rise, beyond the Penrose Ferry bridge. The Susquehanna Indians appear to have used Minquas Kill to come out from their hunting-grounds, and a trading-post at that point would naturally attract them. The Delawares and Iroquois also came down the Schuylkill in their canoes, making a portage at the Falls. The second Swedish fort was built at Nya Götheborg, or New Gottenburg, on that outcrop of gneiss rock which gave a patch of dry land to Tinnecum Island. The Swedes imitated the Dutch in building a fort in Passayunk, on the property given by Queen Christina to Lieut. Sven Schute. It was on the east side of the Schuylkill above Beversrede, probably on the rising ground at Point Breeze. Manayunk, another Swedish stockade on the Schuylkill, "on Manayunk Island," probably near the junction with the Delaware. Fort Gripsholm was built by Governor Printz on an island in the Schuylkill, "within gunshot of its mouth." Its site is disputed, but Mr. Westcott conjectures that from the Dutch descriptions of it by Andrew Hudde it was most probably built at the mouth of Minquas Kill, on the west bank of the Schuylkill, on Province Island. The block-house at Wicaco, which was con-

verted into a church in 1677, became the site of the venerable church Gloria Dei of the Swedes, and was convenient to the settlers of that race in the district of Passayunk and Moyamensing. This spot was the first rising ground on the Delaware above the mouth of the Schuylkill, and as such was a favorite point of defense against foes expected to come up the river. As such it was used in 1747 when the "Association Battery," the first fortification of the Quaker City, was erected by a committee at the time of the renewal of hostilities between France and Great Britain. The Friends would not build forts, but the Penn family promised the artillery if the citizens would erect the breastworks, and the Association Battery was built with this understanding by "the Association for General Defense," part of the funds for it being raised by a lottery. About the same time and by the same devices another battery was erected upon Society Hill, on the bluff between Lombard and Cedar Streets. During the Revolution a fort was erected on Mud Island, in the Delaware, off the shore of Kingsessing and between Hog Island and Province Island. This fort was begun in 1773 by the Province of Pennsylvania. It was a position commanding the channel of the river and the *chevaux-de-frise* between it and Red Bank. Subsequently to the Revolution it was called Fort Mifflin, after Pennsylvania's general and Governor, Thomas Mifflin. At the capture of Philadelphia by the British the fort was gallantly defended by Col. Samuel Smith, of Maryland, holding out against an overwhelming force of British until nine-tenths of its garrison was *hors du combat*. In 1776, Gen. Israel Putnam was deputed by Congress to provide for the safety of Philadelphia and look after its fortifications. The object sought was defense on the land as well as the seaward side. Putnam made his surveys and began his intrenchments, of which next year the British showed their approval by adopting and completing them. A battery was thrown up on Darby Creek or Tinnecum Island, below Mud Fort. The British entered the city in 1777 and commenced fortifying it, after they had reduced Mud Fort and Red Bank. A battery was erected near Reed and Swanson Streets, the Association Battery at Wicaco was renovated and armed, and a third battery put up near Swanson and Christian Streets, on the other side of Wicaco. A fourth battery was erected on a wharf at Kensington, above the mouth of the Cohocksink. On the land side Putnam's unfinished lines were followed up with a series of redoubts and intrenchments, protected by outworks and abattis. The first of these was on the bank of the Cohocksink, east of Front Street and above the Frankford road, a square redoubt, commanding the approach to the Northern Liberties by three important roads. It was flanked with abattis and redans. The next redoubt was west of the Germantown road, north of Poplar Street; the third was on the same line, west of Third Street, and the fourth northwest of that, with a redan to support its flanks.

The fifth battery and redoubt was at the corner of the present Poplar and Sixth Streets; the sixth, east of the Ridge road near Fairmount Avenue; the seventh, near Fairmount Avenue on Bush Hill. An advance battery on the Ridge road covered the approach to this redoubt. Number eight was near the intersection of Twentieth Street with Fairmount Avenue; ninth, near Lemon Hill; tenth, on the northwest slope of Fairmount Hill. This commanding point had also small batteries on its west and northeast slopes. There were rifle-pits in advance of the redoubts on all the main roads, and a lunette was thrown up on the Ridge road below the present site of Girard College. This line, it will be noted, was the line also of fine residences and country-seats. It commanded generally what would have been the south bank of the Schuylkill, provided that river ever actually crossed to the Delaware from above Fairmount to Kensington. Two or three fascined redoubts were built on the hills on both sides of the Schuylkill commanding the Lower and Middle Ferries. In the time of the late civil war, when it was feared Philadelphia would not be safe from Confederate raids, this important spot was once more fortified. In 1812 forts were erected on the east side of Gray's Ferry, commanding that road of approach, and on the same elevation west of the Schuylkill, opposite Hamilton's Grove.

A good deal has been said in regard to the early occupants of land along the Schuylkill and Delaware on the site of Philadelphia, and much more will be found on this subject in connection with the narrative as it progresses. It is necessary to the full comprehension of a city's topography, and it is also an integral part of that city's history, to trace the lines on which population spread from point to point until the wilderness became thickly settled. It is not needful, however, to give the names and the lots taken by all the first settlers of Penn's newly laid off city, since one lot is but the pattern of all the others, and the history of one is the history of all. That history will be found to be fully treated. But with regard to land outside the city the case was different. Here men had a choice, and the eligibility of this or that locality is illustrated by the promptness of its occupancy as compared with the taking up of others. Fortunately there are extant maps which enable us to give the ownership of tracts in Philadelphia at several intervals with very satisfactory exactness. The first and most important of these maps is that of Thomas Holme, Penn's first surveyor-general, who began in 1681 "A Map of the Improved Parts of the Province of Pennsylvania." It is remarkably clear and accurate for the first survey of a wooded wilderness, is well engraved, and a handsome *fac-simile* of it has recently been republished. Beginning, as we did when tracing the streams, at the south corner, we find the line of swamp northeast of Bow Creek very clearly marked and colored in green. Peter Ellet, who held the point of land where Cobb's and Darby

Creeks unite, held also the point on the east side of Cobb's Creek, and a piece of dry land in the swamp to the east, which he had to reach by a bridge or causeway. There are three other dry spots in these swamps, occupied by Andrew Boon, Ernest Cock, and Peter Cock. These were old Swedish titles, confirmed by patents from Upland Court under the Duke of York's laws. No other land is marked as being held southwest of Schuylkill and east of Minquas Kill. Northwest of this kill and of Peter Ellet's land is the tract of Otto Ernest Cock, running up to the Swedes' Mill tract. On the east of these are the lands of Oelle Dalbo, I. Hunt, Enochson and Jonas Neilson, and then come the farms of Widow Justice, Andreis Justeison, Andrew Peterson, and Robert Longshore. A large tract northwest of these is assigned to Peter Joccum, Thomas Pascall, Wm. Clayton, Neil Jonson, Mouns (Moens) Jonson, and Lawrence Hedding. Northwest of these again are "The Liberty Lands of Philadelphia City," a broad, long belt, crossing the Schuylkill above the city, extending to Frankford Creek and the Wingohocking in one direction, and descending to the Delaware between Pegg's Run and Vine Street. This tract included Springettsbury Manor, Fairmount, and in fact the entire townships of Blockley, Penn, and Northern Liberties, except a part of the latter on the Delaware front. On the east side of Schuylkill, northwest of this tract, are lands which belonged to Robert Turner, Richard and Robert Vicaris, and the "German Township Company," their tract being bounded north and northwest and northeast by "Gulielma Maria" and "Penn's Manor of Springfield." Roxborough is assigned respectively to Phil. Tathman, Francis Fincher, James Claypoole, Samuel Bennett, Charles Hartford, Richard Snee, Charles Jones, Jonas Smith, Jasper Farmer, and the Plymouth Company, whose tract extends into Montgomery County. When we return to the Delaware we find the farms on that stream from the Liberties up marked down to Andrew Salung, Michael Neelson, Thomas Fairman, Samuel Carpenter, John Bowyer, Robert Turner, Gunnar Rambo and Peter Nelson, Mouns Cock, George Foreman, Wm. Salway, and Eric Cock. Northeast of Frankford Creek is Taconing (Tacony) township, bounded by the Little Tacony and the Delaware. Between the Little and Great Tacony were holdings of Thomas Fairman, Henry Waddy, Robert Adams, John Harper, John Hughes, John Bunto, Henry Waddy again, Benjamin East, etc. In Bristol, between the Tacony and Wingohocking, the holders were John Moon, Griffith Jones, Thomas Bowman, Barnabas Wilcox, John Goodson, Richard Townshend, John Barnes, Samuel Carpenter, John Songhurst, and Benjamin Whitehead. From Taconing township to Dublin or Pennepack Creek on the Delaware were Enoch & Keene, George Hutchinson, Charles Claus, Neels Nelson, Peter Rambo, Erick Meels, Antony Salter, Elenor Holme, Ha.

Salter, Charles Thomas, Thomas Sare. West of these were John Duckett, John James, Kat. Martin, Joseph Ashtot, John Simmer, Richard Worrul, Thomas Levesly, Robert Fairman, Walter King, Richard Dungworth, William Chamberlin, and Joseph Phipps. Coming down on the northeast side of Dublin Creek, and south of Moreland Manor, we find Daniel Heaphy, William Stanley, Silas Crispin, John Mason, Allen Foster, Jam. Atkinson, Joseph Fisher, Robert Turner, Samuel Claridge, Thomas Holme, Peter Rambo, Jr., Lase Bore, and Benj. Acrod. This brings us to the Poquessing. The original occupants of Byberry were Robert Fairman, Thomas Young, John Carver, Edward Godwin, Nicholas Rideout, Giles Knight, John Tibby, Thomas Cross, Samuel Ellis Daniel Jones, Andrew Griscomb, George John, and Collis Hart.

The names upon Holme's map, however, do not always include a case of actual occupancy. Many allotments were never taken up at all by the parties who subscribed for land; many never immigrated; many let their subscriptions lapse without payment, and the assignments in numerous cases were altered or modified by the Proprietary Government. This is shown, for example, in Reed's map, reproduced in *fac-simile* in 1846. On this map the Northern and Western Liberties are no longer unoccupied, and it is evident that many landholders under Swedish, Dutch, and English grants, ignored by Holme, have had their claims and locations recognized. Peter Cock, for instance, had a two-hundred-acre tract of this description in Blockley west of Mill Creek; William Warner and son three large tracts northwest of this, stretching from Schuylkill half-way to Cobb's Creek on the line of the Haverford road. Jurian Hartfelder's patent for four hundred and fifty-seven acres at what was afterwards Campington, southwest of Cohocksink Creek, is now mapped. The Swansons, who owned Coaquinnoc as well as land at Wicaco, having given up the former, are assigned in recompense a large tract, twelve hundred and twenty acres in all, west of Springettsbury, and lying between that and the Welsh purchase of Griffith Jones and John Roberts. This Swanson tract was on both sides the Schuylkill from the Falls to Fairmount. Northwest of it and between it and the purchases of Pastorius for the Frankford (Germantown) Company were numerous small farms averaging not over fifty acres, of which one is put down to Penn's Deputy Governor, William Markham, and one to Dennis Rockford. Actual settlers and "Welcome" passengers or immigrants of 1682-83 are found among these landholders' names in goodly numbers. Shakhamaxunk (Shackamaxon, Kensington) lands appear in a large tract without names, while Kensington proper appears to be laid off into town lots; but northwest of these many names familiar in the first years of Penn's proprietorship are found, and they do not agree in many instances with names attached to the same

localities in Holme's map. Among these names are those of Holme himself, Nicholas Moore, Thomas Lloyd, John Goodson, James Claypoole, James Harrison, Christopher Taylor, Robert Turner, Joseph Fisher, Isaac Norris, Joseph Growden, Society of Free Traders, John Mifflin, Samuel Carpenter, John Songhurst, Enoch Flower, John Barber, Thomas Bowman, Robert Greenway, Silas Crispin, Nicholas Waln, Thomas Pudyard, etc., all names recorded among those of the first Quaker settlements and names of persons prominent in the history of Philadelphia and the province.

The quaint-looking map of Nicholas Scull and I. Heap is dated 1750. It is small and not very precise, yet it conveys a good deal of topographical information. On this map Bow Creek is distinctly marked and named, but it opens on the Delaware at Mud Island; Minquas Kill is called Kingsesse Creek, Boon's Island retains its name, but Simcock now owns Peter Ellett's land, and the names of Boon and Cock are no longer found on these swampy lands. The middle of the three islands that now appear east of Mingo Creek is called Carpenter's; the one at the mouth of Schuylkill, Province Island. Joccum holds his own southeast of the Darby road, and the lands west of Penrose Ferry belong to Bonsal and Jones Hunt. On the east side of Schuylkill at this point, going northwest, the names are Hannis, Penrose, Cox, Lord, Morris, Cadwallader, Rambo, and then we come to Gray and Gray's Ferry. Besides these there are not many names in all of the Southwark, Moyamensing, and Passayunk peninsula; Cox, Brockden, Morris, Wharton (Wharton's lane named for him), Duche, Pemberton, Lorenz, Turner, Davey, Sims, Griffin, Powell, Lawrence, Crouse, and Poll are all of them. Northwest of the Darby road, on Cobb's Creek, the names are found of Rambo, Stilly (Stille), Whitman, showing that the Swedes still held their own here. On the Darby road, between Blue Bell Tavern and Gray's Ferry, were Gibson, Bartram, Hanby, White, Jones, Coffman (Kaufman), Richard, Lois, and George. The Warners still held on the Schuylkill west from Fairmount; Scull kept the Upper Ferry, Springett-bury became a small, insignificant tract. Bush Hill adjoins ground of Plumsted, Swansons still hold (under the name of Shute) their tract east of Schuylkill, and Mifflin, Harrison, etc., remain where they originally planted. The house of Isaac Norris at Fair Hill is given with a cupola on it. There is another on James Logan's mansion at Stenton. The families of Waln, Greenway, More, Ashmead, Whitman, Griffith appear still on original sites in the northeast, yet after all there has been a woful thinning out of "first purchasers."

In 1762, Matthew Clarkson and M. Biddle published a map, principally of the front of the city, as far west as Eighth Street, and in Southwark to Second Street at that day. Windmill Island then lay in the channel between Pine and Christian Streets, the mill on the

extreme north end. There was a fort just south of Wicaco lane, closing Swanson Street in that direction. Coates' wharf was midway between Wicaco lane and Christian Street, Dennis' factory, the Swedes' Church, Gloria Dei, Wharton's, immediately above Christian Street. The Dock at that time extended from Third Street, half-way between Chestnut and Walnut Streets, diagonally to a point just east of the foot of Spruce Street. Reynolds and Penrose were wharf-owners foot of Queen Street; Trotter, foot of Catharine Street; Niemans, Lewis, Allen, and Penrose, to beyond Almond Street; Moes, Hockley, Mifflin, Church, Morton, Moore, and Willing, to Lombard Street; Eagan & Nixon, Rhoads & Emlin, Plumstead, Sims, May & Allen, Powel, and Stamper, as far as Dock Creek. On the east side of the Dock the wharf belonged to "The Corporation;" then came Hamilton, Penrose, Dickinson, Fishbourne & Meredith, Carpenter, Flower, Morris, King, Pemberton, and then the "Crooked Billet" public landing, foot of Chestnut Street. Old Ferry Slip and Austin's Ferry were at the foot of Arch Street. From Chestnut Street to Callowhill Street the names of wharf-holders were Sims, Lawrence, Allen, Henry, Masters, Hoop, Potts, Bickley, Aspend & House, Clifford, Rawle & Peel, Warner, Okill, Wilkinson, Hoops, Shoemaker, James, Hodges, Hasell, Parrock, Goodman, Mifflin, West, Hewling, Salter, Allen, Clifton, Moyer, and Huston.

William Faden, of London, got out a map in 1777, which is founded upon Scull and Heap's with few alterations, even copying the names of occupants of country-seats, etc., from the latter, although in the course of twenty-five years many of them were dead. A few prominent alterations were made by Faden, whose enterprise was no doubt stimulated by the curiosity of the British people in relation to America, and particularly Philadelphia, where the Congress sat. The streams are precisely the same as in Scull and Heap's maps. The principal novelty is the marking of a fort on Mud Island, the line of the *chevaux-de-frise* in the Delaware, and Governor John Penn's seat at Lansdowne, with a little more prominence to the claim of Kensington to be a settlement than was allowed in 1750. P. C. Varle, geographer and engineer, about 1797 or 1798, drew, and Scott engraved, a very interesting map, which took in the Delaware and the Schuylkill from about Wharton Street on the south to Columbia Avenue on the north.

Hill's maps of 1796 and 1808 (the circular map) are almost purely topographical, and their leading features have been embodied in the foregoing pages. The Swedes' Church at Wicaco appears on the edge of the river bluff; the bed of Church Street, in the rear, runs through a deep ravine, widening at Wharton Street. There is a pond by the Passayunk road, south of Prime Street, and several of them south of Cedar Street between Shippen's and Irish lane. The changes in the channel, some land emerging, some

sinking, and the peculiar way in which the ranges of hills are divided into knobs and domes by the transverse ravines along the course of the streams, are curiously illustrated upon these maps. No Philadelphian would be able to recognize the contour of his city if the streets, roads, and houses should be removed from this checker-board scheme of knolls and ravines, with a stream at the bottom of every hollow. The idea that Philadelphia is a flat and level city disappears in the presence of so much evidence of variety of grade. It may be added, in conclusion, that both the surface contour and the subsoil of Philadelphia are favorable to good drainage; none of the rock-masses are so continuous nor are the underlying clays so tenacious as to prevent water from sinking through them.

To complete the chronographic history of Philadelphia it is proper to add something concerning the city's political and quasi-political divisions. The city, laid off in 1681-83, was part of Philadelphia County, which, having about its present northern and southern boundaries, with the Delaware on the east, extended westward indefinitely towards the State line. From time to time other counties were cut out of it until the present western boundary was practically established by the erection of Montgomery County in 1784. In 1701 (October 25th), Philadelphia was chartered by William Penn as a sort of borough city, with a government of its own, separate from that of the State and county. This charter, which is said to have been modeled upon that of the old city of Bristol, England, bestowed only a very limited sort of municipal authority upon the mayor and corporation of the town. It was, however, divided into wards as the population increased, though the adjoining districts, boroughs, and townships of this county were not incorporated with the city until its final consolidation in 1854. The previous act of incorporation of the old city was passed March 11, 1789, but the charter of 1701 had been materially modified several times in this interval. In 1749, when Dr. Franklin, Joseph Shippen, Chief Justice Allen, and others took the census of the city, it comprised ten wards, named Mulberry, Dock, Lower Delaware, Upper Delaware, South, North, Middle, and the wards between, and named for High (or Market) Street, Chestnut Street, and Walnut Street, inclusive, with Fourth Street on the west. Upper and Lower Delaware, High, Chestnut, Walnut, Dock were on the east. There were four western wards,—Mulberry, North, Middle, and South. In 1800 the ward division was improved and the number increased to fourteen, seven commencing at the Delaware and ending at Fourth Street, and seven extending from Fourth Street to the Schuylkill. This shows that half the population of the city at that time was east of Fourth Street, south of Vine Street, and north of South Street. These wards were thus laid off—Delaware side: New Market Ward, South to Spruce Street; Dock Ward, Spruce to Walnut

Street; Walnut Ward, Walnut to Chestnut Street; Chestnut Ward, Chestnut to Market Street; High Street Ward, Market to Arch Street; Lower Delaware Ward, Arch to Sassafras Street; Upper Delaware Ward, Sassafras to Vine Street. Schuylkill side: Cedar Ward, South to Spruce Street (west of Fourth Street); Locust Ward, Spruce to Walnut Street; South Ward, Walnut to Chestnut Street; Middle Ward, Chestnut to Market Street; North Ward, Market to Arch Street; South Mulberry Ward, Arch to Race Street; North Mulberry Ward, Race to Vine Street.

Philadelphia now comprises thirty-one wards, a less number, in proportion to the increase of area and population, than it had in 1800. The First Ward of the city begins on the Delaware at Wharton Street, runs west to the Passayunk road, down the latter to Broad Street, and thence south to the Delaware, taking in the whole of League Island. This ward includes part of Southwark, partly incorporated in 1762, the oldest district of Philadelphia County. Parts of the Swedish settlements of Wicaco and Moyamensing are within its limits, and it includes also Greenwich Island, with Girard Point, Martinsville, etc. Adjoining the First Ward on the left, and bounded by the Schuylkill River, up to Washington Avenue, Ells worth Street, Passayunk road, and Broad Street down to League Island, the Twenty-sixth Ward is found. It includes a portion of what was once Moyamensing and part of Passayunk; it lies "down the Neck," and includes what was once nearly all meadow, with, however, solid ground above Point Breeze. Moyamensing, originally a farm tract deeded to Stille, Clensmith, and Andries, Swedes, in 1664, and confirmed to Stille, Andries, Bankson, and Mattson in 1684, later became a township. When it was incorporated, in 1812, it had an area of two thousand five hundred and sixty acres. Passayunk (called by Lindstrom, Paisajungh, and variously named in former times Passuming, Perslayonk, Passayon, etc.) is said to have been the site of an Indian village, and to mean "a level place." The first survey of it included a tract of one thousand acres, granted to Lieut. Swen Shute in 1653. It was afterwards patented by Governor Nichols to the brothers Ashman and others. The Twenty-sixth Ward contains two cemeteries, the County Prison and the Point Breeze Gas-Works, Point Breeze Park, Girard Point, and the oil wharves. Opposite the Twenty-sixth Ward, on the other side of the Schuylkill, is found the Twenty-seventh Ward, taking in all the southwestern part of the city, between Bow, Darby, and Cobb's Creeks and the Schuylkill to Market Street, in West Philadelphia. Suffolk Park, the Almshouse property, Mount Moriah and Woodlands Cemeteries are within its extensive limits. It contained Kingessing and part of Blockley townships, the Darby and Baltimore roads, and the villages of Paschallville, Maylandville, West Philadelphia, Hamilton, and other ancient and modern settlements. North of the

Twenty-seventh Ward, still on the west side of the Schuylkill, and bounded by the city limits from Cobb's Creek to the corner opposite the mouth of the Wissahickon, is the Twenty-fourth Ward, which included the rest of Blockley, part of West Philadelphia, Mantua, Hestonville, Haddington, etc., with the grounds of the insane asylum and the greater part of Fairmount Park, with all its historic sites. Originally it was part of the Western Liberties, and it contained the district of Belmont also, which took its name from the country-seat of the Peters family, so distinguished in the Revolutionary and subsequent periods of the history of Philadelphia. Blockley was one of the oldest townships of the county, and contained originally seven thousand five hundred and eighty acres.

Returning to the Delaware side we find the Second Ward small and compact in comparison with those just mentioned, lying north of the First, from Wharton to Passayunk road, then to Ellsworth, to Broad, and to Christian Streets. This was a part of Wicaco, and the old United States Navy-Yard, now occupied by the Pennsylvania Railroad Company, was within its limits. The Third Ward, having the same boundaries south, east, and west as the Second (Broad Street and the Delaware), lies north of it, following Mead Street from Delaware Avenue to Second, and German Street west to Passayunk road, to Fitzwater Street, thence to Broad Street. The Fourth Ward is north of the Third, within the same limits east and west, running up to South Street, west to Broad Street. These three wards include all the remaining part of Southwark and a portion of Moyamensing to the old city limits. West of them, from Broad Street to the Schuylkill, lies the Thirtieth Ward, between South and Washington Avenue, running west along the latter to Gray's Ferry road, up that road to Ellsworth Street, along Ellsworth to the Schuylkill River, then to South Street and to Broad Street. The United States Arsenal and Naval Asylum are in this ward. The Fifth Ward lies between Seventh Street and the Delaware, South Street on the south and Chestnut north. It abounds in the historic monuments of Philadelphia, for here the town began, here Penn first landed, and here the Declaration of 1776 was adopted and signed. Windmill Island, in the Delaware, belongs to the Fifth Ward.

The Sixth Ward lies north of the Fifth, with Seventh Street for its western limit, and Vine Street on the north. West of Seventh Street, extending to the Schuylkill, are the Seventh, Eighth, Ninth, and Tenth Wards, Spruce Street marking the north limit of the Seventh, its southern line South Street; Chestnut Street is the north boundary of the Eighth; Arch Street of the Ninth, and Vine Street of the Tenth. Old Philadelphia, therefore, is entirely included in Wards Five to Ten, inclusive.

The Eleventh Ward extends up the Delaware from Vine Street to Poplar, with Third Street on the west. On the west of Third Street, as far as Sixth Street,

from Vine to Poplar Street, is the Twelfth Ward; west of that the Thirteenth Ward extends to Tenth Street; the Fourteenth, to Broad Street; and the Fifteenth, to the Schuylkill, all three with Poplar and Vine Streets on north and south. The Eleventh and Twelfth and part of the Thirteenth Wards were in what was the Northern Liberties. The land was part of Jurian Hartfelder's original purchase, called Hartsfield. Part of the Fourteenth and of the Fifteenth were in Springettsbury Manor, including Fairmount and Lemon Hill. Willow Street occupied the bed of Pegg's Run. Spring Garden District was partly in this parallelogram. It contains the Eastern Penitentiary and the Fairmount Water-Works. In this group were also to be found the so called town of Callowhill, between Vine and Willow Streets and Front and Second, in the Northern Liberties, Campington, where the British barracks stood, the towns of Bath and Morrisville. Fairmount Park extends along the western boundary. The Sixteenth Ward is bounded on the east by the Delaware River, and on the south by Poplar Street. It extends on the north along Maiden or Laurel Street to the Frankford Road or Avenue, northward along the latter to Girard Avenue, and thence to its western boundary at Sixth Street. The Seventeenth Ward lies just north of it, between Girard Avenue and Oxford Street, and Sixth and Frankford road. The Eighteenth Ward is part of old Kensington, with the Frankford road on the west, the Delaware on the east, Maiden Street on the south, and Norris Street on the north. Immediately above is the Thirty-first Ward, cut out of the old Nineteenth, bounded east by the Delaware, south by Norris Street, west by Frankford road as far northwest as Oxford Street, then along Oxford to Sixth, Sixth to Lehigh Avenue, along the latter to Frankford road, and then by that road to Westmoreland Street, thence to the Point road, and thence, substantially in the same direction as Westmoreland Street, to the Delaware River. Here was an Indian town, perhaps a council-seat, called Shackamaxon; here was the tree in front of Fairman's house, under the branches of which, it is alleged, William Penn held his treaty with the Indians, and here was ground owned before Penn's time by Lasse Cock, Gunner Rambo, and other Swedes. The Nineteenth Ward lies north of the Seventeenth. It extends along Frankford road from Norris to Oxford Street, then to Sixth, then to Germantown Avenue, then to Lehigh Avenue, along the same to Kensington Avenue, then to Front Street, along the latter to Norris, and along Norris to the intersection of Frankford road. The Twentieth Ward is west of the Sixteenth, Seventeenth, and Nineteenth Wards, extending along Sixth Street from Poplar to Susquehanna Avenue, then west to Eleventh, south to Montgomery Avenue, and along the latter west to Broad Street, thence south to Poplar, and thence to the place of beginning. The Twenty-ninth, again,

is west of the Twentieth, with Broad Street on the east, and extending west to the Schuylkill, with Montgomery Avenue on the north and Poplar Street south. Girard College is in the Twenty-ninth Ward. The Twenty-eighth, a large ward, lies north and west of the Twentieth and Twenty-ninth, and west of the Twenty-fifth and Nineteenth, Sixth Street and the Germantown road marking its east line, and the Schuylkill its west, Montgomery Avenue on the south, School lane northwest, and Wissahickon and Roberts Avenues north. This ward has seven cemeteries in it, with Laurel Hill and Schuylkill Falls on the west. The villages of Nicetown and Rising Sun are partly in it. The Twenty-first Ward, on both sides the Wissahickon, contains Manayunk and the township of Roxborough. The Twenty-second Ward, besides Germantown and Chestnut Hill, has a number of villages, —Somerville, Branchtown, Crescentville, McCartersville, Olney, Feltonville, Milestown, Pittville, etc. The Twenty-fifth Ward, created out of portions of the old Nineteenth and Twenty-third Wards, begins on the Delaware River at a point where Lehigh Avenue would intersect if continued in a right line, and along Lehigh Avenue to Germantown Avenue, along the latter to the line of the Twenty-second Ward, along that line to Frankford Creek, along the creek to the Delaware, and down the latter to the place of beginning. It has in it Hunting Park, the New Cathedral Cemetery, Cooperville, Harrowgate, Franklinville, and Bridesburg. The Twenty-third Ward, the city's northeast corner, contains the old townships of Oxford, Byberry, Lower Dublin, and Moreland, the boroughs of Frankford, Tacony, and Holmesburg, and the settlements and villages of Olney, Milestown, White Hall, Volunteertown, Cedar Grove, Rockville, Hollinsville, Torresdale, Mechanicsville, Pleasantville, Smithfield, Knightsville, Bustleton, Vereeville, Sandy Hill, and Fox Chase. Byberry, Oxford, Moreland, and Dublin are all old-established townships.

Philadelphia County before 1784 contained much territory which had not been subdivided into townships. On the creation of Montgomery County, the following were in the county as of its present boundaries: Moyamensing, Passyunk, Northern Liberties, Oxford, Bristol, Byberry, Moreland, Lower Dublin, Frankford, Germantown, Roxborough, Blockley, and Kingsessing. These were all that remained of forty-seven townships existing in 1741. The county of Montgomery took away with it the townships of Amity, Abington, Creesham, Cheltenham, Douglass, Upper Dublin, Franconia, Frederick, Gwynedd, New Hanover, Upper Hanover, Horsham, Limerick, Montgomery, Upper Merion, Lower Merion, Norriton, Plymouth, Providence, Perkiomen, Skippack, Salford, Springfield, Towamensing, Whitpain, Worcester, and Wayamensing. Berks took Allemingale, Amity, Colebrookdale, Exeter, Murder Creek, and Oley.

In Philadelphia's 82,700 acres there are more than twelve hundred miles of streets. Their continuous

length would extend four hundred miles beyond Chicago, or reach to New Orleans. A man walking four miles an hour and ten hours a day would need a good month to traverse them all. There are about six thousand streets, lanes, alleys, and courts, all told, but a plain and simple method of enumeration enables the stranger to find any place in any one of them, the number of the house describing in what part of the city it is to be sought. Names of streets have undergone great changes in Philadelphia since Penn established his system of numbering them from the Delaware running from north to south, and using names of trees for streets running east and west. Any such method ought to have been adhered to, if for no other reason at least to protect a city from the *niaiserie* and bad taste of city councilmen, who are commonly presumptuous in proportion to their ignorance. At present the nomenclature of streets in Philadelphia resembles a "Dolly Varden" print of a very irregular pattern,—one style here, another style there, part-colored and piebald all over. A street name should not be *outré* in its form, nor difficult to pronounce; it should signify something, either an object, a person, or an event, and it should never be changed when once permanently bestowed.

CHAPTER II.

THE GEOLOGICAL STRUCTURE, VEGETATION, AND ANIMALS OF THE SITE OF PHILADELPHIA.

THE geology and the flora and fauna of a section so large as that occupied by the city of Philadelphia must needs be a comprehensive and interesting study, embracing, as this region does, an area of 129.4 square miles, and including within that area all the varieties of soil and all the diversities of surface to be looked for in a range of elevation from tide-washed, alluvial flats to rock-faced bluffs and granite ledges three hundred feet high (over four hundred at Chestnut Hill), and scarred with the marks of those rude wars of the giants which are typical of the glacial period. Much attention has been given to this subject from the days of James Logan, Benjamin Franklin and the American Philosophical Society, John Bartram, and Alexander Wilson down to the present time, and much has been written and published concerning the natural history and physical characteristics of Philadelphia, in both a comprehensive and a fragmentary and special way. It is hard to find, however, any brief and clear *résumés* of the general subject, couched in language such as all can understand without having scientific vocabularies at their fingers' ends, and condensed within such a space that it does not become a laborious task to read them. No ordinary reader can afford to ransack the

journals of the American Philosophical Society, or compare together all the five hundred and seventy thousand specimens in the collections of the Philadelphia Academy of Natural Sciences in pursuit of information of this kind, but every one is capable and willing to master the important features, briefly and plainly set forth, of the order of rocks, plants, and animals appertaining to his place of abode. Without having room for hypothesis, without giving space to speculation, it is proposed here to present the leading facts bearing upon these matters, in as concise a form as may be. We will not be quite so brief and concise, however, as some of the old writers. For instance, Dr. Mease, in his "Picture of Philadelphia," seems to have conceived that such a subject could be exhausted and dismissed in a paragraph. "The immediate substratum of Philadelphia," he says, "is clay of various hues and degrees of tenacity, mixed with more or less sand, or sand and gravel. Underneath, at various depths, from twenty to nearly forty feet, and also on the opposite shores of New Jersey, are found a variety of vegetable remains, which evidently appear to have been left there in remote period of time by the retiring waters; hickory-nuts were found a few years since in digging a well upwards of thirty feet beneath the surface, and the trunk of a sycamore (buttonwood) tree was discovered in Seventh near Mulberry Street, near forty feet below, imbedded in black mud, abounding with leaves and acorns. About sixty feet distant from that place, and nearly at the same depth, a bone was found; the stratum above was a tough potter's clay. In various other parts of the city, and even at the distance of several miles in the country, similar discoveries have been made. Sharks' teeth are occasionally dug up many feet below the surface near Mount Holly. All these facts seem to prove the truth of the opinion first delivered by our countryman, Lewis Evans, that the site of Philadelphia formed part of the sea, whose coast was bounded by a reef of rocks (they are formed of gneiss, micaceous schist, and other primitive rocks), some two, three, or six miles broad, rising generally a little higher than the adjoining land, and extending from New York westwardly by the Falls of Delaware, Schuylkill, Susquehannah, Gunpowder, Patapsco, Potomac, Rappahannock, James River, and Roanoke, which was the ancient maritime boundary, and forms a regular curve. The clay and other soil which compose the borders of the rivers descending from the upland through this tract are formed by the soil washed down with the floods and mixed with the sand left by the sea." And that is all which Dr. Mease has to say of the geology of Philadelphia.¹

The geology of Philadelphia presents many difficulties, and no satisfactory solution of them has yet been reached. There was a geological survey of the State of Pennsylvania made fifty years ago, under the supervision of Prof. Henry D. Rodgers, which established many facts in the geognosy of the State, but was not sufficiently thorough to enable the geology of the difficult eastern portion to be determined. The geological map of this survey was published in 1858. Since that time great advances have been made in systematic investigation. A second geological survey of the State is in progress, the preliminary reports of which were made in 1874, and further reports have been made annually since then, under the auspices of a State commission and the superintendence of Prof. Peter Lesley, State geologist. Mr. Charles E. Hall is making the examination of the rocks on the lower Delaware and Schuylkill Rivers. Mr. H. C. Lewis and Rev. G. F. Wright are studying the surface deposits, moraines, etc., of this section. Mr. Hall has already made a report of progress (1881) for his section, including a large geological map of Philadelphia, Bucks, and Montgomery Counties, with special analyses of minerals, made by Dr. F. A. Genth and his son. There have also been published in this connection a historical sketch of geological explorations in Pennsylvania and other States by J. P. Lesley, a preliminary report of the mineralogy of the State by Dr. Genth, and a "Special Report on the Trap Dykes of Southeastern Pennsylvania" by Prof. T. Sterry Hunt. These various reports enable the

geognosy, the flora and fauna and mineralogy of the earth, had been universally studied before that, and the philosophers of early Philadelphia gave as much attention to their own section as most others were contemporaneously receiving. Isaac Lea, of Wilmington, in 1817 contributed to the Journal of the Academy of Natural Sciences a brief study of the minerals of Philadelphia. Gerhardt Troost, an alumnus of Leyden and Paris, who came to this country in 1810 in the interest of manufacturers of chemicals, and who did much to advance the knowledge of the country's mineral wealth in several sections, in Maryland and Tennessee as well as Pennsylvania, published in 1826 a regular "Geological Survey" of Philadelphia, giving pretty accurately the rock forms and stratifications of the environs of the city. Since then the subject has been handled more or less fully by P. A. Brown, G. W. Carpenter, H. D. Rodgers, F. A. Genth, H. C. Lewis, C. E. Hall, and others. The earlier treatises, however, while they contain many facts, are worthless as systematic presentations of scientific knowledge. Accurate examination and acute observation go for nothing in support of antiquated and obsolete formulae. Modern geology takes no account of the ancient contest between the Neptunians and Plutonians. Science is greater than its greatest masters, and it resigns even a Newton and a Cuvier to oblivion in respect of matters where their hypotheses have been superseded by the progress of modern discovery. In mineralogy, Berzelius, Werner, De Lisle, Haüy, and Mohs are giving place to a modern school which is growing up under the light of the new chemistry; in botany, Linnæus and De Candolle are becoming as obsolete as Dioscorides and Cæsalpinus; in geology and the associated sciences, Catastrophists are no longer heeded, and even Agassiz, Cuvier, and Carpenter are falling in the rear behind the followers of Lamarck and Darwin, and incisive and destructive heralds of development and evolution like Herbert Spencer, Huxley, Tyndall, Buchner, Haeckel, Virchow, Cope, and Gegenbaur. The old geologists, it has been well remarked, are like the knights who fought about the color of the shield. In fact we cannot, in this science, advance from limited, particular data to broad generalization; we must bring the sum of extensive general knowledge to the understanding of special facts revealed by particular localities.

¹ It is of course understood that geology as a science is altogether modern. It did not properly exist before Werner wrote, and the Freiberg professor was not born until 1750. Werner, De Saussure, Cuvier, Hutton first brought paleontology into existence by showing that rocks were to be profitably studied, not as stones, but as beds of fossils. This was the key to the cryptogram of the rocks. But the meteorology and

progress made in determining the geological features of the Pennsylvanian country to be understood.

Prof. Lesley, in speaking of the geological maps and profiles of cross sections accompanying the report on Philadelphia County, remarks that "it must not be supposed that the geology of the district is fully understood. Geologists will have much to discover in years to come. A deep obscurity still shrouds parts of its underground structure and constitution, especially west of the Schuylkill." There are many difficulties, says the professor, in making proper examinations. "The surface of the country is under high cultivation. The water-courses are shallow. Extensive areas are marked by recent gravel and clay deposits. Rock exposures, though numerous, are small and isolated. Plications, faults, and even overturns are the rule, rather than the exception; and metamorphism is universal. Mineral beds are rare. Fossils are absolutely wanting. Characteristic lithological features are evident enough on a large scale; but when looked for on a small scale they fail the geologist at every stage of his progress, along any belt of outcrop, and fade into each other, or repeat themselves and alternate so rapidly and monotonously, in the visible groups of strata exposed, that special classification in vertical order becomes almost impossible." The future systematic geology of the district, the professor adds, must largely depend on artesian well borings. In constructing the map there is a practical difficulty growing out of the number and confusion of azoic rocks, all of a metamorphic character. "We have a country of mica schists, garnet schists, granitic, syenitic, hornblende, and micaceous gneisses, with included serpentine, steatite, talc schists, chrome iron beds, and disseminated gold, all of them rocks which it is still impossible to assign with the least confidence to any age."

Geology is so much a matter of classified, tabulated names and their definitions that it cannot be intelligently discussed apart from this system of grouping and interpretation. Prof. Hitchcock, in preparing a tentative geological map of the United States, adopts the following scheme, the oldest formations being first given:

(a) EOZOIC.		(b) PALÆOZOIC.	
(1) SILURIAN;	(2) DEVONIAN;	(3) COAL MEASURES.	
	(and lower carboniferous).	(and permo carboniferous).	
(c) MESOZOIC.		(d) CENOZOIC.	
(1) TRIASSIC	(2) CRETACEOUS.	TERTIARY;	ALLUVIUM; VOLCANIC.
and	JURASSIC.		

"The eozoic (dawn of life) embraces all formations older than the paroxide beds, including the metamorphic Appalachian schists," says Prof. Hitchcock. Philadelphia, in Prof. Hitchcock's map, rests entirely upon the eozoic formation. A better and more general scheme is that of Prof. James D. Dana, and which our geologists usually follow, with some modifications. It may be rudely represented thus:

		AGE OF MAN.	EPOCHS AND SUB-EPOCHS.
EUROPEAN GEOLOGY.	MAMMALIAN AGE.	Post-Tertiary.....	(xvii.) Pleistocene.
		Tertiary.....	{ (xvi.) Pleocene. (xv.) Miocene. (xiv.) Eocene.
	REPTILIAN AGE.	Cretaceous.....	{ (xiii.) Upper and Lower Chalk (Upper Cretaceous). (xii.) Middle Cretaceous (Upper Green Sand). (xi.) Lower Cretaceous (Lower Green Sand).
			{ Wealden Epoch. { (x.) Wealden.
			{ Oolitic Epoch. { (ix.) Upper Oolite (Portland Clay). (viii.) Middle Oolite (Oxford Clay).
		Jurassic.	{ (vii.) Lower Oolite (Stonesfield). (vi.) Upper Lias. (v.) Marl Stone.
			{ (iv.) Lower Lias. (iii.) Keuper. (ii.) Muschelkalk. (i.) Buntersandstein.
		Triassic.....	
	CARBONIFEROUS AGE.	Permian.....	(xv.) Permo Carboniferous.
		Carboniferous.....	{ (xiv. c) Upper Coal Measures. (xiv. b) Lower Coal Measures. (xiv. a) Millstone Grit.
		Sub-Carboniferous.....	{ (xiii. b) Upper Sub-Carboniferous. (xiii. a) Lower Sub-Carboniferous.
AMERICAN GEOLOGY.	DEVONIAN AGE, OR AGE OF FISHES.	Catskill.....	(xii.) Catskill.
		Chemung.....	{ (xi. b) Chemung. (xi. a) Portage.
		Hamilton.....	{ (x. c) Genesee. (x. b) Hamilton. (x. a) Marcellus.
	SILURIAN AGE, OR AGE OF MOLLUSKS.	Upper Helderberg.....	{ (ix. c) Upper Helderberg. (ix. b) Schoharie. (ix. a) Cauda-Galli.
		Upper Silurian.	{ Oriskany.....(viii.) Oriskany. Lower Helderberg. { (vii.) Lower Helderberg. Salina.....(vi.) Saliferous.
			{ Niagara... { (v. b) Medina. (v. a) Oneida.
		Lower Silurian.	{ Hudson.... { (iv. b) Hudson. (iv. a) Utica. Trenton... { (iii. b) Trenton, Black River, (iii. a) Chazy, Birds' Eye. Potsdam... { (ii. b) Calciferous. (ii. a) Potsdam.
	AZOIC AGE.	(1.) Azoic.

The ascent from primitive rocks to those more recent is from the bottom of the column, beginning with azoic rocks, or those in which there are no fossils, corresponding to Prof. Hitchcock's eozoic. Geologists recognize two great divisions of rocks: (1) the *massive* or (igneous) *primitive* rocks, which form the earth's crust. These have been formed by the action of heat, underlie all others, or have been forced up through them from beneath. Such are granite, basalt, porphyry, etc. (2) The *sedimentary*

or *stratified* rocks, which have been deposited by water as limestone, clays, etc. A third form of rock is the *metamorphic*, resting on the igneous rocks, underlying the stratified rocks, containing no fossils, or scarcely any, stratified, yet having been violently changed (metamorphosed) by heat or water, or both. Of such are gneiss, mica slate, talcous slate, etc. The rocks which underlie Philadelphia are almost all of them metamorphic. Geologists divide rocks as to their antiquity into several *ages*, as the azoic (eozoic), paleozoic (or the age of primary forms of life, etc., such as mollusks), mesozoic, or secondary age, and cenozoic, or tertiary age. Philadelphia County shows none but rocks of the azoic and the paleozoic ages. The paleozoic age is divided into Upper and Lower Silurian, Devonian, and Carboniferous periods or epochs, and Philadelphia can show but few paleozoic strata of a more recent epoch than the Lower Silurian formation. This formation comprises eight stages or groups, and Philadelphia County again confines itself principally to the lowest of these groups, the Potsdam sandstone. The primitive rocks are in many places, however, overlaid by the drift brought down by floods and glaciers and by the mud deposited from rivers. This is not a stratification, but a superficial and (geologically speaking) a recent deposit. It is classed as belonging to the modern epoch, the age of man. The glacial drift period is assumed to be like a wedge between the tertiary or post-tertiary period and the age of man. Its characteristic mark is the deposit of gravel and bowlders. The county of Philadelphia shows many of these erratic bowlders or "gray-heads." In many places the primitive rock is overlaid with deep beds of gravel, and in other places the recent alluvium rests in deep beds both upon the primitive rock and upon the gravel; sometimes it rests upon both at once, overlying the gravel which overlies the bed of azoic rock.

The general system for the rocks embraced in Montgomery, Bucks, and Philadelphia Counties is recent alluvium, Trenton Gravel, Red Gravel, Philadelphia Brick Clay, Yellow Gravel, Bryn Mawr Gravel, Iron-Bearing Clay, Wealden Clay, Trap, New Red Sandstone (mesozoic), Serpentine, Chestnut Hill Garnetiferous Schists, Manayunk Mica Schists and Gneiss, Philadelphia Mica Schists and Gneiss, Quartzose Slate and Mica Schists of South Valley Hill, Slate and Limestone alternations, Magnesian Limestone and Marble (No. 2), Edgehill Rock (Quartzite and Conglomerate), Potsdam Sandstone (No. 1), Syenitic and Granitic Rocks. Of these the first six are of recent formation; Wealden clay belongs to the Cenozoic epoch; the slate, sandstone, and conglomerate of the new red sandstone formation are of Mesozoic; the syenites and granites are of the Laurentian system of primitive or metamorphosed rock, and the slates, mica schist, marble, limestone, and slate and limestone alternations belong to the calciferous, Trenton and Hudson River groups, Cambro-Silurian

epoch, Paleozoic period, metamorphosed rocks. With respect to distribution, we find the Potsdam sandstone¹ along the northern edge of Philadelphia County in two places. The syenite group is found north of Chestnut Hill. "Otherwise," says Mr. Charles E. Hall, "the mica schists and gneisses occupy the entire county, unless limestone be proven to exist north of Somerton and flanking the Potsdam sandstone on the south. Its existence is exceedingly doubtful."² The gneissic and micaceous series of rocks in Philadelphia County seem to belong to one geological formation. Sharply-defined subdivisions have not been thus far detected. The belts of rocks fade into and blend with one another in a sort of imperceptible gradation and transition. The "pitch" of the rock is generally northwestward except along the northern edge, where there is a reverse "dip." This is so invariable as to be a great aid to the geologist in tracing the true relations of these rocks to one another. The entire northern portion of Philadelphia County is covered by gravel. Along the Delaware River mud or alluvial deposits are frequent. They cover the greater part of the south end of the city. The gravel-beds flank these mud deposits along the course of the river. This belt of gravel was deposited by the river before it had receded to its present channel; it marks the ancient bed of the Delaware. The gravel is exposed wherever streets have been graded down. The Trenton or river-shore gravel gradually merges into what are known as the Philadelphia brick clays, mixed with or bounded by the red and yellow gravels. These red gravels are so characteristically high in their colors that William Penn would not employ them when he laid out the walks of his garden and lawn at Pennsbury Manor, and directed his steward to get the gravel from the pit near by and not from Philadelphia, as that was "too red." In other words, he preferred the Trenton to the Philadelphia red clay gravel. The gravel-beds in the southern part of Philadelphia are at least one hundred feet deep. The gravels are composed of and have been derived from the paleozoic rocks along the course of the upper Delaware,—débris brought down by ice action and floods.

The garnetiferous group of Philadelphia County is exposed across the northern end, between Chestnut

¹ So called from a sandstone found and determined in New York by the State geological survey. All the groups in geology east of the Alleghenies are arranged on the basis of this survey. The Potsdam stone is a fine agglomerate of sand, with occasional specks of mica in it. In Philadelphia its strata are *synclinal* generally; i. e., they dip towards each other so as to form basins.

² Report of Progress, C^o, p. 90. By syenite is meant simply a form of granite (from Syene, in Egypt) in which the tough hornblende predominates instead of mica. Granite is composed of feldspar (the chief ingredient), quartz or flint, and mica. Gneiss is a bastard granitic agglomerate, with a slaty structure. Quartz is a form of flint, and when ground produces sand; feldspar, when ground, yields clay; thus the alluvium of the Philadelphia flats overlying the gravel and the primitive rocks is, in fact, composed of the same substance as these solid masses of crystallized and apparently adamantine solidity. So it is also with the soils.

Hill and the Schuylkill River. "Its northern limit is a diagonal line across the northern corner of the county." Its southern limit is less clear, but indications are found half-way between Lafayette Station and Manayunk. The rocks in this belt are garnetiferous mica schists (schists are rocks having a slaty structure, but otherwise not dissimilar to gneissic rocks), thin-bedded sandy gneisses, and hornblende slate. They are peculiar in having deposits of serpentine and steatite.¹ Serpentine occurs on the north-western edge of Chestnut Hill, extending across the Wissahiccon to a point half-way to the Ridge road. It is also found not far above Manatawna, and again half-way between that point and Lafayette. These strips of serpentine are on a line with and belong to the same geological "horizon" as the steatite quarry on the Schuylkill below Lafayette Station.

The belt of Manayunk mica schists and gneisses is visible along the Schuylkill from the Falls to a point half-way between Manayunk and Lafayette Station, its north boundary being south of Chestnut Hill, and its south line in the vicinity of Germantown. There is a gradual transition of this belt on the north to the Chestnut Hill schists, and on the south to a micaceous feldspathic gneiss. There are extensive exposures of hornblende slates between the Falls and Manayunk, on the line of the Schuylkill, and there is a small bed of steatite below the mouth of Cresheim Creek. The belt of Philadelphia mica schist and gneiss extends from the Poquessing to Cobb's Creek, and from the Delaware to the Falls of Schuylkill. In the eastern part of the county it extends north beyond the county line. Exposures of it may be found on the Schuylkill from Gray's Ferry up, and on the Poquessing, Pennepack, and Tacony Creeks. All through this belt, as in the other belts which have been described, the gneisses and schists are continually merging into one another with an avoidance of sharp transitions. There are beds of hornblende rock in several places, the largest along the Schuylkill above Columbia bridge, and on the river-bank at the south end of the river road, below the Strawberry Mansion. Above this point there is an alternation of feldspathic micaceous gneiss and slaty micaceous schists. This same alternation is observed below Columbia bridge to Gray's Ferry, with occasional lenticular beds of quartz in the mass. Feldspar predominates near Gray's Ferry, and forms deposits of kaoline, some of which are very pure and white. South of Gray's Ferry the micaceous gneiss is exposed along the river. At the western end of Market Street, on the east bank of Cobb's Creek, is a quarry of quartzose hornblende gneiss, resembling that at Columbia bridge, and there is a quarry of compact gray gneiss at Frankford.

¹ Serpentine is a compact rock of a greenish drab color; it is an unstratified hydrated silicate of magnesia in composition, while steatite is soapstone, a magnesian silicate also, and allied to talc, mica, and asbestos. All these minerals are apt to occur in close proximity to one another, and serpentine is often, if not usually, accompanied with chromic iron ore.

The arrangement of the Delaware River gravels and clays illustrates the geological history of Philadelphia. The Delaware flows in a southeast direction from Easton to a point a short distance below Trenton, where it turns and flows southwest to and beyond Philadelphia. This bend is a right angle, and is caused by the river striking the hilly outcrop of the New Jersey cretaceous formation. At an earlier period the river passed by or through much more of this marl or chalky formation than now. Its bed was apparently north and northwest of its present bed, and it must have worked its way along the line where the marl-beds joined the solid rock. The bed of the old river is probably marked by the limits of the Trenton gravel. This extends along the river from Yardleyville, on the Delaware, in Bucks County, above Trenton, to Darby Creek, below Philadelphia. Between Morrisville, opposite Trenton, and the mouth of the Poquessing Creek there are two sets of terraces and escarpments, marking an earlier course of the river, and showing that at one time it cut off across country without going around the long angle at Pennsylvania. The belt of red clay and gravel which extends above the Trenton gravel is composed of the débris of all the geological formations existing along the course of the Delaware, together with those of the sands and conglomerates of the edge of the New Jersey Cretaceous and perhaps Tertiary formations also, undermined by the river and carried down by its floods in the process of time. Among these débris are large angular blocks of sandstone and quartzite. The clay is in many cases bedded with the gravel, or deposited in large masses, as, for example, one west of the Pennsylvania Hospital for the Insane and several patches on this range east of the Schuylkill. Mr. Hall is not satisfied whether this deposit be the wash of the cretaceous beds or a deposit similar to the glacial clays of the Hudson River, but he seems to incline to the latter opinion. The age of the deposit, he observes, is "unquestionably not remote from the glacial period. The material which forms much of the gravel with which the clay is associated owes its transport to glacial agencies. Whether the ice did or did not extend to this latitude may still be questioned; but I think there is little question as to the period when the angular blocks were brought south and deposited here with the gravel." Fragments of unmistakably fossiliferous rock—Oriskany sandstone and Helderberg slate—have been found in various places. As to the Bryn Mawr gravel, which only exists at an elevation of four hundred feet above tide, Mr. Hall does not know its origin, though he suggests it may be the remains of a Tertiary or Upper Cretaceous formation swept away by flood and glaciers, and that it is connected with the Cenozoic deposits of New Jersey, the ancient Delaware having carried away all the deposits of this sort covering the intervening space,—that is to say, having once flowed with a current three hundred feet deep above

the present city of Philadelphia. But, in fact, Mr. Hall looks upon the Delaware River from Trenton to Chester as representing, in part at least, "the ancient coast line of the Atlantic Ocean."

Professor Lesley, after summing up the results of the survey thus far, comparing the results attained by Professor Rogers in 1836-58 with those reached by Mr. Hall, and stating the difficulties attending the investigation, concludes that it is impossible just now to locate the Philadelphia series of rocks exactly as to time and place in the general geological series; "all speculation is therefore fruitless," he says, "and we are left in almost total ignorance of the real state of things." We only know that these deposits are enormously thick. "If it were not for these faults" (breaks in the strata), says Professor Lesley, "we could assert that from the kaoline outcrops at Gray's Ferry up to the soapstone quarries above Manayunk the total pile of micaceous and hornblendic schists and gneisses measured about twenty-five thousand feet, representing in ancient times a mountain range as high as the Alps, now eroded nearly to a level nowhere more than four hundred feet above sea-level." Allowing for every fault, he thinks the ancient thickness might have been equivalent to a level of ten thousand feet above tide. Nothing can more emphatically illustrate the intensity of the geological disturbance at this point than the fact that the site of Philadelphia may at one time have occupied the side of a mountain range from ten thousand to twenty-five thousand feet high, and at another may have been two hundred or three hundred feet below the surface of an ocean. In regard to the glacial movement, the Pennsylvania geologists are waiting for the report of Mr. Henry Carvill Lewis, who is now tracing the moraine deposits across Pennsylvania. But some interesting facts are already known on this subject so far as Philadelphia is concerned. The great Delaware glacier has been partly traced by the moraine which it left. It crosses the Delaware River near Belvidere, below the Water Gap, in a straight line north of west to Beach Haven, on the North Branch of the Susquehanna, and thence to Lycoming Creek near Ralston. It passed diagonally over mountains and valleys without ever swerving from its course, crossing the top of the Kittatinny Mountain as if it despised to creep through the Water Gap at the mountain's foot. On the very top of the mountain, as a sign that it had been there, it left a block of Helderberg limestone more than six feet long. It had brought this from a valley below and five miles distant. The Oriskany stone has been brought sixty miles down the valley of the Schuylkill and deposited in West Philadelphia. Others have come down the Delaware through the Water Gap, yet Professor Lesley thinks it "more than doubtful" whether solid ice ever reached Philadelphia. "Floating fragments of the back country glaciers undoubtedly reached the Philadelphia neighborhood." The professor also doubts if

the ocean level ever rose sufficiently to explain the Bryn Mawr gravel, four hundred feet above tide. "It is, however, quite certain," he concludes, "that the Delaware River once flowed in a channel several hundred feet above its present bed, and has cut down since then to its present level. Its deposits of various ages are visible in terraces and patches at various elevations. This is in conformity with what we know of most of the rivers of the world," and the cases of the French rivers, the Seine and the Somme, are adduced in illustration. In the graveled terraces of the latter river at Abbeville remains of prehistoric man have been found. "Similar gravels," says Professor Lesley in conclusion, "line the sides of the Delaware River valley, and human implements of a remote antiquity have been found in them at Trenton." Attention has been called to the fact of such deposits in the alluvium and gravel by Kalm, the Swedish botanist, by Dr. Mease, in his "Picture of Philadelphia," and by John F. Watson, the antiquarian. Kalm's account in 1749 is curious. It may be found in the second volume of his travels, where he says that he once called together the oldest inhabitants of the village of Raccoon (Gloucester Co., N. J.) to converse with them on the natural history of the country. There came to the meeting Mäns Keen (Kyn), Aoke Helm, Peter Rambo, William Cobb, Sven Lock, and Eric Ragnilson. They told Kalm that whenever a well was dug in Raccoon, they always found at the depth of twenty or thirty feet great numbers of clam and oyster shells, sometimes reeds and rushes, once a hank of flax. "Charcoal, firebrands, great branches, blocks, and Indian trowels had often been found very deep in the ground." Peter Rambo found marine animals, petrified or burnt wood, a huge spoon, and some bricks. Mäns Keen, at the depth of forty feet, found chestnut wood, roots, and stalks, etc., and reported that at Elfsborg, when the Swedes first built their fort there, they found, twenty feet below the surface, broken earthen vessels and good whole bricks.¹

In connection with the soil and rocks which underlaid the site of Philadelphia a great variety of minerals were found. The binary compounds, sulphides and arsenides, were represented by a bastard graphite or plumbago which has been found at Robinson's Hill; bismuthite exists in tourmaline in a granite vein in the masses of gneiss on the west side of Schuylkill, over against Fairmount Water-Works, and these rocks, as well as the Frankford gneiss, contain molybdenite. The Frankford gneiss also shows copper pyrites in pinchback brown crystals, as well as fluorite or fluor-spar in purplish crystalline masses. Menalcite exists in a quarry near Columbia bridge and in the gneiss opposite Fairmount; magnetite or lodestone at Chestnut Hill; crystals of limpid quartz in the soil at several places, in the Darby country particularly and

¹ Mickle, "Reminiscences of Old Gloucester."

While there are no conspicuous treatises on the specific subject and limited to the one locality, our information in regard to the natural history of Philadelphia, its flora and fauna, is full and satisfactory. All the early descriptive writers have had much to say on this subject, as if it fascinated them. The works of the Bartrams, the Darlingsons, Kalm, Wilson, and others have added a touch of genius for pleasant writing to the attractiveness of the theme itself. The scientific treatises of Darlington are become classics, and every lover of flowers and birds has heard something charming about John and William Bartram and Alexander Wilson. With Darlington and other writers on Chester, with the exhaustive way in which various naturalists have from time to time illustrated the botany and animal life of Bucks, Montgomery, and Chester Counties and the sections of New Jersey opposite to Philadelphia, it is easy to tell the whole story of the city's flora and fauna. The beauty and the strangeness, the wild luxuriance and shaded mysteries of the primeval forest, however, must be left to the imagination. The pen cannot describe them. In subsequent chapters will be found many quotations from the early writers, showing how vividly they were impressed with the landscape. That was wild without being savage. It was stately and imposing, yet had something of a parklike look, while the occasional birch-bark canoe along shore and the thin curling blue smoke from an Indian's lodge here and there did not disaccord. The undergrowth was not greatly tangled, save in damp and springy places, and the immense proportion of full-grown trees in the primitive forest always lends to it a certain dignity and patriarchal aspect. In the swamps there were great white cedars, almost as venerable as the cypresses of the South, but one missed their bearding of gray Spanish moss. The stately elm spread and branched with full-grown vigor, and the oak was so much at home that Bartram enumerates twenty-one varieties as being found within the boundaries of Philadelphia County. Penn. in one of his early letters, enumerates black walnut, cedar, cypress, chestnut, hickory, sassafras, beech, and the oaks as among the most useful native trees. Of fruits growing wild he mentions the white and black mulberry, plums, strawberries, cranberries, huckleberries, etc. Apples and peaches were plentiful wherever the Indians had clearings, and Penn found them as good as any English peaches, "except the true Newington." His mind is not made up as to whether the fruit is native to the soil or not. Gabriel Thomas, in his little history of Pennsylvania and West New Jersey, after mentioning such wonders as the salamander stone (asbestos), "having Cotton in Veins within it, which will not consume in the Fire, though held there a long time," speaks of several sorts of wild fruits,—

"as excellent Grapes, Red, Black, White, Muscadell, and Fox, which upon frequent Experience have produc'd Choice Wine, being daily Cultivated by skillful Vinerons. . . . Walnuts, Chesnuts, Filberts, Hockery Nuts,

Hartleberries, Mulberries, Rasberries, Strawberries, Cramberries, Plumbs of several sorts, and many other Wild Fruits in great plenty, which are common and free for any to gather." "The common Planting Fruit-Trees are Apples, which from a Kernel (without Inoculation) will shoot up to be a large Tree, and produce very delicious, large and pleasant Fruit, of which much excellent Cyder is made, in taste resembling that in England press'd from Pippins and Pearmains, sold commonly for between Ten and Fifteen Shillings per Barrel, Pears, Peaches, &c., of which they distil a Liquor very much like the taste of Rumm, or Brandy, which they yearly make in great quantities. There are Quinces, Cherries, Gooseberries, Currants, Squashes, Pumpkins, Water-Mellens, Muskmellens, and other Fruit in great Numbers, which seldom fail of yielding great plenty. There are also many curious and excellent Physical Wild Herbs, Roots, and Drugs of great Vertue, and very sanative, as the Sassafras and Sarsaparilla, so much us'd in Diet Drinks for the Cure of the Venereal Disease, which makes the Indians, by a right application of them, as able Doctors and Surgeons as any in Europe, performing celebrated cures therewith, and by the use of some particular Plants only, find Remedy in all Swellings, Burnings, Cuts, &c. There grows also in great Plenty the Black Snake-Root (fam'd for its sometimes preserving, but often curing the Plague, being infused only in Wine, Brandy, or Rumm), Rattle-Snake Root, Poke-Root, call'd in England Jallop, with several other beneficial Herbs, Plants, and Roots, which Physicians have approved of, far exceeding in Nature and Vertue those of other Countries."

Campanius, in his lively but careless narrative, speaks of the great quantity of rushes, with thick, strong roots, that grow in the marshes, and the hog's turnip, like the Jerusalem artichoke, that the Indians eat when their bread and meat give out. He speaks of "the fish-tree, which resembles box-wood, and smells like raw fish." It cannot be split, but melts away if fire be built around it. The Indians had peas, beans, and squashes before the white settlers came in, with gourds and melons. In the dialects of the Unamis, or Delawares of the lowlands, there were many names for tree, shrub, and plant which they must have become familiar with in the vicinity of where Philadelphia now stands. *Schau-we-min-shi* means the red-beech; *ga-wunshak*, the green brier; *hob-be-nac*, the potato; *Coaquonmoc*, the site of Philadelphia, is a corruption of *Cu-we-quen-a-ku*, "the grove of tall pines;" *cu-wen-ha-sink* (Cohocksink), meaning "where the pines grow," from *cu-we*, pine-tree, *co-wa-nesque* (*ga-wun-shes-que*), "overgrown with briars;" *Hob-ben-i-sink*, "where there are wild potatoes;" *Perkiomen* (*Pak-ih-mo-mink*), "place of cranberries," from *pak-him*, cranberry; *si-pu-o-man-di-can*, "wild plums;" *topi*, the alder; *tom-bic*, crab-apple; *woap-i-min-schi* ("the white tree"), the chestnut-tree; *woap-halloch*, "wild hemp;" *wech-que-tauk*, the willow; *wisach-gim*, grapes; *win-ak*, sassafras; *schind*, spruce; *mitz-hack*, gourd, squash, etc.; *ge-scund-hac*, pumpkins; *musquem*, corn; *mis-si-me-na*, apple.

A complete catalogue of plants in Philadelphia County would be out of place in a work of this character, but some mention may be made of prominent families, species, and varieties. The ferns were largely represented in a place containing so many shady and moist spots, rocks, and hollows and spring-heads in the depths of groves. Among these were several of the horsetail ferns (*Equisetaceæ*), as the *E. arvense*, *E. sylvaticum*, *E. hyemale*, or scouring rush; the various polypodia, including maiden-hair, the purple brake, the *Dicksonia punctilobula*, or bladder-fern, ophioglossum,

and all the tribe of lycopods found in the latitude of Philadelphia; the *spagnidae*, *phascidae*, *hypnidae*, etc. There were full representations of the *hepaticae*, or liverwort family, etc. Of the general class of phænogamous plants, the typical clematis (virgin's bower), tall anemone, the wind-flower, meadow-rue, crow-foot, buttercup, marsh marigold, wild columbine, larkspur, and black snake-root represent the order *Ranunculaceæ*; the magnolias have the *Magnolia glauca* (sweetbay, growing in the southeast of the county) and the *Liriodendron tulipifera*, or tulip-tree, so often called poplar. Of the *Anonaceæ*, the papaw (*Asimina triloba*) is mentioned by the early writers, and is said to grow now on Darby Creek; the moonseed (*Menispermum*) is common along streams; the *Berberis canadensis*, the *Podophyllum peltatum* (May-apple), and *Nelumbium luteum* (water-chinquapin, introduced from Connecticut), represent two small families. Of the *Nymphaceæ*, or water-lily family, Philadelphia used to be famous for its spatterdocks (yellow pond-lily, *Nuphar advena*), and its sweet water-lily (*Nymphaea odorata*). The *Sarracenia purpurea* (pitcher-plant, very rare) is found in wet places about Tinicum; the poppy family has the celandine and the blood-root to represent it. Among the *Fumaraceæ* are the common climbing fumitory, the *Dicentra cucullaris* (Dutchman's breeches), and the *Corydalis glauca*. The *Cruciferae* have *Nasturtium officinale* (common water-cress), *N. sylvestre* (yellow cress, peculiar to Philadelphia low grounds), *N. palustre* (marsh cress), *Cardamine rhomboidea* (spring cress), *C. hirsuta*, *Arabis dentata*, *Barbarea præcox* (scurvy grass), *Sisymbrium canescens* (tansy mustard), *Sinapis alba et nigra* (but all natives of Europe), *Draba verna* (whitlow grass), *Lepidium virginicum* (wild pepper-grass), *Capsella* (shepherd's purse), *Herperis matronalis* (rocket), and *Lunaria rediviva* (honesty). The *Isatis tinctoria*, or woad, was introduced by Penn. Of the violet family, Philadelphia has *Solea concolor* (green violet), and *Viola rotundifolia* (round-leaved), *V. lanceolata*, *V. blanda* (sweet white), *V. cucullata* (common blue), *V. palmata*, *V. villosa*, *V. sagittata*, *V. pedata* (bird's-foot, grows on mica slate soils), *V. Muhlenbergii* (dog violet), *V. pubescens*, *V. tricolor* (pansy), and *V. odorata*. The sundew family (*Droseraceæ*) has *D. filiformis*. The St. John's-wort family (*Hypericaceæ*) has *Hypericum perforatum* (common St. John's-wort), *Ascyrum Cruc. Andree* (St. Andrew's cross), *H. ellipticum*, *H. corymbosum*, *H. adpressum*, *H. mutilum* (the *Parviflorum* of Muhlenberg), *H. Virginicum* (*Eloëa Virginica* of Nuttall). The pink family (*Caryophyllaceæ*) is represented by *Dianthus armeria* (Deptford pink), *Saponaria officinalis* (common soap-wort, "Bouncing Bet"), *Silene stellata* (starry campion), *S. Pennsylvanica* (common wild pink), *S. antirrhina* (sleepy catchfly), *Agrostemma Githago* (corn-cockle), *Stellaria media* (chickweed), *S. pubera*, *S. longifolia*, *Cerastium vulgatum*, *C. viscosum*, *C. oblongifolium* (north of Chestnut Hill), *C. nutans*. The purslane family (*Portulacaceæ*)

has *Portulaca oleracea* (common pursley), and *Claytonia Virginica* (spring beauty). The mallows (*Malvaceæ*) are represented by *Malva rotundifolia* (common mallow), *Abutilon*, *Avicennæ*, *Hibiscus moschentos* (Bow Creek swamp rose-mallow), *H. trionum*. The Linden or Basswood family (*Tiliaceæ*) has *Tilia Americana* (basswood; not common, though the Swedes and Indians both gave it as the local name of water-courses). The *Linum Virginianum* (wild flax) is the only one of that family. The wood-sorrels (*Oxalidaceæ*) have chiefly the *Oxalis stricta*, the yellow species. The *Geraniaceæ* (Cranesbill family) have the *G. maculatum* (the common plant); *G. Carolinianum*. The *Balsaminaceæ* (Balsam family) have the *Impatiens pallida* (Touch-me-not), *I. fulva*, and *Tropæolum majus* (from Europe). The sumachs have *Rhus typhina* (staghorn sumach), *R. glabra*, *R. venenata*, and *R. toxicodendron* (poison oak and poison sumach). The Vine family show *Vitis labrusca* (fox-grape), *V. æstivalis* (chicken grape), *V. cordifolia* (winter grape), *V. vulpina* (muscadine), and *Ampelopsis quinquefolia* (Virginia creeper, American ivy). The Buckthorn family (*Rhamnaceæ*) show *Rhamnus catharticus* and *Ceanothus Americanus* (Jersey tea). The *Celastraceæ* yield *Celastrus scandens* (climbing bitter-sweet), *Euonymus atropurpureus* (burning bush), and *E. Americanus* (strawberry-tree). The *Sapindaceæ* yield *Staphylea trifolia* (the bladder-nut); *Acer saccharinum* (sugar-maple); *A. rubrum* (swamp maple; this is the "fish-tree" of Campanius); *Negundo aceroides* (box-elder). The Milkwort family furnishes *Polygala sanguinea*, *P. cruciata*, *P. verticillata*, *P. ambigua*, *P. Senega* (Seneca snake-root, referred to by Gabriel Thomas), *P. polygama* (*P. rubella* of Muhlenberg). Of the *Leguminosæ*, there are *Lupinus perennis* (wild lupine, Chestnut Hill), *Crotalaria sagittalis* (rattle-box), *Trifolium arvense* (stone-clover), with *T. pratense*, *T. repens*, *T. agrarium*, and *T. procumbens* (all the useful clovers); *Melilotus officinalis* and *alba*; *Medicago sativa* (lucerne), *Amorpha fruticosa*; *Robinia pseudacacia* (common locust), *R. viscosa*, *Tephrosia Virginiana* (goats' rue), *Desmodium nudiflorum*, *D. acuminatum*, *D. rotundifolium*, *D. canescens*, *D. cuspidatum*, *D. paniculatum*, *D. rigidum*, *D. Marylandicum*, etc.; *Lespedeza violacea* (three sorts), *L. procumbens*, *L. repens*, etc.; *Vicia sativa* (vetch); *Lathyrus venosus* and *Palustris*, *L. latifolius*, *L. odoratus*, *Cicer arietinum*, *Phaseolus perennis* (wild bean), *P. helvolus*, *P. vulgaris*; *Apios tuberosa* (ground-nut); *Galactia glabella* (milk-pea); *Amphicarpea monoica*; *Baptisia tinctoria* (wild indigo), *B. Australis*, *Cercis Canadensis* (Judas-tree), *Cassia Marylandica* (wild senna), *C. chamecrista* (partridge pea), *C. nictitans* (wild sensitive-plant), and *Gleditschia triacanthus* (honey-locust). Of the Rose family there are *Prunus Americana* (wild plum), *P. chicasa* (chicasaw plum), *P. spinosa* (sloe), *P. Pennsylvanica* (wild cherry), *P. avium*, *P. serotina*, *P. vulgaris*, *P. Virginiana*; *Spiræa opulifolia* (wine-bark), *S. salicifolia* (meadow-sweet), *S. tomentosa*; *Gil-*

lenia trifoliata (Indian physic); *Agrimonia eupatoria* and *parvifolia*; *Potentilla Canadensis* (common five-finger), *P. palustris*; *Fragaria Virginiana* and *vesca* (wild strawberries); *Rubus strigosus*, *R. occidentalis* (red and black raspberry), *R. villosus* (blackberry), *R. Canadensis* (dewberry), *R. hispidus*, and *R. cuneifolius*; *Rosa Carolina*, *R. lucida* (wild-rose), *R. rubiginosa* (sweet-brier); *Crataegus cordata*, *C. oxyacanthæ* (hawthorn), *C. coccinea*, *C. tomentosa* (blackthorn), *C. parvifolia*; *Pyrus coronaria* (crab-apple), *P. arbutifolia*, *P. malus*, *P. communis* (the Seckel pear is a native of Philadelphia), *P. Americana* (mountain ash), *Amelanchier Canadensis* (service-berry), and *Cydonia vulgaris* (quince). The *Lythraceæ* have *Ammania humilis*, *Lythrum lineare*, *Nesaea verticillata*, and *Cuphea viscosissima*. The Evening Primrose family (*Onagraceæ*) furnish *Epilobium palustre*, *E. coloratum*, *Oenothera biennis* (common primrose), *O. fruticosa* (sun-drop), *O. pumilla*, *Gaura biennis*, *Ludwigia palustris* (water parsley), and *Circæa lutetiana* (nightshade); *Myriophyllum scabratum*, *M. ambiguum* (pond plants), and *Opuntia vulgaris*. The Currant family is represented by *Ribes hirtellum* (wild gooseberry), *R. Floridum* (black currant), and *R. rubrum*. The Gourd family has *Sicyos angulatus*, *Cucumis sativus*, *C. melo*, *C. citrullus*, *Cucurbita pepo*, *C. melopepo*, *C. aurantia*, and *Lagenaria vulgaris* (all cultivated by Indians). Of the order of Saxifrages there are *Saxifraga Virginensis*, *S. Pennsylvanica*, *S. erosa* (Pennipack Creek), *Heuchera Americana* (alum-root), *Mitella diphylla* (bishop's cap), *Chrysosplenium Americanum* (golden saxifrage), *Itea Virginica*, and *Philadelphus coronarius*. The Witch-hazel family gives *Hamamelis Virginica*, *Liquidambar styraciflua* (sweet gum or liquidamber tree, used by the Swedes to make hubs for their cart-wheels, as Campanianus notes). The *Umbellifera* or Parsley family is represented in Philadelphia by two species of pennyworts (*Hydrocotyle Americana* and *umbellata*), two species of black snake-root, the *Eryngium yuccæfolium* (rattlesnake root), *Daucus carota* (carrot), *Heracleum lanatum* (cow-parsnip), *Pastinaca sativa* (common parsnip), *Archemora rigida* (cowbane), *Archangelica hirsuta* and *atropurpurea*, *Thaspium bardinode*, *Thaspium atropurpureum*, *Cicuta maculata* (musquash-root, water hemlock), *Sium lineare*, *Cryptotenaria Canadensis* (hone-wort), *Osmorrhiza longistylis* (sweet-cicely), *Conium maculatum* (hemlock), *Erigenia bulbosa*, *Apium petroselinum* (parsley), *A. graveolens* (celery), *A. fœniculum* (fennel), *Anathum graveolens* (dill). The Ginseng order have *Aralia spinosa* (Hercules' club), *A. racemosa* (spikenard), *A. medicaulis* (wild sarsaparilla), and *A. trifolia* (dwarf ginseng). The Dogwood family have *Cornus Florida* (common dogwood), *C. sericea* (silky cormel or kinikinnik), *C. paniculata*, *C. alternifolia*, and *Nyssa multiflora* (black gum). The Honeysuckle family is represented by *Lonicera sempervirens* (trumpet honeysuckle), *L. grata* (woodbine), *Diervilla Canadensis*, *Triosteum perfoliatum* (horse

gentian), *Sambucus Canadensis* (elder), *Viburnum nudum*, *V. prunifolium* (black haw), *V. lentago* (sheep-berry), *V. dentatum* (arrow-wood), *V. acerifolium*, *V. opulus* (snow-ball), and *V. lantanoides* (hobble-bush). The Madder family has *Galium aparine* (goose-grass), *G. asprellum*, *G. obtusum*, *G. triflorum*, *G. pilosum*, *G. circæans* and *lanceolatum* (wild liquorice); *Diodia teres* (button-weed), *Mitchella repens* (partridge berry), and *Oldenlandea cœrulea* (bluets). Of the Composite order there are iron-weed (*Vernonia noveboracensis*), *Elephantopus Carolinianus*, *Liatris squarrosa*, *L. spicata*, and *L. dubia*; *Eupatorium purpureum* (trumpet-weed), *E. teucrifolium*, *E. rotundifolium*, *E. perfoliatum* (boneset), *E. ageratoides* (white snake-root), *E. aromaticum*; *Mikania scandens*; *Conoclinium cœlestinum* (moist-flower), *Tussilago farfara*, *Sericocarpus solidageus*, *S. coryzoides*; Aster and starworts, a dozen leading varieties; *Erigeron canadense* (butter-weed), *E. Philadelphicum* (fleabane), *E. annuum* (sweet scabious), *E. strigosum*; *Diplopappus linarifolius*, *D. umbellatus*, and *D. amygdalinus*; *Boltonia asteroides* (Bartram), *Solidago squarrosa* (golden-rod), *S. bicolor*, and fourteen other varieties; *Chrysopsis mariana* (golden aster), *Inula helenium* (elecampane), *Polymnia Canadensis*; *Iva frutescens*; *Ambrosia trifida* (rag-weed), *A. artemesiaefolia* (hogweed), *Xanthium strumarium* (cockle-bur), *X. spinosum*, *Eclipta procumbens*, *Heliospis levis* (ox-eye), *Rudbeckia* (cone-flower), four varieties; *Helianthus* (sunflower), five varieties, including *H. tuberosus* (Jerusalem artichoke), and *H. annuus* (garden sunflower); *Coreopsis trichinosperma*, *Bidens frondosa* (beggar-lice), *B. connata*, *B. cernua*, *B. chrysanthemoides*, *B. bipinnata* (Spanish needles); *Helenium autumnale* (sneeze-weed), *Maruta cotula* (Mayweed), *Achillea millefolium* (yarrow, or mill-foil), *Leucanthemum vulgare* (ox-eye daisy), *Matricaria parthenium* (feverfew), *Tanacetum vulgare* (tansy), *Artemisia caudata* (wormwood), *A. vulgaris* (mugwort), *Gnaphalium polycephalum* (everlasting), *G. purpureum* (purple cudweed); *Filago Germanica*, *Erechtites hieracifolia*, *Cacalia atriplicifolia* (plantain), *Senecio aureus* (squaw-weed), *Centaurea cyanus* (blue-bottle), *Cirsium* (thistle), seven varieties, including common thistle (*C. lanceolatum*), and Canada thistle (*C. arvense*); *Lappa major* (burdock), *Cichorium intybus* (chicory), *Hieracium scabrum* (hawkweed), *H. Gronovii*, *H. venosum* (rattlesnake-weed), and *H. paniculatum*; *Nabalus albus*, *N. altissimus*, *Taraxacum densleonis* (dandelion), *Lactuca elongata* (wild lettuce), *Mulgedium acuminatum*, *Sonchus oleraceus* (sow thistle) and *S. asper*. The Lobelia family have the cardinal flower, the great lobelia (*L. syphilitica*), the *L. inflata* (Indian tobacco), the blue lobelia (*L. spicata*), and *L. Nuttallii*. The Campanulas have the marsh bell-flower, the tall bell-flower, and *Venus' looking-glass*. Of the heaths there are *Gaylussaccia frondosa* and *G. resinosa* (the blue and the black huckleberry), *Vaccinium macrocarpon* (cranberry), *V. stamineum* (squaw huckleberry), *V. Pennsylvanicum*,

and *V. vacillans*; the *Epigaea* (trailing arbutus), *Gaultheria procumbens* (wintergreen teaberry), *Leucothoe racemosa*, *Clethra alnifolia* (white alder), *Kalmia latifolia* (mountain laurel), *K. angustifolia* (sheep laurel), *Azalea viscosa* (swamp honeysuckle), *A. nudiflora* (Pinxter flower), *Pyrola rotundifolia*, *P. elliptica*, *Chimaphila umbellata* (pipsissewa), *C. maculata*, *Monotropa uniflora* (Indian pipe), and *M. hypopitys* (pine-sap). The *Aquifoliaceæ* or Holly family give specimens (but infrequent) of *Ilex opaca* (American holly), and *I. verticillata* (black alder). The Ebony family is represented by *Diospyros Virginiana* (persimmon); the plantains by *Plantago major*, *P. lanceolata*, and *P. virginica*; the primulas (primroses) by *Dodecatheon Meadia* (American cowslip), *Lysimachia stricta* (loose-strife), *L. quadrifolia* and *L. ciliata*, and the pimpernel (*Anagallis arvensis*). There is one bladderwort, *Utricularia vulgaris*; and one bignonia, the catalpa. The *Orobanchaceæ* have *Epiphegus Virginiana* (beech-drop), *Conopholis Americana* (cancer-root), and *Aphyllon urciflorum*. The *Scrophulariaceæ* have the common mullein, the moth mullein, the toad-flax (*Linaria Canadensis* and *L. vulgaris*, "butter-and-eggs"), *Scrophularia nodosa*, *Chelone glabra* (turtle-head), *Minulus alatus* and *M. ringens* (the monkey-flower), *Hemianthus micranthemoides*, *Veronica* (speedwells, seven varieties), *Buchnara Americana*, *Gerardia* (five sorts), *Castilleja coccinea* (scarlet painted cup), *Pedicularis Canadensis* (wood betony), *P. lanceolata*. The verbenas have *V. hastata* (blue vervain) and the white variety. The *Labiataæ*, or Mint family, are represented by the wood-sage or American germander, spearmint (*Mentha viridis*), peppermint and wild mint (*M. Canadensis*); *Lycopus Virginicus* (bugle-weed), *Cunila mariana* (dittany), *Pycnanthemum incanum* (basil), and five other sorts, *Origanum vulgare* (horse-mint or wild marjoram), *Thymus serpyllum*, *T. vulgaris* (thyme), *Melissa officinalis* (balm), *Hedeoma pulegioides* (pennyroyal), *Colinsonia Canadensis* (rich-weed, horse-balm), *Salvia lyrata* and *S. officinalis* (sage; the fine flowering sages are from South America); *Monardia fistulosa* (wild bergamot), *Lophanthus* (hyssop), two sorts; *Nepeta cataria* (catnip) and *N. glechoma* (ground ivy); *Scutellaria* (skull-cap), six sorts; *Marrubium vulgare* (horehound), *Leonurus cardiaca* (motherwort). The Borage family have *Echium vulgare*, *Onosmodium Virginianum*, *Lithospermum arvense* (common gromwell), *Myosotis palustris* (forget-me-not), *Cynoglossum officinale* (hound's tongue), *C. Virginicum*, *C. Morisoni* (beggar's lice); of the Water-leaf family (*Hydrophyllaceæ*) there are two sorts besides the *Ellisia nyctelea* and the *Phacelia parvifolia*; of the *Polemoniaceæ*, *Polemonia reptans* (Jacob's ladder) and *Phlox maculata* (wild sweet-william), *P. pilosa* and *P. subulata*, with *Pyxidanthera barbulata*. Of the *Convolvulus* family, *Ipomea purpurea* (morning-glory), *I. pandurata*, *Convolvulus arvensis* (bindweed), *Cuscuta Gronovii* (dodder). The Nightshade family have *Solanum dulcamara* (bitter-sweet), *S. nigrum*

(nightshade), *S. Carolinense* (horse-nettle); *Physalis pubescens* and *viscosa* (ground cherry), *Datura stramonium* (jimson-weed); the *Solanum tuberosum* (potato), *S. melongena* (egg-plant), *Lycopersicum esculentum* (tomato), *Atropa belladonna* (deadly nightshade), *Nicotiana tabacum* and *Capsicum annuum* (red pepper, Cayenne) are all allied to this family and all naturalized in Philadelphia County. The Gentian family gives the centaury, fringed gentian, *Gentiana saponaria* (soapwort gentian), *G. Andrewsii* (closed gentian), *Bartonia tenella*, and *Obolaria Virginica*; the family of *Apocynaceæ* gives the spreading dogbane and the Indian hemp (*Apocynum Cannabinum*). The Milkweed order yields *Asclepias cornuti* (common milkweed) and ten other varieties; the Olive family yields privet, fringe-tree (*Chionanthus Virginica*), white-ash, red-ash, and black or elder-leaved ash. There are two sorts of *Aristolochiaceæ*, the asarabacca (wild ginger) and *Aristolochia serpentaria* (Virginia snake-root). The poke-weed family have *Phytolacca decandea* (common poke); the Goosefoot family, *Chenopodium album* (lamb's quarters), *C. ambrosioides* (Mexican tea worm-seed); the amaranth, *Amaranthus albus*, *A. hybridus* (pig-weed), *A. spinosus*—prince's feather ("love lies bleeding"), is of this family—and *Acnida Cannabina*. The Buckwheat family has *Polygonum orientale*, *P. Pennsylvanicum*, *P. persicaria* (lady's thumb), and ten other sorts; *Fagopyrum esculentum* (buckwheat), *Rumex* (water-dock), four varieties, *R. acetocella* (sheep-sorrel), *Rheum rhaponicum* (pie-plant); of the *Lauraceæ* there are sassafras and benzoin (spice-wood); of the *Meze-reums*, the *Dirca palustris*; of the *Santalaceæ*, the *Comandra umbellata*; of the mistletoes, *Phoradendron flavescens*. There are besides the *Saururus cernuus*, the *Ceratophyllum demersum*, *Callitriche verna*, *Podostemon ceratophyllum*, *Euphorbia corollata* (spurge), *E. maculata*, and *E. hypericifolia*, and the *Acalypha gracilens*. Of the *Urticaceæ* or Nettle family there are *Ulmus fulva* (slippery elm), *U. Americana* (native elm), *Celtis occidentalis* (hackberry), *Morus rubra* (red mulberry), *M. alba*, *M. papyrifera*, *Maclura aurantiaca* (osage orange, naturalized), *Urtica dioica* (stinging nettle), *Laportea Canadensis*, *Pilea pumila* (richweed), *Parietaria Pennsylvanica* (pellitory), *Cannabis sativa* (hemp), *Humulus lupulus* (hop). Of the Plane-tree family, *Platanus occidentalis* (the sycamore or buttonwood-tree); of the walnuts, *Juglans cinerea* and *J. nigra* (butternut and black-walnut), *Carya alba* (shellbark), *C. sulcata* (hickory-nut), *C. tomentosa* and *C. microcarpa* (hickories), *C. glabra* (pig-nut hickory), *C. amara* (swamp hickory). Of the Oak family (*Cupuliferæ*) there are found in Philadelphia the *Quercus obtusiloba* (post-oak), *Q. alba* (white-oak), swamp chestnut-oak, swamp white-oak, yellow chestnut-oak, chinquapin-oak, willow-oak, laurel-oak, black-jack, scrub-oak (*Q. ilicifolia*), Spanish oak, pin-oak, quercitron-oak (*Q. tinctoria*), scarlet-oak, red-oak, the chestnut, chinquapin, beech, hazel-nut, and horn-beam or ironwood. Of the *Myricaceæ* are the wax-myrtle (bayberry) and the sweet fern; of the

Birches, *Betula nigra* (red-birch), and *Alnus serrulata* (smooth alder); of the Willow family (*Salicaceæ*), there are the *Salix tristis* (dwarf gray-willow), the low bush, weeping, basket, or osier, silky-leaved, petiolate, black, white, and brittle willows; the quivering aspen, large-toothed aspen, Athenian, Lombardy, and silver poplar (naturalized since 1785), and the *Populus candidans* (Balm of Gilead). Of the *Coniferæ*, there are *Pinus inops* (Jersey pine), *P. rigida* (pitch-pine), *P. strobus* (white-pine), *Abies Canadensis* (hemlock-spruce), *Thuja occidentalis* (American arborvitæ), *Cupressus thyoides* (white-cedar), and the *Juniperus communis* and *Virginiana* (savin). Of the *Arum* family there are *Arisema triphyllum* (Indian turnip), and *Dracontium*, the skunk-cabbage, the golden-club, and the *Calamus* or sweet-flag; of the Cat-tails, *Typha latifolia*, *Sparganium simplex*, and *S. ramosum*; of the Duck-weeds, *Lemna minor* and *L. polyrrhiza*; of the Pond-weeds (*Naiadaceæ*), *Najas flexilis*, *Ruppia maritima*, *Potamogeton natans*, *P. perfoliatum*, *P. lucens*, etc.; of the *Alismaceæ*, *Alisma plantago*, *Sagittaria variabilis*; of the Frog-bits, *Anacharsis Canadensis* and *Vallisneria spiralis* (eel-grass); of the Orchid family, *Orchis spectabilis*, *Gymnadenia tridentata* and *flava*, five sorts of *Plantathera*, *Goodyera pubescens*, *Spiranthes gracilis* and *cernua*; three sorts of *Pogonia*, *Calopogon pulchellus*, *Myrostylis ophioglossoides*, *Liparis liliifolia*, *Corallorhiza*, three varieties; *Aplectrum hyemale* (Adam-and-Eve), *Cypripedium pubescens*, and *acule* (lady's slipper). Of the Amaryllises, there is *Hypoxys erecta* (star-grass); of the Bloodworts, *Aletris farinosa*; of the Irises, the blue flag and fleur-de-luce, the Bermuda grass, the crocus, blackberry lily, and tiger-flower; of the Yams, *Dioscorea villosa*; of the Smilaxes, *S. rotundifolia* (greenbrier), *S. glauca*, and *S. herbacea* (carrion-flower); *Trillium cernuum* (wake-robin), and *Madeola Virginica* (Indian cucumber). Of the Lily family there are *Asparagus officinalis*, *Polygonatum giganteum* (Solomon's seal), *Smilacina racemosa*, *S. Canadensis*, *Convallaria majalis* (lily of the valley), day-lily, Star-of-Bethlehem, wild leek, field garlic, meadow garlic, *Lilium Philadelphicum*, *L. Canadense*, *L. superbum* (Turk's cap), *Erythronium Americanum*; of the Colchicum family, there are the bellwort, the bunch-flower, the white hellebore, the *Amianthum muscætoxicum*, the *Chamelirium luteum*, and *Tofieldia pubens*. Of the Rush family, *Juncus effusus* (common rush), and six others; of the *Pontederiaceæ*, *Pontederia cordata*, the mud-plantain, and the water star-grass; of the Spiderworts, *Commelina Virginica* and *Tradescantia Virginica*; of the *Xyridaceæ*, *Xyris Caroliniana*; of the Pipeworts, *Eriocaulon gnaphalodes*. The Sedges are represented by five varieties of *Cyperus*, seven of *Scirpus*, five of *Fimbristylis*, thirty-three of *Carex*, besides *Dulichium spathaceum*, *Fleochuris obtusa*, *E. tenuis*, and *E. acicularis*, and *Eriophorum Virginicum*; *Cyperus rotundus* is nut-grass; the *carices* do not vary much in appearance, though the catalogue of their varieties in Gray's Manual occupies nearly thirty pages. Of

the family of *Gramineæ*, or grasses, Philadelphia was the habitat of a great many genera and species; there were two *Leersia*, three *Agrostes*, five *Muhlenbergia*, five *Poa*, three sorts of *Elymus*, fifteen of *Panicum*, and three of *Andropogon*; among these were rice-grass, fly-catch, water-oats, meadow fox-tail, timothy, drop-seed grass, bent-grass, thin-grass, orchard-grass, herd-grass, poverty-grass, blue-grass, green-grass, cheat, wild-oats, bur-grass, red-top, nimble will, hair-grass, joint-grass, rattlesnake-grass, spear-grass, wire-grass, meadow fescue, darnel, couch-grass, wild-rye, sweet-scented vernal grass, millet, bottle-grass, sesame, and broom-corn.

Of the animals, birds, and fishes, the reptiles and insects of Philadelphia, the old writers make much mention, but it is still rather of a confused sort. Penn dwells upon the elk and deer, the bears, beavers, raccoons, rabbits, and squirrels, the turkeys, pheasants, pigeons, and partridges, and the water-fowl. The abundance of fish struck him, and he frequently commented upon them. Gabriel Thomas names "swans, duck, teal, geese, divers, brands, snipe, curlew, eagles, Turkeys (of Forty or Fifty Pound Weight), Pheasants, Partridges, Pigeons, Heathbirds, Blackbirds, and the strange and remarkable fowl called (in these parts) the Mocking-Bird, that Imitates all sorts of Birds in their various Notes. And for Fish, there are prodigious quantities of most sorts, viz.: Shadd, Cat-Heads, Sheep-Heads, Herrings, Smelts, Roach, Eels, Perch. As also the large sort of Fish, as Whales (of which a great deal of Oyl is made), Salmon, Trout, Sturgeon, Rock, Oysters (some six Inches long), Crabs, Cockles (some as big as Stewing Oysters, of which are made a Choice soupe or Broth), Canok, and Mussels, with many other sorts of fish, which would be too tedious to insert. There are several sorts of wild Beasts of great Profit, and good Food, viz.: Panthers, Wolves, Fitchow, Deer, Beaver, Otter, Hares, Musk-Rats, Minks, Wild Cats, Foxes, Raccoons, Rabbits, and that strange creature, the Possum, she having a false Belly to swallow her Young ones, by which means she preserveth them from danger when anything comes to disturb them. There are also Bears, some Wolves, are pretty well destroyed by the Indians for the sake of the Reward given them by the Christian for that service. Here is also that Remarkable Creature, the Flying Squirrel, having a kind of Skinny Wings, almost like those of the Batt, though it hath the like Hair and Colour of the Common Squirrel, but is much less in Bodily Substance. I have (myself) seen it fly from one Tree to another in the Woods, but how long it can maintain its Flight is not yet exactly known. There are in the Woods abundance of Red Deer (vulgarly called Stags), for I have bought of an Indian a whole Buck (both Skin and Carcass) for two Gills of Gunpowder. There are vast Numbers of other Wild Creatures, as Elk, Buffaloes, etc., all which, as well Beasts, Fowl, and Fish, are free and common to any Person who can shoot or take them, without any lett, hinderance, or

opposition whatsoever. There are among other various sorts of Frogs, the Bull-Frog, which makes a roaring noise, hardly to be distinguished from that well known of the Beast from whom it takes its Name. There is another sort of Frog that crawls up to the tops of Trees, there seeming to imitate the Notes of several Birds, with many other strange and various Creatures, which would take up too much room here to mention." Campanius mentions tortoises, sturgeons, and whales. The rattlesnake, he says, has a head like a dog, "and can bite a man's leg off as clear as if it had been hewn down with an axe." The "sea-spiders" (king crab) are "as large as tortoises, and like them have houses over them of a kind of yellow horn. They have many feet, and their tails are half an ell long, and made like a three-edged saw, with which the hardest trees may be sawed down." The "tarm-fish" has no head, and is like a smooth rope, one-quarter of a yard in length and four fingers thick, and somewhat bowed in the middle. At each of the four corners there runs out a small bowel three yards long and as thick as coarse twine. "With two of these bowels they suck in their food, and with the other two eject it from them" (a sort of medusa, probably). There is also a devil-fish, called by the Indians "manitto," which plunges deep in the water and spouts like a whale.

That whales once frequented the Delaware does not admit of question. De Vries established the colony at Swaanendael as a *point d'appui* for the whale fishery; Vanderdonck says these mammals were frequently stranded on the shores and captured by Indians and settlers; Lambrechtsen mentions cod, tunny, and whale as among the fish of the North and South Rivers; Du Simitière's manuscripts contain an account of a whale that came up to Philadelphia. It will be noticed that Thomas mentions buffaloes as among the animals of Eastern Pennsylvania; the same thing is done by the author of the so-called "Plantagenet's Albion" pamphlet, and by Vanderdonck, the latter saying that "the buffaloes keep towards the southwest, where few people go." It has been said very positively that the American bison never came east of the Allegheny Mountains, and the general silence of early naturalists on the subject seems to make the statement probable. But the cause assigned, that the bison, a prairie animal, avoids mountains, is no longer admissible, for we now know that he hides in the deepest valleys of the Rocky Mountains, and climbs cliffs as daringly as he storms the snow-drifts. Besides, the bison could easily have passed round the mountains by way of the northern lakes, descending the Hudson, Delaware, and Susquehanna. The animal's frequenting-place was doubtless the treeless plains; but he may have easily come to visit, though not to stay, in the East. Evidently the Delaware Indians knew of the beast; they had a name for him (*sissilie*), and they called one of the branches of the Allegheny River

Sissilie Hanna, "the stream where the buffaloes resort." The city of Buffalo, on Lake Erie, would seem to have its name from the resort of these animals, and there are four townships and one town called Buffalo in Pennsylvania. One Buffalo Creek, in this State, empties into the Juniata; another into the Susquehanna, both east of the Alleghenies; the name is also found in North Carolina, Georgia, and Maryland, at points east of the mountains. This is positive evidence, so far as the names of places go, in favor of eastern migrations of the bison; the non-mention of the animal by early writers is negative evidence against such migrations.

It is not necessary to present a full account of the zoology of Philadelphia County. Dr. Michener, B. H. Warren, Prof. Cope, Alexander Wilson, Spencer F. Baird, John Cassin, Dr. Joseph Thomas, Mr. Brewer, Mr. Barnard, etc., have collected all the information on the subject that is desirable, and a hundred times more than can be used here. Of the insectivora there are several bats, five shrews, and two moles, which are named; of the carnivora there are the panther, (*Felis concolor*), *Lynx rufus* (American wildcat), *L. Canadensis*; the American wolf, red fox, gray fox, weasels (three sorts), the mink, the ferret, the otter, the skunk, the raccoon, and the black bear. Of the marsupials, only the opossum; of the rodents, the squirrel family, including the cat, gray, red, black, and flying squirrels, the ground-squirrel or chipmunk, and the ground-hog or American marmot; of the *muride* or rat family, there were the beaver, the musk-rat, the jumping-mouse, the black and brown rats, the wood-rat, the house-mouse, field-mouse, meadow-mouse, and upland meadow mouse; of the porcupine family there was the American hedgehog; of the rabbits, two, the white and the gray. Of ruminants, the elk, the red deer, the buffalo (besides domesticated animals), the horse, and (among fossils near by in Chester County and in New Jersey) the *Elephas primogenius* and the mastodon. Among the birds Dr. Michener and Mr. Barnard have recognized two hundred species as belonging to the vicinity of Philadelphia, of which nearly a fourth might still be found. The vultures are represented by the turkey-buzzard; the falcons or hawks by the duck-hawk, the pigeon-hawk, the sparrow-hawk, the goshawk, and seven other species, the kite, the marsh-hawk, the golden and the white-headed eagle, and the fish-hawk. The owls have the barn-owl, the great horned owl, the screech, the long-eared, the short-eared, the barred, "saw-whet," and snowy owls; the cuckoos have two varieties; the woodpeckers eight varieties; the humming-birds have only one sort; there are five varieties of swallows; the whip-poor-will and shrike, or night-hawk, are common, and there are the king-fisher and the king-bird. There are eight sorts of fly-catchers, including the pewee; six varieties of the thrush, including the robin and the wood and hermit thrush; two kinds of wren, the blue-bird, the

titlark and the black and white creeper, the yellow-throat, the redstart, and the three water thrushes (*sciurus*). Of the warblers twenty-four varieties have been specified; of the vireos and fly-catchers twelve varieties; the butcher-bird and the mocking-bird were much more frequent in former times, but the cat-bird holds its own, though the brown thrush (*Mimus rufus*) is getting scarce. The marsh wren is common, but not so the other *thryothori*. The gray creeper, the nut-hatcher, the titmouses and chickadees, the larks, tanagers, red-birds, grosbeaks are common; of the finches and cross-bills several varieties are named; there are thirteen named sorts of sparrows, four grosbeaks, two orioles, two black-birds, two sorts of crows; the jay, turtle-dove, wild pigeon, pheasant, partridge; twelve cranes, herons, bitterns, and ibises; three sorts of the plover; the kildeer, phalarope, woodcock; fifteen species of snipe, sand-pipers, etc., and seven or eight sorts of rail, curlew, and marsh-hen. The coot, swan, wild-goose, brant, and loon used to be very abundant on the Delaware—now scarce; the mallard, black duck, sprig-tail, teal, shoveler, summer duck, scaup, canvas-back, red-head, buffel-head, spine-tail, shell-drake, merganser are still shot, and in winter the Delaware is still frequented by five or six varieties of gulls and three sorts of grebes.

The reptiles of Philadelphia were never very formidable, but still, numerous. Sixteen varieties of salamander are catalogued, and eleven toads and frogs, including all the *Bufo*nidae, *Hylidae*, and *Rana*idae. Of the ophidians, two were venomous,—the banded rattlesnake (*Crotalus horridus*) and the copperhead. The other snakes were the worm snake, ring snake, chain snake, house snake, grass snake, black snake, garter snake, ribbon snake, yellow-bellied snake, water snake, and spotted and black viper. There was but one lizard, but nine tortoises, including the snappers.

The fish include ten varieties of perch (with the pike), four darters, a miller's thumb, a stickleback, a gar, trout, salmon, a dozen chubs, dace, shiners, etc., in the small streams; seven or eight mullets or suckers, six sorts of cat-fish, one variety of eel, two of sturgeon, three lampreys, etc. Of the mollusca there is no end of slugs and snails, *pupæ*, etc., eighty-six varieties being catalogued, thirty or forty sorts of mussels and pectino-branchiates, and this is in addition to the salt-water shell-fish.

CHAPTER III.

THE INDIANS.

WHEN Henry Hudson, in 1609, after having examined and sounded the entrance to Delaware Bay, entered and explored New York Bay and the North or Hudson River, he encountered the natives of the country, who called themselves Mohegans or Mohe-

canne. These savages had never seen white men; but after the first surprise and wonder, they met the strangers with the utmost confidence, and made a graceful display of their inexhaustible, generous hospitality, bestowing presents and spreading before the new-comers the choicest treasures of their little store. This visit of Hudson's seems to have made an indelible impression upon the Indians. The incident was handed down in vivid traditions from generation to generation, and Heckewelder heard an account of it from the Pennsylvania Indians, among whom he was doing his gentle duties as a missionary. The ship was mistaken for a supernatural visitant, and its captain and crew were esteemed as being far superior to earthly men. The simple natives fancied themselves blessed with the presence of some great Manitou, and they did their utmost to honor the occasion and propitiate the powerful strangers, whose house had white wings and at whose command were the resources of the elements, the lightning and the thunder. The Indians put on their gala-day costumes and bravest paint, brought out their fetishes and amulets, and prepared a sacrifice, a feast, and a dance. Hudson, *deus ex machinâ*, not to be outdone, met the natives in ceremonious state, furnished them with draughts of nectar,—in this case it was true Holland schnapps, poured forth from a junk-bottle, "fire-water," as the deluded savages most appropriately denominated it,—and made them drunk after the ancient English fashion. It is a point in the unconscious satire of history that the Indians of the temperate zone of North America were not sufficiently "civilized" to have discovered the means of intoxicating themselves by the manufacture of fermented or distilled liquors. The Mexicans had their pulque, the South American Indians their cushaw beer and wine, the Mobilians their "black drink," the Peruvians their coca and probably their "pisco" also, but the Algonkins and their kindred had no other drink but water, and their sole stimulant was tobacco, in the fumes of which they quieted their brains after the fullness of the banquet, or when the excitement of the chase or the war-path was over. This tobacco, and their bronze and clay pipes, handsomely ornamented, the Indians put at the service of their visitors, and it may be remarked, in proof of the universal reciprocity of service in exchanges, that if the whites taught the Indians the use of rum and introduced the smallpox among them, the Indians in return have taught the whole world, civilized and uncivilized, how to smoke tobacco.

The Indians who received Hudson were of the same nation as those who dwelt upon both sides of the Delaware Bay and River. They called themselves Lenni Lenape, or Renni Renappi, a name said to signify the "original people" or its equivalent.¹ The river upon

¹ There is some doubt as to whether Lenni Lenape is to be taken as meaning autochthones in an abstract sense, or whether it means, in a personal way, the boast that "we are the people," the men *par excellence*.

whose banks some of them dwelt they called after their own name, Lenape Wihittuck, Lenape River, and when the English decided that the name of the river should be Delaware they translated the Indian generic title into Delaware also, and so the tribe are called Delawares to this day. Between Hudson's voyage and the beginning of the eighteenth century there is frequent contemporary mention of the Lenape Indians and their kinsmen, the Nanticokes, and their neighbors, the Mengwes, Minquas, or Mingoos, who were known in Maryland as the Susquehannas, and whose remnant afterwards became known in Pennsylvania as the Conestogas. Capt. Cornelis Hendrickson, who explored part of the Delaware in 1615-16 in a small yacht built by Capt. Block in New York Harbor to replace his vessel which had been burned,¹ reported having met and traded with the Minquas, from whose bonds he redeemed three prisoners belonging to the Dutch trading company at Fort Nassau, up the Hudson. It is probable that Hendrickson encountered these natives at Christina or Upland Creek. His intercourse with them was the beginning of the Delaware River fur trade.

In 1623, Capt. Cornelis Jacobson Mey built Fort Nassau on the east side of the Delaware River, just below where Philadelphia now stands. Mey was agent for the Dutch West India Company, and the fort was intended as a trading-post. It was alternately occupied or deserted as trade demands required. In 1633, De Vries found the Indians in possession of it. De Vries himself, acting for some members of the Dutch Company, had bought from the Indians bodies of land on both sides of Delaware Bay near the ocean, and in 1630 a colony was planted under his direction at the Horekills or Lewes Creek, in Lower Delaware, and called Swaanendael, or Swanvale, a house being built and surrounded with palisades, to which the name of "Fort Oplandt" was given. In spite of the land purchase the garrison of this fort got into trouble with the Indians, and the entire party, some thirty men, were massacred. This land at Swaanendael was bought by Hossett and Hëysen, the commissary and captain of the expedition organized by De Vries, on May 5, 1631, from Sannoowouns, Wiewit, Pemhacke, Mekowetick, Teehepewwya, Mathamen, Sacooock, Anchoopoen, Janquens, and Pokahake, who were either Lenape or Nanticoke Indians. De Vries, humane as he was intelligent, saw at once on his return to the Delaware that the massacre at Fort Oplandt was provoked by some act of the garrison or its commander. He did not care to investigate too closely a deed which was irreparable, and which he was assured in his own consciousness must have originated in some brutality or debauchery of his own people, so he simply called the Indians together and made a treaty of peace with them, sealing it with presents.²

At the time of De Vries' plantation, and his expedition afterwards in 1633 up the Delaware, the Minquas appear to have been at war with the Lenapes on the other side of the river, and this may in part explain the hostile attitude in which the navigator found the Indians at several points. This fact will also explain the readiness of the sachems of New Jersey in that year to sell to Arent Corsen the land on the west side of the river on which Fort Beversrede was afterwards erected. In 1638 the Swedes came to the Delaware, and having established themselves at Christina and subsequently at other points, began an active and intimate trade with the Indians for furs. They too bought the land which they occupied, and appear to have lived with the savages on very familiar terms, for we find that they supplied interpreters for many years, supplanted the Dutch in the fur trade, and annually visited the Minquas in their strongholds in Cecil County and on the Susquehanna. When the Iroquois came to attack the Susquehannocks in their castle in 1662, they were baffled by a regular fort, constructed in European style by Swedish engineers, with bastions and mounted cannon.³ The Swedish Governors appear to have understood how to conciliate the Indians effectively, and were much preferred to the Dutch. The natives aided Pappegoya to put on shore the last party of Swedish immigrants who arrived in the Delaware after the subjugation of the colony by Stuyvesant. The instructions by Queen Christina's government to both Printz and Risingh were very minute in their injunction of friendliness and good conduct to the Indians.

De Laet, the contemporary Dutch historian, who was also one of the directors of the Dutch West India Company, and one of the patrons for whom De Vries purchased Indian titles on the Delaware, names some of the Indian bands in that section in his volume, *Novus Orbis*. Campanius states that the Swedes in his time had no intercourse except with "the black and white Mengwes," and he holds that the Lenapes were cannibals, in proof of which he adduces a story which is fully as authentic as his account of the rattlesnake. This author also speaks of

sacre of Hossett and his men to "mere jangling with the Indians" (in his interesting journals), and he himself had experience of Indian loyalty and kindness when kindly treated. The suggestion of debauchery grows out of the name given by the Dutch to Lewes Creek, which, says Smith, the historian of New Jersey, on the authority of a manuscript in the British Museum giving a Swedish account of the early settlements on the Delaware, "had its rise from the liberality of the Indians for lavishly prostituting, especially at that place, their maidens and daughters to our Hollanders." Hossett's party had no women with them, and it will be remembered that one of the earliest complaints of the Delawares to Penn's government was founded upon the charge that a settler's servants had made the males drunk and then debauched their wives. The complaisance which, according to Cadwallader Colden, the Indians extended to the whites on their first arrival might easily become a grave indignity when the whites were discovered to be no longer superior beings, but men like themselves. To meet with Amphitryons visitors must not cease to be Jupiters.

³ Parkman, "Jesuits in North America," p. 442.

¹ See next chapter.

² De Vries had witnessed with extreme disgust the cruelty and bad faith of the whites in their dealings with the Indians. He attributed the mas-

the broad faces, flat noses, large lips, and square teeth of the savages, adding that they often had their heads artificially flattened in infancy. The warriors sometimes wore necklaces made of thumbs of their enemies cut off after battle; the Indians (again Campanius is responsible) ate just when they happened to be hungry; they wore head-dresses of feathers and snake-skins, and fed upon bear's meat, venison, birds, fish, and maize, either in the shape of hominy or pone. When they traveled they mixed their cakes with tobacco juice to quench thirst. They painted their bodies with river mud or ochreous clays, and made no use of salt except as an antidote to epilepsy. In short, Campanius is utterly untrustworthy as an observer, although he is sensational enough as a *raconteur*. De Laet says the earth was their table as well as their bed,—“*humo strati, aut super storeas junceas, somnum pariter atque cibum capiunt*,”—while Campanius (giving Pastorius as his authority, however) absurdly makes them out as being such churls as to mount and sit cross-legged upon tables in Christian houses to which they were asked; they never, in fact, sitting cross-legged under any circumstances. We learn from De Vries that the Indians used the reed-pipe as a musical instrument, and Penn mentions the tambourine. De Laet seems to suppose that they had no religion. “*Nullus ipsis religionis sensus, nulla Dei veneratio*,” he says, a singular misconception. George Alsop, in his little tract called “A Character of the Province of Maryland” (London, 1666), devotes a chapter to “A Relation of the Customs, Manners, Absurdities, and Religion of the Susquehannock Indians in and near Maryland.” These were the Mengwes of Campanius, and the Susquehannoughs of Capt. Smith. Alsop says they are regarded as “the most Noble and Heroick Nation of Indians that dwell upon the confines of America; also are so allowed and lookt upon by the rest of the Indians, by a submission and tributary acknowledgment, being a people cast into the mould of a most large and warlike deportment, the men being for the most part seven foot high in altitude and in magnitude and bulk suitable to so high a pitch; their voyce large and hollow, as ascending out of a Cave, their gate and behavior straight, steady, and majestick, treading on the Earth with as much pride, contempt, and disdain to so sordid a Centre as can be imagined from a creature derived from the same mould and Earth.” They go naked summer and winter, says Alsop, “only where shame leads them by a natural instinct to be reservedly modest, there they become cover’d. The formality of Jezabel’s artificial Glory is much courted and followed by these Indians, only in matter of colours (I conceive) they differ.” They paint their faces in alternate streaks of different colors, and Alsop thinks, with other early writers, that their skins are naturally white but changed to red and cinnamon-brown by the use of pigments. Their hair is “black, long, and harsh,” and they do

not permit it to grow anywhere except upon the head. The Susquehannas tattooed their arms and breasts with their different totems, “the picture of the Devil, Bears, Tigers, and Panthers,” says Alsop. They are great warriors, always at war, and keep their neighbors in subjection. Their government is complex and hard to make out; “all that ever I could observe in them as to this matter is, that he that is most cruelly Valorous is accounted the most Noble,” which is a very good approximation of the fact that the war-chief derives his rank or influence from his deeds. Our author adds that “when they determine to go upon some Design that will and doth require a consideration, some six of them get into a Corner and sit in Juncto, and if thought fit their business is made popular and immediately put in action; if not, they make a full stop to it, and are silently reserv’d.” On the war-path they paint and adorn their persons, first well greased; their arms, the hatchet and fusil, or bow and arrows. Their war parties are small; they march out from their fort singing and whooping; if they take prisoners they treat them well, but dress them and anoint them so that they may be ready for the stake and torture when their captors return home. Alsop gives a full account of the process of torture, and declares that prisoners are hacked to pieces and eaten by the warriors. The religion of the Susquehannas Alsop regarded as an absurd and degrading superstition, they being devil-worshippers; but he admits that, “with a kind of wilde imaginary conjecture, they suppose from their groundless conceits that the World had a Maker.” They sacrifice a child to the devil every four years, and their medicine men have great influence among them. Their dead are buried sitting, face due west, and all their weapons, etc., around them. The houses of the Susquehannas “are low and long, built with the bark of trees arch-wise, standing thick and confusedly together.” The hunters go on long winter hunts; the women are the menials and drudges, and yet they are commended for their beauty of form, and their husbands are said to be very constant to them. “Their marriages,” says Alsop, in conclusion, “are short and authentique; for after ’tis resolv’d upon by both parties, the Woman sends her intended Husband a kettle of boil’d Venison, or Bear, and he returns in lieu thereof Beaver or Otter Skins, and so their Nuptial Rites are concluded without other Ceremony.”

What has been quoted above serves rather to prove how difficult it is to extract from contemporary writers a clear account of the Indians than to furnish an illustration of their actual situation and character. Nor do we get the satisfactory narratives we should expect from observers like Penn and Gabriel Thomas and Thomas Budd, though they must have seen the Indians often, face to face, in their homes and in the wigwams likewise. It is greatly to be regretted that a keen observer and judge of men like James Logan did not write the history of the

Delaware Indians, whom he knew so long and so intimately. As it is, the best account of these Indians which is to be found anywhere is a fragmentary sketch, only a few pages, by Charles Thomson, the secretary to the Continental Congress. This brief paper, which breaks off in the middle of a sentence,

is yet sufficient to explain to us why both whites and Indians dignified Thomson as the very incarnation of unadulterated truth, and add to the regret which all must feel that this eminent

patrician and civilian should have shrunk from writing the history of those great events in which he bore so large and yet so nebulous a part. We will presently speak further of this paper of Thomson's, which has been published among the memoirs of the Pennsylvania Historical Society. Budd, who arrived in Burlington, N. J., as early as 1668, and had many opportunities to see and study the Indians, said of them, "The Indians told us in a conference at Burlington, shortly after we came into the country, they were advised to make war on us and cut us off while we were but few, for that we sold them the smallpox with the match-coats they had bought of us, which caused our people to be in fears and jealousies concerning them; therefore, we sent for the Indian kings to speak with them. . . . One

of them, in behalf of the rest, made the following speech in answer:

"Our young men may speak such words as we do not like nor approve of, and we cannot help that, and some of your young men may speak such words as you do not like, and you cannot help that. We are your brothers, and intend to live like brothers with you; we have no mind to have war, for when we have war we are only skin and bones, the meat that we eat doth not do us good; we always are in fear, we have not the benefit of the sun to shine on us, we hide us in holes and corners; we are minded to live in peace. If we intend at any time to make war we will let you know of it, and the reasons why we make war with you; and if you make us satisfaction for the injury done us, for which the war was intended, then we will not make war on you; and if you intend at any time to make war on us, we would have you let us know of it and the reason, and then if we do not make satisfaction for the injury done unto you, then you may make war on us, otherwise you ought not to do it; you are our brothers, and we are willing to live like brothers with you; we are willing to have a broad path for you and us to walk in, and if an Indian is asleep in this path the Englishman shall pass by and do him no harm; and if an Englishman is asleep in this path, the Indian shall pass him by and say, 'He is an Englishman, he is asleep; let him alone, he loves to sleep.' . . ."

Budd adds that

"The Indians have been very serviceable to us by selling us venison, Indian corn, peas and beans, fish and fowl, buck-skins, beaver, otter, and other skins and furs; the men hunt, fish, and fowl, and the women plant the corn and carry burthens. There are many of them of a good understanding considering their education, and in their publick meetings of business they have excellent order, one speaking after another, and while one is speaking all the rest keep silent, and do not so much as whisper to one another; we had several meetings with them. . . . The kings sat on a form, and we on another over against them; they had prepared four belts of wampum (so their current money is called, being black and white beads made of a fish-shell) to give us as seals of the covenant they made with us; one of the kings, by the consent and appointment of the rest, stood up and spoke."

William Penn, in his letter to the Free Society of Traders, written in 1683, has discoursed copiously about the Delaware Indians. It was not until his second visit, in 1699, that he became much acquainted with other tribes. In a letter of prior date to the one just spoken of, written to Henry Savell, from Philadelphia, 30th of Fifth month, 1683, the proprietary says,—

"The natives are proper and shapely, very swift, their language lofty. They speak little, but fervently and with elegance. I have never seen more naturall sagacity, considering them without y^e help—I was going to say y^e spoyle—of tradition. The worst is that they are y^e wors for y^e. Christians who have propagated their views and yielded them tradition for y^e wors & not for y^e better things, they believe a Diety and Immortality without y^e help of metaphisicks & some of them admirably sober, though y^e Dutch & Sweed and English have by Brandy and Rum almost Debaucht y^m all and when Drunk y^e most wretched of spectacles, often burning & sometimes murdering one another, at which times y^e Christians are not without danger as well as fear. Tho' for gain they will run the hazard both of y^t and y^e Law, they make their worship to consist of two parts, sacrifices w^h they offer of their first fruits with marvellous fervency and labour of holy sweating as if in a bath, the other is their Canticoes, as they call them, w^{ch} is performed by round Dances, sometimes words, then songs, then shouts, two being in y^e middle y^t begin and direct y^e chorus; this they performe with equal fervency but great appearances of joy.¹ In this I admire them, nobody shall want w^t an-

¹ Penn appears particularly anxious to show here and in his letter to the Society of Free Traders that the songs (or Canticoes, as he calls them) and dances of the Indians, which he enjoyed heartily, were purely religious in their character,—acts of exalted spiritual fervor. In fact, he

other has, yett they have propriety (property) but freely communicable, they want or care for little, no Bills of Exchange nor Bills of Lading, no Chancery suits nor Exchequer Acct. have they to perplex themselves with, they are soon satisfied, and their pleasure feeds them,—I mean hunting and fishing.”¹

This letter is made much more full in the one to the Free Society of Traders, written in August of the same year. The natives, Penn says, are generally tall, straight in their person,—

“well built, and of singular proportion [*i.e.*, of symmetry]: they tread strong and clever, and mostly walk with a lofty chin.² Of complexion black, but by design, as the gypsies in England. They grease themselves with bear’s fat clarified, and using no defence against sun and weather, their skins must needs be swarthy. Their eye is livid and black, not unlike a straight-looking Jew. The thick lips and flat nose, so frequent with the East Indians and blacks, are not common to them; for I have seen as comely European-like faces among them, of both sexes, as on your side the sea; and truly an Italian complexion hath not more of the white; and the noses of several of them have as much of the Roman. Their language is lofty, yet narrow; but, like the Hebrew, in signification full. Like short-hand in writing, one word serveth in the place of three, and the rest are supplied by the understanding of the hearer; imperfect in their tenses, wanting in their moods, participles, adverbs, conjunctions, and interjections. I have made it my business to understand it, that I might not want an interpreter on any occasion; and I must say that I know not a language spoken in Europe that hath words of more sweetness or greatness, in accent and emphasis, than theirs; for instance, Octockekon, Rancocas, Oricton, Shak, Marian, Poquesian, all which are names of places, and have grandeur in them. Of words of sweetness, *anna* is mother; *issimus*, a brother; *necap*, friend; *usqueoret*, very good; *pane*, bread; *meta*, eat; *matlu*, no; *hatta*, to have; *pago*, to come; Sepassen, Passijon, the names of places; Tamane, Secane, Menanse, Secatareus, are the names of persons. If one ask them for anything they have not, they will answer, *matta ne hatta*, which, to translate, is ‘not I have,’ instead of ‘I have not.’

“Of their customs and manners there is much to be said. I will begin with children. So soon as they are born they wash them in water, and while very young and in cold weather to choose, they plunge them in the rivers to harden and embolden them. Having wrapt them in a clout, they lay them on a strait thin board a little more than the length and breadth of the child, and swaddle it fast upon the board to make it straight; wherefore all Indians have flat heads; and thus they carry them at their backs. The children will go [walk] very young, at nine months commonly. They wear only a small clout around their waist

was on record as opposing ordinary song and dance, saying of dancing, in the words of one of the ancients, “As many paces as a man maketh in dancing, so many paces doth he make to go to hell.” (“No Cross, no Crown,” 1669, p. 86.) The Indians may have sung and danced at their religious services (if they had any), but unfortunately they sung and danced likewise after all their feasts, and especially when they had had one of their orgies, and the rum and cider were masters of the savages’ ordinary decorum and stoical self-containment.

¹ Penn. Archives, vol. i. pp. 68-9.

² Penn had noticed a singularity in the Indians’ gait, yet did not detect what it was; yet it is so obvious that a few years back, in Kentucky, where the people still walk like the Indians, even a school-boy would recognize a person from the East by differences in his way of walking from the way of those to the manner born. The Indian steps with a perfectly straight foot and without turning his toes out, so that if the sun were upon his back the shadow of his shanks would entirely cover his feet. This tread is the antithesis of that of the sailor, who walks with his toes very much turned out, and the European and the Eastern man walk like him. In both cases convenience and propriety are suited: the sailor, by his mode of locomotion, is enabled to tread more firmly and safely upon an uncertain deck that is always uneasy; the Indian, by his mode, is able to walk more safely the narrow forest path, and to step also with greater stealth and softness in pursuit of his enemy and his game where leaves to rustle and twigs to break are numerous. But the difference is that the sailor “rolls” in his gait and his shoulders swing from side to side, while the Indian’s walk makes him carry himself singularly straight, his shoulders never diverging from a perpendicular. This little circumstance added materially to the outward appearance of gravity in the savage’s general demeanor.

till they are big. If boys, they go a-fishing till ripe for the woods, which is about fifteen. There they hunt; and having given some proofs of their manhood by a good return of skins, they marry; else it is a shame to think of a wife. The girls stay with their mothers, and help to hoe the ground, plant corn, and carry burthens; and they do well to use them to that, while young, which they must do when they are old; for the wives are the true servants of the husbands; otherwise the men are very affectionate to them. When the young women are fit for marriage they wear something upon their heads for an advertisement, but so as their faces are hardly to be seen but when they please. The age they marry at, if women, is about thirteen and fourteen; if men, seventeen and eighteen. They are rarely older. Their houses are mats or barks of trees, set on poles in the fashion of an English barn, but out of the power of the winds, for they are hardly higher than a man. They lie on reeds or grass. In travel they lodge in the woods about a great fire, with the mantle of duffils they wear by day wrapt about them and a few boughs stuck round them. Their diet is maize or Indian corn divers ways prepared, sometimes roasted in the ashes, sometimes beaten and boiled with water, which they call *homine*. They also make cakes not unpleasant to eat. They have likewise several sorts of beans and peas that are good nourishment, and the woods and rivers are their larder. If an European comes to see them, or calls for lodging at their house or wigwam, they give him the best place and first cut. If they come to visit us they salute us with an *Itah*! which is as much as to say, ‘Good be to you!’ and set them down, which is mostly on the ground, close to their heels, their legs upright; it may be they speak not a word, but observe all passages [all that passes]. If you give them anything to eat or drink, well, for they will not ask; and, be it little or much, if it be with kindness, they are well pleased; else they go away sullen, but say nothing. They are great concealers of their own resentments, brought to it, I believe, by the revenge that hath been practiced among them. In either of these they are not exceeded by the Italians. A tragical instance fell out since I came into the country. A king’s daughter, thinking herself slighted by her husband in suffering another woman to lie down between them, rose up, went out, plucked a root out of the ground, and ate it, upon which she immediately died; and for which, last week, he made an offering to her kindred for atonement and liberty of marriage, as two others did to the kindred of their wives, who died a natural death; for till widowers have done so they must not marry again. Some of the young women are said to take undue liberty before marriage for a portion; but when married, chaste. When with child they know their husbands no more till delivered; and during their month they touch no meat, they eat but with a stick, lest they should defile it; nor do their husbands frequent them till that time be expired.

“But in liberality they excel; nothing is too good for their friend; give them a fine gun, coat, or other thing, it may pass through twenty hands before it sticks; light of heart, strong affections, but soon spent. The most merry creatures that live, feast and dance perpetually; they never have much, nor want much; wealth circulateth like the blood; all parts partake; and though none shall want what another hath, yet exact observers of property. Some kings have sold, others presented me with several parcels of land; the pay or presents I made them were not hoarded by the particular owners; but the neighboring kings and their clans being present when the goods were brought out, the parties chiefly concerned consulted what and to whom they should give them. To every king then, by the hands of a person for that work appointed, is a proportion sent, so sorted and folded, and with that gravity that is admirable. Then that king subdivideth it in like manner among his dependants, they hardly leaving themselves an equal share with one of their subjects; and be it on such occasions as festivals, or at their common meals, the kings distribute, and to themselves last. They care for little, because they want but little; and the reason is, a little contents them. In this they are sufficiently revenged on us; if they are ignorant of our pleasures, they are also free from our pains. . . . Since the Europeans came into these parts they are grown great lovers of strong liquors, rum especially, and for it they exchange the richest of their skins and furs. If they are heated with liquors they are restless till they have enough to sleep,—that is their cry, *Some more and I will go to sleep*; but when drunk one of the most wretched spectacles in the world!

“In sickness, impatient to be cured; and for it give anything, especially for their children, to whom they are extremely natural. They drink at these times a *tisan*, or decoction of some roots in spring-water; and if they eat any flesh it must be of the female of any creature. If they die they bury them with their apparel, be they man or woman, and the nearest of kin fling in something precious with them as a token of their love. Their mourning is blacking of their faces, which they con-

tinue for a year. They are choice of the graves of their dead, for, lest they should be lost by time and fall to common use, they pick off the grass that grows upon them, and heap up the fallen earth with great care and exactness. These poor people are under a dark night in things relating to religion; to be sure the tradition of it; yet they believe a God and immortality without the help of metaphysics, for they say, 'There is a Great King that made them, who dwells in a glorious country to the southward of them, and that the souls of the good shall go thither where they shall live again.' Their worship consists of two parts, sacrifice and cantico. Their sacrifice is their first fruits; the first and fattest buck they kill goeth to the fire, where he is all burnt, with a mournful ditty of him that performeth the ceremony, but with such marvellous fervency and labor of body that he will even sweat to a foam. The other part is their cantico, performed by round dances, sometimes words, sometimes songs, then shouts, two being in the middle that begin, and by singing and drumming on a board direct the chorus. Their postures in the dance are very antick and differing, but all keep measure. This is done with equal earnestness and labor, but great appearance of joy. In the fall, when the corn cometh in, they begin to feast one another. There have been two great festivals already, to which all come that will. I was at one myself; their entertainment was a great seat by a spring under some shady trees, and twenty bucks, with hot cakes of new corn, both wheat and beans, which they make up in a square form in the leaves of the stem and bake them in the ashes, and after that they fall to dance. But they that go must carry a small present in their money; it may be sixpence, which is made of the bone of a fish; the black is with them as gold, the white silver; they call it all wampum.

"Their government is by Kings, which they call Sachama, and these by succession, but always on the mother's side. For instance, the children of him who is now king will not succeed, but his brother by the mother, or the children of his sister, whose sons (and after them the children of her daughters) will reign, for woman inherits. The reason they render for this way of descent is, that their issue may not be spurious. Every King hath his Council, and that consists of all the old and wise men of his nation, which, perhaps, is two hundred people. Nothing of moment is undertaken, be it war, peace, selling of land, or traffick, without advising with them, and, which is more, with the young men too. It is admirable to consider how powerful the Kings are, and yet how they move by the breath of their people. I have had occasion to be in council with them upon treaties of land, and to adjust the terms of trade. Their order is thus: The king sits in the middle of an half moon, and hath his council, the old and wise, on each hand; behind them, or at a little distance, sit the younger fry in the same figure. Having consulted and resolved their business, the King ordered one of them to speak to me; he stood up, came to me, and, in the name of his King, saluted me; then took me by the hand and told me, 'He was ordered by his King to speak to me, and that now it was not he, but the King that spoke; because what he should say was the King's mind.' He first prayed me 'to excuse them, that they had not complied with me the last time, he feared there might be some fault in the Interpreter, being neither Indian nor English; besides, it was the Indian custom to deliberate and take up much time in council before they resolve, and that if the young people and owners of the land had been as ready as he, I had not met with so much delay.' Having thus introduced his matter, he fell to the bounds of the land they had agreed to dispose of and the price, which now is little and dear, that which would have bought twenty miles not buying now two. During the time that this man spoke not a man of them was observed to whisper or smile, the old grave, the young reverent in their deportment. They speak little but fervently, and with elegance. I have never seen more natural sagacity, considering them without the help (I was going to say the spoil) of tradition, and he will deserve the name of wise that outwits them in any treaty about a thing they understand. When the purchase was agreed great promises passed between us, 'of kindness and good neighborhood, and that the Indians and English must live in love as long as the sun gave light,' which done, another made a speech to the Indians in the name of all the Sachemakers or Kings, first to tell them what was done, next to charge and command them 'to love the Christians, and particularly live in peace with me and the people under my government; that many governors had been in the river, but that no Governor had come himself to live and stay here before, and having now such an one, that had treated them well, they should never do him or his any wrong,' at every sentence of which they shouted and said Amen in their way. The justice they have is pecuniary. In case of any wrong or evil fact, be it murder itself, they atone by feasts and presents of their wampum, which is proportioned to the quality of the offence, or the person injured, or of the sex they are of. For in case they kill a woman they pay double, and the reason they render is, 'that she breedeth

children, which men cannot do.' It is rare they fall out if sober, and if drunk they forgive it, saying, 'It was the drink, and not the man, that abused them.'

"We have agreed that in all differences between us six of each side shall end the matter. Do not abuse them, but let them have justice and you win them. The worst is that they are the worse for the Christians, who have propagated their vices and yielded their traditions for ill and not for good things. But as low an ebb as these people are at, and as inglorious as their own condition looks, the Christians have not outlived their sight, with all their pretensions to an higher manifestation. What good, then, might not a good people graft where there is so distinct a knowledge left between good and evil? I beseech God to incline the hearts of all that come into these parts, to outlive the knowledge of the natives, by a fixed obedience to their greater knowledge of the will of God, for it were miserable indeed for us to fall under the just censure of the poor Indians' conscience, while we make profession of things so far transcending.

"For their original, I am ready to believe them of the Jewish race; I mean, of the stock of the ten tribes, and that for the following reasons: First, they were to go to a 'land not planted nor known'; which, to be sure, Asia and Africa were, if not Europe, and He that intended that extraordinary judgment upon them might make the passage not uneasy to them, as it is not impossible in itself, from the easternmost parts of Asia to the westernmost of America. In the next place, I find them of the like countenance, and their children of so lively resemblance that a man would think himself in Duke's Place, or Berry Street, in London, when he seeth them. But this is not all: they agree in rites; they reckon by moons; they offer their first fruits; they have a kind of feast of tabernacles; they are said to lay their altar upon twelve stones; their mourning a year; customs of women, with many other things that do not now occur."

So much wrote Penn concerning the aborigines of his province. Gabriel Thomas says (not repeating those matters in which Penn and he write identically) that

"When they bury their Dead, they put into the Ground with them some House-Utensils and some Money (as Tokens of their Love and Affection) with other Things, expecting they shall have Occasion for them again in the other World. And if a Person of Note dies very far from the Place of his own Residence they will carry his Bones home some considerable time after to be buried there. They are also very curious, nay, even nice, in preserving and repairing the Graves of their Dead. They do not love to be asked twice their Judgment about one Thing. They are a People who generally delight much in Mirth, and are very studious in observing the Vertues of Roots and Herbs, by which they cure themselves of many Distempers in their Bodies, both internal or external. They will not suffer their Beards to grow, for they will pluck the Hair off with their own fingers as soon as they can get hold of it, holding it a great Deformity to have a Beard. . . Their chief Employment is in Hunting, Fishing, and Fowling, and making Canoes, or Indian Boats and Bowls, in all which Arts they are very dexterous and ingenious. Their Women's Business chiefly consists in planting of Indian Corn and pounding it to Meal in Mortars, with Pestle (as we beat our Spice), and make Bread, and draw their Victuals, which they perform very neatly and cleanly. They also make Indian Mats, Ropes, Hats, and Baskets (some of curious Workmanship) of their Hemp, which there grows wild and natural in the Woods in Great Plenty. In short, the Women are very ingenious in their several Employments as well as the Men. Their young Maids are naturally very modest and shamefaced. And their young Women when newly married are very nice and shy, and will not suffer the men to talk of any immodest or lascivious Matters. Their Houses are, for the most part, cover'd with Chestnut Bark, but very close and warm, inasmuch that no Rain can go through. Their Age in Computation may be compared with the Christians. Their wearing Habit is commonly Deer-Skins or Duffles. They don't allow of mentioning the Name of any Friend after his Death, for at his Decease, they make their Face black all over with black Lead, and when their Affairs go well with them they paint their Faces with red Lead, it being a Token of their Joy, as the other is of their Grief. They are great Observers of the Weather by the Moon. They take great Delight in Cloths of various Colours. And are so punctual that if any go from their first Offer or Bargain with them, it will be very difficult for that Party to get any Dealings with them any more, or to have any further Converse with them, and moreover, it is worthy of Remark, that when a company of them are got together they never interrupt or contradict one another,

'till two of them have made an end of their Discourse, for if never so many be in Company only two must discourse at a time, and the rest must keep Silence. The English and they live together very peaceably, by reason that the English satisfies them for their Land. . . . The Dutch and Swedes inform me that they are greatly decreased in number to what they were when they came first into this country, and the Indians themselves say that two of them die to every one Christian that comes in here."¹

To show what the early settlers of America thought about the Indians is a very different thing from showing what they really were. Observers were not trained in those days to report things as they are. They went to their work with settled prejudices, preconceived opinions, predilections, and that obstinate half-knowledge which is in so many cases worse than no knowledge at all. They would not look at the Indians except as they conformed to or differed from European standards and European social systems, and the narrow theories of the day, upon all matters connected especially with ethnology, absolutely prevented them from forming just opinions, even in respect to what they clearly saw. Hence a thousand wild and ridiculous speculations and dreams, mixed up with very little plain fact. Our early writers gave us, so to speak, all the alchemy and astrology of Indian history, while neglecting its plain chemical analysis, and the simple but comprehensive mathematical laws by which its vital system could be intelligently explained. We are told much of Indian kings and emperors, of council fires, peace-pipes, and wampum belts, but almost nothing of the Indian social system and domestic economy, and practically less than nothing in regard to Indian languages, since nearly all there is said upon that necessary factor in ethnological study is false and illusory. The hardest task which students of American antiquities to-day have to encounter is that of rescuing hard solid facts from the mass of opinion and speculation in which they are hidden and buried. The day for these theories is not yet quite passed away, as Prof. W. D. Whitney has observed in his lectures on "Language and the Study of Language:" "When men sit down with minds crammed with scattering items of historical information, abounding prejudices, and teeming fancies to the solution of questions respecting whose conditions they know nothing, there is no folly which they are not prepared to commit." But still men are content to speculate far less absurdly to-day than they did a century and more ago on this subject. We have just seen how gravely and calmly Penn put forward his hypothesis that the Delawares are descendants of the ten tribes of Israel; but scholars who have much more pretentiously devoted themselves to American antiquities have not rested with the ten tribes. The Indians have been derived successively from nearly every civilized country of the Old World; Wales,

Ireland, Scandinavia, Spain, Egypt, Phœnicia, India, and China have been called upon in turn to make themselves responsible for the institutions and the monuments of our American aborigines, and China and Mongolia are still favorites in this matter with the most serious and best instructed historians.²

² Bancroft, in his first edition, permits himself enough dalliance with the hypothesis of a Calmuck or Mongolian immigration as to attempt to show that it was not impossible, perhaps not improbable. Grothius, De Laet, etc., speculated with less information perhaps than our historians, and with more prejudices, but not more widely from the purpose. Some writers have assumed that the Phœnicians and Carthaginians, because they made adventurous voyages and passed outside the Straits of Hercules, must have come to America. Plato's myth of the Atlantes has been made to do service in buoying up a sunken continent out of the oozy depths of the ocean and the mermaid grottoes of fantastic legend. Mexico and Peru, as has been infallibly shown time and again, must have got their monuments from Egypt or from India,—Carnac, Luxor, Elephanta are reproduced at Palenque and Uxmal, at Cholula and Cuizzo. Aristotle is quoted to show that the ancients must have had a knowledge of and intercourse with America. Slight similarities of costume, face, and habits have been seized upon as eagerly as Penn seized upon the fact that the Indians counted time by moons (as if Penn himself did not do the same thing!) to establish relationship for our barbarians with the children of Israel, with the fugitive Canaanites, etc. The sons of Prince Madoc of course have not been neglected. White Indians in North Carolina spoke the purest sort of a Cymric dialect, and some of the Shawanese are reported to have been seen carrying around Welsh Bibles in the same belt along with their tomahawks and scalping-knives. Menassah Ben Israel concludes, upon the same sort of data as those which convinced Penn, that the lost tribes emerged between California and the Mississippi, but Spizelius and those who followed him in the last century were content to ascribe the origin of our Indians to a country less distant than the Levant. China, Tartary, Siberia, and Kamtschatka, with the Aleutian archipelago, afforded a natural route for immigration, though no attempt is made to explain how the hordes of savages were able to make their way through the frozen wastes of Alaska and British America. The fact that Lelf, son of the Northman, Eric the Red, did discover America in the year 1000 A.D. has made work for the pseudo-ethnologists as well as the poets in the scratchings on the Digiton rocks in Massachusetts, and the old mill at Newport, R. I., and has even led to the factitious discovery of supposed inscriptions upon the face of the masses of Seneca sandstone at the falls of the Potomac. The Norsemen themselves encouraged the belief that on the Atlantic coast, between Virginia and Florida, a white nation existed, who clothed themselves in long, snowy robes, carried banners on lofty poles, and chanted songs and hymns. These were supposed to be the Irish immigrants, who replied in pure Gaelic when Raleigh's seamen accosted them, and spared Owen Chapelain's life in 1669 because he spoke to them in Welsh. Alexander von Humboldt has condescended to listen to some of these fables, and to repeat them in his *Cosmos*. The Chinese or Japanese settlement of our continent, by vessels coming over the Pacific Ocean, has found many advocates. Spanish legends are adduced to confirm this view. M. de Guignes, in a memoir read before the French Academy of Inscriptions, contends that the Chinese penetrated to America A.D. 458, and adduces the description and chart of Fou Sang in proof. In our own day that ripe Philadelphia scholar, Charles G. Leland, has republished the story of the so-called island of Fou-Sang and its inhabitants. De Guignes holds that the Chinese were familiar with the Straits of Magellan, and that the Coreans had a settlement on Terra del Fuego. Another Chinese immigration is assigned to A.D. 1270, the time of the Tartar invasion of the "Central Flowery Kingdom." But there are other speculations still on this subject. Thomas Morton, in his "New Canaan" (A.D. 1637), argues for the Latin origin of the Indians, because he heard them use Latin words, and make allusions to the god Pan. Williamson thinks that the race unquestionably springs from a Hindoo or a Cingalese source. Thorowgood, Adair, and Boudinot agree with Penn and Rabbi ben Menassah. Roger Williams also said, "Some taste of affinity with the Hebrew I have found." Cotton Mather thought that "probably the Devil, seducing the first inhabitants of America into it, therein aimed at the having of them and their posterity out of the sound of the silver trumpets of the gospel, then to be heard throughout the Roman empire. If the Devil

¹ Gabriel Thomas. "Historical Description of the Province and Country of West New Jersey in America. London, 1698." In his history of Pennsylvania, Thomas simply repeats what Penn had to say about the Indians.

The study of our antiquities is certainly engirt with tremendous difficulties, and these are especially prominent when we approach the linguistic side of our ethnology. All the conditions of the problem of our native languages are perplexing. "The number, variety, and changeableness of the different tongues is wonderful." Each family almost constitutes a tribe; each tribe has its dialect; each dialect changes from year to year, so that the speech of this generation is barely intelligible to the next. Warfare was the normal state of the Indian, and the perpetual strife of petty tribes is thought to have been gradually extinguishing American civilization for many years; the culture of Mexico was yielding to the influence of barbarism, just as the mound-builders of our Mississippi Valley were extinguished before a later and more savage race. Climate and mode of life have also contributed to accelerate the differentiation of our American dialects, which are mobile and changeable intrinsically to a remarkable degree. We have studied these dialects only indifferently well and

had any expectation that by the peopling of America he should utterly deprive any Europeans of the two benefits, literature and religion, which dawned upon the miserable world (one just before, the other just after the first famed navigation hither), 'tis to be hoped he will be disappointed of that expectation." As for the source of the Indians Mather fancied them Scythians, because they answered Julius Caesar's description of "*difficilis invenire quam interficere*." But the fact of idle and comical opinions on this subject does not destroy the interest in these speculations, nor the utility of continuing our investigations, on a rational basis, into American archaeology. Humboldt has said, partly in apology and partly in a spirit of protest, that "I do not participate in the rejecting spirit which has but too often thrown popular traditions into obscurity, but I am, on the contrary, firmly persuaded that by greater diligence and perseverance many of the historical problems which relate to the maritime expeditions of the Middle Ages, to the striking identity in religious traditions, manner of dividing time, and works of art in America and Eastern Asia, to the migrations of the Mexican nations, to the ancient centres of dawning civilization in Aztlan, Quivira, and Upper Louisiana, as well as in the elevated plateaux of Cundinamarca and Peru, will one day be cleared up by discoveries of facts with which we have hitherto been entirely unacquainted." (Cosmos, vol. ii., 610, note.) Professor Whitney is less sanguine. "The linguistic condition of America," he says, "and the state of our knowledge respecting it being such as we have seen, it is evident how futile must be at present any attempt to prove by the evidence of language the peopling of the continent from Asia, or from any other part of the world outside. . . . What we have to do at present is simply to learn all that we can of the Indian languages themselves, to settle their internal relations, elicit their laws of growth, reconstruct their older forms, and ascend toward their original condition as far as the material within our reach and the state in which it is presented will allow; if our studies shall at length put us in a position to deal with the question of their Asiatic derivation, we will rejoice at it. I do not myself expect that valuable light will ever be shed upon the subject by linguistic evidence; others may be more sanguine, but all must at any rate agree that as things are the subject is in no position to be taken up and discussed with profit." Nevertheless, Professor Whitney insists that greater diligence should be devoted to the study of our antiquities. "Our national duty and honor," he contends, "are peculiarly concerned in this matter of the study of aboriginal American languages as the most fertile and important branch of American archaeology. Europeans accuse us, with too much reason, of indifference and inefficiency with regard to preserving memorials of the races whom we have dispossessed and are dispossessing, and to promoting a thorough comprehension of their history. Indian scholars and associations which devote themselves to gathering together and making public linguistic and other archaeological materials for construction of the proper ethnology of the continent are far rarer than they should be among us."

during a brief period; they have no literature, their traditions are scanty and ill-preserved; the tribes themselves in many instances have wasted away from war, pestilence, famine, and the blighting shadow of the white man. These things make the search for the elements and radical character of our American dialects a difficult and arduous undertaking, and it is no wonder, the circumstances being such, that the ancient history of the continent is buried in the deepest obscurity. But we know that the continent had a history.

"Indicia of a numerous and civilized population, over whose memories and labors unnumbered ages have rolled, are yet discoverable on the shores of our ocean lakes, on the banks of our mighty rivers, and in the depths of our impenetrable forests. But these teach us no more of the ancient inhabitants than is known of the most aged of mortals,—that they were, and are not. We are doomed, perhaps, to be forever ignorant of the origin and progress of that race which preceded the inhabitants found upon our coasts at the first visits of Columbus and his successors, who are supposed not only to have adorned our country with the works of science and art, but to have conquered and enlightened a large portion of those climes which ignorance and pride have denominated the Old World."¹

Gordon here refers to the theory of Thomas Jefferson, which many others have coquetted with, that America, being the oldest hemisphere, might also have been the home of the elder races of men. The theory, whatever its merits may be in other respects, ought to be useful in the way of "retort courteous" to those who insist that our continent has been peopled from elsewhere. There is no necessity within the domains of strict science for believing that our Indians are not autochthones,—sprung from the soil itself. Voltaire has suggested that we should be no more astonished that the discoverers found men in America than that they found flies. But if the hypothesis of migration be insisted upon, America is as good a place to migrate *from* as to migrate *to*. Franklin, upon this point, seems to have coincided with Jefferson. Hector St. John Crèvecoeur,² in his account of Franklin, represents "Poor Richard," in the course of some comments upon the works of the mound-builders, as saying, "This planet is very old. Like the works of Homer and Hesiod, who can say through how many editions it has passed in the immensity of ages?" And the philosopher throws out the suggestion, without advocating it, that the mound-builders may have been swept away by some cataclysm of nature in prehistoric time. "The rent continent, the straits, the gulfs, the islands, the shallows of the ocean, are but vast fragments, on which, as on the planks of some wrecked vessel, the men of former generations who have es-

¹ Gordon's History of Pennsylvania, Chap. I.

² "Voyage dans la Haute Pennsylvanie," Chap. II.

caped these commotions have produced new populations. Time, so precious to us, the creatures of a moment, is nothing to nature." And the obverse of the shield can be presented to those who insist upon the Old World as the mother of our people with no little effect. Geologically, the continental mass of North America is far older than that of the other hemisphere. In the western part of this country, in California, Arizona, New Mexico, there are evidences, such as we find in the Syrian deserts, the plains of Mesopotamia, the Campagna of Rome, and the sandy wastes of Chinese Turkestan, of a country worn out and wasted by man's occupancy. The deep cañons and sun-baked valleys of Arizona once teemed with populations like Palmyra and Babylon and Nineveh. The Basque tongue in Europe is thought to be the oldest now spoken, if not the very language of the primitive race. It is older than the ancient Aryan speech, than the oldest Turanian tongue, and it has more affinities with the American dialects than any other which is known. These affinities are not developed or understood enough to warrant the building of any conclusions upon them. But as far as they have been studied they do nothing to negative the hypothesis that the Indian race is the surviving remnant of an older civilization which once peopled this continent with men and adorned it with monuments. Some of these monuments in the Mississippi Valley are so old that they belong to older geological formations. The epochs of glacier and drift have cast their débris upon the foot of these mounds, which must have been standing when down from the north, over mountain, lake, and river, with resistless might, the vitreous mass of the great glacier stream moved slowly southward. Why may not Algonkin and Iroquois have been survivors, like these mounds, from the elder civilization which built them?

When we descend to historic times, when we come to understand the Indian as he has been since the white man first visited these shores, we find one single race of men occupying practically the entire continent, excepting the Esquimaux of the far North, with whom we have no concern. This race, so far as the section of country we speak of is in debate, possessed a belt extending certainly from the Mississippi River to the Atlantic Ocean, and from some point, not exactly defined, north of the St. Lawrence River to North Carolina Sounds on the east, and the Kentucky cane-brakes on the west. It is probable that, as science progresses, it will be discovered that the one common *race* need not be divided into more than four or five *nations*, and that the subdivision of these nations into tribes and bands which now exists serves no ethnological purpose. Within the limits of the United States east of the Mississippi River, south of Hudson's Bay, and north of Georgia, only two nations need to be considered in historic times. One of these is the Delaware, Lenape, or, to speak more generally, the Algonkin nation; the other is

the Iroquois nation. Each of these nations was represented upon the soil of Pennsylvania, and on the site or in the vicinity of Philadelphia. The researches of John Gilmary Shea, Francis Parkman, and others who have given a special and intelligent attention to the subject, have established the fact that the tribe called Minquas or Minquosy by the Dutch (in the Latin of De Laet, *Machoeretini*), Mengwes by the Swedes (the English corruption of which was Mingoes), Susquehannocks or Susquehannoughs (Sasquesahannogh is the rendering by Capt. John Smith) by the Marylanders, and Andastés or Gandastogues (corrupted in Pennsylvania into Conestogas) was a branch of the Iroquois nation, settled above tide on the Susquehanna and Potomac Rivers. This ambitious race of savages, inspired with a conquering instinct which put them on a par with the ancient Romans, not only consolidated its strength at home by a political and military confederacy, but extended its power and influence abroad by the establishment of military colonies, just as republican Rome was in the habit of doing. One of these colonies constituted the tribe of the Tuscarroras, occupying part of North Carolina and Georgia, upon the flanks of the Cherokee nation. Another was the Nottaways, south of the James River, in Virginia. A third colony was the tribe of the Nanticokes, afterwards (in Pennsylvania) known as the Conoys, who held the Delaware and Eastern Shore of Maryland peninsula from the Brandywine southward. They were joined on the north by the Minquas or Susquehannas, whose "fort" was on the Susquehanna River at or near the mouth of Conestoga Creek. The Huron Iroquois of Canada were of this same nation, which thus occupied a belt of territory from north to south extending from Lake Simcoe to the southern limits of North Carolina, all in the country of the Algonkins, yet as distinctly separate from them by difference of language, character, and habit as a vein of trap rock in a body of gneiss or granite. The Andastés (to call them by their own tribal name, *Andasta* meaning a cabin-pole, and the tribe wishing to imply by it that they were house-builders rather than dwellers in lodges), like the Lenapes, claimed a Western origin, and they were the most warlike race upon the continent, proud and haughty as the Romans whom they so closely resembled, and, like them, enabled to conquer by their compact military and civil organization. Other tribes were split into small bands, between which there was only a feeble and defective concert and unity of action. The Iroquois, on the other hand, were a nation, and wherever we find them we discover that they lived and acted together in co-operative union. In Pennsylvania, for example, in all the land purchases made by Dutch, Swedes, and English, we find the Minquas acting as one tribe, dealing as one people and one name, whereas with the Lenapes each petty chief seemed to do what was best in his own sight. Tamine or Tamanend was probably the great

chief of the Lenapes in the time of Penn, and his supreme authority was manifest in the councils, but when it came to selling land he was no more than on a level with the twenty or thirty sachems who signed their marks to the deeds of conveyance for the various tracts. The Minquas ruled all the tribes adjacent to them and received tribute from them. Before the confederacy of the Five Nations entered

upon their ambitious course (the confederacy seems to have been formed during the second decade of the seventeenth century), the Iroquois probably were recognized as superiors by all the tribes of the Algonkins. Their Wyandot branch in Canada overawed the Algonkins there, though the latter were much more numerous. The Mohawks and Senecas kept in check the Mohegans of New York; New Jersey, and New England; the Susquehanna Minquas and the Nanticokes dominated among the Lenape of Pennsylvania and Maryland; the Erie Iroquois were where they could look after the Monecy tribes of the Lenape, the most warlike branch of that comparatively gentle race; the Nottaways kept in check the branch of the Powhatan Lenapes, and the Tuscaroras were in guard upon the Cherokees and the Florida Indians. When the five nations of the Iroquois of the lakes—the Mohawks, Oneidas, Senecas, Cayugas, and Onondagas—formed their confederacy and entered upon their career of conquest their conduct was obnoxious to their kindred both north and south of them, and they speedily found themselves at war both with the Wyandots in Canada, the Eries in the West, and the Andastés-Conestogas on the Susquehanna. In such a state of affairs the semi-hostile relations long existing between them and the Lenapes would of course be very embarrassing, and it was probably at this time that they made a neutral nation of the tribe of the Algonkins who occupied the territory on both sides of the Niagara River between them and the Hurons,¹ subjecting the Lenapes of the Delaware and Hudson to the same sort of *taboo*. Heckewelder, whose critical discernment was blinded by his unvarying partiality for the Lenape and his admiration for their mildness and amiability of character, has told a

¹ The neuter nation were called by the Senecas *Kahkwas*, and by the French *Atticandaron*, *Attivendaronks*, *Atirhagenvenets*, *Rhagenratkas*, or *Attinidarons*. The Niagara River, flowing through their territory, was called *Ongwiahra*, or river of the neutrals. This tribe in 1640, according to Lallemand, numbered forty villages, twelve thousand souls. ("Jesuit Relations," quoted by Parkman.)

story, often repeated, of how the Delawares were made "women," or reduced to a state of neutrality, by the astute contrivance and diplomatic dissembling of the Iroquois, who are said to have induced them to assume metaphorically the garments of women and surrender their warlike apparatus upon the pretext that there was an exalted and honorable merit in the feminine function of peace-maker. This might suit the notions of a simple-hearted Moravian missionary like Heckewelder; but, stripped of its sentimental environment, the naked fact seems to be that the Iroquois, finding they had these wars with their own kindred on their hands, disarmed the Lenapes and the Attiwandarons who surrounded them, and who had become by conquest more or less their tributaries, and guaranteed to them both peace and protection if they would abstain from hostilities on either side. It is likely that the Hurons and the Susquehannas also ratified these guarantees on their own behalf. The compact put a species of taboo upon the neutralized tribes. Their persons, their property, and their territory were to be respected by the belligerents, and while war-parties could march through their country, it was not to be made the scene of conflict, nor were their villages, plantations, or trade to be disturbed. The neuter nations could frequent the countries of both the hostiles with the impunity of ambassadors or heralds. At the same time they were classed as "women," were treated as such, and Heckewelder did not need to be told that the name of woman was an epithet of reproach which no nation of warriors would submit to save under the pressure of dire necessity. Nor did the enforced neutrality of the Lenape protect them from the contempt and the tyranny of the Iroquois. After these had conquered their enemies they did not respect the terms of the convention with the Lenapes. During Governor Fletcher's rule in Pennsylvania the latter appealed to him to save them from the necessity of going to war with the French, as they had been ordered to do by the Five Nations; and at the time of the consummation of the "walking treaty" in 1744, when the Delawares were dissatisfied with the results of the contract, they were brutally told by the Iroquois that they had no rights and no say in the matter whatever; they were women, and could not sell land without consent of their masters; they had lost their senses, and deserved to be taken by the hair of the head and jerked around as some lords of creation are in the habit of serving their wives in order to brighten their wits. They were, in fine, ordered to remove into the interior of Pennsylvania, where they could be "watched," and they obeyed. Here after a while they were joined by their kindred, the Shawanese, from the valleys and mountains of Virginia, and by some fragments of Maryland and other tribes. They made war upon the whites, and after the Revolution, in Ohio and Western Pennsylvania, in league with the tribes of the Eastern prairies, they finally forced the survi-

vors of the Five Nations to remove the taboo and the stigma of womanhood from them.

The Maryland and Pennsylvania Mingoos were a tribe of stalwart warriors, whose fighting qualities were of a superior sort, and their strategy equal to that of their kinsmen on the lakes. Prior to A.D. 1600 they are said to have been at war with the Mohawks, whom they wellnigh exterminated in the course of a ten years' struggle. Capt. Smith found this war still rife when he met the Susquehannas in 1608. The name he gave to the Mohawks was Massawomakes. In 1633 De Vries found them at war with the Lenape bands on the east side of the Delaware, the Armerwamen and the Sankikans. They were on good terms with the Dutch and the Swedes, with whom they had an extensive trade in peltries, by which they were supplied with fire-arms and ammunition; and they were alternately at peace and war with Maryland and the Maryland Indians. They so harassed the Chesapeake and Potomac tribes during the first ten years of the Maryland settlement that Governor Calvert in 1642 proclaimed them as public enemies. In 1647 they had thirteen hundred warriors trained to the use of fire-arms by Swedish soldiers. Then they offered their aid to the Canadian Wyandots, who were being crushed by the Five Nations, having first sent an embassy to Onondaga to propose a general peace between the Iroquois cantons, which overtures were rejected by the Five Nations. In 1652 the Susquehanna Andastés, in the presence of a Swedish deputy, ceded to Maryland all the territory of the Eastern Shore and that of the Western Shore from the Patuxent to the Susquehanna, and four years later they were again at war with the Iroquois of the lakes, while the smallpox was destroying their population by wholesale. They maintained a bold front, however, drove the Cayugas across Lake Ontario, and injured materially the fur trade of the Senecas. The Iroquois, supported by the French, sent a force of eight hundred warriors against the Susquehanna fort in 1663, but it was too strong and well defended to be attacked, and a stratagem attempted by the Iroquois cost them twenty-five warriors, who were burned at the stake. The war continued until 1675, when it ended with the complete overthrow of the Susquehannas. Some of their warriors retreated into Maryland, and the murder of a portion of these led to Bacon's war in Virginia, and a border war in Maryland which still further reduced the number of the surviving Mingoos. Finally they made peace both with the Five Nations and Lord Baltimore, and were permitted to remain at their ancient fort. From this time they began to dwindle away. They were at peace, however, with Pennsylvania from the time of Penn's treaty with their chief, Canoodagtoh, in 1701, until the last wretched remnant of the tribe, then only known as Conestogas, living on their reservation farm at Conestoga, in Manor township, Lancaster County, were cruelly set upon by the Paxton rangers and brutally

murdered in Lancaster jail, whither the authorities had sent them for protection. Thus perished a race of formidable Indian warriors, hunters, and statesmen, whose war-chief, *Hochitageté* (Barefoot), is a Hector in Indian legend, and whose last survivor, "Logan," or *Tah-gah-ju-te*, is known to general fame as a master of that noble, sententious eloquence in which his race excels. Capt. Smith saw the Susquehanna warriors in their prime, and describes them as "such great and well proportioned men as are seldom seen, for they seemed like giants to the English; yea, and to the neighbors, yet seemed of an honest and simple disposition, with much adoe restrained from adoring vs as Gods, . . . for their language it may well beseame their proportions, sounding from them as a voyce in a vault. . . . Five of their chief wero-wances came aboard vs and crossed the Bay in their Barge. The picture of the greatest of them is signified in the Mapped [accompanying Smith's narrative], the calfe of whose leg was three-quarters of a yard about, and all the rest of his limbes so answerable to that proportion that he seemed the goodliest man we ever beheld."

The Iroquois of the Susquehanna, or Andastés, as their name and residence imply (*Connadago*, the name of their fort, signifying the same as *andatagon*,—from *andata*, village,—meaning he is in the house or village of ridge-poles), differed in their mode of dwelling from the Algonkins. The identity of the word for *house* and *town* shows that they, too, like the Wyandots and the Five Nations, lived in "long houses," on the community principle. In fact, with all the Indians, relationship and rank passed through the female; the band represented the members of a family, and, among the Iroquois, as among the ancient Mexicans and the modern Zunis and Pueblo Indians, the family dwelt in one house and under one roof. This house was added to as the family increased in numbers and want, just as the bees add cells to their combs. No man or woman could marry in their own family, or with any one bearing the same totem or *gens* mark; that is to say, descended from the same mother. The man or woman of the Bear, the Beaver, the Wolf, the Serpent, or the Tortoise totem or family could marry in any of the others, but no Tortoise could wed with Tortoise, nor Serpent with Serpent, etc. The children born to the woman of the Tortoise symbol became Tortoises, whether their father was Beaver or Wolf, or of any other family, and these families lived together in the long houses, the construction of which was as in the diagram below:

A, passage-way; B, entrance; (1) to (7), fire-pits.

This house would accommodate seven fires, twenty-eight families, representing probably three or four generations and their increase by birth and accretion of wives and husbands. A Seneca long house, as it was in 1677, and as above represented, is described by Hon. Lewis H. Morgan in a paper called "A Study of the Houses of the American Aborigines," published in the first Annual Report of the Archaeological Institute of America, 1880. The facts are gathered from the description of Greenhalgh. "The interior of the house was divided into compartments at intervals of six or eight feet, leaving each chamber entirely open, like a stall, upon the passage-way or hall, which ran through the centre of the house from end to end. Between each four apartments, two on a side, was a fire-pit in the centre of the hall, used in common by their occupants. Thus a house with six fires would contain twenty-four apartments, and would accommodate as many families, unless some of the apartments were reserved for storage-rooms. Raised bunks were constructed around the three sides of each stall for beds, and the floor was slightly raised above the level of the ground. From the roof-poles were suspended strings of maize in the ear, braided together by the husk; also strings of dried squash and dried beans. Each house, as a rule, was occupied by related families, the mothers being sisters, own and collateral, who, with their children, belonged to the same *gens* or clan, while their husbands, the fathers of these children, belonged to other *gentes*, consequently the *gens*, or clan, of the mother predominated in numbers in the household, descent being in the female line. Whatever was taken in the hunt or raised by cultivation by any member of the household was for the common benefit. Provision was held as common stock within the household. The Iroquois had but one cooked meal each day, a dinner. Each household, in the matter of the management of their food, was under the care of a matron. When the daily meal had been cooked at the several fires the matron was summoned. It was her duty to divide the food from the kettle to the several families within the house, according to their needs. What remained was put aside to await the further direction of the matron." This was the sort of communism in which the Iroquois and their kin, the Minquas or Conestogas, lived, until the long houses finally disappeared under the influence of the whites. To this methodical and economical household communism the Iroquois undoubtedly owe their tribal unity, their faculty of confederating for defense and offense, and their military strength and political influence. John Bartram, in his account of his journey to Onondaga, in company with the Indian interpreter, Conrad Weiser, in 1743, gives a description of one of these long houses, in which he was entertained. It was the official house of the tribe, besides being a community home. "They showed us," he says, "where to lay our luggage and repose ourselves during our stay with them,

which was in the two end apartments of this large house. The Indians that came with us were placed over against us. This cabin is about eighty feet long and seventeen broad, the common passage six feet wide, and the apartments on each side five feet, raised a foot above the passage by a long sapling, hewed square, and fitted with joists that go from it to the back of the house. On these joists they lay large pieces of bark, and on extraordinary occasions spread mats made of rushes, which favor we had. On these floors they sit or lie down, every one as he will. The apartments are divided from each other by boards or bark, six or seven feet long from the lower floor to the upper, on which they put their lumber. . . . All the sides and roof of the cabin are made of bark, bound first to poles set in the ground, and bent round on the top, or set aflat for the roof as we set our rafters. Over each fireplace they leave a hole to let out the smoke, which in rainy weather they cover with a piece of bark, and this they can easily reach with a pole to perch it on one side or quite cover the hole."

The Algonkins, the Lenni Lenapes in Pennsylvania, were also variously called *Wapanacki* (European corruptions: *Openaki*, *Openagi*, *Abenakis*, and *Apenakis*). The Delaware regions appear to have been their principal seat, though affiliated and derivative nations of their stock were found from Hudson's Bay to Florida, and from Lake Superior to East Tennessee. Forty tribes acknowledged the Lenapes as grandfather or parent stock. Their traditions, which are not always authentic, relate that the tribe once upon a time dwelt in the far distant wilds of the West, whence they moved eastward towards sunrise by slow stages, often passing a year in a single camp, but eventually reaching the bank of the *Namesi Sipu*, the River of Fish (Mississippi), where they found the Mengwes or Iroquois, migrating like themselves, but who had descended from the northwest. The Lenape scouts reported the country east of the river to be held by a people called the *Allegewi* (whence the name Alleghany River and Mountains), who were numerous, tall, stout, some of them giants, all dwelling in intrenched or fortified towns. The Lenape were denied leave to settle among the Allegewi, but obtained permission to pass through their country. When they were half over the river, however, the Allegewi attacked and drove them back with great loss. The Lenape now formed an alliance with the Mengwe; the two nations united forces, crossed the river, attacked the Allegewi, and after a long and desperate war defeated them and expelled them from their country, they fleeing southward. The conquered country was apportioned between the conquerors, the Mengwes choosing the northern part, along the lakes, the Lenapes choosing the more southern section, binding on both sides of the Ohio. Moving eastward still, they came finally to the Delaware River and the ocean, and thence spread beyond the Hudson on the

north and beyond the Potomac on the south. This legend, however, is full of inconsistencies and incompatibilities, and hardly answers to what was known of the condition and location of the great Algonkin race at the time of the first settlement of the whites among them. As to their origin as members of the human family, they have divers legends. They claim to have come out of a cave in the earth, like the woodchuck and the chipmuck; to have sprung from a snail that was transformed into a human being and taught to hunt by a kind Manitou, after which it was received into the lodge of the beaver and married the beaver's favorite daughter. In another myth a woman is discovered hovering in mid-air above the watery waste of chaos. She has fallen or been expelled from heaven, and there is no earth to offer her a resting-place. The tortoise, however, rose from the depths and put his broad, shield-like back at her service, and she descended upon it and made it her abode, for its dome-like oval resembled the first emergence of dry land from the waters of the deluge. The tortoise slept upon the deep, and round the margin of his shell the barnacles gathered, the scum of the sea collected, and the floating fragments of the shredded sea-weed accumulated until the dry land grew apace, and by and by there was all that broad expanse of island which now constitutes North America. The woman, weary of watching, worn out with sighs for her lonesomeness, dropped off into a tranquil slumber, and in that sleep she dreamed of a spirit who came to her from her lost home above the skies, and of that dream the fruits were sons and daughters, from whom have descended the human race.¹ Another legend personifies the Great Spirit under the form of a gigantic bird that descended upon the face of the waters, and brooded there until the earth arose. Then the Spirit, exercising its creative power, made the plants and animals, and lastly man, who was formed out of the integuments of the dog, and endowed with a magic arrow that was to be preserved with great care, for it was at once a blessing and a safeguard. But the man carelessly lost the arrow, whereupon the Spirit soared away upon its bird-like wings and was no longer seen, and man had henceforth to hunt and struggle for his livelihood. Manabozho, relates the general Algonkin tradition, created the different tribes of red men out of the carcasses of different animals, the beaver, the eagle, the wolf, the serpent, the tortoise, etc. Manabozho, Messou, Michaboo, or Nanabush is a demi-god who works the metamorphoses of nature. He is the king of all the beasts; his father was the west wind, his mother the moon's great-grandfather, and sometimes he appears in the form of a wolf or a bird, but his usual shape is that of the Gigantic Hare. Often Manabozho masquerades in the figure of a man of great endowments and ma-

¹ Campanius' History of New Sweden. Duponceau's translation, Book III. chap. I.

jestic stature, when he is a magician after the order of Prospero; but when he takes the form of some impish elf, then he is more tricky than Ariel, and more full of hobgoblin devices than Puck. "His powers of transformation are without limit; his curiosity and malice are insatiable;" he has inspired a thousand legends; he is the central figure in the fairy realm of the Indian, which, indeed, is not very full nor genially peopled. Manabozho is the restorer of the world, submerged by a deluge which the serpent-manitous have caused. Manabozho climbs a tree, saves himself, and sends a loon to dive for mud from which he can make a new world. The loon fails to reach the bottom; the muskrat, which next attempts the feat, returns lifeless to the surface, but with a little sand in the bottom of its paws, from which the Great Hare is able to recreate the world. In other legends the otter and beaver dive in vain, but the muskrat succeeds, losing his life in the attempt.¹

The Atlantic Algonkins, the Lenapes, were subdivided into three tribes, of which the *Unamis* or the Tortoise were one, the *Unalachtu* or Turkey the second, and the third the Wolf, the *Minsi*. These were equally the tribal names and the *totems* of these tribes, of whom the greatest and most intelligent were the *Unamis*, living on the lower Delaware and adjacent streams near the tide, a fishing people, and to some extent planters as well as hunters, having numerous villages under minor chiefs, who were subordinate to the great council of the nation. The

nate bands had their names from their places of residence, as the Shackamaxons and the Neshaminkes, or from some other accidental circumstance.

The Lenapes suffered much from the warlike propensities and the strategic devices of the Iroquois, who did not hesitate to murder members of other tribes with the weapons of the Delawares in order to involve them in hostilities. In this way they provoked the Cherokees to fall upon the Lenapes, who suffered much in the long and bloody war which ensued. For nearly two generations after the first treaty between Deputy Governor Markham and the Lenapes in 1681, in which they surrendered lands to William Penn, these Indians maintained pacific relations with the whites of Pennsylvania. Still they had begun to suffer and to feel impatient in consequence of the increase and the pressure of the land-hungry English in the province. After their withdrawal to Wyoming and Shamokin by order of the Five Nations they were reinforced by the restless bands of their kindred, the Shawanese, who had settled as far south as the basin of the Cumberland River in Kentucky and Tennessee, whence they had been driven by the Creeks and Cherokees, a part north of the Ohio River, a part to the valley of Virginia about Winchester, their principal band having crossed into the hilly section of South Carolina. They numbered about two thousand souls on the Susquehanna after the government of Pennsylvania allowed them to settle there. There were numerous treaties between the proprietary government and the Delawares, the Shawanese and their kindred, and the Mengwes from the time of Penn's negotiations in 1701 to 1754, the time of the first overt act of hostility on the part of the Lenape. The causes of this alienation after a peace of seventy years were the abuses in the Indian trade, which rested on avarice, rum, and fraud, despoiling and besotting the poor savages, whose wives were often debauched by the traders; on the execution of a Delaware chief, *Wekahelah*, in New Jersey for what was regarded as an accidental homicide,² and on their being unjustly despoiled of their lands. The "walking treaty" was sorely resented by the Delawares. This is an unsavory part of the history of Pennsylvania. In 1685 Penn had secured a deed from Packenak, Essepertank, and some other chiefs of the Delawares for land from Neshaminy Creek westward "as far in the woods as a man could go in a day and a half." This land was not wanted at that time, and the treaty was left unexecuted. Penn's last will left to his grandson, William Penn, a tract of

DELAWARE INDIAN FORT.
[From Campanius' "New Sweden."]

Minsi, often called *Monceys* by the English, the most warlike of the tribes of Delaware Indians, dwelt in the interior, between the other tribes and the Iroquois. Their towns extended from their council-seat at the Minisink to the Hudson on the east, the Susquehanna on the southwest, the Catskills on the north, and the Muskenecum hills in New Jersey. Subordi-

¹ Manabozho is also called Michabou, Chiabo, Tarenawagon; he is the Hiawatha of the Ojibways, the Onondagas, and Mr. Longfellow,—

"Skilled in all the craft of hunters,
Learned in all the lore of old men,
In all youthful sports and pastimes,
In all manly arts and labors."

² Smith, however, in his History of New Jersey, declares that the deed was a deliberate assassination, and the execution only took place after a legal trial and regular conviction and sentence. *Wekahelah*, as he styles the chief, was an Indian living near Shrewsbury, and of great account both among Christians and his own people, being a wealthy man with an extensive farm, cattle, horses, and negroes; he raised large wheat crops, had a handsome house, feather beds, curtains to his bed, etc., often entertained distinguished persons, and was thought to be fully civilized.

ten thousand acres. The grandson sold the devise to William Allen, a land speculator. Allen had the land located on the Minisink, in the country of the *Minsis*, where the whites had bought no territory. A land lottery was got up at the same time, and Indian lands about Easton were squatted upon. When the Minsis resented this, the Iroquois were called upon, and the Delawares forced to remove. In 1737, John and Thomas Penn conferred with the Indians at Pennsbury, and demanded a confirmation of the deed of 1685; the day and a half's walk was intrusted to hired and trained *runners*, who ran out a line of eighty odd miles into the heart of the best reserved lands of the Indians on the Kittatinny range. The Indians denounced this as a fraud. Tedyuscund, the Delaware chief, at the conference at Easton in 1756, boldly declared against the swindle. Stamping his foot upon the ground, he told Governor Denny that—

"This very ground that is under me was my land and inheritance, and it is taken from me by fraud. When I say this ground, I mean all the land between Tobicon Creek and Wyoming on the Susquehanna." And Tedyuscund explained his accusation with definite and unmistakable precision: "When one man had formerly liberty to purchase lands, and he took the deed from the Indians for it and then dies, and after his death his children forge a deed like the true one, with the same Indian names to it, and thereby take lands from the Indians which they never sold, *this is fraud!* Also, when one king has land beyond the river, and another king has land on this side, both bounded by rivers, mountains, and springs, which cannot be moved; and the proprietaries, greedy to purchase lands, buy of one king what belongs to another, *this likewise is fraud!*"

The fact was indisputable; the French fanned the flame of discontent and furnished arms, and the Delawares went to war, harassing the frontier settlements and doing many deeds of blood. The Quakers patched up a peace with them; they fought for the American side in the Revolution, but their doom was sealed. They moved West, joined the Shawanese, the Miamis, the Maumees, the Wyandots, and Iroquois; went farther West, to Missouri, to Kansas, to the Indian Territory. To-day the tribe has ceased to exist as a tribe; a few scattered hunters and scouts are the sole survivors of this representative and leading tribe of the great Algonkin race, who once occupied a territory extending over fifteen degrees of latitude and twenty-five degrees of longitude in the most fertile parts of the United States, where now there is a population of thirty million souls and an annual value of products exceeding \$4,000,000,000.

The Lenapes had not the compact tribal unity of the Iroquois, nor did they seem to dwell like them in communal houses, yet Mr. Morgan is convinced that the community system was more or less established among all the American Indians; he traces it among the Mandans and the Sioux, the Arickarees and the Cherokees, and declares that Lewis and Clark found it among the Columbia River Indians, in Oregon, in 1808. Campanius, in speaking of the Delawares, says that they have no towns or fixed places of habitation; "they mostly wander about from one place to another,

and generally go to those places where they think they are most likely to find the means of support. . . . When they travel, they carry their meats with them wherever they go and fix them on poles, under which they dwell. When they want fire, they strike it out of a piece of dry wood, of which they find plenty; and in that manner they are never at a loss for fire to warm themselves or to cook their meat."¹

In constructing their lodges, says Campanius, the Lenapes "proceed in this manner: they fix a pole in the ground and spread their mats around it, which are made of the leaves of the Indian corn matted together; then they cover it above with a kind of roof made of bark, leaving a hole at the top for the smoke to pass through; they fix hooks in the pole on which they hang their kettles; underneath they put a large stone to guard themselves from the fire, and around it they spread their mats and skins on which they sleep. For beds, tables, and chairs they use nothing else; the earth serves them for all these purposes. They have several doors to their houses, generally one on the north and one on the south side. When it blows hard, they stop up one of them with bark, and hang a mat or skin before the other. Sometimes they fasten their doors to guard themselves against the sudden attacks of their enemies, and they surround their houses with round or square palisades, made of logs or planks, which they fasten

¹ Campanius speaks far too lightly here of the complicated, arduous methods of obtaining fire which prevail among savages, as if they inherited the possession and uses of flint and steel. When and how barbarous nations learned to produce fire is a mystery. Their first knowledge of fire and its effects and uses could of course be easily learned from the volcano and the thunderbolt; but how came they to know that friction would generate a degree of heat such as would result in flame? It could not have been by experiment; was it a discovery which came by accident, or was it a consequence of observation, such as that of the friction of one falling tree upon the trunk of another? The process is such a difficult one in getting fire by friction, and its civilizing influences are so extensive, that the question seems to be worth an archaeological investigation. In the Osage legend it is the Master of Life himself who instructs the snail-man in the use of fire and the cooking of meat. The Ojibways hold fire to be a sacred mystery. The flint from which it is struck is their emblem of purity, and the lighting of the peace-pipe is one of the most sacerdotal acts. The sacrifice of fire is a sacrifice to fire likewise, and the ancient and original worship of all the Indians was probably directed to the sun, the source of fire. The Indians had great difficulty in getting fire before they learned the use of flint and steel. Some tribes kept fires burning always, and had watchers to see that they never went out. The methods of generating it by friction are various. Gen. George Crook has described a fire-stick used by the Indians of the Sierra Nevada and Cascade ranges. "The fire-stick," he says, "consists of two pieces. The horizontal stick is generally from one foot to a foot and a half long, a couple or three inches wide, and about one inch thick, of some soft, dry wood, frequently the sap of the juniper. The upright stick is usually some two feet long and from a quarter to half an inch in diameter, with the lower end round or elliptical, and of the hardest material they can find. In the sage-bush country it is made of 'grease-wood.' When they make fire they lay the first piece in a horizontal position with the flat side down, and place the round end of the upright near the edge of the other stick; then taking the upright between the hands they give it a swift rotary motion, and as constant use wears a hole in the lower stick, they cut a nick in its outer edge down to a level with the bottom of the hole. The motion of the upright works the ignited powder out of this nick, and it is there caught and applied to a piece of spunk or some other highly combustible substance, and from this the fire is started." (Smithsonian Report, 1871.)

in the ground." The mode of fortifying an Indian village was to dig a ditch around it, throwing up the dirt on the inside. The trees of which the posts or "puncheons" of the palisades were made were felled by means of fire, the burnt parts hacked with hatchets until the tree was cut through in proper lengths. The logs were then planted upright in the embankment, in one or several concentric rows, those of each row bent towards the others till they intersected. Where the palisades crossed, a gallery of timber was thrown for the use of the defenders. These works were not regular except in cases where the Indians were taught by foreign soldiers, as the Hurons by the French, the Iroquois by the Dutch, and the Susquehannocks by the Swedes. The palisades were planted first in rude post-holes, and the dirt from the ditch thrown up around them.¹ The chief articles of furniture were the kettle, the dishes of bark and cedar wood, the curious-woven baskets and the calabashes. In Campanius' time the Indian manufacture of pottery had almost ceased, European utensils serving their ends so much better. Pastorius, speaking of the Indian diet, said, "I have once seen four Indians eating together with great delight; their repast consisted of a pompion (pumpkin) boiled in water, without any meat or fat or any kind of seasoning; their tables and seats were the naked earth; their spoons were muscle-shells, out of which they dipped the warm water; and their plates were large leaves of trees that stood near them." Yet the Indian commissariat was not entirely bare. Besides their meats and fish, fresh and dried, their melons and squashes, beans and peas and berries, of which they dried many for winter use, there were several roots and plants of which they ate largely. In spring and summer many succulent herbs served them for greens and salads; they consumed regularly the *tuckahoe* (*Sclerotium giganteum*), the *taouquaik* of the Mohegans, the *petukgunnug* of the Delawares, called "Indian loaf" by the whites. It is a curious root, fancied by some to be a sort of truffle, the shape of a flattened globe, and varying in size from an acorn to the bigness of a man's head. Kalm considers the tuckahoe to be identical with the *Arum Virginianum*, the wake-robin. It was roasted in the ashes, and the root of the *Arum triphyllum*, the Indian turnip, prepared in the same way, was deprived of its noxious qualities and pungent, bitter taste, and yielded a wholesome farina. The *Apios tuberosa* (*Glycine apios* of Linnæus), the ground-nut or wild bean, was also a regular article of diet, together with the arrow-head (*Sagittaria sagittifolia*) and the root of the golden-club (*Orontium aquaticum*).

In winter the huts of the Lenape were not very comfortable, no matter how picturesque they might be, but probably they afforded as nice lodgings as those of the English gipsies. The interior of the

cabin was stained and dingy with smoke that could find no regular outlet, and it was so pungent and acrid as to cause much inflammation of the eyes and blindness in old age. The fleas and other vermin were bad, and the children were noisy and unruly beyond parallel, raising a pandemonium in each lodge, which the shrill shrieking of the Hecate-like squaws added to without controlling it. Parkman draws a vivid picture of a lodge on a winter night, lighted up by the uncertain flickers of resinous flame, that sent fitful flashes through the dingy canopy of smoke, a bronzed group encircling the fire, cooking, eating, gambling, or amusing themselves with idle chaff; grizzly old warriors, scarred with the marks of repeated battles; shriveled squaws, hideous with toil and hardship endured for half a century; young warriors with a record to make, vain, boastful, obstreperous; giddy girls, gay with paint, ochre, wampum, and braid; "restless children, pell-mell with restless dogs." What a long step from this scene to the quiet decorum, the serene beauty, and the accumulation of comforts and conveniences of the civilization which has succeeded it!

The tools of the Lenape were rude and poor, strictly those of the stone age, for they had no knowledge of any metal save a little copper for ornament, yet they handled them with great skill and neatness.

"They make their bows with the limb of a tree," says Campanius, "of about a man's length, and their bow-strings out of the sinews of animals; they make their arrows out of a reed a yard and a half long, and at one end they fix in a piece of hard wood of about a quarter's length, at the end of which they make a hole to fix in the head of the arrow, which is made of black flint-stone, or of hard bone or horn, or the teeth of large fishes or animals, which they fasten in with fish glue in such a manner that the water cannot penetrate; at the other end of the arrow they put feathers. They can also tan and prepare the skins of animals, which they paint afterwards in their own way. They make much use of painted feathers, with which they adorn their skins and bed-covers, binding them with a kind of network, which is very handsome, and fastens the feathers very well. With these they make light and warm clothing and covering for themselves; with the leaves of Indian corn and reeds they make purses, mats and baskets, and everything else that they want. . . . They make very handsome and strong mats of fine roots, which they paint with all kinds of figures; they hang their walls with these mats, and make excellent bed-clothes out of them. The women spin thread and yarn out of nettles, hemp, and some plants unknown to us. Governor Printz had a complete set of clothes, with coat, breeches, and belt, made by these barbarians with their wampum, which was curiously wrought with the figures of all kinds of animals. . . . They make tobacco-pipes out of reeds about a man's length; the bowl is made of horn, and to contain a great quantity of tobacco. They generally present these pipes to their good friends when they come to visit them at their houses and wish them to stay some time longer; then the friends cannot go away without having first smoked out of the pipe. They make them, otherwise, of red, yellow, and blue clay, of which there is a great quantity in the country; also of white, gray, green, brown, black, and blue stones, which are so soft that they can be cut with a knife. . . . Their boats are made of the bark of cedar and birch trees, bound together and lashed very strongly. They carry them along wherever they go, and when they come to some creek that they want to get over they launch them and go whither they please. They also used to make boats out of cedar trees, which they burnt inside and scraped off the coals with sharp stones, bones, or muscle shells."

Charles Thomson, in the fragmentary "Essay upon Indian Affairs," found among his manuscripts, speaks of the very unusually good opportunities

¹ Parkman, "Jesuits in America." Introduction. An invaluable chapter.

afforded him in 1757 (while at Easton as commissioner for Pennsylvania to negotiate a peace with the Indians) to study their institutions, manners, and customs.

By a concurrence of circumstances, he says, he gained the confidence of the Indians, was admitted to their councils, and "obliged to enter deep into their politics and investigate their claims."¹ Of the Indians he says, after speaking of their diet, to which, in addition to the articles of food already enumerated, he contributes the very prolific and nutritious sweet potato (which might be kept during winter in kilns dug under the lodge fireplaces):

"They were perfect strangers to the use of iron. The instruments with which they dug up the ground were of wood, or a stone fastened to a handle of wood. Their hatchets for cutting were of stone, sharpened to an edge by rubbing and fastened to a wooden handle. Their arrows were pointed with flint or bones. What clothing they wore was of the skins of animals took in hunting, and their ornaments were principally of feathers. They all painted or daubed their face with red. The men suffered only a tuft of hair to grow on the crown of their head; the rest, whether on their head or faces, they prevented from growing by constantly plucking it out by the roots, so that they always appeared as if they were bald and beardless."²

"Many were in the practice of marking their faces, arms, and breast by pricking the skin with thorns and rubbing the parts with a fine powder made of coal (charcoal), which, penetrating the punctures, left an indelible stain or mark, which remained as long as they lived. The punctures were made in figures according to their several fancies. The only part of the body which they covered was from the waist half-way down the thighs, and their feet they guarded with a kind of shoe made of hides of buffaloes or deerskin, laced tight over the instep and up to the ankles with thongs. It was and still continues to be a common practice among the men to slit their ears, putting something into the hole to prevent its closing, and then by hanging weights to the lower part to stretch it out, so that it hangs down the cheek like a large ring. They had no knowledge of the use of silver or gold, though some of these metals were found among the Southern Indians. Instead of money they used a kind of beads made of conch-shell, manufactured in a curious manner. These beads were made, some of the white, some of the black or colored parts of the shell. They were formed into cylinders about one-quarter of an inch long and a quarter of an inch in diameter. They were round and highly polished and perforated lengthwise with a small hole, by which they strung them together and wove them into belts, some of which, by a proper arrangement of the beads of different colors, were figured like carpeting with different figures, according to the various uses for which they were designed. These were made use of in their treaties and intercourse with each other, and served to assist their memory and preserve the remembrance of transactions. When different tribes or nations made peace or alliance with each other they exchanged belts of one sort; when they excited each other to war they used another sort. Hence they were distinguished by the name of peace belts or war belts. Every message sent from one tribe to another was accompanied with a string of these beads or a belt, and the string or belt was smaller or greater according to the weight and importance of the subject. These beads were their riches. They were worn as bracelets on the arms and like chains round the neck by way of ornaments."³

¹ He was in fact adopted by them. He took minutes of the conference proceedings in short-hand, and these were so accurate as to be preferred by the commissioners to the official record, and so just to the Indians as to win their profound gratitude. They adopted him into the Lenape nation, and gave him the name of *Wegh-wu-law-mo-end*, "the man who tells the truth."

² Naturally "*impubes* and *imberbes*," said Dr. Douglas; but Proud denied that this was the case with all the Pennsylvania Indians. The habit of going naked and anointing their persons with unguents made the resort to depilatories very natural.

³ There is enough concurrent testimony to it to warrant the conclusion that the original purpose of *wampum* was exclusively mnemonic.

The Indians were few in number, says Mr. Thomson, as compared with the extent of territory. How few has not been generally realized by writers on this subject. Gordon, who is always moderate, thinks that at the most populous period there must have been less than forty-seven thousand Indians within the limits of Pennsylvania. Yet there have been repeated estimates of fifteen million Indians in the country at the time of the arrival of the English, and we have seen it confidently claimed that there could not have been less than three thousand Indians—six hundred warriors—within the present limits of Philadelphia two hundred and fifty years ago. The computation is very extravagant, and there are means of showing it to be so. The Virginia mode of calculating used to be to allow one Indian for every square mile. This would give three millions to the United States, forty-six thousand to Pennsylvania, one hundred and thirty to Philadelphia. But the estimate is too liberal. A hunting tribe of Indians cannot subsist upon a square mile of territory per capita. According to Lyell, the geologist, "it has been computed that eight hundred acres furnish only as much subsistence to a community of hunters as half an acre under cultivation." The United States, with five acres per capita under

It was a sort of *memoria technica*, like the knotted cords of the ancient Peruvians, and doubtless, if the Indians had had intelligence enough to work it out, a system of written language could have been constructed of wampum bead figures as expressive as that of a signal code and more serviceable than the Runic arrow-head writing of the Northmen. There is a much greater chance for variety of expression in strings of beads of two colors than there is in Prof. Morse's telegraphic alphabet of dots and lines. Wampum was given not only as a present and a courteous reminder, but as a threat and a warning. Thus, when at Lancaster in 1747 the chiefs of the Five Nations forbade the Lenapes to sell any more land, and ordered them to remove to the interior, they emphasized the command by handing them a belt. If the belts presented before the uses of wampum had degenerated and become comparatively meaningless could have been closely and intelligently examined, it is likely that some sort of language could have been made out of the varying forms of the belts and strings and the different arrangements of the beads. The use of wampum for ornament was secondary to its use *memoriter*. As money its use came about in this way: It was a memorandum of exchange, of business transactions. Passyund, of the Munsis, agreed to let his daughter marry the son of Secanee, of the Unamis, and to give with her a dowry of so many beaver-skins, in return for which Secanee's son was to hunt so many days for Passyund. How bind the bargain and prove it? By making a mutual note of it in the exchange of wampum. That particular belt or string represented and vouched for that particular transaction. Menanee, on the Alleghany, agrees to sell to Tamanee, on the Delaware, a dozen buffalo robes for forty fathoms of duffle, with buttons, thread, and red cloth to ornament. A belt is exchanged to prove the transaction. But that cannot be completed till the goods are exchanged. The next step is easy: to put a certain fixed value on each bead, so that when Tamanee pays a belt to Menanee for his robes, Menanee can at once hand the belt over to the trader who has the goods and get from him the duffle and trimmings. Viewed in this light wampum takes rank as an instrument of as various and important uses as any ever employed by man. It is as if the rosary of the pious Catholic were suddenly invested with the powers of a historical monument, a diplomatic memorandum and business "stub" book, a short-hand inscription system, which is equally understood by tribes of every variety of language and dialect, a currency of uniform value and universal circulation in the exchange of a continent, a bank of deposit, a jewelry and personal ornament, all in one. There is no parallel instance in all the economic history of mankind of an article so utterly useless and valueless in itself acquiring such a wide and multifarious range of derivative uses and values.

cultivation, are only able to spare seven and one-half per cent. of food products for export. Thus there are four and six-tenths acres needed to keep each member of this highly cultivated population. On the basis of Lyell's computation, therefore, each member of a population of hunters would require eleven and one-half square miles to keep him. There is a scientific reason for this enormous allowance, which Liebig explains in his "Animal Chemistry." "A nation of hunters on a limited space," he says, "is utterly incapable of increasing its numbers beyond a certain point, which is soon attained. The carbon necessary for respiration must be obtained from the animals, of which only a limited number can live on the space supposed. These animals collect from plants the constituents of their organs and their blood, and yield them in turn to the savages who live by the chase alone. They again receive this food, unaccompanied by those compounds destitute of nitrogen which, during the life of the animals, served to support the respiratory process. In such men, confined to an animal diet, it is the carbon of the flesh and of the blood which must take the place of starch and sugar. But fifteen pounds of flesh contain no more carbon than four pounds of starch, and while the savage, with one animal and an equal weight of starch, could maintain life and health for a certain number of days, he would be compelled, if confined to flesh, in order to procure the carbon necessary for respiration during the same time, to consume five such animals." Such Indian statistics as we possess bear out these conclusions. The hunting range of the Iroquois Five Nations was never less than sixty thousand square miles. They had corn and other sources of carbonaceous food. They were prosperous, comparatively rich, and took tribute and supplies from the tribes surrounding them. Yet, by careful comparisons made in 1877 under the auspices of the Bureau of Education, it is ascertained that they never exceeded a population of twenty thousand souls,—four thousand warriors,—three square miles per capita. This is a guide to the number of the tribes surrounding them. The Iroquois in 1665 had two thousand three hundred and fifty warriors,—eleven thousand seven hundred and fifty souls. The Susquehannas, who put old men and boys in the field, never had more than two thousand warriors,—eight thousand souls. The Canada Hurons never exceeded thirty thousand in all. The most populous branch of the Algonkins, the Mohegans of New York and New England, Parkman computes could not have had more than eight thousand fighting men,—forty thousand in all. The Lenapes of Pennsylvania and New Jersey could scarcely have reached half so many. We do not find any mention among them of populous towns like those of the Pequods, the Wampanoags, the Iroquois, the Hurons, the Powhatans. They had nothing but small and obscure villages, and of these not many. They had but six hundred fighting men from the Delaware to the Ohio in 1759. Proud, who knew

much about them, is not able to enumerate many bands.¹

Secretary Thomson remarks that it is difficult to distinguish the Indians into distinct and different nations:

"Almost every nation being divided into tribes, and these tribes subdivided into families, who from relationship or friendship united together and formed towns or clans; these several tribes, families, and towns have commonly each a particular name and chief, or head man, receive messages, and hold conferences with strangers and foreigners, and hence they are frequently considered by strangers and foreigners as distinct and separate nations. Notwithstanding this, it is found upon closer examination and further inquiry that the nation is composed of several of these tribes, united together under a kind of federal government, with laws and customs by which they are ruled. Their governments, it is true, are very lax, except as to peace and war, each individual having in his own hand the power of revenging injuries, and when murder is committed the next relation having power to take revenge, by putting to death the murderer, unless he can convince the chiefs and head men that he had just cause, and by their means can pacify the family by a present, and thereby put an end to the feud. The matters which merely regard a town or family are settled by the chiefs and head men of the town; those which regard the tribe, by a meeting of the chiefs from the several towns; and those that regard the nation, such as the making war or concluding peace with the neighboring nations, are determined on in a national council, composed of the chiefs and head warriors from every tribe. Every tribe has a chief or head man, and there is one who presides over the nation. In every town they have a council house, where the chief assembles the old men and advises what is best. In every tribe there is a place, which is commonly the town in which the chief resides, where the head men of the towns meet to consult on the business that concerns them; and in every matter there is a grand council, or what they call a council-fire, where the heads of the tribes and chief warriors convene to determine on peace or war. In these several councils the greatest order and decorum is observed. In a council of a town all the men of the town may attend, the chief opens the business, and either gives his opinion of what is best or takes the advice of such of the old men as are heads of families, or most remarkable for prudence and knowledge. None of the young men are allowed or presume to speak, but the whole assembly at the end of every sentence or speech, if they approve it, express their approbation by a kind of hum or noise in unison with the speaker. The same order is observed in the meetings or councils of the tribes and in the national councils."

Gordon, in his "History of Pennsylvania," observes of the language of the Lenape that it is said to be "rich, sonorous, plastic, and comprehensive in the highest degree," adding that a cultivated language usually denotes great civilization. On the contrary, a cultivated, elaborate language, abounding in regular forms and great numbers of distinctions, qualifications, conjugations, and declensions, is not a sign of civilization, but the opposite, to a certain extent. The Sanscrit is more perfect and comprehensive and regular than the Greek, the Greek than the German, the Latin than the French, the Anglo-Saxon (*pace* Mr. Edward A. Freeman) than the English. The Indian languages were comprehensive in the sense of being complicated with many forms. They were not plastic, however. That is the property of the languages of civilization, which are intended to be labor-saving machines. They are plastic, oblique, elliptic, direct, waste no muscular force on the regu-

¹ He mentions the Assunpink, Rancocas, Neshamink, Shackamaxon, Mantas (at Gloucester, N. J.), the Tuteloes (who were remnants of the Virginia Nottoways), Minisinks, Pomptons, Narritaconks, Capitnasses, and Gacheos.

larity of forms. The Algonkin tongue, like all the Indian languages, belonged to what philologists regard as one of the lowest orders of speech. It is of the incorporative or polysynthetic type. In the words of Prof. Whitney, "it tends to the excessive and abnormal agglomeration of distinct, significant elements in its words, whereby, on the one hand, cumbrous compounds are formed as the names of objects,¹ and a character of tedious and time-wasting polysyllabism is given to the language,—see, for example, the three to ten syllabled numeral and pronominal words in our Western Indian tongues, or the Mexican name for 'goat,' *kwa-kwauh-tentsone*, literally, 'head-tree (horn), lip-hair (beard),' or 'the horned and bearded one,'—and, on the other hand, and what is of more importance, an unwieldy aggregation, verbal or quasi-verbal, is substituted for the phrase or sentence, with its distinct and balanced members. . . . Not only do the subjective and objective pronouns enter into the substance of the verb, but also a great variety of modifiers of the verbal action, adverbs, in the form of particles and fragments of words; thus almost everything which helps to make expression forms a part of verbal conjugation, and the verbal paradigm becomes wellnigh interminable. An extreme instance of excessive synthesis is afforded in the Cherokee word-phrase, *wi-ni-taw-ti-ge-gi-na-li-skaw-lung-ta-naw-ne-li-ti-se-sti*, 'they will by that time have nearly finished granting [favors] from a distance to thee and me.'"

Such a language could never become the vehicle of science or the agent of business. As Bancroft has expressed it, the Indian's language was "held in bonds by external nature." It could not and did not rise above the narrow area of his imperfect experiences. It was poor just where the Indian mind and morals were impoverished. "It had no name for continence or justice, for gratitude or holiness," and equally not for covetousness. Loskiel has said that it required the labor of years to make the Lenape intellect capable of expressing abstract truth. Eliot could only translate the gospels by resorting to a series of happy analogies. The Indian tongue was materialistic, but, because it proceeded from one obvious visible object to another, it abounded in trope and metaphor, became highly picturesque, and was furnished with rich supplies from the most efficient armories of eloquence. Plain dealing became "a straight and broad path;"

if the word was peace, it was conveyed by the concrete idea of "burying the hatchet;" to conciliate was to "polish the chain of friendship;" to be allies was to "eat with one mouth;" to condole with a person was to "wipe the tears from his eye;" to repair an injury was to "wipe the blood off the council-seat;" when James Logan was ill and retired he was said to be "hid in the bushes;" to be slow to resent injuries was to "sit with the head between the legs." An Indian cannot conceive of father in the abstract; he must say "my father," or "your father." His pantheon was a procession of idealized images of single objects, animate or inanimate; every tree, every animal, every stone had its particular "manitou," but Gitché Manitou, the Father of Life, was only a faint and colorless adumbration of the Great Spirit, if indeed it existed at all previous to intercourse with the whites. Eliot could not find an Indian word to express the act of kneeling, he had to resort to paraphrase to express the idea; in fact, words must all the time be coined to embody the primal European conceptions of faith, submission, reverence, religion, goodness. Yet the Indian vocabulary is rich in words which signify the dark and tumultuous passions, hate, revenge, etc., and the acts that result. In the forms of homicide the Indian language is as copious as an old English indictment for murder, and there is no lack of words to express what is bad, vicious, filthy, obscene, and shameful.

The Indian's end in life was to act out the propensities of his untamed nature. He had no word to express continence, and chastity was but a half-formed idea in his brain. He bought his wife, and purity of blood was assured by the rule of descent on the female side. Marriage was a physical convenience and a transaction by purchase; religion was as dim perhaps, with rites of sacrifice and worship left to the individual will. But vengeance was a duty, and revenge the strongest and most enduring passion of the Indian's soul. To gratify it time, distance, hardship, danger, all went for nothing; the stealthy blow, the reeking scalp torn from the prostrate victim, the yell of triumph when the deed was done—this was compensation for all. Nor did death suffice; the enemy, public or private, must be tortured, and nothing but his agony and his groans could satiate the wolfish thirst of the savage for blood. His warfare was conducted by stealth and strategy and surprise; he imitated the panther, not the lion, in his assaults, and he lay by his victim and mangled him like the tiger. Sometimes he ate his victim, if he was renowned, that all of the valor and virtue of the slain might not be lost, but some of it pass into the slayer's own person. If conquered or wounded to death his stoicism was indomitable; his enemy might see his back in flight, but never behold him flinch under torture; when his finger-nails were plucked out one by one, and the raw skull from which his scalp was torn seared with live coals, and red-hot gun-barrels thrust into

¹ "They have but few radical words, but they compound their words without end; by this their language becomes sufficiently copious, and leaves room for a good deal of art to please a delicate ear. Sometimes one word among them includes an entire definition of a thing; for example, they call wine *oneharadeshoengstseragherie*, as to say 'a liquor made from the juice of the grape.' The words expressing things lately come to their knowledge are all compounds; they have no labials in their language, nor can they pronounce perfectly any word wherein there is a labial, and when one endeavors to teach them to pronounce these words, they tell one they think it ridiculous that they must shut their lips to speak. Their language abounds in gutturals and strong aspirations; these make it very sonorous and bold, and their speeches abound with metaphors, after the manner of the Eastern nations." (Proud, "History of Pennsylvania," ii. 300.)

the abdominal cavity after he had been disemboweled, he would still sing his death-song and gather breath to hurl a last yell of defiance at his enemy as he expired. To attain this sort of endurance was the aim of all the Indian culture; it was part of his religion, for a distinguished reception in the happy hunting-grounds beyond the grave was the promised reward of the resolute warrior and the successful hunter. The Indian brave was by this system encouraged to set his own personality above everything else. His individuality was most conspicuous and pronounced. He was haughty, proud, boastful, vain. He bragged loudly of his own deeds. He painted and adorned his person with the utmost pains and in the most gaudy and glaring colors. His body was tattooed; his scalp-lock was a study for his ideas in decorative art; he daubed his face in white, red, and green colors till he vied with Harlequin; and his robes, his leggins, his moccasins were beaded and embroidered in a thousand complicated patterns and devices.

The squaw did this fancy work for her lord and master, but she had no time to do it for herself. The Indian woman's life, as Parkman has said, had no bright side. It was a youth of license, an age of drudgery. There was not much passion, but a great deal of dissoluteness. The Lenape women were no more chaste than the men were continent. Amours in youth were no ban to marriage afterwards. Child-bearing was scarcely painful to the woman, and, as she alone had charge of her offspring, children were no burthen nor obstacle to the man. Delicacy and modesty could have no existence in the promiscuous lodge-life of these savage tribes, and the virtue which the male did not protect was naturally no treasure to the female. "Once a mother," says Parkman, describing the Hurons, the woman "from a wanton became a drudge. In March and April she gathered the year's supply of firewood. Then came sowing, tilling, and harvesting, curing fish, dressing skin, making cordage and clothing, preparing food. On the march it was she who bore the burden, for, in the words of Champlain, 'their women were their mules.' The natural effect followed. In every town were shriveled hags, hideous and despised, who in vindictiveness, ferocity, and cruelty far exceeded the men. To the men fell the task of building the houses and making weapons, pipes, and canoes. For the rest, their home-life was a life of leisure and amusement. The summer and autumn were their seasons of serious employment,—of war, hunting, fishing, and trade. . .

These pursuits, with their hunting, in which they were aided by a wolfish breed of dogs unable to bark, consumed the autumn and early winter." With winter the men were idle, the women more at leisure. The festive season ensued,—gambling, smoking, dancing, feasting to gluttony consumed the vacant hours. The Indian was a desperate gambler. He staked his all upon a throw; he stripped himself naked in mid-winter to raise the means for another stake. It was a common feature in the meagre comedy of this dull existence for the young brave who had gone forth gay and resplendent in all his bravery and trappings to visit his kinsmen in the next village to return after a

DELAWARE INDIAN FAMILY.
[From Campanius' "New Sweden."]

day or two like a plucked crow, all his finery gone, and no leggins nor moccasins even left to protect his denuded limbs from frost and snow.

Indian feasts and dances had more or less of a mystical and religious character, but the substantial part of them, gluttony and wild license, were never neglected. At the so-called religious feasts indeed gluttony was part of the ritual. Each was expected to eat all before him, under penalty of vengeance by the special manitou who was to be honored, and prizes were offered to the victor who soonest devoured his

portion. The dances were wild, furious, delirious, and intoxicating. At religious dances men and sometimes women flung off all their clothing; they shouted wild songs, they gesticulated fiercely and contorted themselves like dervishes till their glistening bodies foamed with sweat. The war-dance and war-songs were intended to supply the spark to the tinder of enthusiasm and ferocity, and there was a terrible vividness in the mimic pantomime of battle and murder and sudden death, of the tomahawk thrown with unerring aim, the knife driven hilt-deep in the victim's breast, the scalp waved aloft as if just wrested from the head of the slain. The drum, the rattle, and the Indian flute were heard at these dances, but the song was the true accompaniment. It was the chorus that directed the dance, and the dancers acted its words while their motions followed its rhythm. Some of these songs have the true lyric quality. They burst from the monotony of the chant which is usual to the Indian with a sort of inspiration that the savage's excitable nature always responds to.

The dance was an important ingredient in the scanty materia medica of the Indian conjurer and medicine-man. He esteemed it above the squaw's simple and the warrior's sweat-box or Russian bath. That, indeed, was a good thing to cure rheumatism and restore suppleness and elasticity to the Indian's frame, and the squaw's roots and herbs were wonderful coadjuvants when the savage lived so simple and active a life in the open air; but the medicine-man could not live by these. His profit lay in maintaining the general opinion of the efficacy of his rattle and drum, his pinches, howls, and dancing. Disease came, in the Indian's creed, from the malevolence of spirits, and, as the necromancer had power over these, he must be able to expel disease likewise. The imagination is so powerful a factor, the mind has such unlimited influence over the body in its morbid states, that we are quite willing to believe the Indian medicine-man, shallow charlatan though he was, a far more successful doctor than he usually gets credit for being. In fact, the sorcerers were too numerous not to have been lucky sometimes. In the Indian belief the whole material world swarmed with unseen influences and powers that controlled human destinies with good and evil spirits, with manitous and existences that from dawn till night and from night again to dawn were working with dim indefinite agencies but untiring restlessness to prevent the obvious promises of each person's path in life in some unguessable way. Nature was full of sorceries, and each might be a conspiracy of some sort against human life, health, or happiness. Universal superstition made nameless panics universal, and as only sorcerers could deal with sorcery, each Indian community harbored a pack of conjurers, diviners, medicine-men, who were by turns the village magicians and the village doctors. They were learned in the legends of the past, and they pretended to the lore of the future in order to control

the faith of the present. Their arts were numerous, but the tools of their trade were few and rude, and they were too slavishly adherents of tradition ever to deviate from the established tricks of that trade. In the words of Parkman, "The sorcerer, by charms, magic songs, magic feats, and the beating of his drum, had power over the spirits and those occult influences inherent in animals and inanimate things. He could call to him the souls of his enemies. They appeared before him in the shape of stones. He chopped and bruised them with his hatchet; blood and flesh issued forth; and the intended victim, however distant, languished and died. Like the sorcerer of the Middle Ages, he made images of those he wished to destroy, and muttering incantations, punctured them with an awl, whereupon the persons represented sickened and pined away."

This poor conjurer was the only doctor the Indian had. His magic was more to him than herbs and surgery, and it was his code that if his magic, his drum and rattle, his feasts, howls, and contortions could only expel the demon, nature would expel the disease and the patient was sure to recover. The Algonquin conjurer was also a haruspex and diviner. He watched the flight of birds, interpreted the running of water and the flicker of flame. He locked himself in a cabinet and communed with unseen spirits, for all the world like the most modern and most shameless of our charlatans. He built a low conical lodge of poles and hides, immured himself therein for hours, beat his drum, sounded his rattle, sang his songs, and at last emerged charged with the communications the spirits had vouchsafed to him after his arduous and awe-inspiring wrestle with them. Still, this conjurer was not the priest of even the Indian's debased religion. Every man was priest in his own right, made his own sacrifices, and propitiated the powers to which he yielded deference as suited his own pleasure. The Indian was too poor and too hungry to make many and costly oblations. He sprinkled a little tobacco upon the breeze; he immolated a white dog, or he burned a scrap of meat to Manitou; but when he made a genuine sacrificial feast he and his guests were careful to consume the offering to the last fragment in Manitou's name and behalf. The completeness of the *gormandise* was the compliment which Manitou was thought to appreciate most, and thus piety became its own reward. Feasts of this sort would of course be followed by dreams in proportion to the sumptuousness of the vicarious offering, and these dreams the conjurer made his profit by interpreting.

If the Indian was not extravagant in his offerings to Manitou, he was yet scrupulously and invariably polite in all his dealings with him. He slew the bear and the deer with a sententious courtesy, and was profuse in apologies and civilities to the spirit of every victim of his skill in the chase, and even upon the war-path. This was a sincere proceeding for one so

deeply imbued with the notion that the entire material world was sentient and intelligent, and that every object and being in nature had a share in ruling human destinies. All things had souls, and the souls of all things could hear man's soul while incapable of responding to it. They were not powerless because dumb; they were none the less to be propitiated because their reconnoissance was inaudible. The universe quivered throughout with mystery, and the mysterious was synonymous, in the Indian's creed, with the divine. Hence in every undertaking the American savage made a factitious offering of first fruits. He even propitiated the fishing-nets he had just made with his own hands, and secured a good haul by wedding the nets to the virgins of his tribe. Each Indian had besides his own particular manitou, and the manhood vigil of the young warrior before he went upon his first hunt or his first war-path was a propitiatory acknowledgment made to this spiritual inward guide, friend, and monitor. The object that appeared to him in his fasting dreams during this vigil became his totem, his fetish, the "medicine" which he must henceforth wear about his person.

Sooth to say, however, the Indian did not save all his urbanity for the spirits and the manitou. The elaborate courtesy which he bestowed upon the bear he had just killed was the distinguishing trait of all his daily intercourse with his neighbor and his guest. Politeness, deference, respect for the persons and feelings of others constituted the social law of the Indian, and stood him instead of municipal and police ordinance. The consequence was that these wild and intractable barbarians were able to live together harmoniously even in large communities. Gregarious as the buffalo, the Indian was, as Parkman has said, "in certain external aspects, the most pliant and complaisant of mankind." He had on all occasions that docile acquiescence in the whims and oddities of strangers which is the quintessence of politeness. The Indian of whom Franklin wrote illustrates this spirit cleverly. The missionary had told him how Adam fell, to which he listened with grave assent, telling, in his turn, the Indian fable of the origin of maize and tobacco. The missionary repudiated the story with contempt, whereupon the Indian said, "My brother, it seems your friends have not done you justice in your education. They have not well instructed you in the rules of common civility. You see that we, who understand and practice those rules, believe all your stories. Why do you refuse to believe ours?" An Indian who resented being stared at and gaped at by the town mob complained to his interpreter. "We have," said he, "as much curiosity as your people, and when you come into our towns we wish for opportunities of looking at you; but for this purpose we hide ourselves behind bushes where you are to pass, and never intrude ourselves into your company." The Jesuit priests, when first among the Indians in Canada, fancied they were making converts at once of the entire population, but

afterwards found out that they had mistaken for conviction what was simple courtesy, unwillingness to deny and contradict. Instinctive self-control helped the Indian to maintain this courteous exterior upon all occasions. The self-respect of the Indian, one of his strongest qualities, made him considerate and respectful to the feelings of others. His code of honor was rigid to punctiliousness, and he exacted the same deference to himself which he so willingly yielded to others. He liked popularity, and made sacrifices to secure it. He was hospitable to a fault, and really charitable and generous to distress and suffering. The village hags united to supply the fresh-wedded bride's wood-pile; the whole people turned out to rebuild a lodge if any one had lost his by flood or fire. No man, no matter what his condition, could enter the Indian's wigwam and seat himself but what food would at once be placed before him, if food there was. They were sociable, fond of visiting, and jocose in their sociability. The story-teller always had a high seat at their feasts. Said the Jesuit Father Brébeuf, whom the Iroquois murdered with such atrocious tortures, "They have a gentleness and an affability as it were incredible in savages; they are not easily offended; . . . they keep up their excellent kind relations one with another by frequent interchange of visits, by their mutual helpfulness to the sick and ailing, and by their feasts and family alliances. They are less in their own wigwams than in those of their friends. If they have some tidbit or other at once they make a feast of it for their friends, and never think of eating it without company."

The political organization of each Indian nation, so far as it has been observed, is identical in the essential with that of every other Indian nation. The race or nation was a confederacy of tribes of contiguous territory and common descent; each tribe was divided into clans, and each clan into families. The nation was governed by chiefs, whose office was hereditary in the female line of descent; the power of the chiefs was great, but it was through respect and deference to their opinions rather than submission to their authority, for their influence was almost entirely advisory and persuasive. "There were two principal chiefs, one for war and one for peace; there were chiefs assigned to special national functions; there were numerous other chiefs, equal in rank, but very unequal in influence, since the measure of their influence depended on the measure of their personal ability; each nation of the confederacy had a separate organization, but at certain periods grand councils of the united nations were held, at which were present not chiefs only, but also a great concourse of the people; and at these and other councils the chiefs and principal men voted on proposed measures by means of small sticks or reeds, the opinion of the majority ruling."¹

¹ Parkman, "Jesuits in America."

The power of chiefs and councils, great in degree, was limited in extent. There were few things for it to be exercised upon in that savage state where individuals were so free. Now and then a witch or a traitor or obnoxious person was ordered to be murdered by the council in secret session. But there was no property for the law-making proclivity to exercise itself upon, and there could not be much stealing without property. In fact, the Indians never robbed or stole except away from home. Crimes against the person were individual matters, and redressed by individual methods. This was even the case with murder. If murderer and victim belonged to the same clan, it was looked upon as a family quarrel, to be settled by the immediate kin. As a rule, public opinion compelled the acceptance of the atonement in lieu of bloodshed. If the murderer and victim were of different clans, the whole tribe went to work to prevent a feud from arising and leading to more bloodshed. Every effort was made to get the victim's clan to accept the atonement offering. Thirty presents was the price of a man's life, forty for a woman. If the victim belonged to a foreign tribe, the danger of war led to council meetings, formal embassies, and extensive making of actual and symbolical presents.

A strange race the Indians were, and their institutions, now so rapidly disappearing, are worthy of close and careful study. If this generation shall not profit by the vestiges of Indian antiquities still remaining to secure a knowledge of their institutions and the languages of the people who observed them, nothing will be left for the inquiring spirits of the next age. No matter whether the race remains or not, the aboriginal American Indian, such as he appeared to Penn and to Capt. Smith, to Campanius and De Laet and the Jesuit Fathers, will no longer be found in this continent. It should be our pleasure, as it is our duty, to try to restore the fading picture of Indian life in the spirit of Philip Freneau's graceful poem on "The Old Indian Burying-Ground:"

"The Indian, when from life released,
Again is seated with his friends,
And shares again the joyous feast.

"His imag'd birds, and painted bowl,
And ven'son for a journey dress'd,
Bespeak the nature of the soul,
Activity, that wants no rest. . . .

"By midnight moons, o'er moistening dews,
In vestments for the chase array'd,
The hunter still the deer pursues,
The hunter and the deer—a shade."

CHAPTER IV.

DISCOVERY AND OCCUPATION OF THE HUDSON AND DELAWARE RIVERS BY THE DUTCH.

THERE is no ground for reasonable doubt that John and Sebastian Cabot, natives of Venice, probably sailors almost from birth, but doing business in Bris-

tol, England, at the time of their commission under King Henry VII., were the first navigators, at least of historic times, to discover the actual coast-line of the North American continent, along which they sailed from Newfoundland to the parallel of Gibraltar, that is to say to about the latitude of Cape Hatteras. John Cabot, the senior of these sailors and traders, excited by the news of the great discovery made by Christopher Columbus, and with the certainty thus warranted of reaching land by sailing westward, obtained a commission under the great seal of England from King Henry VII., dated March 5, 1496, authorizing the navigator and his three sons, or either of them, their heirs or their deputies, to sail into the Eastern, Western, or Northern seas, with a fleet of five ships, at their own expense, in search of unknown lands, islands, or provinces; to plant the banner of England on these when found, and possess and occupy them as vassals of the English crown. The provision that the explorers should voyage at their own expense was characteristic of the thrifty monarch, but the commission of a king at that day was the only safeguard the navigator had to protect him from suspicions of piracy, and the exclusive right of frequenting and trading to the new countries when found was a privilege for which nations were soon to contend. Cabot, with his son Sebastian, came in sight of the mainland, in the region of Labrador, on June 24, 1497, fourteen months before Columbus, on his third voyage, had reached the continent, and two years before Amerigo Vespucci sailed from the Canaries.¹ It is not so certain that Verazzano, also an Italian, discovered the bay of New York in a voyage made by him in 1506 from the Carolinas northward, under the commission of King Francis I. of France.²

It is certain that the first practical discovery of the Delaware Bay and River and of the New York Bay and Hudson River was made in 1609, by Henry Hudson, an English navigator in the service of the Dutch East India Company, whose title to immortality seems to be assured by the fact that one of the largest bays and one of the noblest rivers in the world

¹ Bancroft, vol. i. Hakluyt, *Divers Voyages*. Brodhead, *Hist. New York*. The account of Cabot's voyage is given by Peter Martyr.

² The account of Verazzano's voyage is contained in a letter from the navigator to King Francis, dated July 8, 1524, describing what he saw and did and the strange people he encountered. This letter is given to the world first by the historian Ramusio, a Venetian, who also, by including this in his collection, made himself responsible for the voyages of Cadamosto, the travels of Amerigo Vespucci, and of Marco Polo, all of which first saw the world in this most interesting collection. The three volumes of Ramusio also contain the apocryphal voyages of the brothers Zeni beyond the north of Scotland in 1400, the works of the credulous Oviedo, and the earliest histories of the conquests made by Cortes and Pizarro. They are capital reading, but, as the accurate Hallam observes, their subject matter "could as yet only be obtained orally from Spanish and Portuguese sailors or adventurers, and was such as their falsehood and blundering would impart." Ramusio is also convicted of having garbled Marco Polo's narrative by interpolations of his own. Judge Henry C. Murphy, of the Long Island Historical Society, a very competent geographical critic, is disposed to believe that the entire letter of Verazzano to King Francis I. is spurious.

equally bear his name and are admitted to have been discovered by him. The discovery of Delaware Bay and River was made, according to the journal kept by Robert Jewett (or Juet), the first officer of Hudson's ship, on Aug. 28, 1609 (new style), and on this discovery the Dutch founded their claim to the countries binding upon and adjacent to the North (Hudson) and the South (Delaware) Rivers.¹

The accounts of Hudson's third voyage and his discovery of the North and South Rivers are too accurate, circumstantial, and satisfactory to allow of any question in regard to them. Hudson's journal as well as that of Robert Juet are preserved in Purchas' Pil-

¹ We know surprisingly little of Henry Hudson. He is said to have been the personal friend of Capt. John Smith, the founder of Virginia, and it is probable that he was of the family of that Henry Hudson who, in 1554, was one of the original incorporators of the English Muscovy Company. This man's son, Christopher, supposed to have been the father of the great navigator, was as early as 1560 and up to 1601 the factor and agent on the spot of the London Company trading to Russia, and it seems likely that the younger Hudson, from his familiarity with Arctic navigation, and his daring pertinacity in attempting to invade the ice-bound northern wastes, may have served his apprenticeship as a navigator in trading, on behalf the Muscovy Company, from Bristol to

Russia, as was then often done through the North Channel, and round the Hebrides, Orkneys, Shetlands, and North Cape to the White Sea and Archangel. At any rate when Hudson makes his first picturesque appearance before us, in the summer of 1607, in the Church of St. Ethelburge, Bishopsgate Street, London, where he and his crew are present to partake of the Holy Sacrament together, it is preparatory to a voyage in the service of the newly-organized "London Com-

HENRY HUDSON.

pany," in Jewett's own words, "for to discover a passage by the North Pole to Japan and China." The navigator was at that time a middle-aged man, experienced and trusted. Hudson reached Spitzbergen, and there the ice forced him back. He repeated next year the attempt to reach Asia by crossing directly over the Pole, and again he failed after having reached Nova Zembla. The London Company now became disheartened, and Hudson at once transferred his services to the Dutch, who were then also eagerly seeking a northern route to Asia, and preparing under the ardent urgings of Usselinck (of whom more will be said presently) to establish a West India Company. The Amsterdam directors of the Dutch East India Company put him in command of a yacht or vlie-boat, the "Half-Moon" (the "yagt 'Halve-Maan'"), of forty "lasts" or eighty tons burden, and bade him continue to search for a route to the Eastern seas such as the Spaniards and Portuguese could not obstruct. It was on his third voyage when, beaten back by the ice from the Greenland seas, he sailed as far south as the capes of the Chesapeake, and discovered Delaware Bay and Hudson River. In his fourth voyage he returned again to the service of England, discovered and entered Hudson's Bay, wintered there, and in the spring, having angered his crew by harshness and by persisting in going westward, was cast adrift by them in a small boat and left, with his son, to perish in the ice on the desolate border of the bay which bears his name. He was never heard of afterward. For further particulars of this stern, bold, and intelligent navigator, who was a man full of spirit, energy, and well-defined purpose, the reader may consult Purchas, Hakluyt, and the monographs of Hon. H. C. Murphy, Dr. Asher, Gen. John M. Read, Jr., and Rev. B. F. de Costa.

grims, and Juet has given not only the courses and distances sailed on the coast, but the various depths of water obtained by soundings off the bars and within the capes of the two bays. Juet's log-book of Aug. 28, 1609, has indeed been tested by actual soundings and sailing distances, and is found to be so accurate to this day that his route can be minutely followed. The English early gave the name of Delaware Bay and River to the South River of the Dutch, upon the pretext that it was discovered by Lord de la Warr in his voyage to Virginia in 1610. Mr. Brodhead and other writers, however, have plainly shown that Lord La Warr never saw Delaware Bay, and that the name *Cape La Warr* was given to Cape May by the roistering Capt. Samuel Argalls, of Lord Somers' squadron, who, being separated from his commander in a fog off the Bermudas, in that voyage the narration of which is supposed to have given Shakspeare his theme for the *Tempest*, was carried by a cyclone as far north as Cape Cod, and descending the coast again to Virginia, sighted the cape in question and gave his lordship's name to it.² The above few sentences embody all that is certainly known in regard to the discovery of Delaware Bay and River. If we let loose the pen to conjecture and to debatable views and statements, there is ground for very wide discussion, for which, however, there is no room in a volume like this.³

² See several notes in the text and appendices of Brodhead's *History of the State of New York*, vol. i.

³ For instance, Van Materen, one of the early historians of the Netherlands, assumes that the detention of Hudson in England on his return from his third voyage was because the English wanted time to prepare ships to look up and take possession of the newly discovered rivers. But Van Materen himself says at the same time of Hudson that, "as he was about to sail with his ship and crew [from Dartmouth] to go and report the results of his voyage, he was arrested in England and commanded not to depart, but that he must enter the service of his country, which command was also extended to the other English who were in the vessel." On 15th December, 1644, the (Dutch) Chamber of Accounts of the West India Company presented a "Report and Advice" to the effect that "New Netherland, stretching from the South River, situated in thirty-eight and a half degrees, to Cape Malabarre, in the latitude of forty-one and a half degrees, was first visited by the inhabitants of this country in the year 1598, and especially by those of the Greenland Company, but without making fixed habitations and only as a refuge in winter." Nearly all the historians of New York accept this apocryphal statement, which Mr. Brodhead guardedly says "needs confirmation." In fact, the picturesque Indian legends so distinctly confided to Heckewelder prove that Hudson and his crew were the first white men ever remembered to have been seen by the Indians on the Hudson. A stranger story is that of Sir Edmund Ploeden, or Plowden, Earl Palatinate of New Albion, who, by English Charter of 1632, was granted by indefinite description a tract of land between Cape Cod and Cape May, extending westward to some untraceable boundary. This tract, which included New Jersey, Delaware, part of Maryland, and perhaps of Pennsylvania, was divided, according to "Beauchamp Plantagenet" in his pamphlet, into Lordships and other great divisions. Yet before the Dutch came to established settlements, Plowden and his colonists had disappeared. Each government founded its claim to the territory between thirty-eight and forty-one degrees north latitude. In April, 1632, Governor Peter Minuet, recalled in disgrace from the New Netherlands, was driven by a storm into Plymouth, England. He and his staff were detained upon a charge of illegally trading with the Indians of Virginia. A diplomatic correspondence immediately ensued between the two governments, in which King Charles I. declined to release Minuet until he had looked into the matter further, as he was "not quite sure what his rights were." Then was the time, if ever, for the claim of 1598 to be put

Those who wish to pursue these subjects minutely will find ample details in the historical collections of Pennsylvania, New York, Delaware, New Jersey, and Maryland. They will not, however, after all discover much to disturb the general conclusion that the Dutch claim to the New Netherlands rests upon discovery and possession taken by Henry Hudson in 1609; the English claim to general discovery by the Cabots in 1497-98.

The Dutch did not immediately profit to any great extent by the magnificent discoveries made for them and in their name by Henry Hudson. The report upon the Hudson River must indeed have attracted great attention when received at home, but the navigator merely said of the Zuydt (South or Delaware) River,¹ that he found the land to "trend away towards the northwest, with a great bay and rivers, but the bay was shoal," and dangerous by reason of sand-bars. This sort of character would not tend to divert navigators or sea traders in that direction. There were as yet, for reasons which will presently appear, no attempts at colonization either on the North or the South River. But the Dutch, born traders, were fully acquainted with the value of the fur trade through their traffic with Russia, frequently sending as many as sixty to eighty ships a year to Archangel, the czar having made the fur trade practically free. Hudson had revealed to these shrewd traders what a wealth of cheap furs was to be obtained from the Indians on the river bearing his name, and his old vessel, the "Half-Moon," was no sooner released and restored to her owners, in 1610, than she was sent back to the North River with a trading cargo, and returned with a profitable cargo of furs. In 1611, Hendrick Christiaensen, of Cleves, near Niemguen, Holland, West India trader, and Adrian Block, of Amsterdam, chartered a ship, in company with the Schipper Rysar, and made a successful voyage to the Mannhattans and the "great river of the mountains," returning with furs, and bringing also two sons of chiefs with them, whom they kindly christened "Valentine and Orson." These young savages, and the cheap and abundant furs of their native land, attracted public attention in Holland to the newly discovered territories. A memorial on the subject was presented to the Provincial States of Holland

and West Friesland by several merchants and inhabitants of the United Provinces, and "it was judged of sufficient consequence to be formally communicated to the cities of Amsterdam, Rotterdam, Hoorn, and Enckhuysen."² In 1612, Christiaensen and Block, with the encouragement and material aid of leading and enterprising merchants, fitted out two vessels, the "Fortune" and the "Tiger," and sailed again to the Mannhattans, to trade along the Hudson as before. Other merchants joined in these profitable ventures, and in 1613 the "Little Fox," under command of John De Witt, and the "Nightingale," under Thys Volkertsen, were sent out from Amsterdam, while the owners of the ship "Fortune," of Hoorn, sent out their vessel under charge of Capt. Cornelis Jacobsen May, or Mey. Block's vessel, the "Tiger," was burnt at Manhattan Island just as he was about to return to Holland, but the undaunted mariner built a hut on shore on Manhattan Island, and spent the winter of 1613-14 in constructing a yacht of sixteen tons, which he appropriately named the *Onrust*, or "Restless." In the spring of 1614, when Block's little yacht was ready for service, the companion vessels of the previous year, as above enumerated, were coming out for their second voyage. But they came under new auspices, for the States General had considered and acted upon the memorials and petitions spoken of above, passing an ordinance³ declaring that as it was "honorable, useful, and profitable" that the people of the Netherlands should be encouraged to adventure themselves in discovering unknown countries, and for the purpose of making the inducement "free and common to every one of the inhabitants," it was granted and conceded that "whoever shall from this time forward discover any new passages, havens, lands, or places, shall have the exclusive right of navigating to the same for four voyages." Reports of discoveries were to be made to the States General within fourteen days after the return of vessels to port, and where the discoveries were simultaneously made by different parties, the rights acquired under them were to be enjoyed in common.

When the spring voyaging began, Christiaensen pushed up the Hudson and erected a trading-post and block-house on Castle Island, just below where Albany now stands. Block, with the "Onrust," explored Long Island Sound, and many rivers and inlets to the eastward, naming Rhode (Roode) Island and giving his own name to Block Island. Mey, on the contrary, sailed immediately southward, charted the coast from Sandy Hook to the Delaware, and entering that bay gave his surname, May, to the northern cape, his Christian name, Cornelis, to the southern cape opposite, and to the southern cape facing the ocean he gave the name of Hinlopen, the name of a

forward on the one side, and those of Argall and Plowden and Lord de la Warr on the other. But the Dutch simply rested on Hudson's discovery in 1609, the return of some of their people in 1610, a specific trading charter in 1614, and permanent occupancy by the Dutch West India Company in 1623. The claims of King Charles, on the other hand, though formulated by the skillful hand of Sir Edward Coke himself, rested entirely upon the discovery of America by Cabot and the New England and Virginia patents of King James I.

¹ Also variously called by the Indian names of Pontaxat, Makiriskitton, Makarish-Kisken, and Lenape Wibittuck, while Heylin, in his *Cosmography*, bravely gives it the further name of Arasapha. When it became better known, the Dutch sometimes called it the Nassau, Prince Hendrick's or Prince Charles' River; and the Swedes, New Swedeland stream. The earliest settlers sometimes styled it New Port May and Godyn's Bay.

² Brodhead, i. p. 46. N. Y. Hist. Coll., 2d series, II. 355.

³ 27th March, 1614.

town in Friesland. There is no evidence that May attempted to change the name of the Delaware Bay and River from that given it by the Dutch, the South River, or that he landed at any point.¹

All the vessels of the trading squadron returned early in the fall to Holland, except the "Onrust," which remained at Manhattan under the command of Cornelis Hendricksen. Block, who no more visited our coasts, returned in his old companion's ship, the "Fortune," Capt. Hendrick Christiaensen, to Holland. There the navigators and their associated merchants and owners formed a company, drew a chart and report of their several discoveries, and proceeded to the Hague to claim a concession under the ordinance of March 27, 1614. They spread their "figurative map" upon the council table in the presence of the twelve mighty lords of the States General, presided over by John van Oiden Barneveldt, the "Advocate" of Holland, told their tale of adventure, discovery, loss, and gain, and claimed the monopoly which was theirs by right under the ordinance. It was conceded at once, and a special charter to them of exclusive privilege to trade for four voyages in the region they had explored was drawn up and signed in their presence. The penalty for infringing upon this charter was a fine of fifty thousand Netherland ducats for the benefit of the grantees. The territory covered by the charter was all the land between New France, as the French possessions in Canada were called, and Virginia, and the grantees were given three years in which to make the four voyages. This charter, besides conferring a valuable franchise temporarily upon the grantees, in effect asserted that the Dutch territory of the New Netherlands embraced all the territory and coast line of North America from the fortieth to the forty-fifth parallel. Nor did any of King James' charters negative this pretension, for they expressly excepted any lands settled or occupied by the subjects of any European sovereign or State.

While the new company were spreading their "figurative map" before the Council at the Hague, the little yacht "Onrust," on the other side of the ocean, now under the command of the enterprising Capt. Hendricksen, was making the first actual exploration of the Delaware Bay and River. Hendricksen landed at several places, took soundings, drew charts, and discovered the contour of the bay and the

capabilities of the river. While landing at Christina Creek a strange thing happened. Hendricksen's party encountered a band of Minqua Indians and redeemed from captivity three white men, who in the spring of the year 1616 had left Fort Nassau, on Castle Island, at the head of navigation on the North River, and strayed into the wilderness and forest in which the Mohawks and Lenni Lenape had their wondrous hunting-grounds. These men had wandered up the Mohawk Valley, crossed the dividing ridge into the Delaware Valley, and then descended that stream, thus being the first white men who ever trod the soil of Pennsylvania.² On Aug. 19, 1616, Hendricksen, having returned to Holland, laid his claim for extensive trading privileges before the States General, asserting that "he hath discovered for his aforesaid masters and directors certain lands, a bay, and three rivers, situate between thirty-eight and forty degrees, and did there trade with the inhabitants, said trade consisting of sables, furs, robes, and other skins. He hath found the said country full of trees, to wit: oak, hickory, and pines, which trees were in some places covered with vines. He hath seen in said country bucks and doe, turkeys and partridges. He hath found the climate of said country very temperate, judging it to be as temperate as this country (Holland)."³ Hendricksen's claim, however, was not granted, and in January, 1618, the general ordinance granting exclusive trading privileges expired by limitation. An entirely new policy was in contemplation by the Netherlands government.⁴

This new policy looked to stepping at once from simple trading in the New Netherlands to colonization by means of a West Indies Company. Its development and its fluctuations during many years, in obedience to the ups and downs of political agitation in the Netherlands, are described graphically in the brilliant pages of Mrs. Martha J. Lamb's just published History of New York, but at too great length to be followed here. Holland, as Brodhead has described it, was the greatest trading country at this time. Amsterdam was the Venice of the North, and the Dutch pushed their commerce into every zone. But the Netherlands were more than this. They were ardent and even fanatical politicians. They

¹ Some romantic circumstances have gathered about the fact of the Delaware Bay and River and the State of Delaware deriving their name from Lord de la Warr. It has been said that he died off the capes of Delaware on his home voyage, that he was poisoned, etc. The better-received opinion, however, is that he was alive in 1618, and then died either at his seat in England or when about to re-embark for Virginia. He was only Lord de la Warr by courtesy, being actually Sir Thomas West, third son of Lord de la Warr. He married in Virginia, his wife being a daughter of Sir Thomas Shirley, from whom the old Virginia estate of that name derives its title. West Point, in New York, gets its name from him. The family of the Sackville-Wests, owners of the stately manor-house of Knole, which in Queen Elizabeth's day belonged to the Sackvilles, are the stock from whom sprung the present British Minister at Washington, Hon. Lionel Sackville-West.

² *Armor's Lives of the Governors of Pennsylvania*, pages 17 and 20. The fact of this meeting is not disputed. Most authorities say, however, that the three men were not whites but Indians, employés of the trading-post on Castle Island.

³ Another historic doubt clouds this voyage of Hendricksen. It might be supposed that this "third river" must be the Schuylkill, and that he was thus the first white man to gaze upon the site of Philadelphia. But a writer so accomplished as Dr. George Smith, historian of Delaware County, says that it cannot be fairly inferred that the voyage of the "Restless" was extended so far inland even as the mouth of the Delaware River, and that the original "Carte figurative" attached to the memorial of his employers proves this. He suggests that if any new and original information was contributed to the States General by Hendricksen, it was derived not from his own exploration, but from the statements of the three rescued traders from Fort Nassau.

had just conquered their freedom from the Spaniards, whom they hated bitterly, and proclaimed the republic which had enabled them to maintain the bitter struggle, and which consequently they devotedly loved. Up to 1606 they had been completely united both in foreign and domestic policy, and in that year they had been about to found a West Indies Company, not merely for trade, but to carry on the war with Spain more actively and relentlessly. When Virginia was occupied by the London Company in 1608, they had proposed to the British government to join them in a common foreign and trading policy, meaning, of course, to war more energetically still upon Spanish commerce. But the British coolly declined, saying that they feared "that in case of joining, if it be upon equal terms, the art and industry of their people will wear out ours." This suggestion of overreaching was not forgotten by the Dutch. In 1620, when Robinson, Brewster, and their large congregation of Puritans, exiles in Leyden and other parts of the Netherlands for twelve years, had determined to emigrate to America, and had been disappointed in their negotiations with both the Virginia colony and the Plymouth Company, they applied to the Netherlands through the Amsterdam merchants for leave to settle on the North River, Robinson offering to go and take four hundred families with him, provided they were assured of protection. "They desired to go to New Netherlands," said Robinson, "to plant there the true Christian and pure religion, to convert the savages of those countries to the true knowledge and understanding of the Christian faith, and through the grace of the Lord and to the glory of the Netherlands government, to colonize and establish a new empire there under the order and command" of the Prince of Orange and the High Mighty Lords States General.¹ The Amsterdam Company submitted the proposition to the Hague with their approval, having made at the same time "large offers" of free transportation, stock, etc., to the Puritans. The Prince of Orange, the stadtholder, referred the memorial to the States General, and that body, after careful deliberation, resolved peremptorily to reject the offer of the Puritans. But for this action there might have been no Plymouth Rock, and the whole course of American history might have been changed.

The truce of the Netherlands with Spain, which was negotiated in 1609, to last twelve years, was, in lieu of a permanent treaty of peace. Philip II. consented to the independence of the Netherlands, but would not consent to give them free trade in the East Indies. The Netherlands would not treat finally without a recognition of their commercial freedom, and so a truce was the compromise agreed upon. The treaty was the work of Grotius and Barneveldt, supported by James I. of England and Henry IV. of France. Its negotiation had the effect to destroy the

project for a West India Company, and on this and other grounds was opposed bitterly by the "stewart" party of the day in the Netherlands, headed by William Usselinckx, a merchant of Antwerp, who had spent many years in Spain, the Azores, and other Catholic countries, for which he seemed to have a deep personal hatred, and by Plancius, Linschoten, and other leading scholars and merchants, who composed a distinctive "war party," and were eager to resort to every means to injure and humble their haughty and arrogant enemy. This party was strengthened by the fierce temper of religious controversy. The Calvinists and Puritans were in bitter antagonism to the Arminians, who controlled the State. It was an old controversy, old as the days of Augustine and Pelagius, and it was fought over again in Holland. Finally, in 1619, the Reformers carried everything before them in the Synod of Dort, the Arminians were put down, and Barneveldt, in his seventy-second year, was beheaded as a traitor.

The charter of the Amsterdam merchants for trade with the Netherlands had expired, the ordinance under which the concessions were granted had also ceased, Usselinckx and his party and their policy were triumphant, and there were many reasons why the long-suspended project for a West India Company should be carried through without further delay. The Virginians began to look with concern at the presence of the Dutch upon the Zuydt or South River, and indeed had already sent one abortive expedition against them.

The twelve-year truce with Spain expired in the spring of 1621, and the United Provinces knew that the old struggle must soon be renewed. The English government was preparing to remonstrate more or less vigorously against the expansion of the Netherlands colonies both on the South River and on the New England side. The time was ripe for the consummation of the great scheme of Usselinckx, which indeed looked to a vast privateering war against Spain, in connection with the permanent plantation of the New Netherlands. On the 3d of June, 1621, accordingly, the States General, under their great seal, granted a formal patent incorporating the West India Company for the encouragement of that foreign trade and navigation upon which it was assumed the welfare and happiness of the United Provinces mainly depended. This charter gave to the West India Company for the period of twenty-four years the exclusive monopoly of trade and navigation to the coasts of Africa, between the Cape of Good Hope and the Tropic of Cancer, and to the coasts of America and the West Indies, between the Straits of Magellan and Newfoundland. The company was invested with enormous powers. In the language of Brodhead, it might make in the name of the States General "contracts and alliances with the princes and natives of the countries comprehended within the limits of its charter, build forts, appoint and discharge gov-

¹ Brodhead, I. 124.

ernors, soldiers, and public officers, administer justice, and promote trade. It was bound to advance the peopling of these fruitful and unsettled parts, and do all that the service of those countries and the profit and increase of trade shall require." The States General had a sort of general supervision, with the privilege of confirming the appointment of superior officers, but no other powers over it. The government of the company was vested in five boards of managers,—one at Amsterdam, managing four-ninths of the whole; one at Middleburg, in Zeeland, managing two-ninths; one at Dordrecht, on the Maese, managing one-ninth; one in North Holland, one-ninth; and one in Friesland and Groningen, one-ninth. The general executive power for all purposes, the power to declare war only being reserved for the approval of the States, was confided to a board of nineteen delegates, of whom eight were to come from the Amsterdam chamber, and the rest from the other chambers in proportion to their shares, except that the States General had one delegate. The States were pledged to defend the company against all comers, to advance to it a million guilders in money, and give it for its assistance sixteen ships of war of three hundred tons each, and four yachts of eighty tons, fully equipped. This fleet was to be maintained, manned, and supported by the company, which besides was to provide an equal number of vessels on its own part, the whole to be under the command of an admiral selected by the States General. Any inhabitant of the Netherlands or of other countries might become a stockholder during 1621, but after that year the subscription books were to be closed, and no new members admitted. Colonization was one object of this great monopoly, but what its chiefs looked to principally for profit was a vast system of legalized piracy against the commerce of Spain and Portugal in Africa and America. The company was not finally organized under the charter until June, 1623, when the subscription books were closed.

In the interval between the lapse of the old United Company and the completion of the charter of the new monopoly, several ships were sent on trading ventures of a more or less private character to the North and South Rivers in the New Netherlands, among them vessels which had visited those regions before. King James I. having granted the charter of the Plymouth Company, complaints began to be heard about Dutch intrusions. Sir Samuel Argall, who is represented in the curious Plantagenet pamphlet as having forced a Dutch governor in Manhattan to yield allegiance to the British king in 1613, is found in 1621 as complaining, in a memorial signed by him, Sir Ferdinando Georges, the Earl of Arundel, and Capt. John Mason, against the "Dutch intruders," who are represented as having only settled on the Hudson in 1620. This was claimed by the Plymouth Company as proof of the British king's

title to the whole country, *jure primo occupationis*. This led to a protest, in December, 1621, by the British government, through Sir Dudley Carleton, ambassador at the Hague. The States professed ignorance, and promised to make inquiry, and with that answer, after some fretfulness, the British minister was forced to content himself. In fact, the States General, engrossed in preparations for the war with Spain, simply delayed matters until the West India Company was organized, when all such questions were referred to it for settlement. It thus became an issue between British Plymouth Company and Dutch West India Company, and the latter was the stronger of the two, both in men and argument.

The ships of that company, even before the final ratification of the amended charter, were trading in all the Atlantic waters between Buzzard's Bay (within twenty miles of Plymouth) and the Delaware River, and a plan of colonization was already matured. A number of Walloons (Belgian Protestants of supposed Waelche or Celtic origin), refugees in Holland from Spanish persecution, had applied to the British minister Carleton for leave to emigrate to Virginia. The terms offered them do not seem to have been satisfactory. The Holland Provincials heard of the negotiations, and suggested to the Amsterdam chamber of the West India Company that these would be good immigrants with whom to begin the permanent settlement of the New Netherlands. The suggestion was seized upon, and provision made to carry the Walloons over in the company's ship then about to sail, the "New Netherlands," Capt. Cornelis Jacobsen Mey, he who had first sailed into South River, and who was going out now as first resident director or governor of the colonies. Some thirty families, chiefly Walloons, were accordingly taken on board, and in the beginning of March, 1623, the "New Netherlands" sailed from the Texel, Capt. Mey in command, the next highest officer being Adriaen Joris, of Thienpoint. The course of the ship (and of nearly all vessels making the American voyage at that day, was southward from the British Channel to the Canaries, thence across the Atlantic with the trade-winds to Guiana and the Caribbees, then northwest between the Bermudas and Bahamas until the coast of Virginia came in sight. Mey's vessel reached the North River safely and in time to drive off a French vessel which sought to set up the arms of France on Manhattan Island. The Frenchman was foiled in the same way on the Zuydt River. Mey distributed his colonists as far as he could. The greater part of the Walloons were sent up to Albany, several families went to the Dutch factory on the Connecticut; four couples, who had married during the voyage out, several sailors, and some other men were sent to the South River, now also called Prince Hendrick's River. Mey appears either to have accompanied them here or visited them soon after their arrival. He selected a site for their settlement, planting the Walloons on Verhulsten

Island, near the present city of Trenton, N. J., and hastened the construction of a log fort or stockade for his sailors and soldiers at the mouth of the Timmer Kill, on the New Jersey bank of the Delaware, not far from where Gloucester now stands. This fort was called "Nassau." Its exact site is not determined, nor can we decide the original Indian name of the spot, having such a variety to choose from.¹ This South River colony was soon given up. The men and women of the Walloons grew homesick and returned to New York, certainly within a year or so, the garrison also abandoning the fort to the Indians, who occasionally lodged there during several years, probably while waiting for trading vessels. Such a vessel was sent round to the South River at least once a year from Manhattan Island. Thus, it is supposed in 1625, the first settlement on the Delaware came to naught.² Fort Nassau, to conclude its history, seems to have been alternately occupied and abandoned by the Dutch until 1650 or 1651, when it was destroyed by the Dutch themselves, as being too high up the river and too much out of the way. The post was then transferred to the new Fort Casimir. In 1633, De Vries found none but Indians there, but it seems to have been restored some time during the same year by Governor Van Twiller, who was accused of incurring extravagant expense in connection with its construction. Arent Corssen was then commissary; he had a clerk, and the governor ordered him to select the site for another structure of the same sort on the river. In 1635 an English party attempted but failed to capture this fort. They were thought to be Lord Baltimore's people, but were more likely New Englanders or Virginians. The Swedes repeatedly denied that there was any fort of the Dutch on the Delaware in 1638; but the Dutch accounts of expenditure for the maintenance of Fort Nassau charged against that year in the West India Company's books disprove this. There was certainly enough of a garrison in the fort to report at once and protest against the Swedish settlement at Christiana in April, 1638. In 1642 the garrison comprised twenty men, and the fort was continually occupied from this time forth until the Dutch destroyed it.

¹ Hermaomessing, Tachaacho, Armewanix, Arwames, Tekoke, Armenvereus, etc. The year in which the fort was built is also disputed, but the circumstances mentioned in the text make it probable that its construction was undertaken very shortly after Capt. Mey's arrival out.

² It is not possible to state satisfactorily in what year the settlement was given up nor why. The deposition of Peter Lawrenson before Governor Dongan, of New York, in March, 1685, says that he came into this colony in 1628, and in 1630 (actually 1631), by order of the West India Company, he, with some others, was sent in a sloop to the Delaware, where the company had a trading-house, with ten or twelve servants belonging to it, which the deponent himself did see settled there. . . . "And the deponent further saith that upon an island near the falls of that river and near the west side thereof, the said company some three or four years before had a trading house, where there were three or four families of Walloons. The place of their settlement he saw; and that they had been seated there he was informed by some of the said Walloons themselves when they were returned from thence." It is in this indefinite way that the beginnings of all history are written.

In 1624, Peter Minuet (the name is also spelled Minuit, Minnewit, or Minnewe) came out and succeeded Mey as director of the New Netherlands colonies. He held this position until 1632, when he was recalled, and Van Twiller became governor in his stead. Minuet, as will be seen farther on, was a sagacious and enterprising man, but he had to pursue a conservative policy as director of the New Netherlands, for the welfare of the colony was neglected sadly by the West India Company. But few immigrants and colonists came out, the garrisons were not strengthened, nor was much effort made to extend either the boundaries or the trade of the colony. Some negro slaves indeed were landed on Manhattan Island at least as early as 1628, but their labor was not esteemed. The chief business done was in trading with the Indians for peltries and furs. In fact the West India Company was so puffed up with the arrogance that proceeds from great successes and sudden wealth, that the directors despised the small and plodding colonial ways and the slow and meagre profits derived from such sources. It had won brilliant victories at sea. It had taken in two years one hundred, and four Spanish prizes. It had paid dividends of fifty per cent. It had captured the Panama plate fleet. It frequently sent to sea single squadrons of seventy armed vessels. It had captured Bahia in 1624, and Pernambuco in 1630, and it aspired to the conquest of Brazil. These brilliant performances cast the puny interests of the New Netherlands traders into the shade, and the company did not care to be bothered with the discharge of duties which were nevertheless particularly assigned to it in the charter. So obvious was this departure from the original purposes of the company that so early even as 1624 we find that William Usselinx, the founder of the company, had abandoned it in disgust, and was seeking to persuade King Gustavus Adolphus of Sweden to establish a Swedish West India Company, such as would be operated more in accordance with his original plan.

There were still some very shrewd heads among the members of the Amsterdam chamber, men who while quite willing to take all the gold and silver and precious stones they could get, yet were fully acquainted with the more abiding virtues of land. Of these were John De Laet, the historian, Killiaan Van Rensselaër, the diamond-cutter, Michael Pauw, Peter Evertsen Hulft, Jonas Witsen, Hendrick Hamel, Samuel Godyn, and Samuel Blommaert, all rich, all well informed, all interested in the support and development of the colonies on the North and South Rivers, especially if these could be effected in a way further to enrich themselves. The secretary of Minuet and the colony, Isaac De Rasieres, a keen observer and skillful diplomatist, was devoted to the interests of Godyn, Van Rensselaër, and Blommaert, and he probably kept them apprised of all that was going on in the New Netherlands. While Minuet, with reduced

forces, was compelled through fear of Indians to concentrate his people at Manhattan, abandoning all exposed places, the Amsterdam directors, after consulting with De Rasieres, whom Minuet had sent home, procured a meeting of the Executive "College" of nineteen, and secured from it a Charter of Freedoms and Exemptions, which the States General confirmed on June 7, 1629. This was a complete feudal constitution, adopted years before Lord Baltimore's charter. It created a landed aristocracy, and handed the State over pretty much to their control. The plan for the colonization of the territory was its subdivision into separate and independent settlements or estates, each to be under the control of a patroon, or feudal lord, who was to settle it at his own expense in exchange for many peculiar privileges. The charter provided that any member of the West India Company (to none others were these privileges open) who should within four years plant a colony of fifty adults in any part of New Netherland (except the island of Manhattan, which the company, having bought it from the Indians, reserved to itself) should be acknowledged as a "patroon" or feudal chief of the territory he might thus colonize. The land selected for each colony might extend sixteen miles in length if confined to one side of a navigable river, or eight miles on each side if both banks were occupied; but they might run as far into the country as the situation of the occupiers should permit. More immigrants entitled the patroon to proportionately more land. The colonists under the patroons were exempted from all taxes for ten years; they acquired their estates in fee simple with power of disposing by will; they were magistrates within their own bounds, and each patroon had the exclusive privilege of fishing, fowling, and grinding corn within his own domain; they could also trade anywhere along the American coast, and to Holland by paying five per cent. duty to the company at its reservation of Manhattan. The company reserved the fur trade to itself, and none of the colonists were to engage in any manufactures.

Before the details of the Charter of Exemptions and Privileges were completed some of the Amsterdam directors, probably upon the advice of De Rasieres, united with one another, or, as we should now say in newspaper parlance, formed a "pool" for an enormous "land-grab." The first to act were Blommaert, De Rasieres' friend, and Godyn. They sent two persons in 1629 to the Zuydt River to examine and buy land, and these agents purchased from the Indians, on the south side of Delaware Bay, a tract thirty-two miles long and two miles deep from Cape Hinlopen to the mouth of a river, the patent being registered and confirmed June 1, 1630. Sebastian Jansen Krol, Van Rensselaer's agent, bought from the Indians for him on the west side of the Hudson, near Albany, a tract sixteen miles front and extending back two days' journey into the wilderness. This patroon made

other purchases a few days later, and became proprietor of nearly all of what are the present counties of Albany and Rensselaer. Michael Pauw secured in the same way the patroonship of Pavonia and Staten Island, Paulus Hook and Jersey City. The land-grabbers now began to quarrel among themselves, and to avoid scandal and exposure Van Rensselaer divided his tract into five shares, two of which he retained with the title of patroon; one fell to John De Laet, one to Samuel Godyn, and one to Samuel Blommaert. In the same way Godyn and Blommaert shared with their partners the tract on South River.

In the mean time Godyn and Blommaert had to improve their tract. Opportunely for them there arrived at this time at Amsterdam, fresh from a three years' cruise to the East Indies, one David Pietersen de Vries, of Hoorn, a skipper who in 1624 had attempted unsuccessfully to invade the West India Company's monopoly. De Vries, a rough but kindly man, keen, observant, and well versed in affairs as well as seamanship, was well known to Godyn. As soon as his arrival was known the latter approached him and asked if he would like to go to New Netherland as commander and "under-patroon." But De Vries would not go in any capacity except upon an equality with the rest. He was accordingly taken into the partnership with Godyn and Blommaert, Van Rensselaer and De Laet, to whom were soon added four other directors of the West India Company, Van Ceulen, Hamel, Van Haringhoeck, and Van Sittorigh.

De Vries became a patroon Oct. 16, 1630, and at once set to work to promote the designs of his associates. The ship "Walrus," or "Whale," of eighteen guns, and a yacht were immediately equipped. They carried out emigrants, cattle, food, and whaling implements, De Vries having heard that whales abounded in the Bay of South River (Godyn's Bay, or New Port May Bay, as it now also began to be called), and expecting to establish profitable fisheries there. The expedition sailed from the Texel in December under the command of Pieter Heyes, or Heyser. De Vries did not go out at this time, and the voyage was not profitable. De Vries accuses Heyes of incapacity and cowardice, saying he would not sail through the West Indies in an eighteen-gun ship. Still, Heyes did a large business for his employers. He reached South River in the spring of 1631, and established his colony on the Horekill, "a fine navigable stream, filled with islands, abounding in good oysters," and surrounded by fertile soil. The place was near the present site of Lewes, Del. Here a palisaded brick house was erected, and the colony of more than thirty souls was called Swaannendael, the Valley of Swans. The Dutch title was inscribed upon a pillar, on a plate of tin, surmounted by the arms of Holland. The fort, named "Oplandt," was given in the command of Gilliss Hossett, Van Rensselaer's agent in buying lands around Albany. Heyes, after he had

settled matters at Swaannendael, crossed to the Jersey shore and bought from ten chiefs there, on behalf of Godyn, Blommaert, and their associates, a tract of land extending from Cape May twelve miles northward along the bay and twelve miles inland. This purchase was registered at Manhattan June 3, 1631. The whale fishery having come to naught, in September Heyes sailed for home to report to his employers.

De Vries now determined to go out to the South River himself, and preparations were made for him to take charge of another ship and yacht. Just as he was about to sail from the Texel, May 24, 1632, Governor Minuet arrived from New Amsterdam with intelligence of the massacre of the colony at Swaannendael. This was cold news for De Vries and his associates. The patroon sailed, however, and after a long and checkered voyage arrived off Swaannendael early in December. The site of the little settlement told a fearful tale; the house itself nearly ruined, the stockade burnt, and the adjacent land strewn with the skulls and bones of the colonists, the remains of cattle, etc. The valley was silent and desolate.

DAVID PIETERSEN DE VRIES.

De Vries returned on board his yacht and fired a gun to attract attention of the savages. After some mutual mistrust, communication was opened with them, and De Vries was told a cock-and-bull story of a chief having ignorantly removed the coat of arms from the

pillar and been murdered by the Indians for doing it, whereupon his tribe, in revenge, massacred the colonists. De Vries knew too much about the Dutch cruelty and harshness to the Indians to believe any such story. He had before him all the evidences of the white man's cruelty and the savage's wild revenge. The fatal deed was irreparable, and De Vries, keeping his own counsel, did what he could to restore confidence and peace by making presents to the Indians of "duffles, bullets, hatchets, and Nuremberg toys," so as to get them to hunt beaver for him, instead of lying in ambush to murder more colonists. The result was a treaty of peace, the first ever made in Delaware waters.

On Jan. 1, 1633, the navigation being open, De Vries proceeded up the bay and river in his yacht. At Fort Nassau he heard of the murder of the crew of an English sloop, and met some Indians wearing the Englishmen's jackets. These Indians also made a

show of offering peace, but De Vries dealt with them very cautiously, as they greatly outnumbered his men.

On January 10th, De Vries cast anchor at the bar of Jacques Eylandt, precisely opposite the present city of Philadelphia, over against Willow Street, being in fact now part of the fast land of New Jersey.¹ Thence he went down river again, anchoring half a mile above Minquas Kill, on the lookout for whales. He was finally twice frozen up, and in some danger from Indians, numerous war parties of whom he saw, there being some intestine feud among the adjacent tribes. Released from the ice, he reached Swaannendael on February 20th, and on March 6th sailed for Virginia, returning to South River only to break up the colony at Swaannendael and go home. Once more the Delaware River and Bay were abandoned to the Indians, and once more the attempt at settlement by white men had failed. There were no further efforts made to settle on South River until the Swedes came in 1638, but, as has been stated, there must have been a more or less intermittent occupancy at Fort Nassau, and possibly there may have been a permanent garrison from the beginning of Van Twiller's director-generalship.²

¹ The bar of Jacques Eylandt embraces the spot where the city of Camden is now built.

² The 21st of June, 1634, is the alleged date of the probably spurious Sir Edward Plowden or Ployden's charter for impossible territory somewhere between the Potomac and Newark Bay.

Rev. Edward D. Neill, president of Macalester College, Minn., who has given considerable attention to Maryland history, though from a rather sectarian stand-point, contributed two papers on Plowden to the fifth volume of the *Pennsylvania Magazine*, conducted by the Historical Society of that State. He assumes Plowden's existence, and that he was the lineal descendant of Edmund Plowden, the commentator on English law, who earned Coke's encomiums and who died in 1584. Plowden, according to Neill, did obtain a grant in 1632, through King Charles I.'s request to the viceroy of Ireland for a certain "Isle Plowden" and forty leagues of the mainland, called "New Albion." The island lay between 39° and 40° latitude. Capt. Young, commissioned by the king in September, 1633, sent out an exploring expedition in 1634, which ascended the Delaware as far as the Falls. If this expedition ever sailed, it must have been the one mentioned by De Vries as having been massacred by the Indians. There is no proof that Plowden sent out this party or had aught to do with it. Evelyn, who commanded it, was in the service of Clayborne's London partners. Plowden, says Mr. Neill, was living at his seat at Waustead in Hampshire in 1635, unhappy, beating his wife, quarrelling with his neighbors, and changing his religion. His wife and his clergyman's wife both had him arrested for assault and battery, and his wife procured a divorce from him. In 1641, Evelyn wrote a pamphlet descriptive of New Albion, dedicated to Plowden's wife. The next year Plowden was on the Chesapeake. This was ten years after he is said to have procured this rich grant. No one can explain why he did not look after such an estate sooner. Plowden lived most of his time in Virginia, but was in Maryland on Delaware Bay, at New York, and in New England. He was abroad just seven years, say his chroniclers, and then went home to return no more to "New Albion." It is conjectured that his seven years' residence was on account of being transported, and that his New Albion claim was trumped up after the time of his sentence was served out. Plowden is reputed to have died in 1665. Mr. Neill further says that in 1635-40, Plowden was a prisoner in the Fleet Prison, London, for refusing to pay his wife's alimony. Mr. Neill must see that the dates of Plowden's adventures are irreconcilable with his adventures.

CHAPTER V.

THE SWEDISH SETTLEMENTS ON THE DELAWARE.

FORT NASSAU, on the Delaware, whether occupied permanently or not as a Dutch trading-post in 1633, must have had runners near by to bring news from it to Manhattan. John Romeyn Brodhead, the accurate historian of New York State, thinks it was not garrisoned then, nor in 1635, when the English party occupied it. This party of thirteen men, under George Holmes, was sent, he says, from Virginia by Governor Harvey, in consequence of the talk of the latter with De Vries in 1632. Other writers have thought they came from Maryland or Connecticut. They seized the fort, but Hall, Holmes' servant, deserted and went to Manhattan, carrying the news of the occupancy of Fort Nassau by the English. An armed force was at once sent in a sloop to dislodge them. Holmes and his men were made prisoners and sent back to Virginia, just as another party was starting to reinforce them. De Vries, on his return to Amsterdam from the deserted post of Swaannendael, found the partners quarreling among themselves and with the other directors. Not willing to mix in these disputes, he withdrew from the patroon partnership, and after the death of Godyn, in 1634, the West India Company settled the disputes by buying Swaannendael from Godyn's heirs and associates for fifteen thousand six hundred guilders, thus becoming again the legal proprietor of all the territory on both sides of the Delaware. A deed, recorded at Manhattan in 1648 and attested by Augustine Hermans, Govert Loockerman, and others, is adduced to show that the land on the Schuylkill called Armenverius, where this year (1648) Hudde had begun to build a fort called "Beversrede," was acquired by purchase from sundry Indian chiefs, by the company's agent on the South River, Arendt Corsen, in 1633. Nor is this improbable. Of this purchase Augustine Hermans was a witness, as he was at this time clerk to Corsen. The Dutch not only knew of the pretensions and promised coming of the Swedes, but they knew also that Lord Baltimore was about to sail from England, and that his charter called for a frontier line touching the Delaware westward of the mouth of the Schuylkill. They would naturally seek to secure Indian titles in advance for every acre of territory likely to be brought in dispute.

It is impossible to state the causes of the alienation of William Usselinckx from the Dutch West India Company. He had labored strenuously for over thirty years¹ to secure that company's charter, yet

he deserted it less than a year after the company was fully organized. He went to Stockholm, visited the valiant king, Gustavus Adolphus, of Sweden, and full, probably, of enthusiasm as well as special knowledge of his subject, pleaded so eloquently the advantages of colonization in general and the particular beauties and attractions of the territory along the South River which he proposed should be planted, that on Dec. 21, 1624, the king granted him a commission to form a Swedish West India Company somewhat upon the plan of that of the Netherlands, of which Usselinckx was the founder and originator. Usselinckx's plan was one which would naturally awaken the sympathy and excite the imagination of an ambitious monarch. He proposed to organize a trading company, to extend its operations into Asia, Africa, America, and Terra Magellanica. This company would plant Christianity among the heathen, extend his Majesty's dominions, enrich the treasury, reduce the burden of domestic taxation, and put lucrative trade at the command of Sweden's hardy seamen and enterprising merchants. The prosecution of the scheme would finally "tend greatly to the honor of God, to man's eternal welfare, to his Majesty's service, and the good of the kingdom."

The plans of Gustavus were both deep and patriotic. "The year 1624," says the historian Geijer, "was one of the few years that the king was able to devote to the internal development of the realm." He looked at the subject of colonization in America, says Rev. Dr. W. M. Reynolds in the introduction to his translation of Acrelius, "with the eye of a statesman who understood the wants not only of his own country but of the world, and was able with prophetic glance to penetrate into the distant ages of the future." He proposed there to found a free state, where the laborer should reap the fruit of his toil, where the rights of conscience should be inviolate, and which should be open to the whole Protestant world then engaged in a struggle for existence with all the papal powers of Europe. All should be secure in their persons, their property, and their rights of conscience. It should be an asylum for the persecuted of all nations, a place of security for the honor of the wives and daughters of those who were flying from bloody battle-fields and from homes made desolate by the fire and sword of the persecutor. No slaves should burden the soil; "for," said Gustavus, —and we realize the profound truth of his political

upon all the exports and imports of the company. Usselinckx seems to have been a sort of "projector" or "prospector," planning comprehensive commercial schemes which he had not the capital nor the credit to set afloat himself. He was a man, however, evidently of great experience, wide views, and the ability to express himself cogently and eloquently. He is supposed to be the author of the greater part of the documents in the *Argonautica Gustaviana*, printed under the auspices of the Swedish government at Frankfort-on-the-Main in 1633, which did so much to promote the objects of the Swedish Company. He also wrote many pamphlets and circulars addressed to the leading towns of Sweden, the Hansentia cities, France, the States General, etc., "all of them," says Prof. C. T. Odhner, "abounding in clear thoughts and brilliant fancies."

¹ His first attempts were made in 1590. Usselinckx probably left the Dutch West India Company because he had not money enough to secure an influential share in its stock by paying up his subscription. He appears to have been a bankrupt about that time. In the charter given to the Swedish Company he was recognized as director, and his services in that capacity and as organizer and founder of the company were to be compensated by a fee or royalty of one-tenth of one per cent.

economy after an experience of two centuries, at the end of which slavery expired amid the death-throes of our civil war—"slaves cost a great deal, labor with reluctance, and soon perish from hard usage. But the Swedish nation is industrious and intelligent, and hereby we shall gain more by a free people with wives and children."¹

The plan and contract were translated into the Swedish language by Schrader, the royal interpreter, and published to the nation, with an address and supported by the king's recommendation. People of all ranks were invited by royal edict to subscribe, and Gustavus pledged the royal treasury for its support to the amount of four hundred thousand dollars. The edict was ratified in 1627 in a general meeting of the States, and the people welcomed the new enterprise with enthusiasm. It was proposed to execute the plan at once, and every one subscribed from the queen-mother and Prince Casimir down through all ranks of nobility, clergy, military, burghers, and peasantry. Ships and all necessities are said to have been provided and the work was ripe for execution, when a revival of the Polish and German wars called the king away to the field. Campanius and others would have us believe that the fleet sailed and was captured by the Spaniards. It is more likely, however, that the exigencies of war called for the postponement of the comprehensive scheme. Gustavus needed all his meagre resources to aid him in the field.

In 1632 the brave king fell gloriously on the battlefield of Lutzen, and his little daughter, Christina, was bequeathed to the astute guardianship of Chancellor Oxenstierna. One of the last acts of Gustavus had been to urge his people not to forget nor neglect the colonization scheme, and Oxenstierna took an early opportunity to have the patent renewed, with Usselinck still director, and to publish the merits of the proposed new venture throughout Europe. In the mean time, in part probably through the intermediary of Usselinck, the services of Peter Minuet, lately recalled from the director-generalship of New Netherland, were secured to superintend and direct the new plantation. The delays in preparation, however, prevented the expedition from sailing until late in the year 1637. Minuet was a native of Wessel, in Cleves, the nearest borderland of Holland on the side of Germany. It is supposed that he left the city of his forefathers when it fell into Spanish hands on occasion of the Jülich-Cleves war of succession. He entered the service of the Dutch West India Company, and, as has been seen, became director or governor over the colony of New Netherland, residing at New Amsterdam from 1626 to 1632, and proving himself an efficient officer. The intrigues consequent upon the quarrels of the patroons caused his dismissal in 1632. In 1635, Axel Oxenstierna was on a visit to

Holland to secure more support for Sweden in the prosecution of the Thirty Years' war. He was at the Hague and Amsterdam in May of that year, and in the latter city met Samuel Blommaert, the Dutch patroon, who, in conjunction with Godyn, had located tracts of land at Cape May and from Cape Henlopen up the Delaware Bay on the west side. Blommaert was also a friend and patron of Usselinck. He immediately opened a correspondence with the Swedish Prime Minister on the subject of the Swedish West India Company and the colonization of the South River country.² Blommaert's first letters were directed to the plan of an expedition to the coast of Guinea or Brazil, a favorite idea of Usselinck's, who wanted to spoil the Spaniards and Portuguese and get gold. Oxenstierna's thoughts, however, had a more pacific turn. In the spring of 1636 the chancellor was visited in Wismar by his friend Peter Spiring, a Dutchman, who had just come from looking after the regulation of the Prussian excise system, and was now on his way back to Holland. He had been and was at that time more or less in Oxenstierna's employment, and he was now commissioned to try to raise money in Holland for Sweden, and also "to observe whether it might not be possible in this conjunction to obtain some service in affairs of commerce or manufacture." Spiring, on reaching Amsterdam, had several conversations with Blommaert, and was by him put in communication with Peter Minuet. When Spiring returned to Sweden he brought with him for Oxenstierna a memorial written by Minuet, specifying the preparations requisite to planting a Swedish colony (to be called *Nova Suedia*) in some foreign part of the world.

The estimate called for a vessel of sixty to one hundred *läster* (one hundred and twenty to two hundred tons), a cargo of ten thousand or twelve thousand gulden in goods, a company of twenty to twenty-five men, provisions for a year, a dozen soldiers to serve as a garrison for the post, and a small vessel to remain at the settlement. At this time the idea in view was a factory apparently on the Gold Coast. Spiring was sent back to Holland in the fall of 1636 in the capacity of Swedish resident and "counselor of the finances" (*finansråd*) with a title of nobility thrown in, so that he now signed himself *Pieter Spieringh Silvercroen op Norsholm*.³ When Spiring arrived in Holland in Oc-

² The discovery of this correspondence, lately made by Prof. Odhner, in the Royal Archives of Sweden, has thrown an entirely new light upon the history of the Swedish expeditions to the Delaware prior to that of Printz, and enables us to correct the errors into which previous writers have fallen from following too closely the accounts of Campanius and Acrelius. The latter is very accurate so far as his knowledge goes, but he did not search the records of Sweden as closely as he did those of the Swedish Churches in America. Blommaert's letters to the Swedish chancellor are written in Dutch.

³ This was in Dutch; the Swedish was *Silvercroen till Norsholm*. All these interesting details are from the translation of Prof. Odhner's paper, "The Founding of New Sweden" (*Kolonien Nya Sveriges Grundläggning, 1637-1642*). Op C. T. ODHNER, *Hist. Bibliotek. Ny följd I. ss. 197-235. Stockholm, 1876*, published in vol. iii. of the *Pennsylvania Magazine of History and Biography*.

¹ *Argonautica Gustaviana*.

tober he handed to Blommaert his appointment as Swedish commissary at Amsterdam, with a salary of one thousand *riksdaler*. There were immediate consultations between Spiring, Blommaert, and Minuet; the idea of a Guinea factory was abandoned, and preparations made, secretly and privately, so as not to alarm the Dutch West India Company, for planting a colony in North America on soil not occupied by either Dutch or English. The cost of this expedition was estimated at twenty-four thousand Dutch florins (worth about forty cents); Minuet was to be commander, and Blommaert commissioner for it at Amsterdam. The money was contributed, half by Minuet, Blommaert, and their friends in Amsterdam, half subscribed in Sweden by Spiring, the three Oxenstiernas, Clas Fleming, practical chief of the Swedish Admiralty and secretary of the Swedish Company.¹ Minuet went to Sweden in February, 1637, and began his preparations, Blommaert secured crews and cargo, and all were sent to Gottenburg, the expedition intending to start in the spring. Delay came from a prolonged illness of Minuet and other causes. However, the passports for the vessels were issued by the Swedish Admiralty on Aug. 9, 1637, when the two ships, the "Kalmar Nyckel" and the "Gripen," left Stockholm. They did not, however, sail from Gottenburg until late in the fall, and then encountered such severe weather that they were forced to put into the Dutch harbor of Medemblik in December to refit and take in provisions, finally sailing for their destination just about the close of the year. They sailed as the ships of the Swedish West India Company, and as if dispatched to enjoy the benefit of its privileges.²

The charter of the Swedish West India Company gave to the associated subscribers the exclusive right for twelve years to trade beyond the Straits of Gibraltar southward in Africa, and in America and Australia, reaching the coast of America at the same latitude as said straits, viz., 36°, also with all lands and islands between Africa and America in the same latitude, the vessels and goods of others than the same company who infringe those rights to be confiscated. Accounts

were to be settled every year, and every person interested to the amount of one thousand thalers could be present. Final settlements every six years, when the company might be dissolved if its profit or influence be not obvious. Directors or regents to be elected, one for each one hundred thousand thalers of stock, these directors to be all equal in authority, and to be paid one thousand thalers each per annum. The company was put under the royal protection, and given the same extensive trade and foreign privileges as those enumerated in connection with the Dutch Company, but was forbidden aggressive acts against either savage or civilized people. Its object was not war, but peaceful trade and settlement. The founder and director of the company, William Usselinx, was to be paid the tenth of one per cent. royalty on all the traffic of the company in recognition of his services.

There is nothing satisfactory known concerning Minuet's voyage across the Atlantic. Since Professor Odhner wrote, however, a further search among the Swedish archives has been made, and a contract signed by Governor Printz has been discovered, in which it is mentioned that Minuet bought land on the Delaware from an Indian chief on March 29, 1638, so that he must have arrived inside the Capes of the Delaware at least three or four days before that date. This corroborates some of the inferences of Odhner, and enables us to correct other less accurate accounts of this expedition. For example, it has generally been supposed that Minuet arrived later than this date, from a letter written from Jamestown, Va., May 8, 1638, by Jerome Hawley, treasurer of the Virginia colony, to Secretary Windebanke, of the London Company. Hawley says, "Since which time have arrived a Dutch ship, with commission from the Queen of Sweden, and signed by eight of the chief Lords of Sweden. . . . The ship remained here about ten days, to refresh with wood and water, during which time the master of said ship made known that both himself and another ship of his company were bound for Delaware Bay."

The vessel asked the privilege of laying in a cargo of tobacco for Sweden free of duty, but this was refused. Professor Odhner shows, however, that this vessel could not have been the "Key of Kalmar," with Minuet on board, but the yacht "Griffin," which, after his arrival in the Delaware, the commander sent to Jamestown with the idea of bartering her cargo in Virginia. Minuet appears not to have confided to the Holland directors his exact destination, Blommaert in his letters speaking continually of the "*voyagen till Florida*." In the same way it is suspected that Minuet concealed the Dutch protests made after his arrival, and declared that he found the country totally unoccupied by Christians after an exploration some distance inland. It was necessary to deceive Blommaert, for it was less than two years since he and Godyn had sold this very country which the Swedes were occupying back to the Dutch West

¹ Spiring gave four thousand five hundred florins, Axel and Gabriel Gustafson Oxenstierna three thousand each, and the rest smaller sums.

² The passes granted were to Capt. Anders Nilsson Krober, of the "Kalmar Nyckel" (in Dutch *De Kalmers leutel*), and "Vogel Grip" (Dutch, *De Vogelgryp*), commanded by Lieut. Jacob Borben. The "Key of Kalmar" (named after a city of Sweden, on the Baltic coast of Gothland, off the island of Oland, and famous as being the place where the union of Denmark, Sweden, and Norway was consummated in 1397, under the imperious Queen Margaret of Denmark, called the "Semiramis of the North") was a regular man-of-war of quite good capacity. The "Griffin" (or "Bird Griffin") was a sloop or yacht for shallow water. The cost of the expedition, through delays, ran up above thirty-six thousand florins, causing the Dutch subscribers to grumble. The only person, so far as known, who came to New Sweden on the "Gripen" and remained with the colony was *ein morian oder angoler*, "a Moor or Angolese man," a negro named Anthony, a bought slave (the first on the Delaware), who served Governor Printz at Tinnecum in 1644 ("making hay for the cattle and accompanying the Governor in his pleasure-yacht"), and was still living in 1648. (Note of G. B. Keen in his translation of Odhner.)

India Company for a good round sum of money. Minuet's vessels first sighted the coast at Cape Henlopen, and from thence they steered into the Delaware Bay, landing first at Mispillion, the landscape of which so charmed them in its April bloom that they called it "Paradise Point." They then passed up the Delaware to Minquas Creek (the Christina, or Christiana, as now called), and finally anchored at "the Rocks," a natural landing-place at the foot of what is now Sixth Street, Wilmington, Del. Here the freight and passengers were landed, and Minuet set all hands to work at once to erect shelter on shore and build a fort. The latter was named Fort Christina, after the queen of Sweden, daughter of Gustavus, still in her minority, and the settlement, the first permanent settlement on the Delaware, was called Christinaham, or Christina Harbor. Minuet called the colony New Sweden, and the river Elbe, but the settlers called it *Kristinas Kill*, and the local name is still *Cristeen*. The fort, of which a plan is extant,

PLAN OF THE TOWN AND FORT OF CHRISTINA, BESIEGED BY THE DUTCH IN 1655.

drawn by the Swedish engineer Lindstrom in 1655, was built close to the point of rocks, its southern rampart bordering on the creek. Two log houses were built inside the inclosure for the garrison and settlers. A cove under the eastern wall of the fort was called the basin, or harbor, and it afforded a safe dock for such vessels as came there. The land for the fort and Christinaham was bought from five nearby Indian sachems, one of whom bore the name of Mattahorn or Mattahoon, the price paid being a copper kettle and some small articles. The sachem whose name is given later said that they only bought of him so much land as lay "within six trees," the

trees being blazed as surveyor's marks, probably, and promised to pay him half the tobacco grown upon it, a promise never kept. A deed was drawn up in Low Dutch, and signed by both parties. The Dutch historians say that this deed was the only conveyance under which the Swedes claimed the whole south side of the Delaware Bay and River from Cape Henlopen to Trenton (Sankitan), but the better opinion is that this large territory was a later and independent purchase.¹ A part of this territory, including Swaannendael, had belonged to the original territory bought of the Indians by Godyn, Blommaert & Co., and by them sold to the Dutch West India Company.

Minuet and his colonists at Minquas Creek were only a few miles below Fort Nassau, and the Dutch were instantly apprised of their arrival. William Kieft, the successor of Van Twiller, and the new director-general at Manhattan, had arrived out March 28th, or near the same time as Minuet. Among his staff were Andreas Hudde, first commissary, Jan Jansen Van Ilpendam, and Peter Mey, all of whom became conspicuous in the affairs of the Dutch and Swedes on the Delaware. Ilpendam was made commissary of Fort Nassau, now in a decayed state, in spite of Van Twiller's expenditures for its restoration, and Mey was his assistant. On April 28th Kieft wrote to the directors of the company in Amsterdam that Mey had reported Minuet's presence on the Delaware, and that he sent Jan Jansen to him to protest against anything being done by the intruders to the company's disadvantage. Minuet at first temporized, and finally avowed his purpose to build a fort, saying that his queen had as much right there as the company. Early in May Kieft sent a formal protest to Minuet over his own signature as director-general of New Netherland, notifying him of the fact (of which none could be more entirely aware than the man calling himself "commissioner in the service of her royal majesty of Sweden") "that the whole South River in New Netherland has been many years in our possession, and has been secured by us with forts above and below, and sealed with our blood." He further informs Minuet that if he proceeded with the building of forts, cultivating land, and trading in furs and other things, to the prejudice and damage of the company, he must be answerable for the consequences to himself and his employers, as the Dutch meant to defend their rights.

Those rights, as against the pretensions of Minuet and the Swedes, were undoubted in every view of the law and custom of new settlements. Minuet made no reply to Kieft but continued to build his fort, and by means of a shrewd liberality to the Indians induced them to bring to him instead of to Fort Nassau all the furs and peltries they were taking on the

¹ Compare Brodhead, Hazard's Annals of Pennsylvania, Vincent's History of Delaware, Ferris' Original Settlements, etc., and Clay's Annals of the Swedes. Brodhead is always full and accurate, but he never forgets that he is a New Yorker.

South River. Kieft in another dispatch dated July 31, 1638, reports that "Minuet has built a fort near the Delaware, five miles below our fort, and draws all the skins towards him by his liberal gifts; he has departed with the two vessels he had with him, leaving twenty-four men in the fort provided with all sorts of merchandise and provisions, and has put down posts, on which are the letters C. R. S.,¹ Christina Regina Suesciae. Jan Jansen has, according to my orders, protested against this, in which he gave an answer, a copy of which goes herewith. We afterwards sent him a formal clause of protest, which was read to him, but he did not feel inclined to answer it, and his proceeding is a great disadvantage to the company." Kieft's statement in regard to the departure of Minuet at this time has been contradicted by all the older writers on the subject, including the usually very accurate Acrelius, who even goes so far as to state that Minuet died and was buried at Christina, after serving faithfully at his post until 1641. Minuet's biographer, Kapp, does not controvert this. It remained for Professor Odhner to give the facts, confirming the statement of Kieft, and explaining why we hear no more of Minuet. Having made all the necessary arrangements for the safety of his colony, provisioned the fort and supplied it with articles for trading with the Indians, Minuet prepared to return home. He left the fort under the command of Lieut. Måns (Moens) Kling, the only Swede expressly named as taking part in the first expedition (though Acrelius mentions the Swedish priest, Reorus Torkillus, who, it is likely, came with a later expedition), and Hendrick Huyghen, who is said to have been Minuet's kinsman, his cousin or brother-in-law. Kling had charge of the military, and Huyghen of the civil government of the post. Minuet appears to have sailed for home in July, 1638, as Kieft's letter of the 28th of that month speaks of him as having already departed. He sent the yacht "Griffin" on in advance to the West Indies to barter the cargo brought out from Gottenburg, sailing in the same direction himself with the "Key of Kalmar." Blommaert condemns him for this in his letter to the Swedish chancellor, as he might have come home at once in his vessel, transferring the residue of his cargo to the yacht. At the island of St. Christopher he traded his goods for a cargo of tobacco. He was ready to sail for home when he and his captain were invited aboard a Dutch ship in the harbor called "Het vliegende hert" (the "Flying Deer"). While aboard this vessel a cyclone came up, driving all the ships in the harbor out to sea. Many were dismasted or otherwise injured by the hurricane. The "Flying Deer" and Minuet were never heard of again, and the vessel is supposed to have foundered. The "Kalmar Nyckel" escaped the storm, returned to port, and cruised around for some time in hopes to

get news of Minuet. Failing in this she at last sailed away and pursued her voyage to Sweden. In the North Sea she encountered another storm in November, which drove her into a Dutch port to refit. The "Griffin," after a cruise in the vicinity of Havana, returned to New Sweden, took on a cargo of furs which had been gathered from the Indians for her, and then departed for Sweden, arriving in Gottenburg at the close of May, 1639, having made the voyage from Christina in five weeks. It is likely that Kieft would have expelled the company left by Minuet from the South River without ceremony and at once had they not borne the commission of the daughter of Gustavus Adolphus, the champion of Protestantism in Europe. The Dutch West India Company knew how distasteful it would be to the whole Dutch people should they venture to embroil themselves with a great, powerful, warlike nation, with which they had made common cause in so many stirring events. The evidence of this feeling was manifest soon after the reception of Kieft's first dispatches in Holland. A Swedish vessel was seized at Medemblik by order of the West India Company's chamber at Eckhuysen, upon the charge of illegal trading with America, but as soon as the Swedish minister at the Hague made his protest the ship was released and permitted to complete her voyage. As to Kieft's willingness to act, he proved that shortly after, when he promptly expelled the English intruders from the Delaware, and by his energetic procedures at Cow Bay, L. I., against the Massachusetts people.

The first year of the Cristinaham colony was prosperous. They shipped thirty thousand skins to Sweden, and injured the Dutch trade so much that the West India Company adopted police regulations for the navigation of South River, and talked of abandoning the fur trade altogether. The next year, however, the people of the colony were depressed by climatic diseases, and Reorus Torkillus, the colony's first clergyman, had his hands full of work, as probably also had Jan Petersen, of Alfendolft, barber and surgeon at Fort Nassau.² Torkillus had come over, in the "Kalmar Nyckel," with Peter Hollandaer, who was sent to act as Minuet's successor, in the second Swedish expedition. This expedition Acrelius seems to have known nothing about. We are again indebted to the researches of Professor Odhner for the particulars of this voyage. Minuet's loss was a severe blow, and the Dutch partners seemed disposed to abandon the enterprise, or anyhow throw the weight of it on Sweden. They were in trouble also with the Dutch West India directors, who repented their share in promoting the Swedish plantation on the South River. These *désagréments* finally led the Swedish government to buy out the Holland partners, who were

¹ Christina, Queen of Sweden.

² In this year there is unmistakable evidence of negro slavery among the Dutch on South River, a convict from Manhattan being sentenced to serve with the blacks on that river.

found to be "a hindrance," and an appropriation for that purpose was made on Feb. 20, 1641, the sum paid in settlement of all claims being eighteen thousand guilders. The new Swedish Company was given a monopoly of the Baltic tobacco trade. In the meantime, however, Clas Fleming, president of the Swedish College of Commerce, and his secretary, Jan Beyer, were resolved not to neglect New Sweden. A Dutch captain, Cornelis Van Vliet, was commissioned to take out another party in the "Kalmar Nyckel," and colonists were secured. Spiring and Blommaert once more advanced money, the ship was sent from Holland to Gottenburg in June, 1639, and a body of emigrants, with cattle, farming tools, etc., put on board. Lieut. Peter Hollandaer, a Dutchman, like Minuet, was assigned to command in Fort Christina, and the vessel sailed in early autumn. She leaked badly, however, proved unmanageable, and put into Medemblik, where Spiring removed Van Vliet from command, substituting Pouwel Jansen. These delays detained the expedition so long that it was not until February 7th that the "Kalmar Nyckel" finally sailed from the Texel. The date of his arrival was April 17, 1640. Hollandaer was in command at Christina and many of his garrison were down with fever before November, when the *third* expedition came out. A letter of Governor Kieft's to the directors, under date of May 1st, states they were resolved to break up and come to Manhattan, but the day before their intended departure a vessel arrived to succor and strengthen them.¹ This and a subsequent letter of Kieft's shows that relations of courtesy were maintained between the Dutch and Swedes, the former probably hoping and expecting to absorb the latter's settlement. The third expedition arrived in November, in the ship "Fredenburg," Capt. Powelson, sent out from Holland under a Swedish commission of "*Octroi and Privilegium*," and bringing emigrants, cattle, etc., to "New Sweden." The charterers were Gothart de Rehden, De Horst, Fenland, and others, and they had a grant from the Swedish Company in return for these shipments. The grant was afterwards transferred to Henry Hockhammer & Co., who were to send out two or three vessels and found a new colony in New Sweden. They were to take up land on the north side of South River, at least four or five German miles below Fort Christina, and bring it in actual cultivation within ten years, and the land thus selected was to become allodial and hereditary property to them and their heirs and descendants. They were to prefer the Augsburg Confession of Faith in religion, but might profess the "pretended reformed religion," and the patroons of the colony were at all times bound to support "as many ministers and schoolmasters as the number of the inhabitants shall seem to require," choosing by preference for these

offices men willing and capable of converting the savages. They were allowed to engage in every sort of industry, trade, and commerce with friendly powers, and were exempt from taxation for ten years. Jost van Bogardt, who came over in the "Fredenburg," appears to have been governor or executive of this colony, which some writers think was established on Elk River, in Maryland. This, however, is not probable. The grant under which the Hockhammer Company established their colony, and which bears the same date as the commissions of Capt. Powelson, expressly stipulated that they were to "limit their possessions to four or five German miles from Fort Christina." In the commission issued by the Swedish government to Capt. Printz as Governor of New Sweden, it is ordered that "those Hollanders who have emigrated to New Sweden and settled there under the protection of her Royal Majesty and the Swedish Crown, over whom Jost von dem Boyandh² has command, the Governor shall treat according to the contents of the charter and privileges conferred by her Royal Majesty, of the principles whereof the Governor has been advised; but in other respects he shall show them all good will and kindness, yet so that he shall hold them also to the same, that they also upon their side comply with the requisitions of their charter, which they have received. *And, inasmuch as notice has already been given them that they have settled too near to Fort Christina, and as houses are said to be built at the distance of almost three miles from that place, they should leave that place and betake themselves to a somewhat greater distance from that fort.*" This entirely excludes the idea of a settlement on Elk River, and encourages the supposition that the neighborhood of the present city of New Castle, where Stuyvesant afterwards established Fort Casimir, was the place of this Dutch colony. It is certain that New Amstel, as the town near this fort came to be called, was the chief settlement of the Dutch on the Delaware after the overthrow of the Swedish power, and it seems natural that this circumstance should be due to the Hockhammer plantation. It has been conjectured that this Dutch settlement in New Sweden under the patronage of the Swedish West India Company was undertaken on account of jealousies and ill feeling in Holland towards the Dutch West India Company, which was a very close monopoly. The grant given by the Swedish Company to the Hockhammer Company was much more liberal in its terms than could have been obtained from the Dutch West India Company. Bogardt was not only recognized as the commandant and governor of the new colony, but he also had a special commission from the Swedish government to act as its "general agent" on the Delaware River, and particularly to let no opportunity escape him "of sending to Sweden all

¹ Professor Odhner, however, denies that there is any evidence of such distress as is alleged.

² This is the spelling of Acrelius. Dr. O'Callaghan, in his "History of New Netherlands," I. 366-67, says that the proper spelling of this man's name should be *Jooet de Bogaert*.

information which may be useful to her Majesty and the Crown of Sweden." To encourage him in the performance of these duties he was paid a salary of five hundred florins per annum, with a promise of one hundred florins additional annual pay in case he should give sufficient proof of his attachment to the new service, and his zeal to promote the welfare of the Swedish crown.

In this same year, 1640, the English began to make inroads upon the Delaware. They bought Indian lands on both sides of the river and bay, and in 1641 commenced building trading-houses at Varkin's Kill, near the present Salem, N. J., settling sixty persons there from Connecticut, and the next year had the audacity to settle at the mouth of the Schuylkill. This was too much for the peppery Kieft, and even for his less excitable Council. Jan Jansen Ilpendam, commissary at Fort Nassau, was directed to expel the intruders, which he did without any ceremony, seizing their goods and burning their trading-house. After this the Dutch fell upon the Salem settlement also and broke that up.

Oxenstierna determined now to appoint a regular governor for New Sweden, and accordingly, in August, 1642, John Printz, a lieutenant-colonel of cavalry, was selected to fill that office. His commission and instructions were carefully prepared, and armed with these he arrived in the Delaware early in 1643. Printz engaged to keep the new settlements safe from foreign and domestic enemies, to preserve amity, good neighborhood, and reciprocity with foreigners, with his own people, and the savages, and "to render justice without distinction, so that there may be no injury to any man." He engaged to promote industry in every way; and "as to himself, he will so conduct in his government as to be willing and able faithfully to answer for it before God, before us, and every brave Swede, regulating himself by the instructions given to him." These instructions bind him to take care of the frontiers of the country (which are minutely described); to maintain good relations with the English at Varkin's Kill, and respect their title, unless they can be politely dispossessed without any disturbance; to keep on good terms with the Dutch, unless they show hostile intentions, but always to be on his guard with them, in view of their claims to the territory occupied by the Swedes. He must deal with the savages with humanity and mildness, bringing them to believe that the Swedes have not come there to do them injustice. He is to encourage agriculture and the fur trade, establish manufactures, and utilize the natural products of the country. Printz was appointed to serve three years under these instructions, his salary being twelve hundred silver dollars a year. He was given two ships, soldiers and officers to assist him in executing his duties, and the people were ordered to obey and support him.

Printz's chaplain, Rev. John Campanius Holm, the earliest chronicler of New Sweden, kept a journal of

the voyage out, which consumed one hundred and fifty days, Fort Christina being reached on Feb. 5, 1643. From this journal the "History of New Sweden" was written afterwards by his grandson, Thomas Campanius Holm. The new governor, in the midst of so many rival claims and claimants, needed to exercise at least all the circumspection enjoined upon him by his instructions. He certainly showed energy, but whether prudence or not is another matter. His first step was to choose his official residence. This he planted upon Tinneccum Island, nearly opposite Fort Nassau, where he built Fort New Gottenburg, commanding the approaches to the Dutch fort, and behind it erected a mansion for himself, called "Printz's Hall," with orchards, pleasure-house, etc., "all very handsome." We have spoken of the Dutch expelling the English from Varkin's Kill. But Printz aided them very materially in pulling their chestnuts out of the fire, nor did he do it in the courteous "underhand" manner, while preserving the semblance of friendship, which his instructions enjoined upon him. Printz's ideas of tact and diplomacy resembled an elephant dancing. He was a bluff, coarse soldier, well described by the shrewd, observant, caustic Pieterse De Vries as "Captain Printz, who weighed four hundred pounds, and took three drinks at every meal." To deal with the English, Printz crossed the Delaware and planted a fort right alongside them on the opposite bank of Salem Creek. This fort, called "Elfsborg," "Elsingborg," or "Wootwessung," commanded the channel of the Delaware, and enabled Printz to bring to all Dutch vessels or vessels of any other nationality passing up or down the river.

This fort, which had a small garrison and mounted several guns, made De Vries halt before it and give an account of himself when, in 1643, he attempted to pass up South River in his sloop. The sturdy navigator, who had planted the first settlement on the Delaware, must have felt a grim sense of the change in the times on being thus, as it were, barred from access to his own ancient threshold. Meantime the New Haven English sent down another expedition to the Delaware under the same Lamberton whom the Dutch had expelled from Varkin's Kill. His purpose was probably to revive that settlement, as the lands there had been bought from the Indians. While Lamberton's sloop was in the river near the mouth of the Schuylkill, Printz enticed him to Fort Gottenburg with two of his sailors, and cast them into prison, keeping them for three days, while he attempted to suborn the inferiors to testify that Lamberton was inciting the Indians to rise against the Swedes. He resorted to the same device with John Wootlen, Lamberton's servant, making them all drunk and offering them heavy bribes of land and money.¹ The Englishmen were firm, however, in their master's interest,

¹ This is the substance of depositions made by these men on their return to New Haven.

and could not be got to perjure themselves, though Printz put them in irons with his own hands. Lambertson, however, was driven off, after paying a fine of beaver-skins and being roundly sworn at by the burly Swedish governor.

Printz, however, was in some respects a good administrator. He sustained his people in their determined resistance to the immigration of convicts and malefactors, who, when sent over by the home government, were not suffered to land, but compelled to return in the same ships that brought them. He built the first water-mill on South River, at a place called Karakung, otherwise Water-Mill Stream (Amesland or Carkoen's Hook), on what is now Cobb's Creek, near the bridge on the Darby road at the old Blue Bell tavern. This was put up instead of the old wind-mill, which, Printz says, never would work and was "good for nothing." This mill ground both meal and flour, and found constant work. Printz had a military eye, and, as soon as his forts gave him command of the Delaware, he proceeded to close the Schuylkill entirely to the Dutch by a fortification at the mouth of that river (called Manayunk), one at Kingessing, and another at Passayunk, called "Korsholm." He also put a stockade trading-house exactly alongside the Dutch fort of Beversrede, within a biscuit-toss of it, and between it and the water, so as to entirely destroy that fort's efficiency. The Dutch confessed that these works cut them off from the Minquas country and destroyed the fur trade. The Swedes, on the other hand, in 1644 sent home two thousand one hundred and twenty-seven packages of beaver and seventy thousand four hundred and twenty-one pounds of tobacco.

The "insolence of office" was fully developed in Printz. In 1645 the Dutch removed Jan Jansen Van Ilpendam, commissary at Fort Nassau, appointing Andreas Hudde in his place. Hudde was active and energetic, and he and Printz were soon in controversy, Hudde protesting against every act of the Swedes adverse to Dutch interests, and Printz either taking no notice of the protests or else responding to them by still ruder and more hostile actions. He ordered a Dutch trading-sloop away from the Schuylkill on pain of confiscation, and when Hudde came in person to protest, he was ordered off likewise. Kieft peremptorily instructed Hudde in 1646 to acquire some land from the Indians on the west shore, four miles north of Fort Nassau (on the ground now occupied by a part of Philadelphia). Hudde did as bidden, and the purchase being made he planted the company's arms on the premises. Printz at once sent Commissary Huygens to throw down the Dutch arms, whereupon Hudde arrested Huygens and put him in the guard-house, sending word to Printz that he must punish the commissary. Some correspondence ensued, when Printz answered Hudde's final protest and declaration of his company's rights by tossing the paper to an attendant, and seizing a musket as if to shoot the messenger, who, an honest

Dutch sergeant, totally oblivious of the immunities of heralds, quickly made his escape. Printz now decided on non-intercourse with the Dutch, closed the Schuylkill to them entirely, sold the Indians arms and ammunition, and persecuted or expelled every Dutchman in New Sweden who would not take the oath of allegiance to Queen Christina. He stopped and searched Dutch vessels, and made Swedish vessels go by Fort Nassau without showing their colors. In the winter of 1647-48 he even invaded Hudde's own private premises, and cut down his fruit- and shade-trees. Two members of the High Council of the New Netherlands came to the South River to investigate these outrages and find out the status of the Dutch and Swedish titles to the lands about the mouth of the Schuylkill. When they came to Fort Gottenburg, Printz's subordinates kept them waiting outside for half an hour in the rain. They were finally admitted, and delivered their protest. These councilors authorized private persons among the Dutch to make settlements on the Schuylkill. In every case where the attempt was made to profit by this license Printz or some of his officers descended upon the settler and destroyed his property, besides often expelling the person himself with blows. The more Hudde protested the more violent Printz became.

In 1647 the Dutch Director-General Kieft was succeeded by Peter Stuyvesant, who began his administration on May 27th. Printz found him a very different

GOVERNOR PETER STUYVESANT.

man from Kieft. When the two governors finally met in 1651, the Dutch director-general, while quite as soldierly, bluff, and irascible as Printz, showed himself to be head and shoulders above the latter in

diplomacy. During all these disputes and high-handed dealings in the period of Printz's administration, the Dutch had sedulously pursued the policy of acquiring, by public and private purchase, Indian titles to all the lands on both sides the Delaware from Salem and Christinaham up. The Swedes had latterly adopted the same policy, but with less success. Stuyvesant came to the South River in person in 1651, "to preserve and protect the company's rights and jurisdiction." He sent proofs to Printz of the company's rights in the premises, and demanded in return that the Swedish governor should produce proof of what lands he had purchased and his authority to hold them. Printz could merely define the limits of his territory, and say that his papers were on file in the chancellory of Sweden. Then Stuyvesant is said to have detected Printz in an attempt to secretly buy title from an Indian sachem called Waspang Zewan, whereupon the Dutch governor forthwith dealt with the Indians himself, and was by them presented with a title to both sides of the Delaware from Christiana Creek to Bombay Hook, they at the same time denying that they had ever sold any lands to the Swedes. Finally, Stuyvesant determined that he would build another fort, Fort Nassau being too much out of the way, and in spite of Printz's protests he built Fort Casimir on the Delaware side of the river, about one Dutch mile from Fort Christina and near the present city of New Castle. Printz and Stuyvesant had several interviews with each other, and the final result was that "they mutually promised to cause no difficulties or hostility to each other, but to keep neighborly friendship and correspondence together, and act as friends and allies."

It will be observed that all through these controversies, while there were many high words and some kicks and cuffs, the Dutch and Swedes never came to actual hostilities, and always maintained a *modus vivendi* with one another. This was not because they hated each other less, but because they dreaded a third rival more. Both Dutch and Swedes were terribly apprehensive of English designs upon the Delaware. As was laid down in the instructions to Governor Risingh, who succeeded Printz in New Sweden, speaking of the new Fort Casimir, if Risingh could not induce the Dutch to abandon the post by argument and remonstrance and without resorting to hostilities, "it is better that our subjects avoid resorting to hostilities, confining themselves solely to protestations, and suffer the Dutch to occupy the said fortress, than that it should fall into the hands of the English, who are the most powerful and of course the most dangerous in that country." In the same way, after Stuyvesant had met the English at Hartford, Conn., treated with them, and settled a mutual boundary line, so that all was apparently peace and friendship between the Dutch and the New Englanders, the New Haven Company thought they would be permitted without

dispute to resume the occupancy of their purchased Indian lands on the New Jersey side of the Delaware Bay at Salem, whence they had been twice expelled. Accordingly, Jasper Graine, William Tuthill, and other inhabitants of New Haven and Sotocket, to the number of about fifty, hired a vessel and sailed for that destination. On the way they considerably put into Manhattan to notify Stuyvesant of their errand, and consult with him as to the best way of accomplishing it. Stuyvesant took their commission away from them, clapped the master of the vessel and four others into prison, and refused to release them until "they pledged themselves under their hands" not to go to Delaware, informing them likewise that if any of them should afterwards be found there he would confiscate their goods and send them prisoners to Holland. At the same time he wrote to the governor of New Haven that the Dutch rights on the Delaware were absolute, and that he meant to prevent any English settlement there "with force of arms and martial opposition, even unto bloodshed." The Swedes were so much impressed with this firm attitude and with their own unprotected condition (this was probably during the interregnum between Printz's departure and the arrival of Risingh, when Pappegoya, Printz's son-in-law, was acting governor, and there was no news from the mother-country) that they asked Stuyvesant to take them under his protection. The director-general declined to do so without instruction from home, and the directors of the company when he consulted them left the matter to his own discretion, simply suggesting that while population and settlement should be encouraged by all means as the bulwark of the State, it would be advisable that all settlers should yield allegiance to the parent State, and be willing to obey its laws and statutes in order to obtain protection.

Printz sailed for home in October, 1653, and Risingh arrived out in May, 1654, their ships having probably passed each other on the ocean. Risingh was governor and commissary, and he was accompanied by John Amundsen Besk, a captain of the navy, who seems to have been given command of the military of New Sweden. The general management of Swedish affairs on the Delaware had now passed to the charge of the "General College of Commerce" of Stockholm. Risingh (his Christian name was John Claudii) had also Peter Lindström, a military engineer, on his staff, with a clergyman, and they brought out two or three hundred settlers. Risingh's instructions were all for peace, not war; but even before he arrived at Christiana, or Gottenburg, he struck a bold stroke for war. The ship in which he sailed on its way up the Delaware came in sight of Fort Casimir on the 31st of May. Tienhoven and others in the fort, being sent out to speak the stranger, reported that the new Swedish governor was on board and demanded the surrender of the fort as standing upon Swedish territory. Gerrit Bikker, the commander,

made no preparations for defense; he could not understand nor believe the Swedish intention to be hostile. Soon Capt. Swensko, of the ship, with twenty armed men, landed, advanced upon the fort, and while

FORT CASIMIR OR TRINITY FORT.
[From Campanius' "New Sweden."]

the Dutch ran to meet them as friends, entered through the open sally-port, and being in possession demanded the fort's surrender at the point of the bayonet. Bikker and Tienhoven sent two commissioners aboard the ship to demand an explanation, but Amundsen fired two guns over the fort, and the Swedish soldiers at once seized the Dutch, disarmed and ejected them with the least possible ceremony. The Swedes were thus for the moment, and in the most surprising way, supreme on the South River.

Risingh named his new conquest Fort Trinity, because the capture was made on Trinity Sunday; strengthened the fort, and immediately called the neighboring Indians together with a view to make them his allies. The joint council was held at Tinnecum on June 17th, and Risingh offered many presents, distributed wine and spirits, and spread a great feast of suppaun; the old treaties were read, mutual vows of friendship exchanged, and the Indians became allies of the Swedes, whom they strongly counseled to settle at once at Passayunk.

The Dutch and Swedish population on the Delaware at this time, according to a census taken by Risingh, was three hundred and sixty-eight persons. This is probably exclusive of many Swedes who had gone into the interior and crossed the ridge towards Maryland. But little agriculture was attended to besides tobacco planting, and the chief industry was the trade in peltries, which was very profitable. In this trade the Indians had acquired as great skill as in trapping the beaver and drying his pelt. The price of a beaver-skin was two fathoms of "seawant," and

each fathom was taken to be three ells long. An ell was measured (as the yard still is in country places) from one corner of the mouth to the thumb of the opposite arm extended. The Indians, tall and long-limbed, always sent their longest-armed people to dispose of beaver-skins, and the Dutch complained at Fort Nassau that the savages outmeasured them continually.

It was not to be expected that a man of Stuyvesant's heady temperament would permit an outrage such as the capture of Fort Casimir to go unrevengeed, even if the directors of the West India Company had passed it by. But they were quite as eager as Stuyvesant himself for prompt and decisive action on the Delaware. The time was auspicious for them. Axel Oxenstierna, the great Swedish chancellor, was just dead, Queen Christina had abdicated the throne in favor of her cousin Charles Gustavus, and England and Holland had just signed a treaty of peace. The directors insisted upon the Swedes being effectually punished, and ordered Stuyvesant not only to exert every nerve to revenge the injury, not only to recover the fort and restore affairs to their former situation, but to drive the Swedes from every side of the river, and allow no settlers except under the Dutch flag. He was promised liberal aid from home, and was ordered to press any vessel into his service that might be in the New Netherlands. Stuyvesant meanwhile was not idle on his own side. He had captured and made prize of a Swedish vessel that came into the North River almost as soon as he heard the news from Fort Casimir. He received five armed vessels from Amsterdam. He ordered a general fasting and prayer, and then hastened to set his armaments in order. On the 12th of September his forces were off the late Fort Casimir, now Fort Trinity,—seven ships and six hundred men. The fort was summoned to surrender. The garrison, under Capt. Sven Schute, was small, not over thirty or forty men, and their commander surrendered them on honorable terms before a gun was fired. Stuyvesant marched at once to Fort Christina, where Risingh was in command, and invested it on every side. Risingh pretended great surprise, resorted to every little diplomatic contrivance he could think of, and then surrendered also, before the Dutch batteries opened. In truth his fort was a weak and defenseless one, and he had scarcely two rounds of ammunition. The Dutch went up the river to Tinnecum, where they burnt Fort Gottenburg and wrung the necks of Mrs. Pappagoya's ducks and turkeys. A great many Swedes came in and took the oath of allegiance to the Dutch. All such were suffered to remain undisturbed in their possessions. A few who refused to take the oath were transported to Manhattan, while others crossed into Maryland and permanently settled in Cecil and Kent Counties, where their family names are still preserved; but the Dutch yoke undoubtedly sat very lightly upon Swedish shoulders.

This was the end of Swedish rule on the Delaware.

Stuyvesant, obeying instructions from the West India Company, made a formal tender of redelivery of Fort Christina to Risingh, but that hero was in the sulks, refused to receive it, and went home by way of New Amsterdam, swearing at the Dutch "in frantic mood."

Then Stuyvesant appointed Capt. Derrick Schmidt as commissary, who was quickly succeeded by John Paul Jacquet, in the capacity of "Vice-Director of the South River," with a Council consisting of Andreas Hudde, vice-director, Elmerhuysen Klein, and two sergeants. Fort Christina became Altona, Fort Casimir resumed its old name, and a settlement grew up around it which was named New Amstel, the first actual town upon the river. It must be confessed that if the Swedes on the Delaware were not a happy people it was their own fault. But they were happy. Come of a primitive race not yet spoiled by fashions, luxury, and the vices of civilization, and preferring agriculture and the simplest arts of husbandry to trade, they found themselves in a new, beautiful, and fertile region, with the mildest of climates and the kindest of soils. Government, the pressure of laws, the weight of taxation they scarcely knew, and their relations were always pleasant, friendly, and intimate with those savage tribes the terror of whose neighborhood drove the English into sudden atrocities and

barbarities. Very few Swedes ever lost a night's rest because of the Indian's war-whoop. They were a people of simple ways, industrious, loyal, steadfast. In 1693 some of these Delaware Swedes wrote home for ministers, books, and teachers. This letter says, "As to what concerns our situation in this country we are for the most part husbandmen. We plow and sow and till the ground; and as to our meat and drink, we live according to the old Swedish custom. This country is very rich and fruitful, and here grow all sorts of grain in great plenty, so that we are richly supplied with meat and drink; and we send out yearly to our neighbors on this continent and the neighboring islands bread, grain, flour, and oil. We have here also all sorts of beasts, fowls, and fishes. Our wives and daughters employ themselves in spinning wool and flax and many of them in weaving; so that we have great reason to thank the Almighty for his manifold mercies and benefits. God grant that we may also have good shepherds to feed us with his holy word and sacraments. We live also in peace and friendship with one another, and the Indians have not molested us for many years. Further, since this country has ceased to be under the government of Sweden, we are bound to acknowledge and declare for the sake of truth that we have been well and kindly treated, as well by the Dutch as by his Majesty the King of England, our gracious sovereign; on the other hand, we, the Swedes, have been and still are true to him in words and in deeds. We have always had over us good and gracious magistrates; and we live with one another in peace and quietness."¹

One of the missionaries sent over in response to the touching demand of which the above quoted passage is part, writing back to Sweden after his arrival, says that his congregation are rich, adding, "The country here is delightful, as it has always been described, and overflows with every blessing, so that the people live very well without being compelled to too much or too severe labor. The taxes are very light; the farmers, after their work is over, live as they do in Sweden, but are clothed as well as the respectable inhabitants of the towns. They have fresh meat and fish in abundance, and want nothing of what other countries produce; they have plenty of grain to make bread, and plenty of drink. There are no poor in this country, but they all provide for themselves, for the land is rich and fruitful, and no man who will labor can suffer want." All this reads like an idyl of Jean Paul, or one of the naïve, charming poems of Bishop Tegner. It is a picture, some parts of which have been delightfully reproduced by the poet John G. Whittier in his "Pennsylvania Pilgrim."

¹ *Annals of the Swedes on the Delaware.* By Rev. J. C. Clay, D.D.

CHAPTER VI.

THE PLANTING OF PHILADELPHIA.

THE Swedes have no further right to a distinctive place in this work, except so far as individuals of that nation took up land within the boundaries or contributed to form the heterogeneous population of Philadelphia; nor is there need to say anything more about the Dutch of New Netherland, beyond the few meagre particulars in which their ordinances or regulations are found to bear upon that part of the country bordering on the Delaware River within the limits of which Philadelphia is now seated. Shortly after the surrender of Forts Casimir and Christina, a Swedish ship, the "Mercury," arrived in the Delaware with a large number of immigrants aboard. The Dutch refused permission for this vessel to pass the fort, but while the principals were conducting a long diplomatic correspondence on the subject, John Papegoya, Printz's son-in-law, with a party of Indians, boarded the vessel, piloted her up to Christina and Tinneum, and before Stuyvesant and his agents had reached their final unalterable determination to send all the immigrants incontinently back to Sweden, they had got ashore, bag and baggage, and were absorbed in the rest of the population. This was the last body of immigrants from Sweden to the Delaware. It was a favorite project of the director-general of New Netherland and his satellites, tried over and over again, to compel the Swedes and Finns to congregate together in one or two settlements or "reservations," and the order went forth several times to effect this, but it could not be enforced, nor, indeed, was there any serious attempt made to enforce it. A favorite place for this compulsory settlement with the Dutch executive was the Indian seat of Passayunk, and had the Swedes been congregated there from all parts of the colony some distinctive impress of their character would perhaps even to-day be detected in that part of Philadelphia, just as the Moravian traits are still discoverable in and around Bethlehem. The Swedes and Finns, however, preferred to settle where they chose, and a good many of them, fearing they would be excluded from this privilege in the South River colony, crossed the border into Maryland, where many traces of them are still to be found in Cecil and Kent Counties.

This policy of the Dutch, however, and the natural aversion of races speaking different languages to coalesce, did have the effect to separate the Dutch and Swedes so far that while the former collected about Fort Casimir, now called New Amstel, and points lower down the river, the Swedes gravitated towards points farther up the Delaware River than their original settlement at Christiana. "Upland," now Chester, became one of their favorite foci; they took land on the creek in the rear of Printz's domain at Tinneum; they followed up Cobb's Creek beyond

the mill, and had farms on all the streams flowing from the west into the Schuylkill; they crossed that river and, with their church at Wicaco, established their domiciles in several parts of the peninsula embraced between the Schuylkill and the Delaware. Thus it happened that nearly all the original settlers upon the present site of Philadelphia, nearly all the original land-holders,—in distinction to land-owners,—were Swedes, and William Penn found this to be still the case when he came to lay off his city.

It is now time to say something about these first planters upon the ground which is now traversed by so many long streets and bears the weight of so many stately buildings. A great many Indian names have been preserved in and around Philadelphia. The form and spelling have changed or vary, but the original sound is essentially preserved. In Roggeveen's map of New Netherland, published in 1676, the site of Penn's Philadelphia is marked "Sauno," and this is believed to have been a Dutch name for the Sankikans Indians. All the other sites on the South River part of this map bear Dutch or Swedish names. In Lindstrom's map of "Nya Sverige," drawn 1654-55, and republished to accompany Campanius' history, 1702, the Indian or Swedish names are the only ones given. There is Stillen's land (the Stille property), Tenna Kongz Kjen (Tennakonk Creek), Frimen's Kjen (or Darby Creek), Böke Kjen (Bow Creek), Apoquenenia, Örnebo Kjen, Skiar elle linde Kjen (Schuylkill), Nitlaba Konck, Passajong (Passayunk), Wichqua Going (Wicaco), Chingiamong, Fackeland, Asoepok, Alaskius Kjen (or Frankford Creek), Penichpaska Kjen, Drake Kjen, Poanquiising (Poquessing), etc. In Ferris' conjectural map of early settlements we have Darby Creek, Tennakonk's Kil, Karakung Creek, Nittaba Kenck, Passaiung, Wicaco, Sculkil, Coaquanock (which was the Philadelphia laid out by Penn), Fackeland, Frankford Creek, Penichpaska Kil, Poatquissing, Neshaminy, etc. The original name for nearly every one of these is extant in the old deeds and records. The Indian names for streams which are still partially or wholly retained are Minquas Creek (Darby, Cobb's Creek), Poquessin, Pennypack, Sissinokisink, Tacony, Wingohocking, Cohocksink, Wissahiccon, Manayunk, etc. Now the Swedes were the original settlers on nearly all the lands between Bow Creek and Poquessing.

The first claim of purchase of Indian title to lands within the fork of the Schuylkill and the Delaware is that of the Dutch, who insist that Arendt Corssen bought for them from the Indians the site of Fort Beversrede in 1633. The deed for this land, however, was not recorded until 1648. Between those dates, under the guidance of Andreas Hudde, several Dutchmen attempted to plant themselves on the east side of the Schuylkill, but they were not allowed to do so by the Swedes as long as Printz and Risingh were in power. The Swedes claim to have bought all the

land on the west bank of the Delaware, from Cape Henlopen to the falls of the river at Trenton, in 1638. This the Dutch and some of their Indian allies denied, yet the purchase was more than likely made as stated. Printz said the deeds and records were in the archives at Stockholm, where, according to Rudman, Israel Helm, an original Swede settler, who came over with Minuet or Hollandaer, and was afterwards a leading man in the country and a magistrate under the Dutch rule, claims to have seen them himself. The fact of the purchase is also plainly set forth in the official instructions and credentials of Printz, given to him by the Swedish West India Company, by Christina, Oxenstierna, and nine other leading men of the nobility of the kingdom. Peter Stuyvesant also claimed an Indian title to the lands east of the Schuylkill, by deed of *gift*, after his quarrels with Governor Printz had ripened.

But the first patents to particular tracts of land within the metes and bounds set forth were given to Swedes, who also made the first actual settlements. There can be no better evidence of this than the simple names of the persons whose property was secured to them when they could renew their patents in the days when Lovelace and Andross confirmed the English dominion on the Delaware after the conquest of New Netherland. A few of these patents, purchases, and settlements deserve to be referred to in a particular manner. In 1645, Andreas Hudde, the Dutch commissary on the Delaware, a careful and conscientious observer, reports plantations of the Swedes from Christiana along the Delaware for two Dutch miles up the river to a point near to Tinnecum. Then there is not a single plantation "till you come to Schuylkill." This is perfectly intelligible if we remember that the Swedes chose for their plantations firm ground only, and always near the water-front if possible. The above would then read: "The Swedish plantations extend nine and a half English miles

along the Delaware above Christiana; then there is an unoccupied tract of swamp for about ten miles, until the Swedish plantations on the western and eastern banks of the Schuylkill are reached." And Hudde himself furnishes the proof of the existence of such plantations in his account (1648) of the transactions attending the raising of his house on the fort grounds at Beversrede, at the same time that he shows that up to that time the Dutch had not put up a single building above the mouth of the Schuylkill. Three years before that date the Swedes had built a water-mill on the Karakung, or Cobb's Creek, and a fort or trading block-house on Manayunk Island, in the mouth of the Schuylkill, as well as another apparently at Kingsessing. The alleged first purchase of the Dutch east of the Schuylkill was made from Indian sachems on the New Jersey side of the Delaware. The second, by Hudde, in 1646, which Printz resisted, was from an Indian living on the spot; the third, also by Hudde, in 1648, was ratified by Maarte Hoock and Wissementes, sachems of the Passayunk Indians. In Hudde's own account of this he says he called in the sachems, and they gave the Swedes, "who lived there already," notice to leave their settlements on the Schuylkill. In the controversy, or rather squabble, which ensued, and which Hudde seems to report with the utmost fidelity, the sachems are represented as demanding by whose orders the Swedes did erect buildings there; "if it was not enough that they were already in possession of Mateunakonk, *the Schuylkill*, Kingsessing, Kakauken, Upland," etc. "They [the Swedes] arrived only lately on the river, and had already taken so much land from them, *which they had actually settled*, while they [the Dutch], pointing to them, *had never taken from them any land*, although they had dwelt here and conversed with them more than thirty years." This is very strong affirmative evidence to the fact that up to 1648 the Swedes had, and the Dutch had not, settled on land east of the Schuylkill. In that year the latter built Fort Beversrede, and the Swedes planted a block-house directly in front of it, closing its gates. Under the circumstances the Swedes would seem to be justified in this action and in that of the previous year, when they threw down Symon Root's house at Wigquakoing (or Wicaco), or in 1648 prevented the Dutch freemen from building at "Mast-makers' Corner," on the east side of the Schuylkill.

Campanius, the Swedish pastor, returned home in May, 1648. At that time, he says, the Swedes had settlements at Mecoponacka ("Upland," or "Chester"), at Passayunk, on the Schuylkill, where was a fort named Korsholm, and a plantation given under Queen Christina's own hand to Lieut. Sven Schute.¹ At

Kingsessing, reports Campanius, already dwell five freemen, "who cultivate the ground and lived well." This plantation was east of Cobb's Creek, near the Swedes' mill. Techoherassi was Olof Stille's place, on the Delaware near the mouth of Ridley's Creek, and below Tinnecum and Fort Gottenburg. Stille, an original Swedish colonist, sold to the clergyman, Laurentius Carolus, and then settled in Moyamensing, where he took up swamp lands in 1678. In 1651 the Dutch made repeated efforts to settle on the island of Harommuny, or Aharommuny (which Dr. Smith, in his History of Delaware County, places on the Delaware, between Bow Creek and the Schuylkill), but were driven off, and in 1669 this land was patented with other tracts to Peter Cock, a prominent Swede under the Dutch rule, magistrate, commissioner, collector of customs, etc. On the same day in 1653 that Queen Christiana gave the deed of Wicaco to Sven Shute, she also gave to naval commander John Amundsen Besk a deed for "a tract of land extending to Upland Kill." In 1658 we find the Dutch Director Alrichs coveting and very anxious to get control both of Cock's land and Schute's also. In a letter to the Commissioner of Amsterdam he speaks of "two parcels of the best land on the river on the west bank, the first of which is above Marietie's Hook, about two leagues along the river and four leagues into the interior; the second, on a guess, about three leagues along the same, including Schuylkil, Passajonek, Quinsessingh, right excellent land, the grants or deeds whereof, signed in original by Queen Christina, I have seen." He thinks this land could be bought cheaply. In fact, these two tracts, if of the dimensions which Alrichs accorded them, were larger than the whole of Philadelphia County. Passayunk, as confirmed in 1667 by Governor Nicholls and granted to the Ashmans, Carman, Williams, etc., was surveyed to contain one thousand acres, and the quit-rent was fixed at ten bushels of wheat every year. That was certainly cheap enough. In 1664, Governor D'Hinoyossa repented the Sven Schute tract to his heirs, Sven Swensen, Sven Gondersen, Oele Swensen, and Andries Swensen, as eight hundred acres, beginning at Moyamensing Kill and so stretching upwards. In 1676, Governor Andross patented to Jurian Hartsfelder three hundred and fifty acres on Cohocksink's Creek for three and a half bushels of wheat quit-rent. This was sold ten years afterwards to Daniel Pegg, who gave the name of Pegg's Creek or Run to the stream, and this tract formed the Northern Liberties of Philadelphia. Some of it was marsh, and often flooded. In 1675 the block-house at Wicaco, built in 1669 as a defense against the Indians, was turned into a Swedish Church, *Gloria Dei*, and Fabricius, the pastor, preached his first sermon there on Trinity Sunday.

In 1677 the patents for land within the present

¹ This conveyance, however, was not made until Aug. 20, 1653. The tract was called "Mockorhulteykil," "as far as the river, with the small island belonging thereto viz., the island of Karinge, and Kinsessing, comprehending also Passumung" (Passayunk). This land, the title to

which was several times confirmed to the Swensons, Shute's heirs, included Wicaco, and Penn, when he laid out his city in 1682, had to give the Swensons other lands in exchange for this valuable tract.

limits of Philadelphia were very numerous, nearly all to Swedes, and for settlement and cultivation: Jan Schouten, 100 acres, west side of Schuylkill; Richard Duckett, west side, 100 acres; John Mattson, Swen Lom, and Lacey Dalbo, 300 acres on Schuylkill, at Wiessakitkonk, on the west side opposite Wissahickon; Thomas Jacobse, Neshaminies, next above, 300 acres; Lacey Cock and James Sanderling, each 100 acres on Poequissing Creek; Capt. Hans Moens, on Penipake Creek, on side of the same, 300 acres; Benjamin Goodsens, 100 acres, adjoining Duckett on Schuylkill; Ephraim Herman and Peter Rambo, 300 acres, between Pennepacker Creek and Poequissing Creek, promising to seat the same.¹ The same year Peter Rambo takes up 250 acres between Wicaco and Hartfelder's land, but two years later is compelled to surrender it to the Swensens, whose patent covers it. This tract was Kuequenaku (Coaquanock), the centre and navel of Penn's original Philadelphia; Lars Colman, Pell Laerson, and Peter Erickson also get 300 acres near Falls of Schuylkill, and Israel Helm 200 acres "up the river." In 1678 there are grants on Schuylkill made, as follows: Peter Rambo and Pelle Rambo, 200 acres, east side; Andreis Banksen, 200 acres; John and Andreis Wheeler, 300 acres; Andreis Johnson, 200 acres; Lasse Dalbo, 100 acres, east side; Lasse Andreis, Oele Stille, and John Mattsen, of Moyamensing, each take up 25 acres of marsh or meadow between Hollandaer's and Rosamond's Kills, east side of Schuylkill; Peter Dalbo and Oele Swansen getting like quantities in the same vicinity; 200 acres are granted to Thomas Nossicker, and 100 to William Warner, who settled, it is said, on east side of Schuylkill as early as 1658. There were grants also of 250 acres on Neshaminy Creek to Dunck Williams and Edmund Draughton and son; 300 acres at Sachamaxing from Lawrence Cock to Elizabeth Kinsey, and Sir R. Carr shows a deed, dated 1673, for a church-house and garden in Kingsessing.²

Penn's original plans were for a city of 10,000 acres. There are 82,603 acres in the limits of Philadelphia. In the list above given, defective as it is, and cutting all grants down to their minimum, it is shown that 5400 acres of this land was patented and the most of it occupied between 1640 and 1680. The greater part of this rapid development, which began with grants of league-wide tracts and ended with petitions for twenty-five-acre lots of submerged marsh and swamp, occurred after the Dutch power had ceased upon the Delaware River. Security came in with English rule, and it was fostered by capital and enterprise.

The circumstances which led to the overthrow of the Dutch in the New Netherlands do not demand any long recital. The facts are few, and there is no stir-

ring episode in connection with them. No revolution could have been more tame, no transfer of an empire more apathetic. The Dutch had always had the sagacity to know that the English were their worst enemies in this continent. New Netherland lay like a wedge between Virginia and New England, separating and weakening those colonies, while at the same time it kept both from access to the best soils, the most desirable and salubrious climates, and the boldest navigable waters in America. From the time of Lord Baltimore's settlement on the Chesapeake (1634), the pressure which the Dutch felt so much upon their eastern frontier was repeated with an added strain on the southern. Baltimore's charter called for all the land north of the Potomac and south of the fortieth parallel. This line would have included the present site of Philadelphia, and Baltimore was urgent in asserting his claim. He sent Col. Nathaniel Utie to New Amstel (now New Castle) to give notice of his rights and how he meant to enforce them, and his ambassador went among the simple-hearted, timid Dutch and Swedes like a hectoring constable armed with a distraint warrant. Utie and others assisted the Indians who were at war with those tribes who were clients and allies of the Dutch, and Fendall and Calvert repeatedly made it appear that they meant to invade the South River colony and overthrow the Dutch power, either by sailing in at the mouth of the Delaware or by an invasion overland by way of Elk River. So great was the pressure put upon them that the Dutch abandoned their settlements about the Horekills and withdrew farther up the bay. As a further precaution and to erect "a wall between them and the English of Maryland," the Dutch West India Company ceded to the city of Amsterdam, to which it owed heavy debts, its entire jurisdiction over the South River colony.

But the English to be dreaded did not live in the colonies but at home. The Stuarts were in power again, and so greedy were they and their followers after their long fast during the period of the Commonwealth and the Protectorate, that England, though clean stripped, did not furnish spoils enough to "go round." Charles II., moreover, had no liking for the Dutch, and it had already become the policy of Great Britain to obtain control of the North American continent. On March 12, 1664 (O. S.), the king granted to his brother James, Duke of York and Albany (afterwards King James II.), a patent for all the land embraced between the St. Croix River on the north and the Delaware Bay on the south. This covered all of New England, New York, and New Jersey, but it did not include the west side of the Delaware River and Bay, showing clearly that the king respected his father's charter conveying this territory to Calvert. All of the land granted by this patent, from the St. Croix River to the Passaic, had been previously conceded to the Plymouth or North Virginia Company in 1589 by King James I.

¹ The accounts of these deeds may be found in various places in Hazard's Annals, Smith's History of Delaware County, Ferris' "Early Settlements," etc.

² The irregular spelling of names in the text is a reflection of the old records, where every deed almost shows variations.

The duke, in July, sold or granted the territory between the Hudson and Delaware Rivers—the whole of New Jersey, in fact—to Lord Berkeley and Sir George Carteret. War between the English and Dutch broke out two months after the Duke of York received his patent, and the latter, who was lord high admiral of the British navy, at once (May 25th, O. S.) fitted out an expedition to capture the New Netherlands,—in other words, to take possession of the country patented to him by his brother. The expedition, consisting of four vessels, with one hundred and twelve guns and three hundred soldiers, besides the ships' crews, was under command of Col. Richard Nichols, who was accompanied by Sir Robert Carr, Kt., George Cartwright, and Samuel Maverick, commissioners to the several English colonies to hear complaints, redress grievances, and settle the "peace and security of the country." Their instructions bound them first to reduce the Dutch colonies, as the fountain of sedition and sanctuary of discontent and mutiny, to "an entire obedience." The massacres of Amboyna were cited in proof that the Dutch were not fit to be intrusted with great power, and it was declared to be "high time to put them without a capacity of doing the same mischief in America, by reducing them to the same rule and obedience with the English subjects there." Submission to English authority was all that was to be required of them, and no man who submitted was to be "disturbed or removed from what he possessed."

The Dutch, both at home and in New Netherland, were acquainted with the expedition and its objects, but took no real measures of defense. The first vessel of the expedition arrived at the outer bay of New Amsterdam August 25th, and a proclamation was at once issued, offering protection to all who submitted. Stuyvesant repaired the walls of his fort, but he could not rally the people to reinforce the garrison. They would not leave their villages and boueries, their wives and children, upon any such venture. On the 30th, Col. Nichols demanded the surrender of the fort and island, replying to Stuyvesant's commissioners that he was not there to argue questions of title, but to obey orders, and the place must surrender to him without debate, or he would find means to compel it to do so. Stuyvesant was still disposed to argue, to temporize, to fight if he could, but the frigate ran up alongside the fort, broadside on, and demanded an immediate surrender. The people assembled in town-meeting and declared their helplessness, the dominies and the old women laid siege to Stuyvesant, and on the 9th of September, 1664, New Amsterdam surrendered, the Dutch marching out of their fort with all their arms, drums beating, and colors flying. The terms of the capitulation were very liberal, considering that no defense was possible. In fact, the English did not want any war. They sought territory, and they knew that that takes half its value from being in a pacific state.

After arranging affairs at New Amsterdam, the name of which was now changed to New York, Sir Robert Carr, with two frigates and some soldiers, was sent to the Delaware to receive the submission of the Dutch there. They reached New Amstel on September 30th. The inhabitants at once yielded, but the truculent D'Hinoyossa, with Alricks and Van Sweringen, threw himself into the fort and declined to come to terms. Carr landed some troops, made his frigates pour two broadsides into the fortress, and then inconspicuously took it by storm, the Dutch losing three men killed and ten wounded, the English none. The result of D'Hinoyossa's foolhardiness was the sack of the fort, the plunder of the town, the confiscation of the governor's property, as well as that of several of his supporters, and the selling of the Dutch soldiers into Virginia as slaves. A good many negro slaves also were confiscated and sold, a cargo of nearly three hundred of these unhappy beings having just landed at South Amboy and been run across the Delaware with the idea of escaping the English in New York. The name of New Amstel was changed to New Castle, and D'Hinoyossa retired to Maryland, where he was naturalized and lived for several years in Talbot County, but finally finding he could not recover his property, which had been taken by Carr and others, he returned to Holland, entered the Dutch army, and fought in the wars against Louis XIV.

In May, 1667, Nichols was superseded by Sir Francis Lovelace as governor of the Dutch settlements on the North and South Rivers, and in July of that year peace was made between the Dutch and English on the basis of the *uti possidetis*. In August, 1669, some disturbance arose on the Delaware in consequence of the conduct of a Swede called "the long Finn," who gave himself out as the son of General Count Konigsmark, made seditious speeches, and tried to incite some sort of a rebellion. He is thought to have had the countenance, if not the active support, of Printz's daughter, Armgart Pappogoya. He was arrested, put in irons, tried, convicted, and sentenced to be publicly whipped, branded on the face and breast, and sent to the Barbadoes to be sold, all of which was done as set forth.

In 1673 war again broke out between the Dutch and English in consequence of the malign influence of Louis XIV. upon Charles II. The French king invaded the Netherlands with two hundred thousand men, and there was a series of desperate naval battles between the combined French and English fleets, with one hundred and fifty ships, and the Dutch fleet of seventy-five vessels, under De Ruyter and the younger Tromp. The last of these battles, fought off the Helder, resulted in the defeat of the allied squadrons, and the Prince of Orange at once dispatched several vessels under Binckes and the gallant Evertsen to recover possession of New Netherlands. The British made but little resistance, while the Dutch welcomed their old friends. Lovelace fled, and in a few days the

WM DE M

Dutch had resumed control of all their old provinces in North America. Capt. Anthony Colve was made governor. There were a few administrative changes. A confiscation act was passed against the English king and his officers. In 1674, February 10th (O. S.), the treaty of Westminster was signed, and peace again made between the Dutch and English, with a proviso enforcing the restitution of all countries taken during the late war. Under this treaty the English resumed their conquests of 1664. The Duke of York's patents were renewed, and the duke appointed Sir Edmund Andross governor over the whole country from the west side of the Connecticut River to the east side of the Delaware. Andross arrived out November 10th, and at once proceeded to restore the *statu quo ante bellum* as far as he could. He was an astute, well-informed man, of good habits, with the tact of a practiced courtier, and many of the rare accomplishments of a statesman. Under his administration and that of his deputies on the Delaware, Capt. Cantwell, Capt. Collier, and Christopher Billop, the settlements on the South River prospered, and grew rapidly in population, resources, and in sympathy and fellow-feeling with the other colonies.

CHAPTER VII.

WILLIAM PENN.

THE excellent Friend, Samuel M. Janney, of Loudoun County, Va., in the preface to his "Life of William Penn," published in November, 1851, concludes by saying, "While engaged in the preparation of this volume, I have derived both instruction and enjoyment from studying the character and writings of Penn; and when, in its progress, I came to the period of his death, my mind was overspread with sadness, as though I had lost a personal friend." Every intelligent and thoughtful person, we should think, must rise from the attentive study of Penn's life and works and the contemplation of his character with similar feelings and reflections. The founder of Pennsylvania and the man whose influence did so much to mould the rough, uncouth Quakerism of George Fox into comely shape, and give it some sort of standing in and with the outside world by teaching it moderation and decorum, has left such a large and indelible personal impress upon his work that we can understand and fully appreciate that in no other way than by examining it in the light of his genius. Happily the task is not difficult. William Penn was above all things else a man, with like passions unto ourselves. He was a great man in an age remarkable for men of towering genius and conspicuous individuality; he lived in strange times of turmoil, confusion, and uncertainty, in which the current of events flowed along with a double stream, resembling that of the Missis-

sippi at St. Louis, upon the left bank a tawny, turbid volume of corruption, riot, filth, debauchery, and vacillating irresponsible tyranny such as was never recorded in the chronicles of England before nor since, and flowing side by side with it on the right a deep, clear, yet mysterious blue tide of religious contemplation and pietistic ecstasy and exercise,—a new-born, non-militant Puritanism, which sought to found a democratic church without head and without ritual, such as the State could not control because unable to reach it, and such as persecution would assail in vain because encountering no resistance. Penn's relations to these times and events and the men active in them were numerous, far-reaching, various, and intricate, but over and above these his character shines forth almost invariably bright and pure, simple and serene. He was in these things, but not of them, and whether he was walking the lobby among the courtiers or interceding for some victim of hardship or tyranny in the king's closet at Whitehall, or locked up in Newgate or the Tower, his thoughts rose above and reached beyond his immediate surroundings, taking him to his pretty and peaceful home in Hertfordshire or Sussex, or to some "brave" and "improving" and "precious" meeting in company with Fox, Barclay, Keith, Turner, and others, or leading him into deep and fruitful meditations upon the "Holy Experiment," as he was wont to call his American colonies, the germs of which were already planted in his heart. There were some exceptions to this lofty elevation of life, thought, and purpose, but only so many as were needed to prove that Penn was human, fallible, and lived in an age steeped in corruption.

It will serve the objects of this history to pause here to inquire how Penn came to be led to entertain seriously the project of founding upon the banks of the Delaware a self-governing commonwealth, the roots of which should draw sap from the fundamental principles of universal religion, while its branches should be free as air to spread abroad wheresoever they listed. The process was necessarily a gradual one, and the influences which finally settled his determination were numerous and diverse.

At once a scholar and a courtier, a man of the world and a man of books, Penn was neither an ascetic nor a fanatic. The least bit of formalism flavored his character, but it was altogether outward, and he wore it easily as he wore his cloak. The broad and deep channels through which his speculation and thought made their way were much less under the guidance of the severe and logical processes which directed the minds of men like Fox and Barclay, Baxter and Stillingfleet, than they were obedient to the quick suggestions of his warm and fructifying imagination. He was an enthusiast, but his enthusiasm was colored by his large, genial heart and his benevolent disposition, as it was tempered and modulated also by his native shrewdness, his reading, and his carefully acquired knowledge of men, which

constant intercourse with the world had confirmed to him. It seems probable that the stories of his father, the admiral, about the conquest of Jamaica and of the tropical splendors of that beautiful island first turned the attention of Penn to our continent. He was twelve or thirteen years old when he would have heard these things, and while growing in beauty and manliness, he was already seeing the visions and dreaming the dreams which visit none but children of great imagination and extreme sensitiveness. When Penn went to Oxford, at the age of sixteen, he seems to have studied the English literature of the two preceding generations more closely than his text-books. He knew the Puritan idea as expounded by Vane and Hollis, and the Utopian schemes for ideal commonwealths as set forth by Sir Thomas More, Bacon, Harington, and others. He felt then, with a sense of personal injustice, the pressure of an established hierarchy upon the individual, as illustrated in his own expulsion from Christ Church College for non-conformity, and it is certain that he studied theology, theoretical and dogmatic, very assiduously while at Saumur under the tutelage of that learned expounder of Genevan doctrine, Moses Amyrault.¹ It was while on the continent, contemporaneously with these studies, that Penn made the acquaintance of Algernon Sidney, that honest old English republican, tired of exile, yet unwilling to purchase a return home at the cost of sacrificing his ideas, and eager to expound those ideas to any English hearer who might chance to come his way.

When Penn had lived a few years longer in courts and among men he realized the fact that the Friends could not escape persecution nor enjoy without taint their peculiar religious seclusion, nor could his ideal commonwealth be planted in such a society as that of Europe. It must seek new and virgin soil, where it could form its own manners and ripen its own code. Then, in 1672, came home George Fox, fresh from his journey through the wilderness and his visits to the Quaker settlements in New Jersey and Maryland, in which latter province the ancient meetings of Anne

¹ Penn's curious acquaintance with theology not only served him many a good turn in the polemical controversies, in which he took a not too pacific delight for a Quaker, but it often aided him to turn the tables upon his adversaries in business of a more practical character. Thus when the early Quakers in Maryland were disturbed in their minds about the question of oaths, which had already prevented John Edmondston, of Talbot County, from taking his seat in the Assembly, though often elected, Penn wrote to them (Anno 1673) a letter of advice as to how to deal with the officials of a Catholic colony. He referred them to Polybius, Grotius, Bishop Gaudens, etc.; alluded to the fact that Christ had forbidden "vain swearing," and added: "Thirdly. That it is not only our sense: Polycarpus, Ponticus, Blandina, Basilides, primitive martyrs, were of this mind, and Justin Martyr, Cyprian, Origen, Lactantius, Clemens Alexandrinus, Basilus, Magnus Chrysostom Theophylact, Eumenius, Chromatius, Euthymius (Fathers) so read the text, not to mention any of the Protestant martyrs. Therefore should they be tender." He thus in effect arrayed against the slaves of authority the whole panel of patriotic writers whom the Catholic Church reveres as only a little below the apostles in inspiration, and it was this subtlety and skillful adjustment of means to end in argument which, more than anything else, led to the epithet of "Jesuit" being attached to Penn.

Arundel and Talbot were already important gatherings of a happy people entirely free from persecutions. We may imagine how eagerly and closely Penn read Fox's journals and the letters of Edmondston, Wenlock Christison, and others about their settlements.

In 1675, when his disgust with European society and his consciousness of the impossibility to effect radical reform there had been confirmed and deepened, Penn became permanently identified with American colonial affairs, and was put in the best possible position for acquiring a full and accurate knowledge of the resources and possibilities of the country between the Susquehanna and the Hudson. This, which Mr. Janney calls "an instance in which Divine Providence seemed to open for him a field of labors to which he was eminently adapted," arose out of the fact of his being chosen as arbitrator in the disputes growing out of the partition of the West Jersey lands. As has already been stated, on March 12, 1664, King Charles II. granted to his brother James, Duke of York and Albany, a patent for all the lands in New England from the St. Croix River to the Delaware. This patent, meant to lead directly up to the overthrow of the Dutch power in New Netherland, was probably also intended no less as a hostile demonstration against the New England Puritan colonies, which both the brothers hated cordially, and which latterly had grown so independent and had so nearly established their own autonomy as to provoke more than one charge that they sought presently to abandon all allegiance due from them to the mother-country. At any rate, the New England colonies at once attempted to organize themselves into a confederacy for purposes of mutual defense against the Indians and Canadian French, as was alleged, but for divers other and weighty reasons, as many colonists did not hesitate to proclaim.² The Duke of York secured New York, Pennsylvania, and Delaware to himself as his own private possessions. That part of New Netherland lying between the Hudson and the Delaware Rivers was forthwith (in 1664, before Nicolls sailed from Portsmouth to take New York) conveyed by the duke, by deeds of lease and release, to John Lord Berkeley and Sir George Carteret. The latter being governor of the Channel Islands at the time, the new colony was called New Jersey, or rather *Nova Cesarea*, in the original grant. In 1675, Lord Berkeley sold for one thousand pounds his undivided half-share in New Jersey to John Fenwick, in trust for Edward Billinge and his assigns. Fenwick and Billinge were both Quakers, and Billinge was bankrupt. Not long after this conveyance Fenwick and Billinge fell out about

² This was a revival of the old New England confederacy of 1643, of late crippled and made ineffective by inter-colonial dissensions. It finally fell to pieces through the destruction of local self-government and the substitution of royal governors in the New England colonies between 1664 and 1684. See Richard Frothingham's "Rise of the Republic," chap. II.

the property, and, after the custom of the Friends, the dispute was submitted to arbitration. The disputants fixed upon William Penn as arbitrator. When he made his award, Fenwick was not satisfied and refused to abide by Penn's decision, which, indeed, gave Fenwick only a tenth of Lord Berkeley's share in the joint tenancy, reserving the remaining nine-tenths to Billinge, but giving Fenwick a money payment besides. Penn was offended at Fenwick's recalcitrancy, and wrote him some sharp letters. "Thy days spend on," he said, "and make the best of what thou hast. Thy grandchildren may be in the other world before the land thou hast allotted will be employed." Penn stuck to his decision, and, for that matter, Fenwick likewise maintained his grievance. He sailed for the Delaware at the head of a colony, landed at Salem, N. J., and commenced a settlement. Here he carried matters with such a high hand, patenting land, distributing office, etc., that he made great trouble for himself and others also. His authority was not recognized, and for several years the name of Maj. John Fenwick fills a large place in the court records of Upland and New York, where he was frequently imprisoned and sued for damages by many injured persons.

Billinge's business embarrassments increasing, he made over his interest in the territory to his creditors, appointing Penn, with Gawen Lawrie, of London, and Nicholas Lucas, of Hertford, two of the creditors, as trustees in the matter. The plan was not to sell, but improve the property for the benefit of the creditors. To this end a partition of the province was made, a line being drawn through Little Egg Harbort to a point near where Port Jervis now is. The part of the province on the right of this line, called East New Jersey, the most settled portion of the territory, was assigned to Carteret. That on the left, West New Jersey, was deeded to Billinge's trustees. A form of government was at once established for West Jersey, in which Penn's hand is distinctly seen. The basis was liberty of person and conscience, "the power in the people," local self-government, and amelioration of the criminal code. The territory was next divided into one hundred parts, ten being assigned to Fenwick and ninety to Billinge's trustees, and the land was opened for sale and occupancy, being extensively advertised, and particularly recommended to Friends. In 1677 and 1678 five vessels sailed for West New Jersey, with eight hundred emigrants, nearly all Quakers. Two companies of these, one from Yorkshire, the other from London, bought large tracts of land, and sent out commissioners to quiet Indian titles and lay off the properties. At Chygoes Island they located a town, first called Beverly, then Bridlington, then Burlington.¹ There was a regular treaty

with the Indians, and the Friends not only secured peace for themselves, but paved the way for the pacific relations so firmly sealed by Penn's subsequent negotiations with the savages. The Burlington colony prospered, and was reinforced by new colonists continually arriving in considerable numbers. In 1680, Penn, as counsel for the trustees of West New Jersey, succeeded, by means of a vigorous and able remonstrance, in getting the Duke of York, then proprietary of New York, to remove an onerous tax on imports and exports imposed by the Governor of New York and collected at the Horekill. The next year Penn became part proprietor of East New Jersey, which was sold under the will of Sir George Carteret, then deceased, to pay his debts. A board of twenty-four proprietaries was organized, Penn being one, and to them the Duke of York made a fresh grant of East New Jersey, dated March 14, 1682, Robert Barclay becoming Governor, while Penn's friend Billinge was made Governor of West New Jersey. Both these governments were surrendered to the crown in Queen Anne's reign, April 15, 1702.

While Penn was thus acquiring knowledge of and strong property interests in America, two other circumstances occurred to intensify his impatience with the state of affairs in England. One was the insensate so-called "Popish plot" of Titus Oates, the other the defeat of his friend, Algernon Sidney, for Parliament. From the date of these events Penn began to look westward, and prepared himself for the accomplishment of his "Holy Experiment." And now, before detailing the history of this great experiment, and describing one of its results in this fair city of

30 pair of hose, 20 fathoms of duffels (Duffield blanket cloth, of which match-coats were made), 30 petticoats, 30 narrow hoes, 30 bars of lead, 15 small barrels of powder, 70 knives, 30 Indian axes, 70 combs, 60 pair of tobacco tongs, 60 pair of scissors, 60 tinshaw looking-glasses, 120 awl-blades, 120 fish-hooks, 2 grasps of red paint, 120 needles, 60 tobacco-boxes, 120 pipes, 200 bells, 100 jews-harps, and 6 anchors of rum." The value of these articles probably did not exceed three hundred pounds sterling. But, on the other hand, the Indian titles were really worth nothing, except so far as they served as a security against Indian hostility. It has been said that there is not an acre of land in the eastern part of Pennsylvania the deeds of which cannot be traced up to an Indian title, but that in effect would be no title at all. Mr. Lawrence Lewis, in his learned and luminous "Essay on Original Land Titles in Philadelphia," denies this absolutely, and says that it is "impossible to trace with any accuracy" the titles to land in Philadelphia derived from the Indians. Nor is it necessary to trace a title which is of no value. The Indians could not sell land to individuals and give valid title for it in any of the colonies; they could sell, if they chose, but only to the government. Upon this subject the lawyers are explicit. All good titles in the thirteen original colonies are derived from land-grants, made or accepted not by the Indians, but by the British crown. Thus Chalmers (Political Annals, 677) says, "The law of nations sternly disregarded the possession of the aborigines, because they had not been admitted into the society of nations." At the Declaration of Independence (see Dallas' Reports, ii. 470) every acre of land in this country was held, mediate or immediately, by grants from the crown. All our institutions (Wheaton, viii. 588) recognize the absolute title of the crown, subject only to the Indian right of occupancy, and recognize the absolute title of the crown to extinguish that right. An Indian conveyance alone could give no title to an individual. (The references here given are quoted from the accurate Frothingham's "Rise of the Republic.")

¹ The value of Indian lands at that time to the savages may be gathered from the price paid in 1677 for twenty miles square on the Delaware between Timber and Oldman's Creeks, to wit: 30 match-coats (made of hairy wool with the rough side out), 20 guns, 30 kettles, 1 great kettle,

which we write, it is proper to say a few words concerning the life of the great founder.

William Penn was born in London, in St. Catharine's Parish, hard by the Tower, Oct. 14, 1644. His father was Vice-Admiral Sir William Penn, his mother Margaret Jasper, daughter of a well-to-do Rotterdam merchant. They were united Jan. 6, 1643, when the elder Penn, though only twenty years old, had already received his commission as post-captain in the royal navy, and William was their first child. Admiral Penn was a kind-hearted, genial, but shrewd

ARMS OF PENN.

and observant man of the world. He was a skillful sailor and navigator, very brave and prompt, a man of action, a man also who was determined to get on in the world which he saw about him. He had set his hopes on a fortune and the peerage. The fortune he got; the peerage he would have secured but for his son William's adhesion to the doctrine of the Friends. At court he steered himself as adroitly as he had steered his fleet amid the reefs and cays of the Antilles on his way to Jamaica and Hispaniola. He owed his early promotion and appointment to Cromwell, but when he thought the times were ripe he deliberately betrayed the Protector and offered his fleet to Charles II. He was a great favorite with Charles and the Duke of York, and the latter became his son's chief protector for the father's sake. He was impetuous, irascible, yet strongly attached to his family and their interests as he interpreted them. It is almost pathetic to notice the many efforts he made to reclaim his son from what he regarded as his wayward departure from common sense in joining the Society of Friends. He at first beat the boy and turned him out-doors, then sent him abroad in the best company, and with a pocket full of money, to make the grand tour of Europe, and learn gayety and frivolity enough to enable him to shine at court. He dispatched him to become a member of the brilliant family of the Duke of Ormond, viceroy of Ire-

land. But the young man proved, as his father thought, incorrigible, and he was again beaten, kicked out of the house, and left to shift for himself. Finally, when, broken in health and spirits, and disappointed in his fondest anticipations, the admiral found himself on his death-bed, he had learned to admire his son's skill and quickness in polemical fence, and the calm, unbending, uncomplaining fortitude with which he bore persecution, insult, and imprisonment. "Son William," he whispered, just before he died, "if you and your friends keep to your plain way of preaching and to your plain way of living, you will make an end of the priests to the end of the world."

Lady Penn seems to have been as quiet and domestic as Sir William was gay and worldly. Pepys said, twenty years after her marriage, that she had been very handsome and "is now very discreet." It is not improbable that John Jasper, the merchant of Rotterdam, may have been of Puritan stock or affinities; it is nearly certain that from his mother Penn derived the strength of his early religious impressions, his tendency to sobriety of thought and conversation, and his quiet but deep enthusiasm, just as he inherited from his father the quick mother-wit, the shrewdness in bargaining, and the political and courtier-like skill in dealing with men of all ranks and judging all sorts of characters which so often stood him in good stead in the experiences of his checkered life. Those early religious impressions, whatever their source, grew with the boy's growth and strengthened with his strength. While he was yet at Chigwell grammar school he had visions of the "Inner Light," though he as yet had never heard Fox's name mentioned. He was not a puny child, though he must have been a studious one. He delighted and excelled in field sports, boating, running, hunting, and athletic exercises. He was sent from the grammar school to Oxford, and entered as a fellow-commoner in Christ Church College at the early age of fifteen. The dean of Christ Church was the famous polemical writer, Dr. John Owen; South was orator of the university, Locke was a fellow of Christ Church, and the profligate but witty Wilmot was a fellow-commoner. Penn studied assiduously, he joined the "serious set," he went to hear Thomas Loe preach the new gospel of the Society of Friends, he resented the discipline which the college attempted to put upon him and his intimates in consequence, and he was expelled the university for rejecting the surplice and rioting in the quadrangle. His father beat him, relented, and sent him to France, where he came home with the manners and dress of a courtier, but saturated with Genevan theology. Pepys says he looked quite "modish," and Pepys was a judge of dress. He had shown in Paris that he could use his rapier gallantly, and his father took him to sea with him, to prove to the court, when he returned as bearer of dispatches, that he was capable of beginning the career of office. The plague of London set him again

upon a train of serious thinking, and his father to counteract this sent him to the Duke of Ormond, at the same time giving him charge of his Irish estates. Penn danced in Dublin and fought at Carrickfergus equally well, and he even applied for a troop of horse. He was a very handsome young fellow, and armor and lace became him mightily, as his portrait of this date shows. But at Cork he met Thomas Loe again, and heard a sermon upon the text "There is a faith which overcomes the world, and there is a faith which is overcome by the world." Penn came out of this meeting a confirmed Quaker. His father recalled him, but could not break his convictions, and then again he was driven from home, but his mother still found means to supply his needs. He now joined the Quakers regularly, and became the most prominent of the followers of that singularly eccentric but singularly gifted leader of men, George Fox. Penn's affection for Fox was deep and strong. He repeatedly got "the man in the leather breeches" released from jail, and he gave him a thousand acres of land out of the first surveys made in Pennsylvania. Fox had great influence over him, and it is likely that Penn reciprocally wrought upon Fox's character for his benefit.

We must not lightly regard the sacrifices of this handsome young enthusiast. He was a favorite; he had the manners to push him at court; he had certain and powerful influences upon his side; yet, instead of taking the step that would make him Lord Weymouth, he became a preacher for a despised sect, universally treated as zealots or lunatics, whose steadfast disregard of a statute made them continually inmates of the loathsome gaols of England. Penn did this for conscience' sake; and he was neither a zealot nor a lunatic, but an English gentleman, fond of dress, comfort, ease, and something like luxury, an accomplished courtier, a thorough business man, and one of the shrewdest students and judges of character. Penn preached in public as Fox was doing, and so well that he soon found himself a prisoner in the Tower of London, where, when brought up for trial, he defended himself so ably as to prove that he could have become a great lawyer had he so chosen. He profited by his imprisonments to issue a series of works, chiefly controversial, which revealed a writer of great force and perspicuity and acuteness. He could not perhaps cope with Baxter, but he vanquished nearly every opponent who came against him. Penn married in 1672, his wife being Gulielma Springett, daughter of Sir William Springett, a lady of lovely person and sweet temper. It was a love-match; "remember," he says in his beautiful letter to wife and children on his departure for America, "remember thou wast the love of my youth and much the joy of my life; the most beloved, as well as the most worthy of all my earthly comforts; and the reason of that love was more thy inward than thy outward excellences, which yet were many." But Penn did not give many weeks to his honeymoon. He was soon

at his work again, wrestling for the truth, and, it must be said, wrestling still more lustily, as one who wrestles for victory, with the oppressors of the faithful. In this cause he went to court again, resumed his relations with the Duke of York, and secured that prince's influence in behalf of his persecuted sect. This semi-alliance of Penn with the duke led up directly to the settlement of Pennsylvania. When, after Penn's return from his first visit to America, he resumed his place at court upon the accession of James II., he became one of the most considerable men in the kingdom. He had the monarch's private ear, and his influence was all the time exerted on the side of justice and humanity, while he expended the best efforts of his natural courtier's tact and shrewd mother-wit in the vain endeavor to save a predestined despot and fanatic from the consequences of his fatal errors and blind follies.

After James' abdication came persecution, debts, semi-exile, affliction of every sort to the Quaker courtier. His wife died, his son went to the bad, his steward robbed and betrayed him, his province and people were ungrateful, he was accused of treason, hunted by the royal pursuivants, and reduced to poverty. There came an Indian summer of prosperity after this, when, acquitted of debt, and accusations dismissed, married to another wife, and glad to see how his work thrived, he returned to his province and enjoyed a brief reign of luxurious indolence and importance at his manor and mansion of Pennsbury. Then his government was again threatened by the royal power, and he reluctantly went back to England, to find his affairs all disordered. "I never was so low and so reduced," he writes to James Logan. "O Pennsylvania," he says later on, in the bitterness of his spirit, "what hast thou not cost me? Above £30,000 more than I ever got by it, two hazardous and most fatiguing voyages, my straits and slavery here, and my son's soul almost!" He was forced into prison for debt, and when finally released, resumed his labors as a minister at the age of sixty-five. Soon after this he was paralyzed, his vigorous intellect dwindled away to second-childishness, but his sweetness of temper and disposition were still retained to the last, and in a way which evidently made a strong impression on all who saw him. "No insanity, no lunacy," says his old friend, Thomas Story, after a visit to him, "at all appeared in his actions, and his mind was in an innocent state, as appeared by his loving deportment to all that came near him; and that he had still a good sense of truth is plain by some very clear sentences he spoke in the life and power of truth in an evening meeting we had together there, wherein we were greatly comforted, so that I was ready to think this was a sort of sequestration of him from all the concerns of this life, which so much oppressed him, not in judgment but in mercy, that he might have rest and not be oppressed thereby to the end." That end was now not

far off, and William Penn "forsook the decayed tabernacle" of his body on the 30th day of the Fifth Month (July, 1718, O. S.), in the seventy-fourth year of his age. The funeral took place August 5th, in the burying-ground at Jordan's Quaker meeting-house, in Buckinghamshire, where his first wife and several of his family were already interred. His

WILLIAM PENN'S BURIAL-PLACE.

own Monthly Meeting at Reading has left the best summary of his character in the touching little memorial entitled "A Testimony concerning William Penn," the last paragraph of which is as follows: "In fine he was learned without vanity, apt without forwardness, facetious in conversation, yet weighty and serious; of an extraordinary greatness of mind, yet void of the strain of ambition; as free from rigid gravity as he was clear of unseemly levity; a man, a scholar, a friend; a minister surpassing in speculative endowments, whose memorial will be valued by the wise and blessed with the just." "This," says Bancroft, "is the praise of William Penn," that in an age of debauchery and *ennui*, skepticism and pessimism, when all around him, even the wisest, shook their heads, "Penn did not despair of humanity, and, though all history and experience denied the sovereignty of the people, cared to cherish the noble idea of man's capacity for self-government."

It certainly was a "noble idea" which lay at the bottom of Penn's "Holy Experiment," and its history should be unfolded with scrupulous exactness as well as with reverent hands.

We have seen how, after the Restoration, the attention of the court as well as the people of England was directed in a much larger measure than formerly to the American colonies. Many who were weary of strife, discontented with the present aspect of affairs or apprehensive of the future, sought relief and peace in emigration. The hardships of the wilderness, the

perils of Indian warfare, the depressing diseases of a new climate and unbroken soil were as nothing to those in comparison with the blessings of political and religious liberty secured by emigration. As far as the court was concerned, Charles wanted provinces to give away to his favorites, while his cabinets, both under Clarendon, the Cabal, and Danby, had strong political reasons for putting the colonies more immediately under control of the crown in order to check their manifest yearning for self-government and comparative independence. Thus the representatives of prerogative were compelled likewise to give an enlarged attention to colonial affairs. The Council for Foreign Plantations was given new powers and a greater and more exalted membership in 1671, and in 1674 this separate commission was dissolved, and the conduct of colonial affairs intrusted to a committee of the Privy Council itself, which was directed to sit once a week and report its proceedings to the Council. This committee comprised some of the ablest of the king's councilors, and among the members were the Duke of York and the Marquis of Halifax. William Penn's relations with the duke gave him great facilities in dealing with this committee.

Admiral Penn at his death had left his son a property of £1500 a year in English and Irish estates. There was in addition a claim against King Charles' government for money lent, which with interest amounted to £15,000. The king had no money and no credit. What he got from Louis XIV. through the compliant Barillon hardly sufficed for his own *menus plaisirs*.¹ Penn being now resolved to establish a colony in America alongside his New Jersey plantations, and to remove there himself with his family so as to be at the head of a new Quaker community and commonwealth, petitioned the king to grant him, in lieu of the claim of £15,000, a tract of country in America north of Maryland, with the Delaware on its east, its western limits the same as those of Maryland, and its northern as far as plantable country extended. Before the Privy Council Committee Penn explained that he wanted five degrees of latitude measured from Lord Baltimore's line, and that line, at his suggestion, was drawn from the circumference of a circle, the radius of which was twelve miles from New Castle as its centre. The petition of Penn's was received June 14, 1680. The object sought by the petitioner, it was stated, was not only to provide a peaceful

¹ Not to be wondered at when we find in Charles' book of secret service money such entries as the following: "March 28th. Paid to Duchess of Portsmouth [king's mistress] £13,341 10s. 4½d. in various sums. June 14th. Paid to Richard Yates, son of Francis Yates, who conducted Prince Charles from the field of Worcester to Whyte Ladies after the battle, and suffered death for it under Cromwell, £1010s."

home for the persecuted members of the Society of Friends, but to afford an asylum for the good and oppressed of every nation on the basis of a practical application of the pure and peaceable principles of Christianity. The petition encountered much and various opposition. Sir John Werden, agent of the Duke of York, opposed it because the territory sought was an appendage to the government of New York, and as such belonged to the duke. Mr. Burke, the active and untiring agent of Lord Baltimore, opposed it because the grant asked by Penn would infringe upon the territory covered by Baltimore's charter. At any rate, said Mr. Burke, in a letter to the Privy Council Committee, if the grant be made to Penn, let the deed expressly state lands to the north of Susquehanna Fort, "which is the boundary of Maryland to the northward." There was also strong opposition in the Privy Council to the idea of a man such as Penn being permitted to establish plantations after his own peculiar model. His theories of government were held to be Utopian and dangerous alike to Church and State. He was looked upon as a Republican like Sidney. However, he had strong friends in the Earl of Sunderland, Lord Hyde, Chief Justice North, and the Earl of Halifax. He had an interview with the Duke of York, and contrived to win him over to look upon his project with favor, and Sir J. Werden wrote to the secretary, saying, "His royal Highness commands me to let you know, in order to your informing their lordships of it, that he is very willing Mr. Penn's request may meet with success." The attorney-general, Sir William Jones, examined the petition in view of proposed boundaries, and reported that with some alterations it did not appear to touch upon any territory of previous grants, "except the imaginary lines of New England patents, which are bounded westwardly by the main ocean, should give them a real though impracticable right to all those vast territories." The draught of the patent, when finally it had reached that stage of development, was submitted to the Lords of Trade to see if English commercial interests were subserved, and to the Bishop of London to look after the rights of the church. The king signed the patent on March 4, 1681. A certified copy of the venerable document may now be seen framed and hung up in the office of the Secretary of State at Harrisburg. The name to be given to the new territory was left blank for the king to fill up, and Charles called it Pennsylvania. Penn, who seems to have been needlessly squeamish on the subject, wrote to his friends to say that the name was in honor of his father, and that he wanted the territory called New Wales, and offered the Under Secretary twenty guineas to change the name, "for I feared lest it should be looked on as a vanity in me." However, he consoled himself with the reflection that "it is a just and clear thing, and my God, that has given it me through many difficulties, will, I believe, bless and make it the seed of a nation. I

shall have a tender care to the government that it be well laid at first."

The charter, which is given complete in Hazard's Annals, consists of twenty-three articles, with a preamble reciting the king's desire to extend his dominions and trade, convert the savages, etc., and his sense of obligation to Sir William Penn:

I. The grant comprises all that part of America, islands included, which is bounded on the east by the Delaware River from a point on a circle twelve miles northward of New Castle town to the 43° north latitude if the Delaware extends so far; if not, as far as it does extend, and thence to the 43° by a meridian line. From this point westward five degrees of longitude on the 43° parallel; the western boundary to the 40th parallel, and thence by a straight line to the place of beginning.

II. Grants Penn rights to and use of rivers, harbors, fisheries, etc.

III. Creates and constitutes him Lord Proprietary of the Province, saving only his allegiance to the King, Penn to hold directly of the kings of England, "as of our castle of Windsor in the county of Berks, in free and common socage, by fealty only, for all services, and not *in capite*, or by Knight's service, yielding and paying therefore to us, our heirs and successors, two beaver-skins, to be delivered at our castle of Windsor on the 1st day of January every year," also one-fifth of precious metals taken out. On these terms Pennsylvania was erected into "a province and seignior."

IV. Grants Penn and his successors, his deputies and lieutenants "free, full, and absolute power" to make laws for raising money for the public uses of the Province and for other public purposes at their discretion, by and with the advice and consent of the people or their representatives in assembly.

V. Grants power to appoint officers, judges, magistrates, etc., to pardon offenders, before judgment or after, except in cases of treason, and to have charge of the entire establishment of justice, with the single proviso that the laws adopted shall be consonant to reason and not contrary nor repugnant to the laws and statutes of England, and that all persons should have the right of appeal to the King.

VI. Prescribes that the laws of England are to be in force in the Province until others have been substituted for them.

VII. Laws adopted for the government of the Province to be sent to England for royal approval within five years after their adoption, under penalty of becoming void.

VIII. Licenses emigration to the new colony.

IX. Licenses trade between the colony and England, subject to the restrictions of the Navigation Acts.

X. Grants permission to Penn to divide the colony into the various minor political divisions, to constitute fairs, grant immunities and exemptions, etc.

XI. Similar to IX., but applies to exports from colony.

XII. Grants leave to create seaports and harbors, etc., in aid of trade and commerce, subject to English customs regulations.

XIII. Penn and the Province to have liberty to levy customs duties.

XIV. The Proprietary to have a resident agent in London, to answer in case of charges, etc., and continued misfeasance to void the charter and restore the government of the Province to the King.

XV. Proprietary forbidden intercourse or correspondence with the enemies of England.

XVI. Grants leave to Proprietary to pursue and make war on the savages or robbers, pirates, etc., and to levy forces for that end, and to kill and slay according to the laws of war.

XVII. Grants full power to Penn to sell or otherwise convey lands in the Province.

XVIII. Gives title to persons holding under Penn.

XIX. Penn may erect manors, and each manor to have privilege of court-baron and frank-pledge, holders under manor-title to be protected in their tenure.

XX. The King not to lay taxes in the Province "unless the same be with the consent of the Proprietary, or chief Governor, or Assembly, or by act of Parliament of England."

XXI. The charter to be valid in English courts against all assumptions or presumptions of ministers or royal officers.

XXII. Bishop of London may send out clergymen if asked to do so by twenty inhabitants of the Province.

XXIII. In cases of doubt the charter is to be interpreted and construed liberally in Penn's favor, provided such construction do not interfere with or lessen the royal prerogative.

On the 2d of April, after the signing of the charter, King Charles made a public proclamation of the fact of the patent, addressed chiefly to the inhabitants of the territory, enjoining upon them to yield ready obedience to Penn and his deputies and lieutenants. At the same time Penn also addressed a letter to the inhabitants of the province, declaring that he wished them all happiness here and hereafter, that the Providence of God had cast them within his lot and care, and, though it was a new business to him, he understood his duty and meant to do it uprightly. He told the people that they were not now at the mercy of a Governor who came to make his fortune out of them, but "you shall be governed by laws of your own making, and live a free and, if you will, a sober and industrious people. I shall not usurp the right of any or oppress his person. God has furnished me with a better resolution and has given me his grace to keep it." He hoped to see them in a few months, and any reasonable provision they wanted made for their security and happiness would receive his approbation. Until he came he hoped they would obey and pay their customary dues to his deputy.

That deputy was Penn's cousin, William Markham, a captain in the British army, who was on April 20, 1681, commissioned to go out to Pennsylvania, and act in that capacity until Penn's arrival. He was given power to call a Council of nine, of which he was to be president; to secure a recognition of Penn's authority on the part of the people; to settle bounds between Penn and his neighbors; to survey, lay out, rent, or lease lands according to instructions; to erect courts, make sheriffs, justices of the peace, and other inferior requisite officers, so as to keep the peace and enforce the laws; to suppress disturbance or riot by the *posse comitatus*, and to make or ordain any ordinances or do whatever he lawfully might for the peace and security of the province. Markham was particularly instructed to settle, if he could, boundaries with Lord Baltimore, and Penn gave him a letter to that neighbor of his. The deputy soon after sailed for Pennsylvania, on what day is not definitely known, but he was in New York on June 21st, when he obtained from the Governor, Anthony Brockholls, a proclamation enjoining upon the inhabitants of Pennsylvania that they should obey the king's charter and yield a ready obedience to the new proprietary and his deputy. When Markham met Lord Baltimore the interview was unsatisfactory. The boundary question at once came up, and was as quickly let drop when Markham found that the lines could not be run according to the two charters respectively without giving to Baltimore some lands which Penn was resolved to keep as his own.

It is not supposed that Markham took out any emigrants with him. His business was to get possession of the province as speedily as possible, so as to insure the allegiance of the people, secure the revenue, and prepare the way for Penn. It is probable, therefore,

that he sailed in the first ship offering for New York or Boston, without waiting for company. Meanwhile, even before Markham's departure, Penn began to advertise his new province and popularize what information he had concerning it. This was the business part of the "Holy Experiment," and Penn was very competent to discharge it. He published a pamphlet (through Benjamin Clark, bookseller, in George Yard, Lombard Street) entitled "Some account of the Province of Pennsylvania in America, lately granted under the Great Seal of England to William Penn, etc. Together with privileges and powers necessary to the well-governing thereof. Made publick for the information of such as are or may be disposed to transport themselves or servants into those parts." This prospectus shows the extent of the knowledge Penn had already gleaned concerning his province, and how closely he had studied the methods by which he proposed to secure its prompt and effective planting and settlement. It is not necessary to incorporate the whole of such a pamphlet in this narrative, but some of its salient points must be noted. It was written, we must remember, in April, 1681, a month after the signing of the patent. Penn begins with an excursus upon the benefit of plantations or colonies in general, "to obviate a common objection." "Colonies," he says, "are the seeds of nations, begun and nourished by the care of wise and populous countries, as conceiving them best for the increase of human stock and beneficial for commerce." Antiquity is then searched through for examples needless to repeat, but all brought in to prove that colonies do not weaken or impoverish the mother-country. Indeed, this part of his argument reads as if it were Penn's brief while his petition was before the Privy Council, and as if he drew it up in reply to objections there urged against conceding him the patent. He shows how colonies and foreign plantations have contributed to the benefit of England's commerce and industry, and might be expected to continue to do so. He denies that emigration has depopulated the country, but says that the increase of luxury has drawn an undue proportion of the rural communities into cities and towns, and that the increased cost of living thus brought about tends to prevent marriage and so promotes the decay of population. For this and the many attendant evils emigration, he suggests, is the only effective remedy. He then proceeds to speak of his province, the inducements it offers to colonists, and the terms on which he is prepared to receive them.

"The place," he says, "lies six hundred miles nearer the sun than England," so far as difference of latitude goes, adding, "I shall say little in its praise to excite desires in any, whatever I could truly write as to the soil, air, and water; this shall satisfy me, that by the blessing of God and the honesty and industry of man it may be a good and fruitful land." He then enumerates the facilities for navigation by way of the

Delaware Bay and River, and by way of Chesapeake Bay also; the variety and abundance of timber; the quantity of game, wild fowl, and fish; the variety of products and commodities, native or introduced, including "silk, flax, hemp, wine, sider, wood, madder, liquorish, tobacco, pot-ashes, and iron, . . . hides, tallow, pipe-staves, beef, pork, sheep, wool, corn or wheat, barley, rye, and also furs, as your peltree, mincks, racoons, martins, and such like store of furs which is to be found among the Indians that are profitable commodities in England." Next, after explaining the channels of trade,—country produce to Virginia, tobacco to England, English commodities to the colonies,—he gives assurance that under his liberal charter, paying due allegiance to the mother-country, the people will be able to enjoy the very largest proportion of liberty and make their own laws to suit themselves, and that he intends to prepare a satisfactory constitution.

Penn states explicitly in this pamphlet the conditions of immigration into his province. He looks to see three sorts of people come,—those who will buy, those who will rent, and servants. "To the first, the shares I sell shall be certain as to number of acres; that is to say, every one shall contain five thousand acres, free from any incumbrance, the price a hundred pounds, and for the quit-rent but one English shilling, or the value of it, yearly, for a hundred acres; and the said quit-rent not to begin to be paid till 1684. To the second sort, that take up land upon rent, they shall have liberty so to do, paying yearly one penny per acre, not exceeding two hundred acres. To the third sort, to wit, servants that are carried over,¹ fifty acres shall be allowed to the master for every head, and fifty acres to every servant when their time is expired. And because some engage with me that may not be disposed to go, it were very advisable for every three adventurers to send over an overseer with their servants, which would well pay the cost."²

Penn next speaks of his plan for allotments or dividends, but as his scheme was not then, as he confesses, fully developed, and as he later furnished all the details of this scheme as he finally matured it, we will pass that by for the present. It is enough to say that the plan is very closely followed to-day in Eastern Europe to promote the sale of government bonds.

¹ The practice of carrying servants "over" was not long continued. In a few years many came to try their fortunes and entered into service.

² On this basis, if we suppose the servant allotments to pay the same quit-rent as other tenants, Penn's colonists would be assessed about thus:

Manors.—5000 acres @ £100, Int. 5 per cent.....	£5
50 servants to a manor, giving it 2500 acres more,	
total quit-rent @ 1s. per 100 A.....	3 10
(Equal to 27½ pence per 100 A. per annum).....	£8 10s.
Tenants.—200 A. @ 1d. per A.....	
5000 A., 25 tenants, 25 servants, 1250 A., 6250 A. @ 1d.	26
Servants.—75 servants @ 50 A., equal to 3750 A. @ 1d.....	15 12½

Thus Penn, in placing 17,500 acres, proposed to get £100 cash and yearly rents amounting to £45 2s., or 5s. 2d. nearly per 100 acres, the greater part of the burden falling upon the smaller tenants of course. The purchaser of 5000 acres had, moreover, a further advantage in sharing in the allotments, or "dividends," as Penn calls them.

The persons, Penn says, that "Providence seems to have most fitted for plantations" are "1st, industrious husbandmen and day laborers that are hardly able (with extreme labor) to maintain their families and portion their children; 2d, laborious handicrafts, especially carpenters, masons, smiths, weavers, taylors, tanners, shoemakers, shipwrights, etc., where they may be spared or low in the world, and as they shall want no encouragement, so their labor is worth more there than here, and there provisions cheaper." 3d, Penn invites ingenious spirits who are low in the world, younger brothers with small inheritances and (often) large families; "lastly," he says, "there are another sort of persons, not only fit for but necessary in plantations, and that is men of universal spirits, that have an eye to the good of posterity, and that both understand and delight to promote good discipline and just government among a plain and well-intending people; such persons may find room in colonies for their good counsel and contrivance, who are shut out from being of much use or service to great nations under settled customs; these men deserve much esteem and would be hearken'd to."

Very considerably Penn next tells all he knows about the cost and equipments for the journey and subsistence during the first few months, "that such as incline to go may not be to seek here, or brought under any disappointments there." He mentions among goods fit to take for use or for sale at a profit "all sorts of apparel and utensils for husbandry and building and household stuff." People must not delude themselves, he says, with the idea of instant profits. They will have a winter to encounter before the summer comes, "and they must be willing to be two or three years without some of the conveniences they enjoy at home, and yet I must needs say that America is another thing than it was at the first plantation of Virginia and New England, for there is better accommodation and English provisions are to be had at easier rates." The passage across the ocean will be at the outside six pounds per head for masters and mistresses, and five pounds for servants, children under seven years old fifty shillings, "except they suck, then nothing." Arriving out in September or October, "two men may clear as much ground by spring (when they set the corn of that country) as will bring in that time, twelve months, forty barrels, which makes twenty-five quarters of corn. So that the first year they must buy corn, which is usually very plentiful. They must, so soon as they come, buy cows, more or less, as they want or are able, which are to be had at easy rates. For swine, they are plentiful and cheap, these will quickly increase to a stock. So that after the first year, what with the poorer sort sometimes laboring to others, and the more able fishing, fowling, and sometimes buying, they may do very well till their own stocks are sufficient to supply them and their families, which will quickly be, and to spare, if they follow the English husbandry as they do in New Eng-

land and New York, and get winter fodder for their stock." Finally, the candid Penn recommends that none should make up their minds hastily, all get the consent of their friends or relatives, and all pray God for his blessing on their honest endeavors.

During all the rest of this year and of 1682 and up to the moment of his embarkation from Europe, William Penn was most busily and absorbingly engaged in the multifarious preparations for his new plantations. He drew up a great variety of papers, concessions, conditions, charters, statutes, constitutions, etc., equal to the average work of half a dozen congressional committees. As much of this matter is unique and highly characteristic, we think it best to group it all together in a separate chapter (next succeeding this), so as to present as full and accurate a picture as can be made of Penn as a law-giver and a statesman. In addition to work of this sort, requiring concentrated and abstracted thought and study, his correspondence was of the most voluminous character, and he was further most actively employed in disposing of lands and superintending the sailing of ship-loads of his colonists. The first of these papers on concessions and conditions was prepared indeed on the eve of the sailing of the first vessels containing his "adventurers." This was in July, and the vessels arrived out in October. Every paper he published called forth numerous letters from his friends, who wanted him to explain this or that obscure point to them, and he always seems to have responded cheerfully to these exhaustive taxes upon his time. His work seems to have attracted great attention and commanded admiration. James Claypoole writes (July 22d), "I have begun my letter on too little a piece of paper to give thee my judgment of Pennsylvania, but, in short, I, and many others wiser than I am, do very much approve of it, and do judge William Penn as fit a man as any one in Europe to plant a country." Penn had also been busily negotiating with the Duke of York for the lands now constituting the State of Delaware, which were the duke's property, and which Penn wanted to possess in order to insure to his own province the free navigation of the Delaware, and perhaps also to keep this adjacent territory from falling into the hands of his neighbor, Lord Baltimore, who claimed it under his charter. But Sir John Werden, the duke's agent, still held off and gave Penn much trouble and uneasiness. The latter had received a tempting offer from a company of Marylanders of £6000 cash and two and a half per cent. royalty for the monopoly of the Indian (fur) trade between the Delaware and Susquehanna Rivers, but he refused it upon noble grounds. The Lord had given him his province, he said, over all and great opposition, and "I would not abuse His love, nor act unworthy of His providence, and so defile what came to me clean. No! let the Lord guide me by His wisdom and preserve me to honor His name and serve His truth and people, *that an example and standard may be set up to*

the nations; there may be room there, though none here." So also he refused to abate the quit-rents, even to his most intimate friends, "intending," as Claypoole wrote, "to do equal by all," but he did reduce them from a penny to a half-penny in favor of servants settling on their fifty-acre lots after having served their time. Subsequently, as we shall see, Penn was less rigidly moral in his land contracts. In lieu of the proposed monopoly, Penn made very liberal concessions of land and privileges to another company, "The Free Society of Traders," whose plans he favored and whose constitution and charter he helped to draw. This work will be described farther on.

Notwithstanding all these and many other heavy and pressing engagements, Penn seems to have found time to attend to his work as a preacher and a writer of religious tracts and pamphlets. He went on a mission tour into the West of England, he wrote on "Spiritual Commission," he mediated between dissenting Friends, and healed a breach in his church; his benevolent endeavors were given to aid and encourage the Bristol Quakers, then severely persecuted, and he barely escaped being sent to jail himself for preaching in London at the Grace Church Street meeting.

Penn had expected to go out to Pennsylvania himself late in the fall of 1681, but the pressure of all these concerns and the rush of emigrants and colonists delayed him. He found he would have settlers from France, Holland, and Scotland, as well as from England, and few besides servants would be ready to go before the spring of 1682. "When they go, I go," he wrote to his friend, James Harrison, "but my going with servants will not settle a government, the great end of my going." He also said in this letter that in selling or renting land he cleared the king's and the Indian title, the purchaser or lessee paid the scrivener and surveyor. In October Penn sent out three commissioners, William Crispin, John Bezar, and Nathaniel Allen, to co-operate with Markham in selecting a site for Penn's proposed great city, and to lay it out. They also were given very full, careful, and explicit instructions by Penn, particularly as to dealing with the Indians, some Indian titles needing to be extinguished by them. He wrote a letter to the Indians themselves by these commissioners, which shows he had studied the savage character very carefully. It touched the Indian's faith in the one universal Great Spirit, and finely appealed to his strong innate sense of justice. He did not wish to enjoy the great province his king had given him, he said, without the Indians' consent. The red man had suffered much injustice from his countrymen, but this was the work of self-seekers; "but I am not such a man, as is well known in my own country, I have a great love and regard for you, and I desire to win and gain your love and friendship by a kind, just, and peaceable life, and the people I send are all of the same mind, and shall in all things behave themselves accordingly,

and if in anything any shall offend you or your people, you shall have a full and speedy satisfaction for the same by an equal number of just men on both sides, that by no means you may have just occasion of being offended against them." This was the initiatory step in that "traditional policy" of Penn and the Quakers towards the Indians which has been so consistently maintained ever since, to the imperishable honor of that sect.

As the year 1682 entered we find Penn reported to be "extraordinarily busy" about his province and its affairs. He is selling or leasing a great deal of land, and sending out many servants. A thousand persons are going to emigrate along with him. He gets Claypoole to write to his correspondent in Bordeaux for grape-vines, fifteen hundred or two thousand plants, to carry out with him, desiring vines that bear the best grapes, not the most. Claypoole has himself bought five thousand acres, wants to go out and settle, but doubts and fears. He don't feel sure about the climate, the savages, the water, the vermin, reptiles, etc. April 4th Penn finally ratified the charter of his Free Society of Traders, and erected their land into a manor. They had taken twenty thousand acres in a single block. Their constitution was now at once promulgated and subscriptions solicited. April 18th Penn sends out Capt. Thomas Holme, duly commissioned to act as surveyor-general of Pennsylvania, with detailed instructions how to act. Holme sails in the ship "Amity," along with Claypoole's son John, April 23d. On May 5th Penn publishes his "Frame of Government," following it with his *précis* of new statutes for the Pennsylvania Assembly to act upon. By June 1st Penn had made the extraordinary sale of five hundred and sixty-five thousand five hundred acres of land in the new province, in parcels of from two hundred and fifty to twenty thousand acres. Penn's mother died about this time, causing him much affliction. The Free Society of Traders is organized, Claypoole makes up his mind at last to emigrate, the site for Philadelphia is determined, and Markham buys up Indian titles and settlers' land upon it, so as to have all clear for the coming great city. August 31st the Duke of York gives Penn a protective deed for Pennsylvania, and on the 24th the Duke finally concedes New Castle and Horekill (Delaware) to him by deed of feoffment. This concludes the major part of Penn's business in England, and he is ready to sail Sept. 1, 1682, in the ship "Welcome," three hundred tons, Capt. Robert Greenway, master. It is then that he writes the touching letter to his wife and children, from which we have already quoted. He embarked at Deal with a large company of Quakers, and from the Downs sent a letter of "salutation to all faithful friends in England."

CHAPTER VIII.

WILLIAM PENN AS A LAW-GIVER AND STATESMAN.

HERE, while the "Welcome" is on the ocean struggling with the waves, and her passengers are mostly down with the smallpox, faithfully ministered to by Penn and his friend Robert Pearson, seems to be the proper place to discuss the great founder's legislative principles, measures, statutes, ordinances, and regulations, with a view not only to illustrate the main subject of these volumes, but also to ascertain Penn's real merits as a statesman and a framer of laws. He has been greatly and perhaps indiscriminately praised for his performances in this sphere, but it is not overpraise in view of the fact that what he did was rather upon theory than after a full experience. Penn had had no real legislative practice, and the knowledge of law which he acquired during his brief and interrupted studies at Lincoln's Inn could not have been either thorough or extensive. He never was in Parliament; his acquaintance with affairs both at Westminster and Whitehall was chiefly through the lobby and not in the halls. But he had read much, thought deeply, and the candor and genuineness of purpose which characterized him afforded him material assistance in arriving promptly at just conclusions from sound premises. He was rather practical than logical in his mental processes, but his strong good sense never deserted him, and this gives a directness, a consistency, and an apparent simplicity to his system which make it look even more admirable than it actually is. It has been positively asserted and as positively denied that he owed the best part of his system to Algernon Sidney. It is known that he often consulted Sidney and Sir William Petty, as well as many other of his friends, and that he was eager for advice from every quarter. Probably he was counseled also by Halifax, Hyde, and Sutherland from the abundance of their parliamentary and cabinet political experiences. But the constitution, laws, instructions, circulars, concessions, commissions, letters, etc., which emanated from Penn during those two most busy years all have the same general earmark. They are William Penn's work, and William Penn was a Quaker of an oppressed and persecuted sect, at the same time that he was a courtier deeply indebted to the bigoted Duke of York. If we do not remember these things we will not be able to put a fair and intelligible interpretation upon Penn's legislative work.

But first let us, avoiding repetitions, present a condensed summary of what that work was. Abstracts of the charter or patent for Pennsylvania and of Penn's first prospectus of the province and the conditions of emigration have already been given, and we have seen how shrewdly Penn, as attorney for himself and his province, managed affairs before the com-

mittée of the Privy Council and with the Duke of York and his agent in the matter of the Delaware Hundreds. His clever handicraft has also been illustrated in the conduct of the complicated affairs of Berkeley and Carteret, Billinge and Fenwick, and the East and West New Jersey Plantations. The leading documents relating to Pennsylvania, in which Penn's hand directed matter and text, from the execution of the patent down to the moment of the "Welcome's" sailing, naturally group themselves into two classes: *first*, practical executive work; *second*, fundamental law-making, with theoretical declarations of principles and rules of interpretation. It is necessary, therefore, to look at Penn in this place in the double light of the business manager of a great incorporated speculation, the Holy Experiment, as he himself called it in a letter, and as a speculative philosopher, like Hobbes, Locke, or Bentham, seeking to evolve constitutions out of the blended action of his own consciousness, his reading, and his knowledge of men and the world.

In the general conduct of his experiment, while attributing everything to Providence, Penn did not neglect worldly devices of a very shrewd sort. He advertised his province with great pains, very extensively and very attractively. By the time he was ready to sail it had attracted a general and lively interest throughout Europe, and especially among those persecuted sects among whom Penn's ministry had fallen in the course of his visits to the Continent. The Walloons, the Mennonites or Mennists, the Labadists, the various Reformed German sects and heresies from Protestantism and Romanism, watched the experiment as closely as the Quakers did. Penn made the terms on which settlers would be received very plain, and he stated perspicaciously in advance the probable cost of living and the probable average of hardships for which immigrants into the new province must prepare themselves. This was not only characteristically candid, it was eminently politic. It forestalled disappointment, it prevented the access of undesirable adventurers, and it tended to increase the number of substantial "bone and sinew" planters, who might have recoiled before imaginary perils, but who laughed at the little catalogue of petty inconveniences and hardships which he displayed before them. In the regulations for colonists set forth in his statement of "certain conditions or concessions agreed upon by William Penn, proprietary and Governor of Pennsylvania, and those who are the adventurers and purchasers in that province, the 11th of July, 1681," the system of plantation is plainly described. First, a large city is to be laid off on navigable water, divided into lots, and purchasers of large tracts of lands (five thousand acres) are to have one of these city lots assigned them, the location determined by chance. It was Penn's original plan to have his great city consist of ten thousand acres, divided into one hundred lots of one hundred acres

each, one of these lots to be awarded (by lot) to each purchaser of a tract of manorial proportions, who was to build in the centre of his lot and surround his house with gardens and orchards, "that it may be a green country town," he said, "which will never be burnt and always be wholesome."¹ Of course no great city could be built on any such plan, and Penn himself abandoned it or greatly modified it even before he sailed, the commissioners and surveyor finding it impossible to observe the conditions, especially when vessels began to be numerous along the water-front and business sprang up. This system of great farms, with a central township divided into minor lots, Penn proposed to extend all over the province. His road system was excellent. Roads were to be built not less than forty feet wide from city to city, on air-lines as nearly as possible; all streets were to be laid off at right angles, and of liberal width, and no buildings were to be allowed to encroach on these, nor was any irregular building to be permitted. This rule of symmetry, amounting to formality, could not be carried out any more than the great city plan. It was not Penn's notion probably, for he was not a precisian in anything, and it looks much more like a contrivance borrowed by him for the nonce from Sir William Petty, Sir Thomas Browne, or some other hare-brain among his contemporaries. Penn's system of quit-rents and of manors also, the foundations of a great fortune, resembled closely that of Lord Baltimore in Maryland. It is likely that Penn got the idea where Baltimore derived his, from Ireland, that form of irredeemable ground-rent being an old and familiar Irish tenure.² The quit-rent system caused almost immediate discontent in Pennsylvania, and undoubtedly injured the proprietary's popularity and interfered with his income. His large reservations of choice lots in every section that was laid out contributed to this also.

Every person was to enjoy access to and use of water-courses, mines, quarries, etc., and any one could dig for metals anywhere, bound only to pay for damages done. Settlers were required to plant land surveyed for them within three years. Goods for export could only be bought or sold, in any case, in public market, and fraud and deception were to be punished by forfeiture of the goods. All trading with Indians was to be done in open market, and fraud upon them prevented by inspection of goods. Offenses against Indians were to be punished just as those against the whites, and disputes between the two races to be settled by a mixed jury. Indians to have the same privileges as the whites in improving their lands and

¹ Instructions to commissioners for settling the colony, Oct. 10, 1681.

² This has been conclusively shown in some opinions (published in the Maryland Reports) of the judges of the Maryland Court of Appeals. These opinions were given in interpretation of leases "for ninety-nine years, renewable forever." It was decided that those leases were perpetual, and their historical relation to the Irish leases was demonstrated in order to establish the fact of their irredeemable character.

raising crops. Stock not marked within three months after coming into the possession of planters to be forfeited to the Governor. In clearing land, one-fifth to be left in wood, and oak and mulberry trees to be preserved for ship-building. To prevent debtors from furtively absconding, no one was to leave the province until after three weeks' publication of the fact.

In his instructions to the commissioners for laying out the province, Penn enlarges upon the plan for the great town, which is to be located on his side the Delaware, where "it is most navigable, high, dry, and healthy; that is, where most ships may best ride, of deepest draught of water, if possible to load or unload at the bank or key side, without boating or lightering of it." Other things are to be postponed until this site is chosen and laid out. If the place selected has settlers on it, they are to be removed, either by buying their lands or giving them other tracts in exchange.¹ In dealing with Indians the commissioners are bidden to be tender of offending them, but to make sure, "by honest spies," that no one is instructing them to stand off for higher prices. Give them plenty of love, says Penn in effect, but do not pay too much for their land, and do not let them sell you what does not belong to them. "Be grave; they love not to be smiled on." The commissioners are forbidden to sell any islands; they are to lay off the streets in a rectangular way, to preserve a broad water-front, to reserve a central lot of three hundred acres for the Governor's house, and in other matters to be guided by circumstances and their own discretion.²

The charter to the Pennsylvania Company, the Free Society of Traders, bears date March 24, 1682. The incorporators named in Penn's deed to them were "Nicholas Moore, of London, medical doctor; James Claypoole, merchant; Philip Ford (Penn's unworthy steward); William Sherloe, of London, merchant; Edward Pierce, of London, leather-seller; John Symcock and Thomas Brassey, of Cheshire, yeoman; Thomas Baker, of London, wine-cooper; and Edward Brookes, of London, grocer." The deed recites Penn's authority under his patent, mentions the conveyance to the company of twenty thousand acres, erects this tract into the manor of Frank, "in free and common socage, by such rents, customs, and services as to them and their successors shall seem meet, so as to be consistent with said tenure," allows them two justices' courts a year, privilege of court-baron and court-leet and view of frank-pledge, with

all the authority requisite in the premises. The society is authorized to appoint and remove its officers and servants, is given privilege of free transportation of its goods and products, and exempted from any but necessary State and local taxes, while at the same time it can levy all needful taxes for its own support within its own limits. Its chief officers are commissioned as magistrates and charged to keep the peace, with jurisdiction in case of felony, riot, or disorder of any kind. It is given three representatives in the Provincial Council, title to three-fifths of the products of all mines and minerals found, free privilege to fish in all the waters of the province, and to establish fairs, markets, etc., and the books of the society are exempted from all inspection. The society immediately prepared and published an address, with its constitution and by-laws, in which a very extensive field of operation is mapped out. The address, which is ingenious, points to the fact that while it proposes to employ the principle of association in order to conduct a large business, it is no monopoly, but an absolutely free society in a free country. "It is," says this prospectus, "an enduring estate, and a lasting as well as certain credit; a portion and inheritance that is clear and growing, free from the mischief of frauds and false securities, supported by the concurrent strength and care of a great and prudent body, a kind of perpetual trustees, the friend of the widow and orphan, for it takes no advantage of minority or simplicity."³

Penn's commission to Capt. Thomas Holme as surveyor-general is dated April 18th. It contains nothing salient beyond the ordinary terms of such instruments. All this executive department work recorded above shows Penn in the light of a skillful, thrifty administrator, well instructed even in the minutest details of his business, and always looking out shrewdly for his own interests. On April 25th he published his "frame of government," or, as James Claypoole called it in one of his letters, "the fundamentals for government,"—in effect, the first

¹ Penn balances this direction very closely between thrift and conscience. He says, "Herein [in buying or exchanging these lands] be as sparing as ever you can, and urge the weak bottom of their grant, the Duke of York never having had a grant from the King, etc. Be impartially just and courteous to all, that is pleasing to the Lord and wise in itself." Yet Penn, like Svenson and the other Swedes, had bought his title, just as they did, of the Indians and the Duke of York.

² This interesting paper was signed in London, Sept. 30, 1681, with Richard Vickery, Charles Jones, Jr., Ralph Withers, Thomas Callowhill, and Philip Th. Lehmann as witnesses.

³ In this society votes were to be on basis of amount of stock held, up to three votes, which was the limit. No one in England was allowed more than one vote, and proxies could be voted. The officers were president, deputy, treasurer, secretary, and twelve committee-men. Five, with president or deputy, a quorum. Committee-men to have but one vote each in meetings, with the casting vote to the president. Officers to hold during seven years on good behavior; general election and re-opening of subscription books every seventh year; general statement at the end of each business year. The officers to live on society's property. All the society's servants were bound to secrecy, and the books were kept in society's house, under three locks, the keys in charge of president, treasurer, and oldest committee-man, and not to be intrusted to any person longer than to transcribe any part in daytime and in the house, before seven persons appointed by committee. The society was to send two hundred servants to Pennsylvania the first year, to build two or more general factories in Pennsylvania, one on Chesapeake Bay, one on Delaware or elsewhere; to aid Indians in building houses, etc., and to hold negroes for fourteen years' service, when they were to go free, "on giving to the society two-thirds of what they can produce on land allotted to them by the society, with a stock and tools; if they agree not to this, to be servants till they do." The leading object of the society at the outset seems to have been an extensive free trade with the Indians.

Constitution of Pennsylvania. Hepworth Dixon claims that in the composition of this instrument Penn received so much aid from Algernon Sidney "that it is quite impossible to separate the exact share of one legislator from that of the other." On the contrary, others of Penn's biographers see nothing in it but Penn's work under the inspiration of George Fox's "inner light." A careful examination of the document itself, however, and the preamble will, it is believed, establish it as a genuine production of the author of the "concessions and conditions of settlement" and the "instructions to the commissioners," which have been analyzed above. It is the work of William Penn, and reflects precisely some of the brightest and some of the much less bright traits of his genius and character.

The document is entitled "The frame of the government of the province of Pennsylvania, in America, together with certain laws agreed upon in England by the governor and divers freemen of the aforesaid province, to be further explained and continued there by the first provincial council that shall be held, if they see meet."

The "preface" or preamble to this Constitution is curious, for it is written as if Penn felt that the eyes of the court were upon him. The first two paragraphs form a simple excursus upon the doctrine of the law and the transgressor as expounded in St. Paul's Epistle to the Romans: "For we know that the law is spiritual: but I am carnal, sold under sin," etc. From this Penn derives, not very perspicuously, however, "the divine right of government," the object of government being twofold, to terrify evil-doers and to cherish those that do well, "which gives government a *life beyond corruption* [i.e., divine right], and makes it as durable in the world as good men shall be." Hence Penn thinks that government seems like a part of religion itself, a thing sacred in its institution and end.¹ "They weakly

err," continues Penn, in an admirable sentence, the clearest possible anticipation of modern convictions in regard to penitentiary institutions, "they weakly err that think there is no other use of government than correction, *which is the coarsest part of it.*" He declines saying much of "particular frames and modes," for the reason that men are so hard to please. "It is true they seem to agree in the end, to wit, happiness, but in the means they differ. . . . Men side with their passions against their reason, and their sinister interests have so strong a bias upon their minds that they lean to them against the good of the things they know."

The form, he concludes, does not matter much after all. "Any government is free to the people under it (whatever be the frame) where the laws rule and the people are a party to these laws." Good men are to be preferred even above good laws, and that which makes a good constitution must keep it, he says, to wit, men of wisdom and virtue. The frame of laws now published, Penn adds, has been carefully contrived "to support power in reverence with the people, and to secure the people from the abuse of power." This is very nicely balanced, but it scarcely harmonizes with the letter referred to previously which Penn sent out to the people of his province by Markham, promising them freedom to make their own laws and govern themselves.

In the Constitution, which follows the preamble, Penn begins by confirming to the freemen of the province all the liberties, franchises, and properties secured to them by the patent of King Charles II. The government of the province is to consist of "the Governor and freemen of the said province, in form of a Provincial Council and General Assembly, by whom all laws shall be made, officers chosen, and public affairs transacted." The Council, of seventy-two members, is to be elected at once, one-third of the members to go out, and their successors elected each year, and after the first seven years those going out each year shall not be returned within a year. Two-thirds of the Council are required to constitute a quorum, except in minor matters, when twenty-four will suffice. The Governor is always to preside over the sessions of Council, and is to have three votes. "The Governor and Provincial Council shall *prepare and propose* to the General Assembly hereafter mentioned *all bills* which they shall at any time think fit to be passed into laws within the said province, . . . and on the ninth day from their so meeting, the said General Assembly, after reading over the proposed bills by the clerk of the Provincial Council, and the occasion and motives for them being opened by the Governor or his deputy, shall give their affirmative or negative, which to them seemeth best, . . . and the

¹ Compare this with Penn's pamphlet of 1679, called "An Address to all Protestants," where he says, "The fourth great ecclesiastical evil is preferring human authority above reason and truth," and at the same time abuses the accredited State administrators of religion as the greatest obstacles to faith. "Is not prophecy, once the church's, now engrossed by them and wholly in their hands? Who dare publicly preach or pray that is not of their order? Have they not only the keys in keeping? May anybody else pretend to the power of absolution or excommunication, much less to constitute ministers? Are not all church rites and privileges in their hands? Do not they make it their proper inheritance? Nay, so much larger is their empire than Caesar's that only they begin with births and end with burials: men must pay them for coming in and going out of the world. Thus their profits run from the womb to the grave, and that which is the loss of others is their gain and part of their revenue. . . . The minister is chooser and taster and everything for them (the people). . . . They seem to have delivered up their spiritual selves, and made over the business of religion—the rights of their souls—to their pastor, and that scarcely with any limitation of truth, too. And as if he were, or could be, their guarantee in the other world, they become very unsolicitous of any further search here. So that if we would examine the respective parishes of Protestant as well as Papish countries, we shall find it come to that sad pass that very few have any other religion than the tradition of their priests. They have given up their judgment to him, and seem greatly at their ease that they have

discharged themselves of the trouble of 'working out their own salvation, and proving all things, that they might hold fast that which is good,' and in the room of that care bequeathed the charge of these affairs to a standing pensioner for that purpose."

laws so prepared and proposed as aforesaid that are assented to by the General Assembly shall be enrolled as laws of the province, with this style: 'By the Governor, with the assent and approbation of the freemen in the Provincial Council and General Assembly.' Here is the fatal defect of Penn's Constitution, a defect which robs it of even any pretence of being republican or democratic in form or substance. The Assembly, the popular body, the representatives of the people, are restricted simply to a veto power. They cannot originate bills; they cannot even debate them; they are not allowed to think or act for themselves or those they represent, but have nothing to do except vote "yes" or "no." To be sure, the Council is an elective body too. But it is meant to consist of the Governor's friends. It is the aristocratic body. It does not come fresh from the people. The tenure of its members is three years. Besides, for ordinary business, twenty-four of the Council make a quorum, of whom twelve, with the Governor's casting vote, comprise a majority. The Governor has three votes; the Free Society of Traders six; if the Governor have three or four friends in Council, with the support of this society he can control all legislation. It seems incredible that William Penn should have of his own free will permitted this blemish upon his Constitution, which he claimed gave all the power of government and law-making into the hands of the people.

It is impossible for Penn to have acted ignorantly or unadvisedly in this matter. He was born amid the thunder of the great struggle, in the very hour of the triumph of the English Parliament over the executive upon this very issue of the power of the Commons to originate bills, a contest that had been going on for three hundred years, and had been incessantly waged since the beginning of the reign of King Edward III. He could not help knowing that this question had been fought out, or was still cause for battle between Governor and Council and the popular Assembly in every American colony. He was too familiar with our colonial history to have forgotten the inauguration of the Virginia House of Burgesses in 1619, and how, successively in each colony as it was formed, in the language of Bancroft, "popular assemblies burst everywhere into life with a consciousness of their importance and an immediate capacity for efficient legislation."¹ Why was it, then, that Penn, who certainly

desired popular freedom, and sought anything else rather than the investment of arbitrary power in his own office and that of the Governor's advisers, followed in the footsteps of Lord Baltimore and John Locke, and attempted to deprive his popular assembly of every actual legislative function? We think the reason is plain that it was only by promising to construct his proprietary government after this model he was able to secure his patent at all. His relations with the Duke of York have been set forth. When, in 1675, the committee of the Privy Council was given charge of colonial affairs, the Duke of Albemarle (Monk) was chairman, but the Duke of York was the most active and controlling spirit of the committee. When Halifax opposed the attempt to subvert the autonomy of the colonies, and bring them directly under the sovereign power of the throne, he was dismissed from office, and the Privy Council voted that Governors and Councils of colonies "should not be obliged to call assemblies from the country to make taxes and to regulate other important matters, but that they should do what they should judge proper, rendering an account only to his Britannic majesty." This action was not finally taken till 1684, but it represented the well-matured views of the Duke of York, who had long held that colonies did not need General Assemblies, and ought not to have them. Penn was fully acquainted with these views and bowed in deference to them. He stooped to conquer. He waived his principles in order to secure his province, feeling that good must come from that establishment in innumerable ways.

Aside from this fatal piece of subservience there is much to praise in Penn's Constitution and something to wonder at, as being so far in advance of his age. The executive functions of Governor and Council are carefully defined and limited. A wholesome and liberal provision is made for education, public schools, inventions, and useful scientific discoveries.²

The Provincial Council, for the more prompt dispatch of business, was to be divided into four committees,—one to have charge of plantations, "to situate and settle cities, posts, and market-towns and highways, and to have and decide all suits and controversies relating to plantations," one to be a committee of justice and safety, one of trade and treasury, and the fourth of manners, education, and arts, "that

this power has existed since 1667. In New Jersey the Assembly of representatives, with law-making power, is as old as 1668. In South Carolina the freemen took part in law-making, through their delegates, from 1674. In New Hampshire the law-making power resided in the Assembly from March 16, 1680.

² In the preamble Penn lays down a doctrine now universally recognized, and the general acceptance of which, it is believed, affords the surest guarantee for the perpetuity of American institutions: that virtue and wisdom, "because they descend not with worldly inheritances, must be carefully propagated by a virtuous education of youth, for which after-ages will owe more to the care and prudence of founders and the successive magistracy than to their parents for their private patrimonies." No great truth could be more fully and nobly expressed than this.

¹ The Virginia Burgesses were first summoned July 30, 1619, two each from three cities, three hundreds, three plantations, Argall's Gift, and Kiecowtan. They met together with Governor and Council until 1680, when, under Lord Colepepper's government, the two houses separated. —(Beverly.) In Massachusetts, May 19, 1634, twenty-five delegates, chosen by the freemen of the towns of their own motion, appeared and claimed a share in making the laws. The claim was allowed and they became members of the General Court. In Connecticut the popular body was first provided for Jan. 14, 1639. In Maryland the first House of Burgesses dates from February, 1639, and they soon voided the authority of the Governor and Council, under the charter, to originate bills. In Rhode Island the power of popular assemblies dates from May, 1647. In North Carolina, in spite of Locke's aristocratic constitution,

all wicked and scandalous living may be prevented, and that youth may be successively trained up in virtue and useful knowledge and arts."

The General Assembly was to be elected yearly, not to exceed two hundred members, representing all the freemen of the province. They were to meet in the capital on "the 20th day of the second month," and during eight days were expected to freely confer with one another and the Council, and, if they chose, to make suggestions to the Council committees about the amendment or alteration of bills (all such as the Council proposed to offer for adoption being published three weeks beforehand), and on the ninth day were to vote, "not less than two-thirds making a quorum in the passing of laws and choice of such officers as are by them to be chosen." The General Assembly was to nominate a list of judges, treasurers, sheriffs, justices, coroners, etc., two for each office, from which list the Governor and Council were to select the officers to serve. The body was to adjourn upon being served with notice that the Governor and Council had no further business to lay before them, and to assemble again upon the summons of the Governor and Council. Elections were to be by ballot, and so were questions of impeachment in the Assembly and judgment of criminals in the Council. In case the proprietary be a minor, and no guardian has been appointed in writing by his father, the Council was to appoint a commission of three guardians to act as Governor during such minority. No business was to be done by the Governor, Council, or Assembly on Sunday, except in cases of emergency. The Constitution could not be altered without the consent of the Governor and six-sevenths of the Council and the General Assembly. (Such a rule, if enforced, would have perpetuated any Constitution, however bad.) Finally Penn solemnly declared "that neither I, my heirs nor assigns, shall procure or do anything or things whereby the liberties in this charter contained and expressed shall be infringed or broken; and if anything be procured by any person or persons contrary to these premises it shall be held of no force or effect."

On May 15th Penn's code of laws, passed in England, to be altered or amended in Pennsylvania, was promulgated. It consists of forty statutes, the first of which declares the charter or Constitution which has just been analyzed to be "fundamental in the government itself." The second establishes the qualifications of a freeman (or voter or elector). These include every purchaser of one hundred acres of land, every tenant of one hundred acres, at a penny an acre quit-rent, who has paid his own passage across the ocean and cultivated ten acres of his holding, every freeman who has taken up fifty acres and cultivated twenty, "and every inhabitant, artificer, or other resident in the said province that pays scot and lot to the government." All these electors are also eligible to election both to Council and Assembly.

Elections must be free and voluntary, and electors who take bribes shall forfeit their votes, while those offering bribes forfeit their election, the Council and Assembly to be sole judges of the regularity of the election of their members.

"No money or goods shall be raised upon or paid by any of the people of this province, by way of public tax, custom, or contribution, but by a law for that purpose made." Those violating this statute are to be treated as public enemies and betrayers of the liberties of the province.

All courts shall be open, and justice shall neither be sold, denied, or delayed. In all courts all persons of all (religious) persuasions may freely appear in their own way and according to their own manner, pleading personally or by friend; complaint to be exhibited fourteen days before trial, and summons issued not less than ten days before trial, a copy of complaint to be delivered to the party complained of at his dwelling. No complaint to be received but upon the oath or affirmation of complainant that he believes in his conscience that his cause to be just. Pleadings, processes, and records in court are required to be brief, in English, and written plainly so as to be understood by all.

All trials shall be by twelve men, peers, of good character, and of the neighborhood. When the penalty for the offense to be tried is death the sheriff is to summon a grand inquest of twenty-four men, twelve at least of whom shall pronounce the complaint to be true, and then twelve men or peers are to be further returned by the sheriff to try the issue and have the final judgment. This trial jury shall always be subject to reasonable challenge.

Fees are required to be moderate, their amounts settled by the Legislature, and a table of them hung up in every court-room. Any person convicted of charging more than the lawful fee shall pay twofold, one-half to go to the wronged party, while the offender shall be dismissed. All persons wrongfully imprisoned or prosecuted at law shall have double damages against the informer or prosecutor.

All prisons, of which each county is to have one, shall be work-houses for felons, vagrants, and loose and idle persons. All persons shall be bailable by sufficient security, save in capital offenses "where the proof is evident or the presumption great." Prisons are to be free as to fees, food, and lodging.

All lands and goods shall be liable to pay debts, except where there is legal issue, and then all goods and one-third of the land only. (This is meant in case a man should die insolvent.) All wills in writing, attested by two witnesses, shall be of the same force as to lands or other conveyances, being legally proved within forty days within or without the province.

Seven years' quiet possession gives title, except in cases of infants, lunatics, married women, or persons beyond the seas.

Bribery and extortion are to be severely punished, but fines should be moderate and not exhaustive of men's property.¹

Marriage (not forbidden by the degrees of consanguinity or affinity) shall be encouraged, but parents or guardians must first be consulted, and publication made before solemnization; the ceremony to be by taking one another as husband and wife in the presence of witnesses, to be followed by a certificate signed by parties and witnesses, and recorded in the office of the county register. All deeds, charters, grants, conveyances, long notes, bonds, etc., are required to be registered also in the county enrollment office within two months after they are executed, otherwise to be void. Similar deeds made out of the province were allowed six months in which to be registered before becoming invalid.

All defacers or corruptors of legal instruments or registries shall make double satisfaction, half to the party wronged, be dismissed from place, and disgraced as false men.

A separate registry of births, marriages, deaths, burials, wills, and letters of administration is required to be kept.

All property of felons is liable for double satisfaction, half to the party wronged; when there is no land the satisfaction must be worked out in prison; while estates of capital offenders are escheated, one-third to go to the next of kin of the sufferer and the remainder to next of kin of criminal.

Witnesses must promise to speak the truth, the whole truth, etc., and if convicted of willful falsehood shall suffer the penalty which would have been inflicted upon the person accused, shall make satisfaction to the party wronged, and be publicly exposed as false witnesses, never to be credited in any court or before any magistrate in the province.

Public officers shall hold but one office at a time; all children more than twelve years old shall be taught some useful trade; servants shall not be kept longer than their time, must be well treated if deserving, and at the end of their term be "put in fitting equipage, according to custom."

Scandal-mongers, back-biters, defamers, and spreaders of false news, whether against public or private persons, are to be severely punished as enemies to peace and concord. Factors and others guilty of breach of trust must make satisfaction, and one-third over, to their employers, and in case of the factor's death the Council Committee of Trade is to see that satisfaction is made out of his estates.

All public officers, legislators, etc., must be professors of faith in Jesus Christ, of good fame, sober and honest convictions, and twenty-one years old. "All persons living in this province who confess and acknowledge the one Almighty and Eternal God to be

the Creator, Upholder, and Ruler of the world, and that hold themselves obliged in conscience to live peaceably and justly in civil society, shall in no ways be molested or prejudiced for their religious persuasion or practice in matters of faith and worship; nor shall they be compelled at any time to frequent or maintain any religious worship, place, or ministry whatever." The people are required to respect Sunday by abstaining from daily labor. All "offenses against God," swearing, cursing, lying, profane talking, drunkenness, drinking of healths, obscenity, whoredom and other uncleanness, treasons, misprisions, murders, duels, felony, sedition, maimings, forcible entries and other violence, all prizes, stage-plays, cards, dice, May-games, gamesters, masks, revels, bull-baitings, cock-fightings, and the like, "which excite the people to rudeness, cruelty, looseness, and irreligion, shall be respectively discouraged and severely punished, according to the appointment of the Governor and freemen in Council and General Assembly."

All other matters not provided for in this code are referred to "the order, providence, and determination" of the Governor and Legislature.

The most admirable parts of this code, putting it far ahead of the contemporary jurisprudence of England or any other civilized country at the time,² are the regulations for liberty of worship and the administration of justice. Penn's code on this latter point is more than a hundred years in advance of England. In the matter of fees, charges, plain and simple forms, processes, records, and pleadings, it still remains in advance of court proceedings and regulations nearly everywhere. The clauses about work-houses and

² But we must except the Catholic colony in Maryland, founded by Sir George Calvert, whose charter of 1632 and the act of toleration passed by the Assembly of Maryland in 1649, under the inspiration of Sir George's son, Cecilius, must be placed alongside of Penn's work. Two brighter lights in an age of darkness never shone. Calvert's charter was written during the heat of the Thirty Years' religious war, Penn's Constitution at the moment when all Dissenters were persecuted in England and when Louis XIV. was about to revoke the Edict of Nantes. The Virginians were expelling the Quakers and other sectaries. In New England the Puritan Separatists, themselves refugees for opinion's sake, martyrs to the cause of religious freedom, were making laws which were the embodiment of doubly distilled intolerance and persecution. Roger Williams was banished in 1635, in 1650 the Baptists were sent to the whipping-post, in 1634 there was a law passed for the expulsion of Anabaptists, in 1647 for the exclusion of Jesuits, and if they returned they were to be put to death. In 1656 it was decreed against "the cursed sect of heretics lately risen up in the world, which are commonly called Quakers," that captains of ships bringing them in were to be fined or imprisoned, Quaker books, or "writings containing their devilish opinions," were not to be imported, Quakers themselves were to be sent to the house of correction, kept at work, made to remain silent, and severely whipped. This was what the contemporaries of Calvert and Penn did. We have seen Penn's law of liberty of conscience. Calvert's was equally liberal. The charter of Calvert was not to be interpreted so as to work any diminution of God's sacred Christian religion, open to all sects, Protestant and Catholic, and the act of toleration and all preceding legislation, official oaths, etc., breathed the same spirit of toleration and determination, in the words of the oath of 1637, that none in the colony, by himself or other, directly or indirectly, will "trouble, molest, or discountenance any person professing to believe in Jesus Christ for or on account of his religion."

¹ "Contentements, merchandise, and wainage," says the text,—the land by which a man keeps his house, his goods, and his means of transportation.

about bailable offenses are also far in advance of even the best modern jurisprudence, and the provisions for a complete registration of births, etc., have yet to be enforced in some of the States closely adjoining Pennsylvania, despite the fact that accurate registries of this sort are essential preliminaries to any collection of vital statistics. This systematic recording of all transactions, public or domestic, has been characteristic of the Society of Friends from its earliest beginnings, and their registry and minute-books are now filled with historical materials of the most precious sort.

CHAPTER IX.

FOUNDING THE GREAT CITY—PENN IN PHILADELPHIA—HIS ADMINISTRATION.

PENN was very well represented in the new province and his interests intelligently cared for from the time that Lieutenant-Governor Brockholls, of New York, surrendered the colony until he himself arrived and took formal possession. His cousin, Capt. William Markham, Deputy Governor, as has been seen, arrived out in October, 1681, his commissioners, appointed for laying out the proposed great city, came over towards the end of the year, and his surveyor-general, Capt. Thomas Holme, reached Philadelphia in the early summer of 1682. The commissioners, as originally appointed Sept. 30, 1681, were William Crispin, Nathaniel Allen, and John Bezar. They sailed either in the ship "John and Sarah" or the "Bristol Factor," taking the southern passage and stopping at Barbadoes, where Crispin died. Crispin, the head of the commission, was a man of mature years and Penn's own kinsman, like Markham. It appears by a letter from Penn to Markham, dated London, Oct. 18, 1681, that Penn intended Crispin to hold high office in the new province. He says, "I have sent my cosen, William Crispin, to be thy assistant, as by Commission will appear. His Skill, experience, Industry, and Integrity are well known to me, and particularly in Court keeping, &c., so yt is my will and pleasure that he be as Chief Justice to Keep y^e Seal, y^e Courts and Sessions, & he shall be accountable to me for it. The profits redounding are to his proper behoof. He will show thee my Instructions wch guide you in all y^e business, & y^e cost is left to your discretion; y^t is, to thee, thy two Assistants and y^e Council." After telling Markham that if he prefers the sea to the deputyship he will procure him the profitable command of a passenger-ship to run between England and Pennsylvania, he adds: "Pray be very respectful to my Cosen Crispin. He is a man my father had great confidence in and value for. Also strive to give content to the Planters, and with meekness and sweetness, mixed with authority, carry it so as thou mayst honour me as well as thyself, and I do

hereby promess thee I will effectually answer it to thee and thyn." In this letter, as Penn states, was inclosed another, in the Norse language, addressed to the Swedes of the new province by Liembergh, the ambassador of Sweden in London. Markham is to give this to the Swedish pastor and bid him read it to his countrymen.

Before Crispin's death was known to Penn he had appointed William Heage as additional commissioner. There does not appear on the record evidence of any great amount of work done by them, though they probably afforded assistance to both Markham and Holme in executing, as well as they could, the instructions of Penn. Being on the spot it was soon discovered that these instructions would require to be sensibly modified. For example, in selecting the site for the city and locating it in the fork of the Schuylkill and Delaware, which was done early in the spring of 1682,¹ it was found that scarcely more than an eighth of the acres called for could be laid off.

Markham was in New York on June 21, 1681, where he procured the proclamation already spoken of from Governor Brockholls. The first record we have of his appearance on the Delaware is the following "Obligation of Councilmen:" "Whereas, wee whose hands and Seals are hereunto Sett are Chosen by Wm. Markham (agent to Wm. Penn, Esq., Proprietor of y^e Province of Pennsylvania) to be of the Council for y^e s^d province, doe hereby bind ourselves by our hands & Seals, that wee will neither act nor advise, nor Consent unto anything that shall not be according to our own Consciences the best for y^e true and well Government of the s^d Province, and Likewise to Keep Secret all y^e votes and acts of us, The s^d Councell, unless Such as by the General Consent of us are to be published. Dated at Vpland y^e third day of August, 1681.

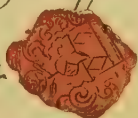

"Robert Wade, Morgan Drewet, W^m. Woodmanse, (W. W. The mark of) William Warner, Thomas Ffairman, James Sandlenes, Will Clayton, Otto Ernest Koch, and y^e mark (L) of Lacy (or Lasse) Cock." Wade, Drewet, Woodmanson, Fairman, Sandeland, Clayton, and the two Cocks were old residents upon the Delaware; Fairman, Clayton, and both the Cocks owning land within the present limits of Philadelphia. Fairman appears to have had one of the best or most convenient houses on the site of the nascent city at and before the time of Penn's arrival. There is on file a bill and receipt for £426 10s. 6d., which he rendered Penn for services in surveying, doing errands, furnishing horses, hands, etc., between 1681 and later years. He boarded and lodged

¹ Claypoole writes, in England, July 24, 1682, "I have taken up resolutions to go next spring with my whole family to Pennsylvania, so have not sent my orders for a house for planting, but intend to do it when I do come. I have one hundred acres where our capital city is to be, upon the river near Schuylkill and Peter Cock. There I intend to plant and build my first house." This land of Peter Cock's appears to have adjoined the Swenson estate, and Penn gave him twice as many acres for it on the west side of the Schuylkill.

Whereas wee whose hands and Seals are herunto
 Setts are Chosen by W^m Markham (agent to ~

Markham, Haige, and Holme and family at different times, and gave up his house to Penn the winter after the Governor's arrival. It appears also by this bill that Markham, aided by Fairman, made the survey of the river-front which determined the site of Philadelphia. They were seven weeks "taking the courses and soundings of the Delaware," and Fairman's charge for his services was £10. For "taking the courses of the Schuylkill, etc., for sounding and placing Philadelphia on Delaware River, etc.," his charge was £6.¹

In September Upland Court appears to have been reorganized under Markham's instructions and jury trials instituted. The justices present at the meeting of this newly organized court were William Clayton, William Warner, Robert Wade, William Byles, Otto Ernest Cock, Robert Lucas, Lasse Cock, Swen Swenson, and Andreas Bankson, five of them being members of Markham's Council. The clerk of the court was Thomas Revell, and the sheriff's name was John Test. The first jury drawn in this court—the first drawn in Pennsylvania—was in a case of assault and battery (*Peter Earicksen vs. Harman Johnson and wife*), and their names were Morgan Drewet, William Woodmanson, William Hewes, James Browne, Henry Reynolds, Robert Schooley, Richard Pittman, Lasse Dalboe, John Akraman, Peter Rambo, Jr., Henry Hastings, and William Oxley; two more of the Deputy Governor's Council being on this jury. At the next meeting of Upland Court, in November, Markham was present, and he attended all the subsequent sessions up to the time of Penn's arrival.

A petition to Markham, dated from "Pesienk (Passyunk), in Pennsylvania, 8th October, 1681," would tend to show that the Indians of that day could not see the merits of "Local Option." It is signed by Nanne Seka, Keka Kappan, Jong Goras, and Espon Ape, and shows that "Whereas, the sell-

ing of strong liquors [to Indians] was prohibited in Pennsylvania, and not at New Castle; we find it a greater ill-convenience than before, our Indians going down to New Castle, and there buying rum and making them more debauched than before (in spite of the prohibition). Therefore we, whose names are hereunder written, do desire that the prohibition may be taken off, and rum and strong liquors may be sold (in the foresaid province) as formerly, until it is prohibited in New Castle, and in that government of Delaware." This petition appears to have been renewed after Penn's arrival, for we find in the minutes of the Provincial Council, under date of 10th of Third month (May 20, 1683), that "The Gov'r [Penn] Informs the Council that he had Called the Indians together, and proposed to Let them have rum if they would be contented to be punished as y^e English were; which they agreed to, provided that y^e Law of not Selling them Rum be abolished." The law was in fact declared to be a dead letter, but in 1684 Penn besought the Council to legislate anew on the subject so at least as to arrest indiscriminate sales of spirits to the savages. This subject of selling rum to the Indians is continually coming up in the Colonial Records.

On the 15th of July, 1682, as one result of his careful surveys of the Delaware, Deputy Governor Markham bought of certain Indian sachems, or "sachamakers" (named Idquahon, Icanottowe, Idquoqueuon, Sahoppe, for himself and Ockmickon, Merkehowan, Oreckton, for Nannacassey, Shaurvaughton, Swanpisse, Nahoosey, Tomackhickon, Weskekitt, and Towharis), on Penn's account, a large tract of country on the Delaware above Philadelphia, including the major part of what is now Bucks County (a name given by Penn himself in recollection of his long family connection with Buckinghamshire in England), and including also the site of the manors of Pennsbury and Highlands. It seems likely Penn himself knew something about the qualities of this tract, and had directed Markham's attention to it as well as to Burlington Island. The Quakers of the West New Jersey settlement were well acquainted with it, George Fox had ridden through it in 1672 on his way to Maryland, and the preliminary paths of the high-road from New York to the Delaware passed through it, crossing the Delaware either at Bristol or at Trenton. Pennsbury was beautifully located in the bend of the river at the falls, where the Delaware makes an elbow at right angles. This whole tract now bought by Markham—the consideration to the Indians being the usual assortment of match-coats, blankets, arms, trinkets, wampum, rum, and in this case with a little money added—had already a history of its own. The Walloon families sent by the Dutch to the South River are supposed to have dwelt during their brief stay in that section on Verhulsten Island, just below the falls. Hudde, the Dutch commissary on the Delaware, erected the

¹ Robert Wade was the first Quaker in Upland; he came over with Fenwick in 1675. His house, called "Essex House," was a Quaker stopping-place; William Edmundston preached there in 1675, and this was the first house at which Penn lodged on landing in 1682. Sandeland was a Scotchman, came with Governor Carr, and settled in Upland in 1669. He married a daughter of Jorän Kyn, the Swede who founded Upland, and the Yeates family are among his descendants. Thomas Fairman, the surveyor (he appears to have been officially so in 1696), was a forehanded Quaker, who came in probably from New Jersey in 1679. He married Elizabeth Kinsey, daughter and heir of John Kinsey, of Herefordshire, England, and by her got three hundred acres of ground, with house and outbuildings, at Shackamaxon. This land she had bought from Lasse Cock, Nov. 12, 1678. It was his share of a "town" of eighteen hundred acres only a short time previously laid off at that point. Fairman's house was the Quaker meeting-house and Penn's residence. Lasse Cock's building it may have been the cause of the Indians frequenting the spot. Fairman took up two hundred and sixty acres on March 12, 1679, at Bensalem, Neshaminy Creek, and June 8, 1680, he got a grant for two hundred acres more. John Kinsey, Elizabeth Fairman's father, was one of the commissioners sent over in 1677 by the Quaker Company of Yorkshire to settle Indian claims in West Jersey. They came in the ship "Kent," and bought all the land on the east side of the Delaware from Oldman's Creek to Assanpink Creek. This purchase was the beginning of Burlington.

West India Company's coat of arms on the tract in 1646, and both Campanius and Adrian Van der Donck, in their books about the South River country, have spoken of this section.¹

In 1654, Lindstrom, the Swedish engineer, who came over with Risingh, mapped this part of the Delaware and adjacent lands, beginning at the falls, which he designated as *La Cataract d'Asinpink*. Welcome Creek, on which Penn built his manor-house, was called by Lindstrom *La Rivière de Sipaessingz-Kjil*, and Burlington Island, opposite Bristol, is styled *Mechansio*. Peter Alrichs, who held many offices under both Dutch and English on the Delaware from his arrival at Henlopen in 1659 until the accession of Penn, had titles to Burlington Island and part of the mainland near Bristol under grants from the West India Company and from Governor Nichols in 1667. In 1682 he sold to Samuel Borden, and in 1688 to Samuel Carpenter. Alrichs' Island was occupied in 1679 by a Dutchman named Barentz. In 1675, Governor Andros bought of four Indian chiefs,—Mamarckickam, Anrickton, Sackoquewano, and Nanneckos,—some of the same party apparently who sold to Markham, a tract on the river from the present Bristol to Taylorsville, embracing fine lands in three townships, and including what was afterwards Penn's Manor. This purchase was made for the Duke of York, but Mr. Davis, the historian of Bucks County, thinks the purchase was never consummated, or at least the land never occupied. The Swedes petitioned Andros in November, 1677, for leave "to settle together in a town on the west side of the river near the falls," in this same tract.² It seems quite probable, in view of all the circumstances, that there is foundation for the legend that the commissioners, with Markham and Holme, had looked curiously at Pennsbury, with a view to locating the great city there. The difficulty with regard to Upland was that so many Swedish titles would have to be extinguished, and, besides, the division line between Maryland and Pennsylvania

was still unsettled. Pennsbury was rejected after survey, probably because the depth of water was insufficient. At Coquannock, on the contrary, every condition required by Penn was fulfilled, except that the neck of the peninsula first occupied was too narrow to permit a town site of ten thousand acres to be laid out upon it, and the original city, as mapped by Thomas Holme, only contained between twelve hundred and thirteen hundred acres.

When the site was determined, Holme and his assistants went to work with the greatest industry to lay the ground off into lots, as well as to survey the farm and manor tracts which had already been sold. There was need to do this promptly, for now a stream of immigration began to pour in upon the city and the adjacent towns and plantations. It started before Penn had sailed from Deal, and it continued through the year, twenty-three ships, one every sixteen days, having arrived in the Delaware in 1682. Over one thousand immigrants came over that year, and Penn wrote to Lord North, in September, 1683, that "since last summer we have had about sixty sail of great and small shipping, which is a good beginning." At the end of this same year he said, in a letter to the Marquis of Halifax, "I must, without vanity, say that I have led the greatest colony into America that ever any man did upon private credit, and the most prosperous beginnings that ever were in it are to be found among us."

All these new settlers wanted their lands laid off, so that they might begin to build upon them; many were living in tents, or in caves cut in the high banks of the Delaware and the Schuylkill. Holme and the commissioners accordingly laid off the town and began to apportion the lots with as much dispatch as possible. One of the earliest surveys on record is as follows: "No. 142, David Hammon; return for a lot. Warrant, 1681, 5th mo. 5th.³ I have caused to be surveyed and set out unto David Hamon, in right of Amos Nythols, purchaser of 250 acres, his City Lot, between the 5th and 6th sts. from Delaware, and on the south side of the lot called as yet Pool street [afterwards Walnut Street], in the city of Philadelphia, containing in length 220 foot, bounded on the west with Robert Hart's lot, on the east with John Kirk's lot, on the north with y^e said Pool Street, and on the south with vacant lots; and containing a breadth of 50 foot, and was surveyed on the 6th instant, and accordingly entered and recorded in my office and hereby returned into the Governor's Secretary's office, Philadelphia, this 10th of y^e 5th month, 1682.

"THOMAS HOLME, *Surveyor-General*."

This is proof that the city was named, surveyed, platted, and lots had begun to be occupied by settlers in July, 1682. Exactly how, or when, or why Penn named the city Philadelphia does not now seem easy

¹ Davis' History of Bucks County, Pa., p. 21, *et seq.*

² The names of these petitioners were Lawrence (or Lasse, Lacy) Cock, Israel Helm, Moens Cock, Andreas Benckson, Ephraim Herman, Caspar Herman, Swen Loon, John Dalbo, Jasper Fisk, Hans Moonson, Frederick Roomy, Erick Muelk, Gunner Rambo, Thomas Harwood, Eric Cock, Peter Jockum, Peter Cock, Jr., Jan Stille, Jonas Nielson, Oele Swenson, James Sanderling, Matthias Matthias, J. Devos, and William Orlam. Ephraim and Caspar Herman were both sons of Augustin Herman, a Bohemian adventurer of great accomplishments, a soldier, scholar, surveyor, sailor, and diplomatist, who, after serving in Stuyvesant's Council in New Amsterdam, and conducting an embassy from him to Lord Baltimore, incurred the naughty director's displeasure and was cast into prison. He escaped, went into Maryland, surveyed and made a map of the Chesapeake Bay and the province, and was paid with the gift of a territory in Kent and Cecil Counties, which he called Bohemia Manor. It was intersected by a river of the same name. A part of this tract was sold by Herman to a congregation of Labadists, who settled upon it. Ephraim Herman, who was born in 1654, lived chiefly among the Swedes in New Amstel and Upland. He was clerk of the court here in 1676. In 1679 he married Elizabeth von Rodenburg, a daughter of the Governor of Curaçoa, and took her to Uplands, where he shortly afterwards deserted her to join the Labadists. He returned to her, however, after a while, and was in Upland on the day of Penn's arrival.

³ "1681," if meant for the year, is an error. The plat of the city had not been marked out as early as the 5th of July, 1681. "1682, 5th mo. 5th" must have been meant.

to ascertain. Of course he selected the name himself; and, as we know from one of his letters, did so before the site was chosen, and he had in full view its meaning of brotherly love. Doubtless, likewise, Penn had in view that one of the "seven churches of Asia" to which the angel in Revelation was commanded to write.¹

On the 19th of September, 1682, Holme and the commissioners had a drawing of lots in Philadelphia in compliance with the instructions given by the Proprietary Governor. The lots drawn were on Second, Broad, and Fourth Streets, but as these drawings were never ratified, and as a great many radical changes were made in Penn's land distribution system after he came into the province, it is needless to dwell more at length upon the subject in this place.²

Penn's ship, the "Welcome," sailed from "the Downs" (the roadstead off Deal and Ramsgate, where the Goodwin Sands furnish a natural breakwater) on or about Aug. 31, 1682. Claypoole writes on September 3d that "we hope the 'Welcome,' with William Penn, is gotten clear." The ship made a tolerably brisk voyage, reaching the capes of the Delaware on October 24th, and New Castle on the 27th, being thus fifty-three days from shore to shore. The voyage, however, was a sad one, almost to the point of disaster. The smallpox had been taken aboard at Deal, and so severe were its ravages that of the one hundred passengers the ship carried thirty, or nearly one-third, died during the passage. The terrible nature of this pestilence may be gathered from one striking fact, and that is this: antiquarians, searching for the names of these first adventurers who came over with

Penn,—a list of names more worthy to be put on record than the rolls of Battell Abbey, which preserves the names of the subjugators of England, who came over with William the Conqueror,—have been able to find the most of them attached as witnesses or otherwise to the wills of the well-to-do burghers and sturdy yeomen who embarked with Penn on the "Welcome" and died during the voyage. During this period of trial and affliction, when the natural instincts of man are turned to terror and selfish seclusion, Penn showed himself at his best. His whole time and that of his friends was given to the support of the sick, the consolation of the dying, the burial of the dead. Richard Townshend, a fellow-passenger, said, "His good conversation was very advantageous to all the company. His singular care was manifested in contributing to the necessities of many who were sick with the smallpox. . . . We had many good meetings on board." In these pious services Penn had the cordial help of Robert Pearson, to whom, in return, he gratefully gave the privilege of rebaptizing the town on the Delaware at which some of the survivors landed, and thus the significant and appropriate name of Upland, applied by the Swedes to their second colony, was lost in the euphonious but meaningless and inappropriate cognomen of Chester.

The record of Penn's arrival at New Castle is as follows: "October 28. On the 27th day of October, arrived before the town of New Castle, in Delaware, from England, WILLIAM PENN, Esq., proprietary of Pennsylvania, who produced two certain deeds of feoffment from the illustrious prince, James, Duke of York, Albany, etc., for this town of New Castle, and twelve miles about it, and also for the two lower counties, the Whorekill's and St. Jones's, which said deeds bear date the 24th August, 1682; and pursuant to the true intent, purpose, and meaning of his royal highness in the same deeds, he the said William Penn received possession of the town of New Castle, the 28th of October, 1682."³ This delivery was made, as the records show, by John Moll, Esq., and Ephraim Herman, gentlemen, attorneys, constituted by his royal highness, of the town of Delaware, otherwise called New Castle; the witnesses to the formal ceremony, in which the key of the fort was delivered to Penn by one of the commissioners, "in order that he might lock upon himself alone the door," and which was accompanied with presents of "turf and twig, and water and soyle of the river Delaware," were Thomas Holme, William Markham, Arnoldus de la Grange, George Forman, James Graham, Samuel Land, Richard Tugels, Joseph Curles, and John Smith. Penn at once commissioned magistrates for the newly-annexed counties, and made Markham his attorney to receive possession of the lower counties from Moll and Herman. He also summoned a court

¹ Rev., chap. i. 2; iii. 7-11. There were two Philadelphias before Penn's city,—one, this city referred to, in Asia Minor, now called Ala-Shehr ("the exalted city"), which still has a considerable population, maintains a Greek Church archbishopric, and has numerous remains of antiquity, including five Christian Churches; and the Philadelphia in Syria, anciently called "Rabbak," and now "Amman" or "Ammon," site of the Ammonites. It lies on an affluent of the Jordan, fifty-five miles from Jerusalem, in the pashalik of Damascus. Ala-Shehr is a sacred city even among the Turks, who carry their dead long distances in order to bury them there.

But there may have been another reason for Penn's giving the name of Philadelphia to his new city. Jane Leadley was the founder of a religious sect in England during the seventeenth century which was very near in its observances to those of the Quakers. It was said to have originated from the society founded by Madame Bourignon. Jane Leadley's society made many proselytes in England and on the Continent of Europe, in Holland, Belgium, and Germany. Its members were closely allied to the Quakers and the Mennonists, the Quakers sometimes preaching to the Leadleyites and *vice versa*. Both Fox and Penn were acquainted with Jane, who called her sect the "Philadelphian Society." Her secretary, Heinrich Johann Deichmann, was a German, and the friend and correspondent of John Kelpius, the "Hermit of the Wissahickon." The Continental agent of the Philadelphoi was Hermann von Saltzungen, and there was little to distinguish the *amici* of the Philadelphia from the disciples of Schwenkfeld, Menno, and Labadie; all claimed a common descent from Jacob Boehme, Johann Arnd, Johann Tauler, and Thomas à Kempis.

² Much confusion is found in the names and dates and order of transactions at this period in respect to land apportionment. Records appear to have been revised without any account kept of the changes, and consequently authorities differ materially concerning what was done. See Lewis' Land Titles, 64-174, and John Blair Linn, Duke of York's Laws.

³ Hazard's Annals.

to meet at New Castle on November 2d. On that day Penn was present with the justices, and Markham, Holme, Haige, Symcock, and Brassey, of the Provincial Council. The lower counties gave in their allegiance to Markham for Penn on November 7th. In the interval between his arrival and the meeting of court, October 29th, Penn went to Upland to pay a short visit. There is no positive information that shows at what time Penn arrived in Philadelphia. The record of the Society of Friends says, "At a Monthly Meeting the 8th, 9th month, 1682: At this time Governor William Penn and a multitude of Friends arrived here and erected a city called Philadelphia, about half a mile from Shackamaxon, where meetings, etc., were established, etc. Thomas Fairman, at the request of the Governor, removed himself and family to Tacony, where there was also a meeting appointed to be kept, and the ancient meeting of Shackamaxon removed to Philadelphia, from which, also, other meetings were appointed in the Province of Pennsylvania." This has been construed to say that Penn arrived at Philadelphia on the 8th. If that was correct, then he must have gone to Fairman's house on the same day, and the place of Friends' Meeting was changed on the same day. It is clear, from letters of Penn from Upland and other places, that he did not go to Fairman's house until February or March, 1683.

Traditions, upon which imaginative writers have been eager to expatiate, speak of Penn coming to his new city from Upland or New Castle in a handsome barge, and describe how and where he landed. But we need not place as great confidence in tradition as John F. Watson seems to have done. This indefatigable antiquarian and most graphic and agreeable writer,—the very Boswell of old Philadelphia, its men and manners,—after tossing aside bundle after bundle and chest after chest full of precious early documents, the *materia prima* of history, with the characteristic comment that "they furnish but little in my way," rubs his hands with exquisite complacency and listens with the most perfect faith to the rambling and confused recitals of old men and old women, the older the better, to whom dates are as dreams of the night, and who make up in detail and obstinacy what they lack in precision and authenticity. "A handsome barge" on the Delaware would have been a strange craft. Why should not Penn come to Philadelphia on the "Welcome" with the other passengers, and land with them somewhere between Wicaco and Shackamaxon, on the site of the city which had been laid off under his instructions?

Penn was at that time thirty-eight years old, still young, graceful, athletic, enthusiastic, still fond of boating and riding. Tradition even says (though we must be permitted to doubt this, in view of his conception of the gravity of the Indian character, as laid down in his instructions to Crispin and his fellow-Commissioners, and in his later letter to the Company

of Free Traders) that he competed with and eclipsed the young Indian braves in their jumping matches. But at least he bore no resemblance to the Penn painted by old Mr. Benjamin West in his wretched misrepresentation upon the so-called Shackamaxon treaty. Even the sedate Mr. Janney cannot help entering a protest against West's having depicted Penn as "a corpulent old man." He says nothing about the plain broadbrim hat and the snuff-colored, shad-bellied coat in which West has clothed Penn, both of them sixty years out of the way. West painted Penn's figure from his recollection of the figures and dress of the elders he used to see when a lad in the meeting-house at Springfield, just as, according to his pupil Dunlap's "History of the Arts of Design," he painted the hands in every portrait he made from his own or those of one of his students. Mr. J. F. Fisher, in his discourse before the Pennsylvania Historical Society on "the private life and domestic habits of William Penn," says that West has misconceived Penn's dress as unpardonably as he has his age and figure. "The true costume of the figure," he remarks, "would have been that in vogue towards the end of the reign of Charles II. This (as nearly as I can ascertain) was a collarless coat, perfectly straight in front, with many buttons, showing no waist nor cut into skirts, having only a short, buttoned slit behind; the sleeves hardly descending below the elbow, and having large cuffs, showing the full shirt sleeves. The vest was as long as the coat, and, except as to the sleeves, made apparently in the same way. The breeches were very full, open at the sides, and tied with strings." Mr. Fisher is uncertain about the hat, but we know from Penn's account-books that he was nice and particular in regard both to his hats and wigs, and that he paid quite a price for a pair of leather spatterdashes to use when riding on horseback. He also had a gig, a state coach and four, and a barge, manned by a coxswain and six oarsmen, and carrying sail besides. No such person seems to have any place in honest old West's preposterous picture.

The antiquarians and chroniclers of Philadelphia have sought, with indefatigable zeal, the names of the persons who embarked with Penn in the "Welcome" to aid him in promoting his "Holy Experiment," and they have pursued the work so successfully that it is not believed that more than four or five of the one hundred who sailed in that ship have been overlooked. Apparently most of them were people of standing and some estate, the servants seeming to have been sent over in other vessels for the most part. Judging from the account of stores of one of these emigration larders, as given by Dixon, they were well equipped for even a longer voyage.¹ The list of pas-

¹ Dixon says, quoting from Thomas Story's MS. papers, "It is not to be supposed that the traveling Friends denied themselves the little consolations of the larder by the wayside. In a list of creature comforts put on board a vessel leaving the Delaware for London, on behalf a Quaker preacher, are enumerated 32 fowls, 7 turkeys, 11 ducks, 2

sengers, derived chiefly from Mr. Edward Armstrong's address before the Pennsylvania Historical Society at Chester in 1851 (his authorities being there given in full), begins with

JOHN BARBER and Elizabeth, his wife. He was a "first purchaser," and made his will on board the "Welcome."

WILLIAM BRADFORD, first printer of Philadelphia and earliest government printer of New York.¹

hams, a barrel of China oranges, a large keg of sweetmeats, ditto of rum, a pot of tamarinds, a box of spices, ditto of dried herbs, 18 cocoa-nuts, a box of eggs, six balls of chocolate, six dried codfish and five shaddocks, six bottles of citron water, four bottles of Madeira, five dozen of ale, one large keg of wine, and nine pints of brandy. There was also more solid food in the shape of flour, sheep, and hogs." In one of the first cases tried by Penn and his Council at Philadelphia, that of sundry passengers against James Kilner, master of the ship "Levee," of Liverpool, it was shown that the passengers had so much beer on board that the sailors drank it surreptitiously by the gallon during the voyage.

¹ We have examined with care the evidence both for and against the assumption that Bradford came over in the ship with Penn, and our judgment is that it is by no means proven, but, on the contrary, that the preponderance is against the assumption. The evidence is conflicting. Mr. John William Wallace, of Philadelphia, in his able address before the New York Historical Society on the occasion of the celebration of the two hundredth birthday of Bradford (of whom he is a descendant), has summed up both sides of the case: (1) Bradford, in his American Almanac for 1739, stated he was born May 20, 1663; (2) that Watson, Dixon, Armstrong, and all tradition concur in believing that Bradford came over in the "Welcome" with Penn; (3) Bradford's obituary, *New York Gazette*, May 25, 1752, says, "He came to America seventy years ago" (which would be 1682), "and landed at a place where now stands Philadelphia, before that city was laid out or a single house built there"; (4) "But, stronger than all, his name is given among the names of persons belonging either to Philadelphia or the adjoining lower counties under the date of the '12th of ye 7th mo., 1683' (minutes of Provincial Council, i. 27)." "My supposition is," says Mr. Wallace, "that Bradford came, took a survey of the country, returned to England, got married, and came finally in 1685, with his press."

Here we have one piece of documentary evidence, the rest is hearsay, tradition. *Per contra*: (1) Bradford's tombstone in Trinity churchyard, New York, says he was born in 1660; if he was born in 1663, his wife, who died in 1731, aged sixty-eight, would have been a year older than he, and he only nineteen when Penn brought him over to make him printer for the province; (2) The minutes of Council, quoted above, simply show that the 12th of October, 1683, almost a year after Penn landed, a certain William Bradford owed the province for "28 lbs porke." This is not evidence that the said Bradford came over with Penn, or that he was Bradford the printer. Forty ships had come over in that interval of a year,—why not some one of the name of Bradford in one of them? (3) We do know that William Bradford the printer did come over in 1685, that he brought books for sale as well as printing materials, and that he came armed with a *letter of introduction from George Fox*. This letter we think affords indubitable evidence that Bradford did not come on with Penn, and had never been in the colony before. It is dated "London, 6th month, 1685," and is addressed to leading members of the Society of Friends in Rhode Island, West and East New Jersey, Pennsylvania, and Maryland. Fox says, "This is to let you know that a sober young man, whose name is William Bradford, comes to Pennsylvania to set up the trade of printing Friends' books. And let Friends know of it in Virginia, Carolina, Long Island, and Friends in Plymouth Patent and Boston. And what books you want he may supply you with; or Answers against Apostates or wicked Professors Books. He may furnish you with our Answers; for he intends to keep up a correspondence with Friends that are Stationers or Printers here in England. . . And so you may do well to encourage him. He is a civil young man and convinced of truth. He was apprentice with our friend, Andrew Sowle; since married his daughter," etc. Now, does any one suppose that a man who had come out with Penn and stayed at least a year in the province would have needed to be introduced in this way, and had all these particulars told about him by Fox three years later? It is contrary to reason. (4) Bradford was a man of extraordinary enterprise and activity. He knew how to advertise himself by novel undertakings. His energy was so great that he could not keep still. He came over in 1685, reaching Philadelphia not sooner than October. In January, 1686 (9th of 11th mo., 1685),

WILLIAM BUCKMAN and Mary, his wife, with Sarah and Mary, their children, of Billingham, Sussex.

JOHN CARVER and Mary, his wife, of Hertfordshire, a first purchaser. BENJAMIN CHAMBERS, of Rochester, Kent. Afterwards sheriff (in 1683) and otherwise prominent in public affairs.

THOMAS CHROASDALE (Croasdale) and Agnes, his wife, with six children, of Yorkshire.

ELLEN COWGILL and family.

JOHN FISHER, Margaret, his wife, and son John.

THOMAS FITZWALTER and sons, Thomas and George, of Hamworth, Middlesex. (He lost his wife, Mary, and Josiah and Mary, his children, on the voyage.) Member of Assembly from Bucks in 1683, active citizen, and eminent Friend.

THOMAS GILLET.

ROBERT GREENAWAY, master of the "Welcome."

CUTHEBERT HAYHURST, his wife and family, of Easington, Bolla, Yorkshire; a first purchaser.

THOMAS HERIOTT, of Hurst-Pier-Point, Sussex. First purchaser.

JOHN HEY.

RICHARD INGELO. Clerk to Provincial Council in 1685.

ISAAC INGRAM, of Gattou, Surrey.

GILES KNIGHT, Mary, his wife, and son Joseph, of Gloucestershire.

WILLIAM LUSHINGTON.

HANNAH MOODRIDGE.

JOSHUA MORRIS.

DAVID OGDEN, "Probably from London."

EVAN OLIVER, with Jean, his wife, and children,—David, Elizabeth, John, Hannah, Mary, Evan, and Seaborn, of Radnor, Wales. (The last, a daughter, born at sea, within sight of the Delaware Capes, Oct. 24, 1682.)

ROBERT PEARSON, emigrant from Chester, Penn's friend, who renamed Upland after his native place.

JOHN ROWLAND and Priscilla, his wife, of Billingham, Sussex. First purchaser.

THOMAS ROWLAND, Billingham, Sussex. First purchaser.

JOHN SONGHURST, of Chillington, Sussex. First purchaser. (Some say from Conyhurst, or Hitchingfield, Sussex.) Devoted to Penn. Member of first and subsequent Assemblies. A writer and preacher of distinction among the Friends.

JOHN STACKHOUSE and Margery, his wife, of Yorkshire.

GEORGE THOMPSON.

RICHARD TOWNSEND, or Townsend, wife Anna, son James (born on "Welcome" in Delaware River), of London. First Purchaser. A leading Friend and eminent minister. Miller at Upland and on Schuylkill.

WILLIAM WADE, of Hankton parish, Sussex.

THOMAS WALMESLEY, Elizabeth, his wife, and six children, of Yorkshire.

NICHOLAS WALN, of Yorkshire. First purchaser. Member from Bucks of first Assembly. Prominent in early history of province.

JOSEPH WOODROOFE.

THOMAS WRIGHTSWORTH and wife, of Yorkshire.

THOMAS WYNNE, chirurgion, of Caerwys, Flintshire, North Wales. Speaker of first two Assemblies. Magistrate for Sussex County. "A person of note and character." (Chestnut Street, in Philadelphia, was originally named after him.)

DENNIS ROCHFORD and Mary, his wife, John Heriott's daughter. From Erinstorfe, Wexford, Ireland. Also their two daughters, who died at sea. Rochford was member of Assembly in 1683.

JOHN DUTTON and wife.

PHILIP THEODORE LEHNMAN (afterwards Lehman), Penn's private secretary.

BARTHOLOMEW GREEN.

was already hauled up before Council for an offense. As the record says, "The Secretary [Markham] Reporting to ye Council that in ye Chronologie of ye almanack sett forth by Sam'll Atkins of Philadelphia & Printed by Wm. Bradford, of ye same place, there was these words ('the beginning of Governm't here by ye Lord Penn,') the Council Sent for Sam'll Atkins and ordered him to blott out ye words 'Lord Penn'; & likewise for Wm. Bradford, ye Printer, and gave him Charge not to print anything but what shall have Lycence from ye Council." Does any one suppose that an active person of this stamp, who could get out an almanac within two months after landing, would have remained utterly without record for a year in 1682-83? (5) Bradford did not know Penn, or he never would have thought of styling him Lord Penn. On this evidence we submit the case.

NATHANIEL HARRISON.
 THOMAS JONES.
 JEANE MATTHEWS.
 WILLIAM SMITH.
 HANNAH TOWNSHEND, daughter of Richard.

Dr. George Smith, in the "History of Delaware County," specifies the following as having probably come about the time of William Penn, some before and others immediately afterwards, and before the end of 1682:

RICHARD BARNARD, of Sheffield, settled in Middletown.
 JOHN BEALES, or Bales, who married Mary, daughter of William Clayton, Sr., in 1682.
 JOHN BLUNSTON, of Derbyshire, his wife Sarah, and two children. A preacher of the Society, member of Assembly and of Council, and speaker of the former body.
 MICHAEL BLUNSTON, Little Hallam, Derbyshire.
 THOMAS BRASSEY (or Bracy), of Wilston, Cheshire. Representative of the Free Society of Traders, member of first Assembly.
 SAMUEL BRADSHAW, of Oxtou, Nottinghamshire.
 EDWARD CARTER, of Brampton, Oxfordshire, member of the first English jury impeached at Chester.
 ROBERT CARTER, son of the foregoing.
 JOHN CHURCHMAN, of Waldron, Essex.
 WILLIAM COBB, who gave his name to Cobb's Creek. He took the old Swede's mill on the Karakung.
 THOMAS COBURN, his wife Elizabeth, and their sons William and Joseph, from Cashel, Ireland.
 RICHARD CROSBY, of London.
 ELIZABETH FEARNE, widow, with son Joshua and daughters Elizabeth, Sarah, and Rebecca, of Derbyshire.
 RICHARD FEW, of Levington, Wiltshire.
 HENRY GIBBONS, with wife Helen and family, of Parvidge, Derbyshire.
 JOHN GOODSON, chirurgeon, of Society of Free Traders. Came in the ship "John and Sarah" or "Bristol Factor."
 JOHN HASTINGS and Elizabeth, his wife.
 JOSHUA HASTINGS and Elizabeth, his wife. He was on the first grand jury.
 THOMAS HOOD, of Breason, Derbyshire.
 VALENTINE HOLLINGSWORTH, of Cheshire. Ancestor of the Hollingsworth family of Philadelphia (and Maryland).
 WILLIAM HOWELL and Margaret, his wife, of Castlebight, Pembroke-shire, Wales.
 ELIZABETH HUMPHREY, with son Benjamin, and daughters Anne and Gobitha, of Llanegryn, Merioneth, Wales.
 DANIEL HUMPHREY, of same place as foregoing.
 DAVID JAMES, his wife Margaret and daughter Mary, of Llangeley and Glascom, Radnorshire, Wales.
 JAMES KENERLEY, of Cheshire.
 HENRY LEWIS, his wife Margaret and their family, of Narbeth, Pembroke-shire.
 MORDECAI MADDOCK, of Loem Hall, Cheshire.
 THOMAS MINSHALL and wife Margaret, of Stoke, Cheshire.
 THOMAS POWELL, of Rudheith, Cheshire.
 CALEB PUSEY and wife Ann, and daughter Ann.
 SAMUEL SELLERS, of Belper, Derbyshire.
 JOHN SHARPLESS, Jane his wife, and children,—Phebe, John, Thomas, James, Caleb, Jane, and Joseph, of Huddeston, Cheshire.
 JOHN SIMCOCK, of Society of Free Traders, from Ridley, Cheshire. A leading man in the province.
 JOHN SIMCOCK, JR., son of the foregoing. JACOB SIMCOCK, ditto.
 CHRISTOPHER TAYLOR, of Skipton, Yorkshire.
 PETER TAYLOR and WILLIAM TAYLOR, of Suttin, Cheshire.
 THOMAS USHER.
 THOMAS VERNON, of Stouthorne, Cheshire.
 ROBERT VERNON, of Stoaks, Cheshire.
 RANDALL VERNON, of Sandyway, Cheshire.
 RALPH WITHERS, of Bishop's Canning, Wiltshire.
 GEORGE WOOD, his wife Hannah, his son George, and other children, of Bonsall, Derbyshire.
 RICHARD WORRELL (or Worrall), of Oare, Berkshire.
 JOHN WORRELL, probably brother of foregoing.
 THOMAS WORTH, of Oxtou, Nottinghamshire.

The passengers by the "John and Sarah" and "Bristol Factor," so far as known, include William Crispin, who died on the way out, John Bezar and family, William Haige and family, Nathaniel Allen and family, John Otter, Edmund Lovett, Joseph Kirkbridge, and Gabriel Thomas.

W. W. H. Davis, whose interesting history of Bucks County was published in 1876, says that one-half of the "Welcome's" passengers who arrived with Penn settled in that county. He names the Rowlands, Fitzwalter, Buckmans, Hayhurst, Ingelo, Walmsly, Walne, Wrigglesworth (Wrightsworth?), Croasdale, and Kirkbridge. He also says there was a JOHN GILBERT among the "Welcome" passengers. Of the immigrants who arrived in 1682, but did not come over with Penn, Mr. Davis presents quite a list: RICHARD AMOR, of Buckelbury, Berkshire; HENRY PAXSON, of Bycot House, Slow parish, Oxfordshire. (He embarked with his family, but lost his wife, son, and brother at sea.) LUKE BRINSLEY, of Leek, Staffordshire, stone-mason and servant of Penn; JOHN CLOWS, JR., his brother Joseph, sister Sarah, and servant HENRY LENGART; (there was another Clows contemporary with these, who had three children, Margery, Rebecca, and William, and three servants, JOSEPH CHERLEY, DANIEL HOUGH, and JOHN RICHARDSON). There was also JOHN BROCK (or Brockman), of Stockport, Cheshire, with his servants; he had two grants of land, one of one thousand acres; WILLIAM VENABLES, of Chathill, Staffordshire, with Elizabeth, his wife, and two children, Joyce and Francis; GEORGE POWNALL, with Eleanor, his wife, five children (and three servants, JOHN BREASLEY, ROBERT SAYLOR, and MARTHA WORRAL), of Laycock, Cheshire; WILLIAM YARDLEY, with Jane, his wife, of Bausclough, Staffordshire, with children, Enoch, Thomas, and William, and servant, ANDREW HEATH.¹

In his speech to the magistrates in his first court at Upland, November 2d, Penn, after giving them full assurances and explanations in regard to his intended course, recommended them to take inspection, view, and look over their town plots, to see what vacant room may be found therein for the accommodating and seating of newcomers, traders, and handicraftsmen therein. The proprietary was evidently

¹ Yardley was born in 1632, and had been a minister among the Friends for twenty-five years. He was a member of the first Assembly, and Isaac Pemberton was his nephew. This Pemberton, conspicuous in the affairs of the province, was the son-in-law of James Harrison, Penn's friend and correspondent and afterwards his steward at Pennsbury. After Penn sailed for Pennsylvania, in 1682, Harrison and Pemberton, with their families, servants, and others, embarked on the ship "Submission" to join Yardley, part of whose land purchases (at the Falls of the Delaware, where he had already begun to build a house) having been on account of Harrison and Isaac and Phineas Pemberton. The captain of the "Submission," instead of keeping his contract, landed the party at the mouth of the Patuxent River, Maryland. Their goods were landed on the other side of the bay, at Choptank meeting-house, and it was not until May, 1683, that they, their families, and luggage finally reached their destination.—(See Davis, *Hist. Bucks County, and Hazard, Annals*, p. 600.)

afraid of being crowded at Philadelphia, where as yet but very little building had been done. Granting that half the thousand persons who came over with Penn or before or after him in 1682 were able to find some sort of lodgings, either on the spot or at the various settlements and houses along the Delaware from the Horekills to the Falls, and on the east side of the Delaware again from the Falls to New Salem, there would still remain five hundred houseless people on the site of the new city or about to arrive there in the next two months. It was the second week in November when the "Welcome's" passengers landed, and the winds must have already become bleak and cutting, with now and then a film of ice or a flurry of snow, to prevent them from forgetting that winter was about to come. The "first purchasers" and others who came over at this time were nearly all Quakers, well-to-do people at home, who had sold their property in England and sought refuge in America to escape the prosecutions that had been visited upon them so often and so severely. They had servants, and were well supplied with clothing and provisions. Some of them were delicately nurtured women and children, unused to hardships of any kind. To such persons there would have been nothing romantic and nothing inviting in the prospect of a winter camp-meeting on the banks of the Delaware. The woods and swamps were so deep and thick between the two rivers that a span of hobbled horses lost there were not recovered for several months. There were no roads, scarcely any paths, and the low houses of the Swedes and the lodges of the Indians were few and far apart. But the Quakers were a patient, long-suffering people, and the lofty woods of Coaquanock afforded at least a far better lodging-place than the loathsome jails of England, in which so many of them had languished. The air was pure, the water was clear and good, and the hearts of the adventurers beat high with hope. Their arms were strong, and they had good teachers in the Swedes, and the wood was plenty, both for fuel and other purposes, and every one had his axe and his spade. Some dug holes and caves in the dry banks of the two rivers, propped the superincumbent earth up with timbers, and, hanging their pots and kettles on improvised stakes and hooks at the entrance, speedily had warm and comparatively comfortable lodgings in the style of what hunters used to call "half-faced camps."¹

¹ The "caves," of which so much has been said in connection with the early history of Philadelphia, were not all made by the passengers who came over at the same time as Penn. The Indians dug some, the Swedes may have dug others. Dr. Mease, in his "Picture of Philadelphia" (1811), conjectures that the name "Schuylkill" ("hidden river") came from the circumstance that a good many Maryland settlers used to lurk on its banks, concealing themselves from the Dutch and probably the Indians. This is fanciful and far-fetched; the Indian names were significant, but the Dutch seldom were. Acrelius, in a note upon the Indian word *Wicaco*, or *Wicacoa*, derives it from *Wickling*, dwelling, and *Chito*, fir-tree. He adds that "Upon the shore by *Wicaco* was a place which was formerly called *Puttalasutti*, or 'Robbers' Hole.' The reason of that was that some Indians, who had engaged in robbery, had dug a

Others rolled together forty or fifty logs, notched them at each end, and, aided by their neighbors, could in a day or two erect "log cabins," and these, roofed over with poles, upon which a thatch of bark from dead and fallen trees was laid, and the interstices between the logs "chinked" with stones, mud, and clay, made residences which, in some sections of the country, are still thought to be good enough for anybody. Others made more primitive huts still of stakes, bark, and brushwood, such as the savages sometimes toss together for their summer lodgings. The settlers had blankets and warm clothes in abundance, and we may suppose that the furs which the Indians brought in were in ready demand. With all these rude resources, we may safely believe that the early adventurers on the Delaware got through their first winter without much suffering or many deaths, except among the old people, with whom there seems to have been a considerable mortality. At any rate, no such cry of distress went up from Penn's first settlement as was heard from Plymouth and Jamestown after their first winters. If there were deaths, there were births also, and in one of the caves on the Delaware, long afterwards known as the "Pennypot," was born John Key, the first child of English parents who saw light within the precincts of Philadelphia. Penn signalized the event by presenting the child with a lot of ground in the city, and John Key survived to be eighty-five years old, bearing the cognomen of "first-born" as long as he lived.

Penn was not idle while his people were getting ready for the winter. He sent off two messengers to Lord Baltimore to ask to know when he could receive him; he appointed sheriffs for the three counties into which he had laid off his new province,—Chester, Philadelphia, and Buckingham,—and for the three annexed counties of Delaware (or New Castle), Jones, and New Deal, or Horekill; and then he took horse and rode to New York to see the Governor there, and look into the affairs of his friend the Duke of York's province. When he returned he went to Chester, and there issued writs to all the sheriffs to summon the freeholders to meet on November 20th, to elect representatives to serve as their deputies in the Provincial Council and delegates in General Assembly, which were to meet on December 4th, at Up-land. Chester County chose three councilors and nine assemblymen. Nicholas More was president of the

cave in a hill by the river and there concealed themselves. When other Indians went along there upon the strand to fish or hunt, these robbers attacked, seized, and murdered them. The Indians around there missed their people from time to time, and did not know what had become of them. Finally they discovered the robbers' nest. The entrance was well fortified, so they dug a hole through the roof on the hill and smoked them. Those who were besieged resolved to die in their stronghold; but, although they could not save themselves, they would not give up their booty to others; they broke up their *Sauvant* or *Wampum* by pounding it between stones, which was heard by those outside." This is proof that there were caves in the bank before the whites came, and the above is probably an Indian legend to explain their existence.

Assembly, which met as summoned. The first day was devoted to organization and the selection of committees; on the second day the credentials of members and contested election cases were disposed of, and the house proceeded to adopt a series of rules and regulations for its government. These have no special interest, except that they show the lower house had set out to become a deliberative body, and was prepared to originate bills as well as vote upon them. The three lower counties sent in a petition for annexation and union, and the Swedes another, asking that they might be made as free as the other members of the province, and have their lands entailed upon them and their heirs forever. The same day a bill for annexation and naturalization came down from the Governor and was passed, and on the next day the Legislature passed Penn's "Great Law," so called, and adjourned or was prorogued by the Governor for twenty-one days. It never met again.

SUPPOSED MEETING-PLACE OF THE FIRST ASSEMBLY AT UPLAND.

[From Day's Historical Collections of Pennsylvania.]

The act of union and naturalization, after reciting Penn's different titles to Pennsylvania and the three lower counties or Delaware Hundreds, and the reasons there were in favor of a closer union and one government for the whole, enacts that the counties mentioned "are hereby annexed to the province of Pennsylvania, as of the proper territory thereof, and the people therein shall be governed by the same laws and enjoy the same privileges in all respects as the inhabitants of Pennsylvania do or shall enjoy." To further the purpose of this act of union it is also enacted that "all persons who are strangers and foreigners that do now inhabit this province and counties aforesaid," and who promise allegiance to the king of England, and obedience to the proprietary and his government, "shall be held and reputed freemen of the province and counties aforesaid, in as ample and full manner as any person residing

therein;" other foreigners in the future, upon making application and paying twenty shillings sterling, to be naturalized in like manner. This act, says Penn in a letter written shortly afterwards, "much pleased the people. . . . The Swedes, for themselves, deputed Lacy Cock to acquaint him that they would love, serve, and obey him with all they had, declaring it was the best day they ever saw." An "act of settlement" appears to have been passed at the same time, in which, owing to "the fewness of the people," the number of representatives was reduced to three in the Council and nine in the Assembly from each county, the meetings of the Legislature to be annually only, unless an emergency should occur in the opinion of Governor and Council.

Penn's "Great Law," passed as above recited, contains sixty-nine sections.¹ It represents the final shape in which the proprietary's "frame of government" and code of "laws agreed upon in England" conjointly were laid before the Legislature. The variations from the original forms were numerous, some of them important. The language of the revised code is much improved over the first forms, both in dignity and sustained force. The preamble and first section are always quoted with admiration, and they should have their place here:

"THE GREAT LAW; OR, THE BODY OF LAWS OF THE PROVINCE OF PENNSYLVANIA AND TERRITORIES THEREUNTO BELONGING, PASSED AT AN ASSEMBLY AT CHESTER, ALIAS UPLAND, THE 7TH DAY OF THE 10TH MONTH, DECEMBER, 1682.

"Whereas, the glory of Almighty God and the good of mankind is the reason and end of government, and therefore government, in itself, is a venerable ordinance of God; and forasmuch as it is principally desired and intended by the proprietary and Governor, and the freemen of the Province of Pennsylvania, and territories thereunto belonging, to make and establish such laws as shall best preserve true Christian and civil liberty, in opposition to all unchristian, licentious, and unjust practices, whereby God may have his due, Cæsar his due, and the people their due from tyranny and oppres-

sion of the one side and insolency and licentiousness of the other, so that the best and firmest foundation may be laid for the present and future happiness of both the governor and people of this province and territories aforesaid, and their posterity. *Be it therefore enacted* by William Penn, proprietary and governor, by and with the advice and consent of the deputies of the freemen of this province and counties aforesaid in assembly met, and by the authority of the same, that these following chapters and paragraphs shall be the laws of Pennsylvania and the territories thereof:

"I. Almighty God being only Lord of conscience, father of lights and spirits, and the author as well as object of all divine knowledge, faith, and worship, who only can enlighten the mind and persuade and con-

¹ There is a discrepancy here which it is difficult to make clear. The text follows Hazard; but Mr. Linn, in his work giving the "Duke of York's laws," shows that the "Great Law" as adopted contained only sixty-one sections, and Mr. Hazard's classification is pronounced to be "evidently erroneous." In fact it is said in Council Proceedings of 1689 that a serious lack of agreement was discovered between the Council copy of laws and the enrolled parchment copies in the hands of the Master of the Rolls. Mr. Linn also claims that Mr. Hazard is in error in regard to the date of the passage of the "Act of Settlement," which was adopted not in 1682, but March 19, 1683.

vince the understanding of people in due reverence to his sovereignty over the souls of mankind; it is enacted by the authority aforesaid that no person now or at any time hereafter living in this province, who shall confess and acknowledge one Almighty God to be the creator, upholder, and ruler of the world, and that professeth him or herself obliged in conscience to live peaceably and justly under the civil government, shall in anywise be molested or prejudiced for his or her conscientious persuasion or practice, nor shall he or she at any time be compelled to frequent or maintain any religious worship, place, or ministry whatever contrary to his or her mind, but shall freely and fully enjoy his or her Christian liberty in that respect without any interruption or reflection; and if any person shall abuse or deride any other for his or her different persuasion and practice in matter of religion such shall be looked upon as a disturber of the peace, and be punished accordingly. But to the end that looseness, irreligion, and atheism may not creep in under pretense of conscience in this province, be it further enacted by the authority aforesaid, that according to the good example of the primitive Christians, and for the ease of the creation every first day of the week, called the Lord's Day, people shall abstain from their common toil and labor that, whether masters, parents, children, or servants, they may the better dispose themselves to read the scriptures of truth at home, or to frequent such meetings of religious worship abroad as may best suit their respective persuasions."¹

The second article of the code requires that all officers and persons "commissionated" and in the service of the Commonwealth, and members and deputies in Assembly, and "all that have the right to elect such deputies shall be such as profess and declare they believe in Jesus Christ to be the Son of God and Saviour of the world," etc. This was not perhaps

¹ To these primitive Quakers, as to the Puritans likewise, Almighty God seems to have been constantly a visible, audible presence, in whose awful court everything, even the ordinary business of every-day life, was transacted. This is strikingly manifest in the two paragraphs just quoted. They show, moreover, the strong influence of his peculiar doctrines upon Penn's mind in framing this Constitution and laws. Government was a divine ordinance, and the suppressed minor premise that kings were entitled to administer government by divine right, and that Penn's tenure under King Charles imparted some of that supernal authority to himself, at once disposes of the notion that Penn had any just conception of a republican, much less a democratic form of government. He did not seek, did not desire the outward semblances of power for himself or his successors, but his notion of government was strictly paternal, and that the people needed to be fenced in against themselves and their own misguided passions quite as much as against external tyranny and oppression. This spirit seems to pervade the entire instrument, and effectively disposes of the notion, so fondly nursed by Hepworth Dixon, that Penn's constitutional views were "inspired" by Algernon Sidney. Dixon would have gone much nearer the truth if he had sought their germs in the moral and political system of the atheist philosopher, Thomas Hobbes, who had great influence in Penn's day. Many of the expressions in Penn's Constitutions curiously resemble the cast of thought in Hobbes' "Leviathan" and his earlier treatises, *De Cive* and *De Corpore Politico*. Compare, for example, Penn's preamble with the following from the treatise *De Cive*: "Societates autem civiles non sunt meri congressus, sed federa, quibus faciendis fides et pacta necessaria sunt. . . . Alia res est appetere, alia esse capacem. Appetunt enim illi qui tamen conditiones aequas, sine quibus societas esse non potest, accipere per superbiam non dignantur." Hobbes held that the state of man in natural liberty is a state of war, a war of every man against every man, wherein the notions of right and wrong, justice and injustice, have no place. "For," he says, "if we could suppose a great multitude of men to consent in the observation of justice and other laws of nature without a common power to keep them all in awe, we might as well suppose all mankind to do the same, and then there neither would be nor need to be any civil government or commonwealth at all, because there would be peace without subjection." (*Leviathan*, c. 17.) This is Penn's government, "an ordinance of God, . . . whereby the people may have their due . . . from insolvency and licentiousness." The difference is that Hobbes finds the need for strong government in the laws of nature, Penn in the fact of man's weakness and Almighty God's supervision of human affairs.

illiberal for Penn's day, but under it not only atheists and infidels but Arians and Socinians were denied the right of suffrage. Swearing "by the name of God or Christ or Jesus" was punishable, upon legal conviction, by a fine of five shillings, or five days' hard labor in the House of Correction on bread and water diet. Every other sort of swearing was punishable also with fine or imprisonment, and blasphemy and cursing incurred similar penalties. Obscene words one shilling fine or two hours in the stocks.

Murder was made punishable with death and confiscation of property, to be divided between the sufferer's and the criminal's next of kin. The punishment for manslaughter was to be graduated according to the nature of the offense. For adultery the penalty was public whipping and a year's imprisonment at hard labor; second offense was imprisonment for life, an action for divorce also lying at the option of the aggrieved husband or wife; incest, forfeiture of half one's estate and a year's imprisonment; second offense, the life term; sodomy, whipping, forfeiture of one-third of estate, and six months in prison; life term for second offense; rape, forfeiture of one-third to injured party or next friend, whipping, year's imprisonment, and life term for second offense; fornication, three months' labor in House of Correction, and, if parties are single, to marry one another after serving their term; if the man be married he forfeits one-third his estate in addition to lying in prison; polygamy, hard labor for life in House of Correction.

XIV. Drunkenness, on legal conviction, fine of five shillings, or five days in work-house on bread and water; second and each subsequent offense, double penalty. "And be it enacted further, by the authority aforesaid, that they who do suffer such excess of drinking at their houses shall be liable to the same punishment with the drunkard." Drinking healths, as conducive to hard drinking, is subject to fine of five shillings. The penalty for selling rum to Indians is a fine of five pounds. Arson is punished with amercement of double the values destroyed, corporal punishment at discretion of the bench, and a year's imprisonment. House-breaking and larceny demand fourfold satisfaction and three months in work-house; if offender be not able to make restitution, then seven years' imprisonment. All thieves required to make fourfold satisfaction; forcible entry to be treated as a breach of the peace, and satisfaction to be made for it. Rioting is an offense which can be committed by three persons, and is punished according to common law and the bench's discretion. Violence to parents, by imprisonment in work-house at parent's pleasure; to magistrates, fine at discretion of court and a month in work-house; assaults by servants on masters, penalty at discretion of the court, so also with assault and battery.

XXVII. Challenges to duels and acceptance of challenge demand a penalty of five pounds fine and three months in work-house. Rude and riotous sports, "prizes, stage-plays, masks, revels, bull-baits, cock-fighting, with such like," are treated as breaches of the peace; penalty, ten days in work-house, or fine of twenty shillings. Gambling, etc., fine of five shillings, or five days in work-house. Spoken or written sedition incurred a fine of not less than twenty shillings; slighting language of or towards the magistracy, penalty not less than twenty shillings, five or ten days in the work-house.

XXXII. Slanderers, scandal-mongers, and spreaders of false news are to be treated as peace-breakers; persons clamorous, scolding, or railing with their tongue, when convicted "on full proof," are to go to the House of Correction for three days.

XXXIV. The statute for the encouragement of marriage is as it was quoted above in the laws adopted in England, "but" (xxxv.) "no person, be it either widower or widow, shall contract marriage, much less marry, under one year after the decease of his wife or her husband."

XXXVI. "If any person shall fall into decay and poverty, and be un-

able to maintain themselves and children with their honest endeavor, or who shall die and leave poor orphans, upon complaint to the next justice of the peace of the said county, the said justice finding the complaint to be true, shall make provision for them in such way as they shall see convenient till the next county court, and then care shall be taken for their comfortable subsistence."

XXXVII., etc. "To prevent exaction in public-houses," strong beer and ale of barley-malt shall be sold for not above two pennies per Winchester quart; molasses beer one penny; a bushel must contain eight gallons, Winchester measure, all weights to be avoirdupois of sixteen ounces to the pound; all ordinaries must be licensed by the Governor, and, to insure reasonable accommodation, travelers must not be charged more than sixpence per head for each meal, including meats and small-beer; footmen to pay not over two pence per night for beds, horsemen nothing, but the charge for a horse's hay to be sixpence per night.

XI. "The days of the week and the months of the year shall be called as in Scripture, and not by heathen names (as are vulgarly used), as the first, second, and third days of the week, and first, second, and third months of the year, etc., beginning with the day called Sunday, and the month called March."

Sections XLI. to LXIX. and the end of this code are substantially repeated from the code of laws adopted in England, which have already been analyzed on a preceding page. They relate to the administration of justice, the courts, testamentary law, registration, and the purity of elections. Only a few additions and changes have been made, and these simply for the sake of more perspicuity and clearer interpretation.

gave him; Penn holding firm upon his purchase, the king's letter, and the phrase in the Calvert charter confining its operations to lands hitherto unoccupied, a position in which Penn and the Virginian Claiborne took common ground. The issue of fact as to whether the Delaware Hundreds were settled or unsettled in 1634 could not be determined then and there, even if the contending parties should agree to rest their case upon that point, as neither would do. The proprietaries finally parted, agreeing to meet again in March, and each went home to write out his own views and his own account of the interview to the Lords of the Committee of Plantations. On his way to Chester Penn stopped to visit the flourishing settlement of Friends in Anne Arundel and Talbot Counties, Maryland, reaching his destination on the 29th.

We are at a loss when we attempt to assign a particular date to Penn's treaty with the Indians under the great elm-tree at Shackamaxon, if such a treaty

PENN'S TREATY TREE AND HARBOR OF PHILADELPHIA IN 1800, FROM KENSINGTON.

[From Birch's Views.]

After the meeting of the Assembly, Penn set out on December 11th to go to visit Lord Baltimore, with whom he had an appointment for the 19th. The meeting took place at West River, where Penn was courteously and hospitably entertained. Nothing was accomplished, however, in the way of settling the boundary dispute, beyond a general discussion of the subject. Baltimore contended for what his charter

was ever made. Those who are most familiar with the subject, and have most laboriously studied it in all its bearings, are convinced that the council must have taken place before the meeting of the Legislature at Upland, December 4th. This seems to have been assumed because no such interview could have occurred after that date in 1682; every day of Penn's time can be shown to have been otherwise occupied.

There is nothing on the record to show that there was such a meeting or such a treaty. Penn, always frank and rather exultant in the recital of his affairs, public and private, seems to have kept an absolute silence in regard to this treaty, both in his correspondence with the Lords of the Committee of Plantations and in his letters to his friends at home. In one of the latter, written on December 29th, the day of his return to Upland from Maryland, he says, "I bless the Lord I am very well, and much satisfied with my place and portion, yet busy enough, having much to do to please all and yet to have an eye to those that are not here to please themselves. I have been at New York, Long Island, East Jersey, and Maryland, in which I have had good and eminent service for the Lord. I am now casting the country into townships for large lots of land. I have had an Assembly, in which many good laws were passed. We could not stay safely till the spring for a government. I have annexed the territories lately obtained to the province and passed a general naturalization for strangers, which hath much pleased the people. As to outward things, we are satisfied; the land good, the air clear and sweet, the springs plentiful, and provision good and easy to come at; an innumerable quantity of wild fowl and fish; in fine, here is what an Abraham, Isaac, and Jacob would be well contented with, and service enough for God, for the fields here are white for harvest. Oh, how sweet is the quiet of these parts, freed from the anxious and troublesome solicitations, hurries, and perplexities of woful Europe." A full chronicle of his deeds, yet not a syllable about the Shackamaxon treaty, esteemed generally to be the greatest of all his achievements.

We must not, however, do injustice to the universal tradition on the subject of this supposititious treaty, fortified as it is by everything except that documentary evidence, the singular absence of a line of which casts suspicion on the whole affair. This defect is incurable, of course, unless it can be shown how it occurred, or, *per contra*, how the traditions arose which unite in pointing to the fact of such a treaty and describing how and where it was negotiated. A brief inquiry into this difficult subject will not be inappropriate in this place, and we may begin it by stating the arguments in favor of the supposed negotiations.

First. It is quite reasonable to suppose that Penn would have desired such a treaty and that the Indians would be willing to negotiate one with him. They expected many good things of the Friends, and were taught to look for the arrival of Penn, their leader and chief, with the lively anticipation of benefits. As early as 1677, in negotiations in West New Jersey between the Indians and Quakers (according to a pamphlet of Thomas Budd's, written nine or ten years later), the latter had endeavored to prevent the sale of liquors to the Indians, who seemed to recognize the humanity of the intention. Budd describes a chief as saying, "Now there is come to live

a people among us who have eyes; they see it [rum] to be for our hurt, they are willing to deny themselves the profit of it for our good. These people have eyes; we are glad such a people are come among us; we must put it down by mutual consent, the cask must be sealed up, it must be made fast, it must not leak by day or by night, in light or in the dark, and we give you these four belts of wampum, which we would have you lay up safe and keep by you, to be witnesses of this agreement; and we would have you tell your children that these four belts of wampum are given you to be witnesses, betwixt us and you, of this agreement." These Indians had already heard of Penn and his character and influence; they would naturally have news of his arrival and come to see him at Shackamaxon and Pennsbury. As soon as Penn secured possession of his province he began writing letters and sending messages to the Indians, while his deputy, Markham, conducted successfully a series of land treaties with them. His letter of instructions to the commissioners to lay out Philadelphia bids them "Be tender of offending the Indians, . . . to soften them to me and the people; let them know you are come to sit down lovingly beside them. Let my letter and conditions with my purchasers about just dealing with them, be read in their tongue, that they may see we have their good in our eye, equal with our own interest, and after reading my letter and the said conditions, then present their kings with what I send them, *and make a friendship and league with them, according to these conditions*, which carefully observe, and get them to comply with. . . . From time to time, in my name, and for my use, buy land of them, where any justly pretend," etc. The 11th, 12th, 13th, 14th, and 15th articles of the "conditions and concessions" are here referred to, in which trading with Indians except in market is forbidden, goods sold to "the poor natives" are ordered to be tested, offenses against them punished just as offenses against whites, differences to be settled by mixed juries, and the Indians given liberty, the same as the planters, to improve their grounds, etc. In September, 1681, we find George Fox sending around a circular letter "to all planters," especially in West Jersey, directing them to pay attention to the spiritual welfare of the Indians. In Penn's letter to the Indians, sent them through the hands of his commissioners, he expounds to them his principles of universal justice and of the common brotherhood of mankind, adding that "I have sent my commissioners to treat with you about land *and a firm league of peace*," and that "I shall shortly come to you myself, at what time we may more largely and freely confer and discourse of these matters." Penn sent by Holme, his surveyor-general, another letter of the same tenor to the Indians, which Holme indorsed as having been read to them by an interpreter the sixth month (August), 1682. The place of the reading is not mentioned, but Holme was at that time living with Fairman in

his house at Shackamaxon, where the Quaker meetings were held.

Second. In 1835 the Historical Society of Pennsylvania appointed a committee, consisting of Peter S. Duponceau, Joshua F. Fisher, and Roberts Vaux, to report upon a communication of John F. Watson in reference to "the Indian treaty for the lands now the site of Philadelphia and the adjacent country." Mr. Vaux having died before the work was finished, Messrs. Duponceau and Fisher made an exhaustive report on the subject, considering all the questions connected with the treaty or supposed treaty at Shackamaxon. Their conclusion was that while no treaty was ever negotiated at Shackamaxon for the purchase of lands, with which were joined stipulations for peace and amity and a league of friendship (since if such a treaty had been made it would necessarily have been recorded), yet there *was* a solemn council held there for the purpose of sealing friendship between the Indians and the proprietary. They found their opinion upon certain expressions in speeches of

MONUMENT ERECTED TO MARK THE SITE OF THE TREATY TREE.

Lieutenant-Governor Keith to the Susquehanna Indians in 1717 and 1722, and by Lieutenant-Governor Gordon in 1728-29. They are firm in their belief that such a treaty or conference did take place, probably in November, 1682, at Shackamaxon, under the great elm-tree which was blown down in 1810. "The treaty was probably made," according to the committee, "with the Lenni Lenape or Delaware tribes and some of the Susquehanna Indians; that it was 'a treaty of amity and friendship,' and perhaps confirmatory of one made previously by Markham [or the commissioners and Holme]. In the concluding language of the report, therefore, 'we hope that the memory of the Great Treaty, and of our illustrious founder, will remain engraved on the memory of our children and children's children to the end of time.'"¹

Third. Tradition has found the place of the treaty, named those present, tells us that Penn came there in a barge, and wore a blue sash. A belt of wampum has come from the Penn family, which, it is claimed, was presented to the proprietary on that occasion. The great Tamanend or Tamany was chief spokesman on this day, and his dress and the emblems worn by him of kingly power are accurately described; in short, the whole scene has been set with a view to bringing out the illusion effectively.

On the other hand, those who do not believe that any such treaty was ever negotiated reply:

First. That the treaty referred to by Keith and Gordon was not one made by Penn with the Lenni Lenapes in 1682, but one which he negotiated in April, 1701, on occasion of his second visit, with the representatives of several tribes, including the Susquehannocks, *alias* Minquas or Conestogas, the Shawanese, the Onondagoes, etc., which treaty is duly recorded in the Colonial Records. The fact that the Indians possessed a parchment copy of the treaty, which they produced in their council with Keith in 1722, is evidence of this, there being no attempt to prove a written treaty in 1682. At any rate, the actual treaty of 1701 fits all the circumstances of the case, and all the allusions of the Indians and the Governors, far better than the assumed treaty of 1682.

Second. It is easy for tradition to have confused the two occasions, and even to have set the familiar scene at a very early day. In his letter of Aug. 16, 1683, to the Society of Free Traders, Penn, writing from Philadelphia about the Indians, whose habits and language he had been studying closely in the course of a tour among them, describes very minutely the conduct of an Indian council, for he says, "I have had occasion to be in council with them upon treaties for land and to adjust the terms of trade." Then he gives a picture of the ordering of an Indian council, which might very well be taken for the original of the traditional accounts of the treaty under the Shackamaxon elm. "Every king," he says, "hath his council, and that consists of all the old and wise men of his nation, which perhaps is two hundred people. Nothing of moment is undertaken, be it war, peace, selling of land, or traffic, without advising with them, and, which is more, with the young men too. . . . Their order is thus: The king sits in the middle of a half-moon, and has his council, the old and wise, on each hand. Behind them, or at a little distance, sit the younger fry in the same figure." This is the Shackamaxon scene exactly. One almost sees West's picture, or Watson's descriptions, gleaned from the recollections of the oldest inhabitants. But Penn goes on, and from depicting the general scene comes to delineate what was apparently an actual incident in his recollection. "Having consulted and resolved their business, the king ordered one of them to speak to me. . . . He took me by the hand and told me he was ordered by his king to speak to me, and that now

¹ Hazard, Annals, i. 635.

it was not he but the king who spoke. . . . *He first prayed me to excuse them that they had not complied with me the last time.* He feared there might be some fault in the interpreter, being neither Indian nor English. Besides, it was the Indian custom to deliberate and take up much time in council before they resolved, and that if the young people and owners of the land had been as ready as he, *I had not met with so much delay.*" Now this exactly meets the case of Penn's undoubted and recorded treaties with the Indians for land in the spring and summer of 1683. In his letter about the Maryland boundary to the Lords of the Committee on Plantations Penn writes: "In the month called May, Lord Baltimore sent three gentlemen to let me know he would meet me at the head of the Bay of Chesapeake; *I was then in treaty with the kings of the nations for land*, but three days after we met ten miles from New Castle, which is thirty from the Bay." This was in May or June 23d, and 14th of July following the treaties were negotiated with the Kings Tamanend and Metamequam. Here are the land treaties, the kings and their council, the non-compliance the first time, the delay, all the circumstances. "*When the purchase was agreed on,*" adds Penn (when the actual business of the conference was discharged, in other words), "*great promises passed between us of kindness and good neighborhood and that the English and Indians must live in love as long as the sun gave light.*" Then another Indian spoke, charging the natives to love the Christians and so on, "at every sentence of which they shouted and said amen in their way." Finally, Penn says in this letter, written only a month after the transaction, "We have agreed that in all differences between us six of a side shall end the matter. Do not abuse them, but let them have justice and you win them." In these sentences we have all the data of the supposititious treaty of Shackamaxon,—a written bargain for land, sealed and paid for, and an unwritten treaty of friendship on the basis of justice and equity. If Penn could describe this event so vividly would he not have dwelt still more upon an earlier and more formal treaty of alliance, made when he had not been in the province a month, and when the Indians and everything else were such novelties to him?

Third. This described treaty covers all that Penn told the historian Oldmixon, to wit, that he "stayed in Pennsylvania two years, and having made a league of amity with *nineteen* Indian nations, established good laws," etc., he returned to England. Now it happens that there are exactly *nineteen* "sachamakers" who sign the various land deeds given by the Indians to Markham in 1682 and to Penn in 1683, to wit: July 15, 1682, *Kowyockhickon, Attoireham*; Aug. 1, 1682, *Nomne Soham*, June 24, 1683, *Tammanen*; same date, *Essepenaïke, Swanpees, Okettarickon, Wessapoat, Kekerappan*; same date, *Metamequam*; June 25th, *Wingebone*; July 14th, *Secane and Iquoquehan*; same date, *Nenesickan, Malebore, Neshanocke, and Osereneon*;

October 10th, *Kekerappan*; October 18th, *Machaloha*. And these are all the Indian deeds on record between the date of Markham's arrival and Penn's return to England.

Is it then necessary to despoil tradition entirely? We do not think so. We are loath to give up the great elm at Shackamaxon, with Tamanend and his council squatted in a double semicircle beneath its wide, bare branches (though there must have been a good deal of frost in the ground so late in November), and Penn with his blue sash, Markham with his scarlet coat, and Lasse Cock, the interpreter, in leather breeches and fur coat, speaking an indescribable mixture of Swedish, Dutch, English, and Indian. We will have to give up the barge, we suppose, for, if such a conference ever occurred, it must have been while Penn was occupying Fairman's house on the spot at Shackamaxon. But there is no inherent improbability in the idea of such a conference. The Indians would be as eager to see Penn, of whom they had heard so much, as he would be curious to meet them. Suppose that, while the "Welcome" was still at New Castle or Upland, or after she had gone up the river and anchored off the mouth of Dock Creek, hard by the house, then just built, which soon came to be known as the Blue Anchor tavern, Penn's counselors had suggested to him, or he to them, that it would be a politic thing to call the Indians together in council, so that he might ratify to them in person the lavish promises made in his name and on his behalf by his agents. The Indians would be notified, a day set, runners sent out, and when the time came there would be no difficulty in securing a very respectable collection of sachems and braves of the contiguous bands. Old Tammany might have been present himself if the weather was good, and if the "Welcome" had not yet gone down the river, and Penn still occupied his cabin, the ship's jolly-boat might very well have served him for barge in which to make a stately entry upon the scene. Then upon his arrival, after the peace pipe had been smoked, there might have ensued such a succession of speech-making and such another love-feast as Penn describes as having taken place after the signing of the land treaties in 1683, and upon newcomers like the passengers of the "Welcome," ignorant equally of the language, the circumstances, and the surroundings, what they then and there witnessed might have made an indelible impression as the first great treaty with the Indians. At the same time Penn, used to state business, and knowing nothing had been accomplished, may not have charged his memory particularly with the occurrence. The presence and acts of Penn and the just dealings of his followers made a strong and lasting impression upon the Indians, not only of Eastern Pennsylvania, but of the whole State and of New York also. They gave him a name of their own, "Onas" (signifying quill, or "pen"), and this patronymic was extended to all his successors

in the executive of Pennsylvania down to quite a late period. His familiar name among the Delawares was "Miquon," and for his sake, while the savages in every section east of the Mississippi and north of the Tennessee, smarting under a thousand wrongs, were waging undying war against every other person of English descent, the peaceful garb of members of the Society of Friends continued to be a passport and a palladium. Penn's traditional policy is still kept up with proud consistency by the Quakers, and there is not a tribe, nor the vestige of a band of savages, within all the broad extent of the United States but has experienced some material benefit from this amiable determination of the quiet sect to right, wherever they can, the injuries inflicted by the white man upon the original owners of the soil.

The year 1683 was a very busy one for William Penn. A great number of colonists arrived, building was very actively going on, the division of land among purchasers was a source of much care and perplexity, the lines and bounds and streets of the new city required to be readjusted, the Council and Assembly had to be newly elected and organized, with much important legislative business before them, and there were besides the boundary question and interviews with Lord Baltimore, Indian land treaties with their tedious preliminary councils and pow-wows, and in addition to all this an extensive and exacting correspondence. Penn, however, was equal to it all, and maintained his health, spirits, and energy remarkably well. He even found time to make an extensive tour through his territories, visited the Indian tribes in friendship with them, curiously studied their manners and customs, and even picked up a smattering of their tongue. Penn was more and more pleased with his province the more he saw of it, and was elated with the great work he had set in motion, even while he could not conceal from himself that his new province was going to prove difficult for him to govern, and that his liberal expenditures in behalf of its settlement would eventually plunge him deep in pecuniary embarrassments.

The Governor's first care, after appointing sheriffs for the several counties and ordering them to issue writs for a new election of members of the Provincial Council and General Assembly, was to replat the city and rename the streets, which had been provisionally named by the commissioners and Holme. In a spirit of avoidance of "man-worship," Penn designated the streets between and parallel to the Delaware and the Schuylkill by numbers; the intersecting streets connecting the two rivers he named after the different varieties of trees and fruits indigenous to the soil. There were a few exceptions to this rule, concessions to some local peculiarity, as, for example, Front, High, Broad, etc. But the main body of streets bore names from Delaware 2d to Delaware 10th, and from Schuylkill 10th to Schuylkill Front Street, and from Cedar, going north, Pine, Spruce, Walnut, Chestnut,

High, Mulberry, Sassafras, and Vine Streets. Lombard Street was not laid out until many years afterwards. This deprives Philadelphia streets of that historical flavor which hangs about the names of thoroughfares in other large cities. As Philadelphia, as originally laid out, contained only about twelve hundred acres, it was found impossible to accommodate the "first purchasers" of large tracts of land with the city lots promised them in the prospectus inviting colonists. To remedy this a portion of territory outside the original survey was laid off and annexed under the name of "the Liberties," and in these the apportioned lots still undrawn were located. These apportionments, as finally arranged by Penn, gave to each purchaser of land about two per cent. of his purchase in town lots. If he took one thousand acres he received twenty acres of lots and nine hundred and eighty acres of farm land. But if the lots were in the Liberties east of the Schuylkill there was a reduction of twenty per cent. in the size of the lots in consequence of their much greater value. While arranging this difficult business as respected Philadelphia, Penn also prepared for the distribution of rural population through the counties which he had opened, and particularly Chester and Buckingham (or Bucks as it soon began to be called), by laying out townships there, and "squares" around which the farmsteads were grouped and in which each landholder had his lot, just as was the case in Philadelphia County, and its township, Philadelphia City. This system is illustrated very graphically on Holme's "map of the improved part of Pennsylvania."

Penn had begun to build, likewise, on his own account. The construction of the mansion-house at Pennsbury is said, rather vaguely, however, to have been commenced by Markham previous to the proprietary's arrival in the province, and it was now pushed vigorously, though Penn does not appear to have occupied the house permanently until his second visit. He also built a house in Philadelphia for his own use. This structure, called the Letitia house, and assumed to have been the first brick house erected in the city, is commonly said to have been put up for Penn's daughter, whose name it bears. Her father did not grant the lot to her by patent until the 29th of first month (March), 1701. Penn lived there when it was first built, and when he returned to England it became the official residence of Markham. The Pennsbury mansion, so situated as to give the Lord Proprietary convenient access both to his own capital and to Burlington, the chief town in the West Jersey plantation, was quite an elaborate building, costing, with expenditures upon the grounds and out-buildings, from five thousand to seven thousand pounds. It was placed on a gentle eminence fifteen feet above high water and one hundred and fifty feet from the river, with a winding creek or cove flowing around one side of it to the rear. Not a vestige of the

house or plantation now remains, except some gnarled trunks of old cherry-trees, supposed to have been planted by the founder. This mansion-house was, however, not completed until some years after Penn's return to England. The supervision of its construc-

THE LETITIA HOUSE.

tion was given to James Harrison, and Penn's letters to him on the subject are numerous and interesting. The proprietary in the first few months of his visit seems to have had no other thought than that of a permanent residence in the province, surrounded by his family, and in the midst of sylvan solitude and rural comforts. He had not then learned that new colonies may be harassing and intractable, and that the European with large home interests who goes to dwell in the wilderness cannot escape illustrating the proverb, "Out of sight out of mind." "I am much satisfied with my plan and portion," he wrote to one friend from Chester; to Lord Colepepper, just come out as Governor and proprietor of Virginia, he wrote, 5th February, 1683: "I am mightily taken with this part of the world; here is a great deal of nature, which is to be preferred to base art, and methinks that simplicity, with enough, is gold to lacker, compared with European cunning. I like it so well that a plentiful estate and a great acquaintance on the other side have no charms to remove; my family being once fixed with me, and if no other thing occur, I am likely to be an adopted American. Our province thrives with people; our next increase will be the fruit of their labor. Time, the maturer of things below, will give the best account of this country."

The new sheriffs summoned the freemen electors, and a new election was held under the Constitution and laws for members of the Council and Provincial Assembly. The "act of settlement," or frame of government provisionally adopted by the first Legislature in its brief session at Upland, or Chester, had arranged for the election of a Council of twelve persons

from each county, and a General Assembly to consist of not more than two hundred freemen. The people of the counties, however, thought that this would be too heavy a drain upon a scattered and as yet scanty population, especially at times when labor seemed to be of more value than law-making, and accordingly they simply went outside the charter and elected twelve members from each county, three of whom were designated to serve in the Provincial Council, the rest to act as members of the General Assembly.

The Legislature met for the first time in Philadelphia, the Council and Governor coming together on the 10th of March, 1683, the General Assembly two days later. The members of the Council were

William Markham, Thomas Holme, Lasse Cock, Christopher Taylor, James Harrison, William Biles, John Simcock, William Clayton, Ralph Withers, William Haige, John Moll, Edmund Cantwell, Francis Whitwell, John Richardson, John Hilliard, William Clark, Edward Southern, and John Roads. The members of the Assembly were: *Philadelphia County*.—John Songhurst, John Hart, Walter King, Andros Bengtson, John Moon, Griffith Jones, William Warner, Swan Swanson (Sven Svenson, one of the Sven Sever or sons of Sven Shute), and Thomas Wynne (Speaker). *Bucks*.—William Yardley, Samuel Darke, Robert Lucas, Nicholas Waln, John Wood, John Clowes, Thomas Fitzwalter, Robert Hall, James Boyden. *Chester*.—John Hoskins, Robert Wade, George Wood, John Blunston, Dennis Rochford, Thomas Bracy, John Bezar, John Harding, Joseph Phipps. *New Castle*.—John Cann, John Darby, Valentine Hollingsworth, Gasparus Herman, John Dehraef, James Williams, William Guest, Peter Alrichs, Heurick Williams. *Kent*.—John Biggs, Simon Irons, Thomas Hassold, John Curtis, Robert Bedwell, William Windmore, John Brinkloe, Daniel Brown, Benoni Bishop. *Sussex*.—Luke Watson, Alexander Draper, William Fletcher, Henry Bowman, Alexander Moleston, John Hill, Robert Bracey, John Kipshaven, Cornelius Verhoof.

Biographies of these pioneers in law-making as well as plantation may be found in the works of Thompson Westcott (particularly his exhaustive "History of Philadelphia"), in the work of Proud, and in the nice and critical investigations now being pursued in the Historical Magazine of the Pennsylvania Historical Society. Markham, Holme, Simcock are already known to the reader. The latter was the founder of Ridley, in Chester County. James Harrison was Penn's friend, agent, and property commissioner. William Biles came from Dorchester, in Dorsetshire, arriving in the Delaware June 12, 1679, with wife, seven children, and two servants, having a grant from Andross of three hundred and nine acres on the west bank of the river below Trenton Falls. He was a man of talent and influence and a leader. Governor Evans sued him for slander, for saying, "He is but a boy; he is not fit to be our Governor; we'll kick him out, we'll kick him out." Whitwell was an early settler on the Lower Delaware. Thomas Wynne, first Speaker of the first Assembly, was a Welsh Quaker preacher, one of the Welsh colony afterwards at Merion. He was an ancestor of John Dickinson. John Songhurst came over with Penn. William

Yardley, of Bucks, came over in September, 1682; a yeoman of Sussex, the founder of Yardleyville, and connected with the Harrisons and Pembertons. He had been twenty-five years a preacher when he immigrated. Haige was a London merchant. Lasse (Lorenz, Laurence, Larrison, or Laers) Cock, or Kock, was the son of Peter Larrison Kock, who came over in 1641, servant to the Swedish West India Company. Lasse, his son, was Penn's interpreter and Markham's right-hand man. He and his family were original members of the old Swedes' Church at Wicaco. Andros (Andreas) Binkson (Bengtsson, now Bankson and Benson) was one of the old Swedes. Peter Alrichs was son of the Dutch director on South River, owner of Alrichs' or Burlington Island. Gasparus Herman, son or grandson of Augustine Herman, of Bohemia Manor. Thomas Fitzwalter came over with Penn, and was prominent in many public affairs. Blunston was an immigrant of 1682, from Little Hallam, Derbyshire, having a certificate from the Quaker Meeting-house there. He was a member of the Society of Free Traders, and a man of consequence. John Bezar, or Bezear, of Bishops Canning, in Wiltshire, was one of Penn's land commissioners. His business in England was that of maltster, and he was a regular preacher of the Quakers; had been imprisoned and put in the stocks for attempting to preach in the "steeple-house" at Marlborough. He settled at Marcus Hook. Thomas Bracey was also one of the Society of Free Traders and an active Friend. Robert Wade came over with John Fenwick. He was a resident of Upland as early as 1675. He owned Essex House, at Upland, built by Armgardt Pappegoya, which is supposed to have been the first Quaker meeting-house in Pennsylvania. He also was an active Quaker. Christopher Taylor was the best scholar among the Quaker immigrants, native of Skipton, Yorkshire, convert of George Fox, eminent preacher, often incarcerated, once for two years; taught classical schools on both sides the Atlantic, held important public offices, was well acquainted with Latin, Greek, and Hebrew, and published a *Compendium Trium Linguarum* of those languages. William Clayton came out in 1678, bought Hans Oelsson's share of Marcus Hook; an active Quaker, and had a large part in public affairs. John Clows came over in 1682, previous to Penn, and John Richardson appears to have been his servant.¹

At the first meeting of the Council in Philadelphia, March 10, 1683, Penn took the chair and sixteen of the eighteen councilors were present. The sheriffs of the different counties (John Test, for Philadelphia) were called in and made their returns respecting the election. The rules were of the simplest: the Governor ordered those speaking to do so standing, one at a time, and facing the chair, and the members

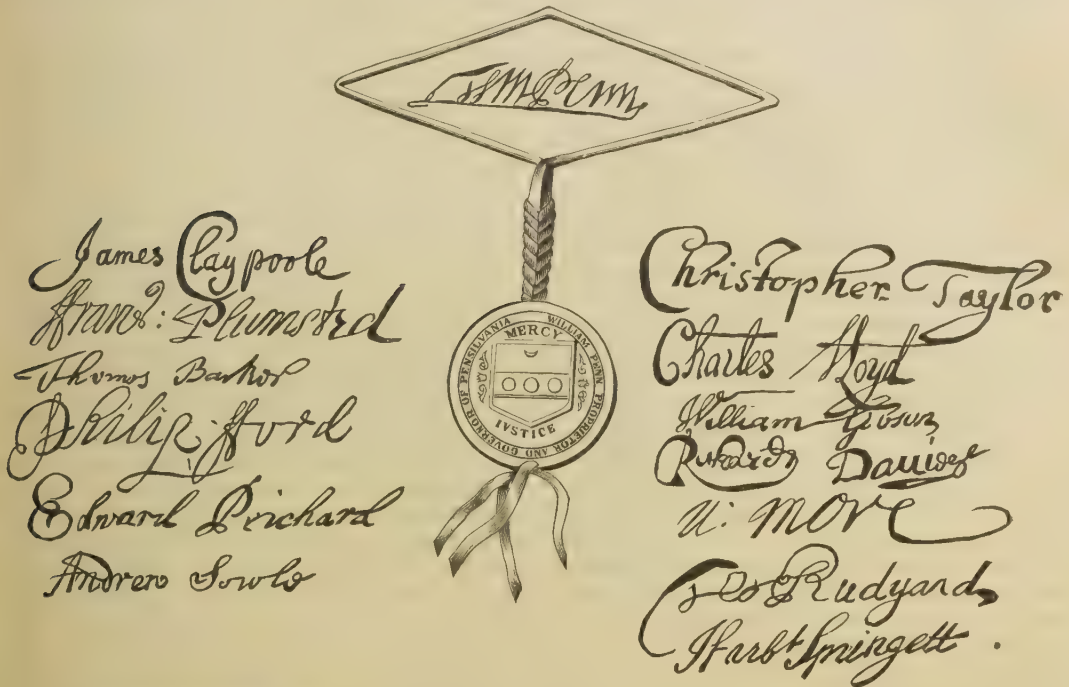

agreed upon a *viva voce* vote in all except personal matters. When these arose the vote was to be by ballot. The question of the power of electors to change the number of representatives without modifying the charter at once arose, when Penn answered that they might "amend, alter, or add for the Public good, and that he was ready to settle such Foundations as might be for their happiness and the good of their Posterities, according to y^e powers vested in him." Then the Assembly chose a Speaker, and there was an adjournment of Council till the 12th. On the session of Council of that day nothing seems to have been done beyond compelling Dr. Nicholas More, president of the Free Society of Traders, to appear and apologize for having abused Governor, Council, and General Assembly "in company in a publick house, . . . as that they have this day broken the charter, and therefore all that you do will come to nothing & that hundreds in England will curse you for what you have done & their children after them, and that you may hereafter be impeacht for Treason for what you do." Dr. More's apologies were ample, as became such a determined conservative. The next day's session was occupied with improvement of the rules and suggestions as to amending the charter. It was obvious that the freemen of the province were determined this should be done, in spite of Dr. More's suggestions about impeachment. On the 15th, John Richardson was fined for being "disordered in Drink," and reproved. The question of giving Governor and Council authority to prepare all bills was finally settled affirmatively, but apparently only after considerable debate. On the 16th, Dr. More, of the Free Society of Traders, wrote to ask such an interpretation of the law against fornication as applicable to servants as would be "more consistent wth the Mr. & Mrs. Interest." This was the first utterance of a corporation in Pennsylvania, and it was not on the side of humanity or morality, but of the "master and mistress interest,"—the society did not care how severely servants were punished for their vices, so that the punishment was not such as to deprive the corporation of their services.

Among the earliest bills prepared for submitting to the General Assembly were the following: A bill for planting flax and hemp, for building a twenty-four by sixteen feet House of Correction in each county, to hinder the selling of servants into other provinces and to prevent runaways, a bill about passes, about burning woods and marshes, to have cattle marked and erect bounds, about fencing, showing that servants and stock gave the settlers more concern than anything else. The country was so large and free that it was difficult to retain people in any sort of bondage, and, where nineteen-twentieths of the land was uninclosed and free to all sorts of stock, it was necessary to fence in improved and cultivated tracts to save the crops from destruction. These bills and

¹ His diary contains notes of many minor events in the history of the province.

other matters were given in charge of the various committees into which the Council now began to divide itself. On the 19th the Speaker and a committee of the Assembly reported the bill of settlement (charter or Constitution) with "divers amendments,"

and cattle-brands. Also bills requiring hogs to be ringed, coroners to be appointed in each county, regulating wages of servants without indenture, bail-bonds, and summoning grand juries. There was offered likewise a law of weights, and a bill fixing the punish-

FAC-SIMILE OF WILLIAM PENN'S AUTOGRAPH AND SEAL AND THE AUTOGRAPHS OF ATTESTING WITNESSES TO THE CHARTER OF 1682.

which were yielded to by the Governor and Council, and other amendments suggested. The Duke of York's laws and the fees charged in New York and "Delaware" were also considered in this connection; finally, on the 20th, there was a conference between the Governor and the two houses, "and then the question being asked by the Gov^r whether they would

have the old charter or a new one, they unanimously desired there might be a new one, with the amendm^{ts} putt into a Law, w^h is past." Other bills introduced at this time looked to regulating county courts, protested bills of exchange, possessions, "sailor's wracks," acts of oblivion, "Scoulds,"

seizure of goods, limits of courts in criminal cases, marriage by magistrates, executors and administrators, limiting the credit public-houses may give to twenty shillings, protecting landmarks, ear-marks, and cattle-brands. Also bills requiring hogs to be ringed, coroners to be appointed in each county, regulating wages of servants without indenture, bail-bonds, and summoning grand juries. There was offered likewise a law of weights, and a bill fixing the punish-

ment for manslaughter, and it was ordered that the seal of Philadelphia County be the anchor, of Bucks a tree and vine, of Chester a plow, of New Castle a castle, of Kent three ears of Indian corn, and of Sussex a sheaf of wheat. The pay of Councilors was fixed at three shillings, and Assemblymen two shillings sixpence per diem, the expenses of government to be met by a land-tax. On April 2, 1683, "the Great Charter of this province was this night read, signed, sealed and delivered by y^e Gov^r to y^e inhabitants, and received by y^e hands of James Harrison and y^e Speaker, who were ordered to return y^e old one wth y^e hearty thanks of y^e whole house, which accordingly they did." Then on the 3d, after passing some minor laws, the chief of which was to prohibit the importation of felons, the Assembly adjourned "till such time as the Governor and Provincial Council shall have occasion for them."

SEAL OF PHILADELPHIA IN 1683.

The new charter, Constitution, bill of settlement, or frame of government was modeled upon the plan originally proposed by Penn. It retained in the hands of Governor and Council the authority to originate bills, but in other respects it deviated materially from the conditions of the old charter. The

Council was to consist of three, and the General Assembly of six members from each county. The members of Council served one, two, and three years respectively. A provision was introduced looking to increase of representation in proportion to the growth of population. The whole legislative body was to be called the General Assembly, and all bills becoming acts were to be called acts of such Assembly, and the lower house was not to adjourn until it had acted upon the business before it. It was, moreover, distinctly implied in the language of the charter that some of the rights and prerogatives enjoyed by Penn under it were to cease with his life; they were concessions to his character and his labors for the province, and not a final surrender of freemen's rights. In return Penn confirmed all in all their liberties, and pledged himself to insure to all the inhabitants of the province the quiet possession and peaceable enjoyment of their lands and estates.

The Governor and Council were in what may be called continuous session, since the charter required that the Governor or his deputy shall always preside in the Provincial Council, "and that he shall at no time therein perform any act of State whatsoever that shall or may relate unto the justice, trade, treasury, or safety of the province and territories aforesaid but by and with the advice and consent of the Provincial Council thereof." The Assembly, however, did not meet again until October 24th, when, after a two days' session, devoted to business legislation and providing that country produce could be taken in lieu of currency, it adjourned. The business before the Council during 1683 was mainly of a routine character. The people and officials were too busily occupied in outdoor work—building, planting, surveying, laying off manors and townships and treating with Indians—to have time to spare for records and debates. Governor William Penn exercised his authority and sat as president of Council. The great number of ships coming and going, with their gangs of sailors, caused a good deal of rioting and disorder in the public-houses that had sprung up at several points on the water-front of the young city; complaints were frequent, and the Governor and Council were much put to it for means to arrest such demoralizing proceedings. Constables were appointed, hours set for early closing, and finally the Governor had to issue his proclamation against the offending taverns and ordinaries. Servants also gave trouble in various ways, so that finally masters were authorized to flog them for slight offenses, and in case they ran away five days were ordered to be added to their term of service for every day's absence without leave. Some of the sailors in port also combined with other ill-conditioned persons to coin counterfeit money and put it in circulation. Small change was so scarce and so much sought after that these scamps were shortly enabled to dispose of a large quantity of their spurious coin before being apprehended. This coin was rather de-

based than counterfeit. R. Felton testified that he received of the chief offender "24 lbs. of Bar'd Silver to Quine for him;" this was "alloyed" as heavily as it would bear with copper and "quined" into "Spanish bitts and Boston money" (Massachusetts "pine-tree shillings," first coined in 1652, and the old Spanish piece or "levy," eleven-penny bit, the coin which is the basis of the "piece-of-eight" or dollar, and which perhaps has had a wider circulation than any other coin ever known). These spurious coins, which the counterfeiters stoutly maintained were as good as the Spanish debased coin then in circulation, were passed upon some leading business men. Griffith Jones took eight pounds in the new "bits," and several other persons were victimized, so that Penn had to issue another proclamation. The parties were tried before a jury and convicted. Penn sentenced the ringleader to redeem all his false money, pay a fine of £40, and give security for good conduct. Another was fined £10, and a third, who turned State's evidence, got off with an hour in the stocks. There was also a trial of two poor wretches, both Swedes, for witchcraft. The jury, however, rendered a verdict of guilty of the "common fame of witches, but not guilty as indicted;" the women's husbands went security for them, and we hear no more of witchcraft in Philadelphia, nor do the names of Margaret Mattson and Gethro Hendrickson appear again in the police annals. While on this subject we might as well refer to a singular record in the Council minutes for May 13, 1684, as illustrative of the character and methods of Penn, and what he meant by creating the office of peacemaker or arbitrator, who might stand between the people and the courts and save them the expenses and heart-burnings of litigation. "Andrew Johnson, *Pl.*, Hance (Hans) Peterson, *Defl.* There being a Difference depending between them, the Gov^r & Council advised them to shake hands, and to forgive One another; and Ordered that they should Enter in bonds for fifty pounds apiece for their good abearance; w^{ch} accordingly they did. *It was also Ordered that the Records of Court concerning that Business should be burnt.*" This simple, naked record of how the differences between Jan Jansen and Hans Petersen were settled is one of the most impressive examples of practical ethics applied to jurisprudence that was ever known.

The founders of Philadelphia would not let the first year of its existence slip away before they had made some provision for education, in accordance with the terms of the charter and the spirit and desire of the people. Accordingly we read that at a meeting of the Council held in Philadelphia y^e 26th of 10th month,—the day after Christmas,—1683, "the Gov^r and Prov^ll Council having taken into their Serious Consideration the great Necessity there is of a School Master for y^e Instruction & Sober Education of Youth in the towne of Philadelphia, Sent for Enock flower, an Inhabitant of said Towne, who for twenty Year

past hath been exercised in that care and Employ^{mt} in England, to whom having Communicated their Minds, he Embraced it upon these following Termes: to Learn to read English 4s by the Quarter, to Learn to read and write 6s by y^e Quarter, to learn to read, Write and Cast acc^{ts} 8s by y^e Quarter; for Boarding a Schollar, that is to say, dyet, Washing, Lodging & Scooling, Tenn pounds for one whole year." This was not a high scale of charges, but it is to be hoped that the spelling of the above record was not copied from Enock Flower's own prospectus.

CHAPTER X.

RAPID GROWTH OF THE PROVINCE AND CITY —
"ASYLUM FOR THE OPPRESSED OF ALL NA-
TIONS"—MOVEMENTS OF WILLIAM PENN, 1684-
1699.

WHEN Isaac Norris the second, then Speaker of the Pennsylvania Assembly, sent an order to England, in 1751, for a bell for the State-House of Pennsylvania, he directed the following words to be inscribed around it, "well shaped, in large letters": "By order of the Assembly of the Province of Pennsylvania, for the State House in the City of Philadelphia, 1752," and underneath: "Proclaim Liberty throughout the land, unto all the inhabitants thereof." (Levit. xxv. 10.) This was that old "Independence Bell," which, recast to remedy a flaw, did proclaim liberty throughout the land in announcing, on July 4, 1776, that the Declaration of Independence was signed. Mr. Norris was not prophesying, however, when he ordered the inscription and text. He was simply announcing what he and his fellow-citizens understood to be Penn's policy and that of his successors in the government of the province from the hour of its foundation,—entire freedom of conscience and liberty of worship to all (Christian) sects, and an asylum for the oppressed of all nations. The general knowledge throughout Europe that Penn had adopted such a policy as the groundwork of his Constitution, and the general confidence that he had both the ability and the will to maintain it in his province, was one chief cause of the rapid influx of persons and families of all nationalities to the shores of the Delaware. They came for ease from many cares, for relief from great and petty tyrannies; they came to settle and make themselves homes, rather than to trade and get money. Thus the province had from the first a heterogeneous population, and was saved from falling into the grooves of a dead and dull uniformity such as would have been its fate if it had been settled exclusively by English Quakers. Upon an indisputably strong and established warp of simple and ingenuous Swedish peasants and farmers, who constituted the body of the original settlers, and who have left a decided and durable impress upon the character of the people of

Eastern Pennsylvania and Delaware, was woven a parti-colored woof of many nationalities, sects, opinions, and habits, toned down, yet not reduced to absolute sameness, by the predominant drab of the English Society of Friends. Welsh, Irish, Scotch-Irish, Germans, Switzers, French, Dutch and Belgians, Quakers, Pietists, Mennonites, Tunkers, Presbyterians, Huguenots, Calvinists, with runaways of no religion whatever, and Englishmen of the Established Church, were all to be found among the permanent settlers of the province prior to or just after the end of the seventeenth century, and though it took these races and faiths full fifty years to coalesce, and though in some parts of Pennsylvania society still lies, as it were, in distinct strata, there can be no doubt that the province owed much of its immediate prosperity and its energetic early growth to the variety of the people of different habits and opinions who composed its first settlers. Among the earliest political measures taken by Penn, the first law in fact of his first Legislature at Upland, was one establishing a general plan of naturalization for all "foreigners," among whom he curiously classed the Swedes and Dutch, who were on the spot so long before him.

This act was understood and appreciated in connection with the ordinance establishing freedom of conscience. As early as Sept. 10, 1683, we find Penn naturalizing eight persons of French names,—Capt. Gabriel Rappe, Mr. Andrew Learrin, Andrew Inbert, Peter Meinardeau Uslee, Lees Cosard, Nich. Ribouleau, Jacob Raquier, and Louis Boumat,—who were either Walloons or French Huguenots. But the proprietary had opened the way for a still larger immigration, taking advantage of the disturbed condition of Europe and the horrible persecutions to which "reformers" in every sect, Catholic and Protestant, were then subjected. Louis XIV. was even then preparing for the revocation of the Edict of Nantes, which was consummated two years later (1685), costing his kingdom half a million of its most peaceable, industrious, and skillful inhabitants. The Catholics and Protestants equally persecuted the non-resisting sects of the Anabaptists, and in England and Wales the Quakers knew no rest from the pursuit of the sheriff and the constable. But while the English and Welsh Quakers had to dread the costs of the præmunire, and were fined, whipped, cropped, branded, and imprisoned for the crime of worshipping God in their own way, the still more innocent sects of the Continent, the descendants of the Waldenses, the pacific Quietists of Switzerland, Holland, and the German Episcopal sees, who had seceded from the ranks and protested against the terrible madness of the Anabaptists of Munster, were dealt with in a much more summary fashion. They were hung, they were broken on the wheel, they were disemboweled, they were burnt at the stake, men, women, and children, with their tongues riveted to their jaws to prevent them from testifying aloud in

the crisis and agony of their martyrdom. The great book of the Mennonites after the Bible, their "golden legend," gives the names of the persons and reports minutely the deaths of over a thousand of these innocent sufferers for opinion's sake, these victims of man's inhumanity to man.¹

Penn and his co-religionists knew of these distresses of the defenseless brethren, both by hearsay and experience. The Quakers had made some converts in Holland and the Palatinate, and they maintained a correspondence with many of the fugitive and hidden congregations of Tunkers and Mennonites in those sections. In 1677, after Penn had secured an interest in the Jersey plantations, and when he was probably already looking to the colonization of Pennsylvania, he crossed the Channel, in company with George Fox, Robert Barclay, George Keith, and others, to Brill, in Holland, and made an extensive proselyting tour in Holland and Germany. There were Quaker congregations in Rotterdam, Amsterdam, Leyden, and elsewhere; their preachers were protected by the reigning prince of the Palatine Electorate, and at Kreisheim (Cresheim), near Worms, a good many Mennonites had become Quakers. The "new brood of fanatical spirits," as they were called, were hunted and persecuted as much as those less recent in their origin. Indeed, there was but little difference between the Quakers and the Tunkers and the disciples of Simon Menno, so that Barclay said that he was compelled to regard Fox "as the unconscious exponent of the doctrine, practice, and discipline of the ancient and stricter party of the Dutch Mennonites." The two sects agreed respecting all the salient traits of Christian life and duty. "Both laid the greatest stress on inward piety and a godly, humble life, considered all strife and warfare as unchristian, scrupulously abstained from

making oath, declared against a paid ministry, exercised through their meetings a strict discipline over their members, favored silent prayer, were opposed to infant baptism, and looked upon the established churches as unhallowed vessels of the divine wrath."²

It was to these people that Penn and his fellow-apostles directed their mission. They had found some sort of toleration at places in the Netherlands, where they were treated much more liberally than in Switzerland and Germany. True, there were severe laws against them on the statute books, but these were not rigidly enforced, and though the mob pelted and abused them sometimes, it was done rather in sport than anger, and perhaps because the Quakers brought it on themselves, for in spite of their non-resistance they had a pertinacious fashion of going into "steeple-houses"

² See article on Penn's Travels, by Prof. Seidensticker, in *Pennsylvania Magazine*, vol. II. No. 3. The Mennonites bear the same relation to the wild John of Leyden and the Anabaptists of Munster, his followers, that the disciples of George Fox bear to the English Puritans. But while the mild asceticism of the Quakers led them to formalism and a quiet sort of practical self-denial and economy, the tendencies of the German sectaries, under the influence of a deeper sensibility, took the direction of mysticism. The testimony of the "inner spirit" bore a different fruit according to the race in whose bosom it shone. Fox was the natural predecessor of the shrewd and worldly wise "plain" farmer and merchant who built up Philadelphia; but the followers of Menno, the believers in the inspiration of Tauler, drifted in an equally natural way to the communities of the Tunkers and the monasteries of Beissel and others. The difference is still strongly marked, as any one may see who compares the proceedings of a Tunker, Mennonite, or Amish congregation in Pennsylvania or Ohio with the conduct of a Quaker meeting in Philadelphia. The Mennonites claim, through their own historians, to be lineally and theologically descended from the Waldenses; their enemies have reproached them with being an outgrowth of the Anabaptists of Munster, who carried Luther's doctrines to the extreme of excess and tried to promulgate them with fire and sword, outrage and debauchery. Doubtless both sides are true; the Mennonites are in some measure descended from the Waldenses through the Walloons; they are also in a great measure an offshoot from the Anabaptists. The radical difference between them was in their understanding of what is meant by "Christ's kingdom on earth," and how to bring it about. The followers of John of Leyden, Thomas Munzer, Bernhard Rothman, and Jean Matthis preached the sword and torch doctrine to the down-trodden peasantry of Europe, whose sufferings made them only too willing to listen and believe. On the other hand, Menno Simon preached nothing but prayer, humility, and non-resistance. John of Leyden was torn to pieces with red-hot pliers, his bones set aloft in an iron cage, and his sect died with him; but the Mennonites, next to the Jews, are the most widely distributed religious denomination. Menno Simon, founder of this sect, was a native of Witmarsum, in Friesland, born in 1492, educated for the priesthood, and in 1536 abandoned the Catholic Church and began to preach to a congregation of his own, calling themselves the *Dooptgezinde*, or Relaptizers. He taught the inefficacy of infant baptism or any other baptism without repentance, contended for the complete severance of Church and State, and absolute religious liberty. His followers were enjoined not to take the sword and not to resist; they swore not at all; practiced feet-washing and love-feasts; assumed plain dress and simple manners; and punished derelict brethren by putting them under the ban of avoidance and non-intercourse. No one could deny the purity of their lives, their thrift, frugality, and homely virtues. It is strange that so harmless a people should have been so bitterly persecuted; Menno Simon was hunted like a wild beast. One of their historians says of the sect that "As the true pilgrims upon earth, going from place to place in the hope to find quiet and rest, appear the Mennonites." Within the last ten years we have witnessed the migration of many congregations of these people all the way from the banks of the Volga to Kansas and Minnesota rather than violate their tenet against bearing arms.—*Cf.* papers in the *Pennsylvania Magazine* by Dr. De Hoop Scheffer, of the College at Amsterdam, Prof. Oswald Seidensticker, Mr. S. W. Pennypacker, etc.

¹ *Der Blutige Schau-platz oder Martyrer Spiegel* ("The Bloody Spectacle, or Martyrs' Mirror"), an immense folio of fifteen hundred pages, in which the sufferings of the Mennonites and Tunkers are chronicled, is one of the scarcest and greatest books ever printed in this country. It was originally published in Europe in Dutch, passing through many editions, each larger than the preceding one, from the earliest, *Het offer der Heeren*, in 1582, to the handsome folios of 1685, with over one hundred copper-plates by Jan Luyken. In 1745, when the French and Indian war troubles began to agitate the people of Pennsylvania, the elders among the Tunker and Mennonite sects feared lest their young folks should be led astray. To fortify them in their principles as "the defenseless people," it was resolved to have a German translation made and printed of the Martyr's Mirror. The work was intrusted to the cellmate community of Tunker mystics, who had their monastery at Ephrata, in Lancaster County, under the management of their founder and *Vorstehet*, Conrad Beissel, or *Vater Friedsam*, as he was called in his retreat. The translation was made, and the work supervised by the accomplished Peter Müller, the prior of the convent and its leading spirit. The paper was made at Rittenhouse's mill, and the book was printed on a hand-press belonging to the convent, where also the binding was done. The work required the labor of fifteen brothers for three years, and it is by long odds the most remarkable book among early American publications. At the time of the battle of Germantown, cartridge-paper having given out, two wagon-loads of the unbound sheets of the Martyrs' Mirror were seized and made into cartridges for the use of Washington's army.—*Cf.* article by S. W. Pennypacker in *Pennsylvania Magazine*, vol. v. No. 3, 276; "Pennsylvania Dutch and other Essays," Philadelphia, 1872; Rupp's "Christian Denominations," etc.

with their hats on and "testifying" where they had no business to open their lips. Still the separatists did not have an easy time of it, and they looked towards America long before Penn came here. The Labadists under Sluyter and Denkers came to Maryland and founded a community on the Bohemia Manor about 1680. A colony of twenty-five Mennonites had still earlier (in 1662) settled at Horekills, on the lower Delaware, under the leadership of Pieter Cornelis Plockhoy, of Zierik Zee, but they were plundered and driven out two years later by Sir Robert Carr, who took all their property, "even to a naile."¹ These Mennonites and other separatist sects were therefore as well acquainted with the promises held out by America as Penn could be. There were, moreover, other affinities and attractions which brought the German and Dutch Reformers into close connection with the Quakers. They were not only both of them in the ranks of a revolt against theology and orthodoxy and scholasticism, but they had also a common meeting-ground in the concordance of their faith in the supernatural and their doctrine of the inner life. The first Quakers had learned from Jacob Böhme and Tauler a great deal of what they preached to English plowboys and tradesmen, while the Philadelphia associations of Pordage and Jane Leadley found acceptance with the German mystics. German Quakers, indeed, defended themselves in the courts upon the ground that they discovered in the sermons of Fox and the apologies of Barclay the very doctrines they had been taught to reverence in the writings of Johann Tauler and Thomas à Kempis. The Quakers found much to admire and to imitate in the teachings of the Pietist Jacob Spener, of Jean de Labadie, and the learned Anna Maria Schurman. Indeed, part of Penn's mission in Germany was to see Elizabeth, granddaughter of King James I. of England, who was then Abbess of Herford, in Westphalia, a convert of Spener's, and the protector of him, Schurman, and the Labadists. She had corresponded with Penn and Fox, and they were eager to obtain her protection for the Quakers, and to convert her to their faith.

Fox and his associates held a great meeting of Dutch Quakers in Amsterdam, and then Penn went forward to visit his Stuart princess in her abbey of Herwerden. She was a singular character, daughter of Frederick V., Palatine of the Rhine, who is known in Bohemian annals as the "Winter King," because after reigning a part of the year as elected king of Bohemia, he was defeated in the battle of Prague, and lost not only his new kingdom, but his ancient principality and castle of Heidelberg. Elizabeth had a serious, not to say masculine turn of mind. She took to mathematics, and established a correspondence with Descartes, the philosopher. She was offered the hand

of the king of Poland if she would become a Catholic, but spurned the offer, and finally, while misfortune darkened around her house and family, she gave herself up to pious contemplation in Herwerden. Penn and his sermons made a powerful impression on the princess, but she still did not join his society. He and Barclay then went on to Frankfort, where they were well received by various sectaries. Their teachings and plans must have strongly prepossessed the leading men in these societies, for in the very year in which Penn sailed for his new province a German company, known as the Frankfort Company, and from which Frankfort Village takes its name, was formed. Of the eight original stockholders of this company in 1682 nearly all were mystics or Mennonites, or Quaker converts made by Penn during his visit in 1677. Jacob Van de Walle was the gentleman at whose house Penn met the Pietist Johanna Eleonora von Merlau, his first convert, both of them being attendants of Spener's *collegia pietatis*; Dr. J. J. Schütz, another stockholder, was also one of the Pietists, and a friend of Fräulein von Merlau; J. W. Weberfeldt was a disciple of Böhme; Dr. Von Maesticht was Penn's Duisburg friend; Dr. Von Wylich, one of Spener's college, and the two members from Lubeck seem to have been Quakers.² Pastorius, a member of the reorganized Frankfort Company in 1686, says in his autographic memoir (which is still in manuscript), "Upon my return to Frankfort in 1682 I was glad to enjoy the company of my former acquaintances and Christian friends, assembled together in a house called the Saalhof, . . . who sometimes made mention of William Penn, of Pennsylvania, and showed me letters from Benjamin Furly, also a printed relation concerning said province; finally, the whole secret could not be withholden from me that they had purchased twenty-five thousand acres of land in this remote part of the world. Some of them entirely resolved to transport themselves, families and all. This begat such a desire in my soul to continue in their society, and with them to lead a quiet, godly, and honest life in a howling wilderness, that by several letters I requested of my father his consent," etc. We have gone into these particulars with something like detail because justice to the memory of William Penn requires it to be shown conclusively that he himself gave the first impulse to the large and important immigration into Pennsylvania from Germany. Pastorius founded the first settlement at Germantown, and Pastorius would not have turned his eyes towards America but for Penn's powerful influence upon his converts and sympathizers in Germany. From this source has Pennsylvania derived many of her best citizens, not simply that honest rural population who build big barns, fatten large pigs, and sell incomparable butter, while eating four meals a day with great regularity, but the men

¹ Pennypacker, Settlement of Germantown, in *Penna. Magazine*, vol. iv. No. 1.

² Seidensticker, Penn's Travels, *Penna. Magazine*, vol. ii. No. 3.

of force and intelligence likewise, the people who rule the State by the combined weight of intellect and integrity of purpose. Pastorius was one of the best scholars of his day; Rittenhuysen built the first paper-mill in the colonies, and his son was one of the greatest astronomers who ever lived; Saur's Bible was printed in German thirty-nine years before any English edition of the sacred volume had been issued on this continent, and of the merits of the great "Martyrs' Mirror" of Ephrata we have already spoken. The Speaker of the first House of Representatives under the Federal Constitution (Frederick A. Muhlenberg) was of German descent, and so have been seven of the Governors of Pennsylvania. Indeed, there are few Pennsylvanians whose families have lived in the State for three generations who cannot trace back some of their ancestors to immigrants from the borders of the Rhine. William Penn brought these settlers here almost as directly as he brought over his own English Quakers.

The first impulse to the wave of German immigration was received at Crefeld, a town on the Rhine, close to the Netherland country. Crefeld had an humble population of weavers and craftsmen, among them Quakers and Mennonites who had endured many persecutions. Penn visited and comforted these lowly people in 1677 during his visit to Germany, and they never forgot his ministrations. When the news of his scheme for settling the newly acquired province reached them, they at once prepared to send some of their number to recruit his forces. On March 10, 1682,¹ Penn conveyed to Jacob Telner and Jan Streypers, merchants, the first of Crefeld, the second of a near-by village, and to Dirck Sipman, also of Crefeld, deeds for five thousand acres of land to each, to be laid out in Pennsylvania. They were thus in the class of "first purchasers," entitled to city lots, which indeed they received. Telner knew what he was buying, because he had already been in America. In November, 1682, Pastorius heard of the Frankfort Company; he took an active part in its concerns, went to London as its agent, and there, in May and June, 1683, bought a tract of fifteen thousand acres for it, afterwards increasing the quantity of land to twenty-five thousand acres. The eight original purchasers were Van de Walle, Dr. J. J. Schütz, J. W. Ueberfeldt, Daniel Bahagel, Caspar Merian, George Strauss, Abraham Hosevoet, and Jan Laurens, the latter an intimate friend of Telner's. When the company was reorganized in November, 1686, the stockholders were Pastorius, Johanna von Merlau, now the wife of Dr. J. W. Peterson, Dr. Garhard von Maestricht, Dr. Thomas von Wylich, Johannes Lebrun, Balthasar Jawert, and Dr. Johannes Kemler, nearly all of them Pietists and followers of Spener. Pastorius was the only one of these members who came

to America; nor, indeed, does the Frankfort Company seem to have contributed any of the first immigrants to Pennsylvania from Germany. Pastorius, however, went out before the Crefeld colony, on their behalf, in part, as much as for the Frankfort Company, and he is entitled to the credit of being the founder of Germantown, or, as he preferred to call it, *Germanopolis*.

This remarkable man, Francis Daniel Pastorius, was born in Somerhausen, Germany, Sept. 26, 1651, and died Sept. 27, 1719. He came of a good family, of official standing, and he himself was well educated at the University of Strasburg, the high school of Basle, and the law-school of Jena. He was well acquainted with the classical languages, and such modern tongues as French, Dutch, English, and Italian. He began the practice of law in Frankfort, then traveled for two years in Holland, England, France, Switzerland, and his own country, returning to Frankfort just in time to hear of Penn's new-born province, and put himself at the head of the German movement towards it. He sailed from London for Pennsylvania on June 10, 1683, and reached Philadelphia August 20th. In 1688 he married, becoming the father of two sons. His learning, social position, and administrative ability easily made him conspicuous in Germantown. He wrote much, and had much to do in promoting the cause of education, being himself a school-teacher as well as poet, historian, and humorist.

On June 11, 1683, Penn sold one thousand acres of land each to Govert Remke, Lenart Arets, and Jacob Isaacs van Bebber, a baker, all of Crefeld. These joined forces with Telner, Streypers, and Sipman, and arranged to settle a colony in Pennsylvania, the condition of their purchase from Penn being, indeed, that they should settle a certain number of families on their land within a specified time. A colony of thirteen families, thirty-three persons in all, was got together, including Van Bebber, Streypers, Arets, three Op den Graafs, with Thomas Kunders, Reynier Tyson, Jan Seimans, Jan Lensen, Peter Keurlis, Johannes Bleikers, Jan Lucken, and Abraham Tunes, nearly all connected with one another or with the purchasers of the tract. They went to Rotterdam, and after some delays sailed from London in the ship "Concord" on July 24, 1683, in company with Penn's friend, James Claypoole, his family, and the settlers he was taking out. The greater part of the purchasers as well as of the settlers were Mennonites, "religious good people," as Richard Townshend, the Quaker preacher, who came over in the "Welcome," denominates them. Several of them were weavers by trade.

The pioneers had a pleasant voyage. "The blessing of the Lord did attend us," says Claypoole; and Johannes Bleikers had one more in his family when they reached Philadelphia on October 6th than there were when the ship sailed. October 12th Pastorius

¹ The date has been challenged, but Mr. Pennypacker, in his paper on the settlement of Germantown, *Penna. Mag.*, vol. iv. No. 1, furnishes conclusive evidence to establish it.

secured a warrant for six thousand acres of land, of which five thousand three hundred and twenty acres were laid off by Thomas Fairman into fourteen lots. These lots were drawn for by the adventurers on October 25th, the scene of the division being the cave occupied by Pastorius. The settlers were reinforced by Jurian Hartsfelder, who had been sheriff under Andross and received from him a patent for land. They at once began to dig cellars and erect their huts for the winter, naturally having to endure many hardships and privations. In the words of Pastorius, "it could not be described, nor would it be believed by coming generations in what want and need and with what Christian contentment and persistent industry this German township started." Some other immigrants arrived, including Telner, who remained on the spot for thirteen years, the central figure of the emigration. He was a merchant in extensive business in Amsterdam, and his widespread mercantile connections gave him great facilities in promoting the work of colonization. Mennonite as he was, we find him going on a proselyting tour in New England with a Quaker preacher. His chief estate in Pennsylvania was on the Skippack, and was long called "Telner's township." Peter Schumacher, of Kriesheim, founder of a leading family, came over and settled in Germantown in 1685; the Kassels in 1686, in which year also a Quaker meeting-house was built, used both by the Friends and the Mennonites. Pastorius had before this constructed a house for himself on the city lot drawn by him, but he could not afford anything but oiled paper for his windows, and over his door he placed the inscription: "*Parva domus, amica bonis, procul este profani*,"—the reading of which tickled Penn's sense of humor. Streypers seems to have boasted of the fact that he had two pair of leather breeches, two leather doublets, stockings, and a new hat. In 1684, Cornelis Bom, one of Telner's first party, kept a notion-shop, and increased his gains by peddling among the Indians. He paid neither rent, taxes, nor excise, and owned a negro whom he had bought. His pigs and poultry multiplied rapidly; he owned horse and cow, and reported himself and wife to be "in good spirits." Bom's daughter married Anthony Morris, and from her are descended the distinguished Pennsylvania family bearing that name. William Rittinghuysen, who came over in 1687, was a Mennonite preacher, but his family had long followed paper-making, and in 1690 William erected on the Wissahickon that paper-mill which supplied paper to William Bradford, the earliest printer in the Middle Colonies.

Dirck Keyser came over and settled in Germantown in 1688, a descendant of that Leonard Keyser, said to be one of the Waldenses, who was burned to death as a Mennonite at Scharding in 1527. In 1688 also we find Pastorius, the Op den Graaffs (now Updegraffs), and Gerhardt Hendricks sending to the Friends' meeting-house the first public protest ever

made on this continent against the holding of slaves, or, as they uncompromisingly styled it, "the traffick of men's body." They compare negro slavery to slavery under Turkish pirates, and cannot see that one is better than the other. "There is a saying that we shall doe to all men licke as we will be done ourselves; making no difference of what generation, descent, or Colour they are. And those who steal or robb men, and those who buy or purchase them, are they not all alike? *Here is liberty of Conscience, wch^{ch} is right and reasonable; here ought to be likewise liberty of y^e body, except of evil doers, wch^{ch} is another case. . . .* In Europe there are many oppressed for Conscience sake; and here there are those oppressed w^{ch} are of a black Colour." This memorial is said to be in the handwriting of Pastorius. At the date when it was written New England was doing a handsome business in the Guinea trade, the slave depots being located chiefly at Newport, where the gangs and "coffles" for the Southern market were made up, and Dr. Samuel Hopkins, the earliest New Englander to protest formally and earnestly against this "traffick of men's body," was not born until thirty-nine years later. All honor therefore to these honest first settlers of Germantown, who asked categorically "Have these negers not as much right to fight for their freedom as you have to keep them slaves?" and asked further to be informed what right Christians have to maintain slavery, "to the end we shall be satisfied in this point, and satisfie likewise our good friends and acquaintances in our natif country, to whom it is a terrour or fairfull thing that men should be handeld so in Pensilvania." The Quakers were embarrassed by the memorial and its blunt style of interrogatory. It was submitted to the Monthly Meeting at Dublin township, "inspected," and found so "weighty" that it was passed on to the Philadelphia Quarterly Meeting, which "recommended" it to the Yearly Meeting at Burlington, which adjudged it "not to be so proper for this meeting to give a Positive Judgment in the case, It having so General a Relation to many other Parts, and, therefore, at present they forbore it." So the matter slept.

The German town grew, sent out offshoots, had its representatives in the Assembly,—Pastorius and Abraham Opden Graeff,—was incorporated as a borough in 1691, with Pastorius for bailiff, Telner and others burgesses, etc., and had power to hold a court and market, lay fines, and enact ordinances. The people were called together once a year and had the laws read to them, but the little town had great trouble in finding officers willing to serve. As Löher said, "they would do nothing but work and pray, and their mild conscience made them opposed to the swearing of oaths and courts, and would not suffer them to use harsh weapons against thieves and trespassers." Work, however, they would, and did with great industry and great success. Their finelinen was highly esteemed, and so many of them were spinners and

weavers that Pastorius, in devising a town seal, selected a trefoil of clover, one leaf bearing a vine, one a stalk of flax, the third a weaver's spool, with the motto, "*Vinum, Linum, et Texturum.*" Was ever a happier community known in the world's history? Names of new settlers are noticeable every year,—Jan Jansen, next printer after Bradford, whose imprint is now worth its weight in gold, Kuster, Ruter, De la Plaine, Pettinger, etc. In 1694 there came to Germantown an old man and his wife. He was blind and poor, and his name was Cornelis Plockhoy, the founder and last survivor of the Mennonite colony broken up thirty years before at the Horekills by Sir Robert Carr. The good people of Germantown took pity on him. They gave him a few rods of ground for habitation and garden, built him a house, planted a tree before it, and collected a free-will offering for the support of the aged wanderers, who had found a home at last. What a sweet peace seems to pervade these simple annals of the earliest German settlements in Pennsylvania. No wonder the pastoral pipe of John G. Whittier gave forth music of its own accord in the presence of such a natural idyl. Alas, however, for the little span of time during which such dreams retain their brightness. In 1701, before even the school-house took its place in the quiet community, Germantown was building a prison, and repairing the stocks with a new and stronger framework.

The Welsh, some of whom came over in the class of first purchasers, began before Penn's return to England to come more collectively, and to establish separate plantations of their own. They landed chiefly at Chester in the beginning, and established themselves at Merion and Radnor and Haverford. Their names still abound, not only in the sections west of Schuylkill but also in many parts of Philadelphia and Bucks Counties. John ap Bevan, a pillar of Haverford Meeting in 1683, Davies, David, Edwards, Ellis (also a settler in Haverford in 1683), Evan, Evans, Harry, Hayes, Hent, Howell (of Castlebigt, Pembrokeshire, came over in 1682), Hugh, Humphrey, all early settlers at Radnor, Haverford, or Merion. So with the Jameses, Jarmans, Merediths, Jenkinsons, Lewises, Lloyds (of whom Thomas, the first comer, was Penn's Deputy Governor, keeper of the seals, and chief justice), Miles, Morgan, Morris, Powell, Price, Pugh, Rutherford, Rees, Richard, Sharpus, etc. The Welsh were among the earliest purchasers of large tracts of land from Penn, and they have given permanent names to many localities. They settled all the high ground between Darby Creek and the Schuylkill, and their natural clannishness made them desire to seat themselves close to one another. This was the origin of the "barony" called the "Welsh tract," containing forty thousand acres, surveyed by Holme, under instructions from Penn dated at Pennsbury, 13th of March, 1684. Not far behind the Welsh came the Scotch-Irish, whose chief

immigration, however, does not fall within the period now being described.

Penn, as has been seen, was transacting business at Pennsbury in March, 1684. He had been long parted from his family, and his affairs in England were not in a good condition. He had done much for his province and its chief city on the spot—the site along the Delaware which was barely inhabited in 1682—now contained three hundred houses, and the province had a population of seven thousand. He now thought it good for him to return for a season to England, especially as there was the place in which he might more safely hope to effect a settlement of the vexatious boundary disputes with Lord Baltimore, whose agents had invaded the lower counties, built a fort within five miles of New Castle, and were collecting taxes and rents and dispossessing tenants in that section. Calvert himself had gone to England in March, and Penn wrote to the Duke of York that he meant to follow him as fast as he could. Accordingly he prepared to leave the province, reorganizing the church discipline of his co-religionaries, and looking after the fiscal system of his civil government in a practical and able way. To the Friends in the province he said, in a circular letter addressed to them, that God had a work for them to do, and he wished them to be faithful to the measure of grace received. "Have a care of cumber," he entreated them, "and the love and care of the world. It is the temptation that lieth nearest to those who are redeemed from looseness, or not addicted to it." He wanted them to be watchful over themselves, helpful to one another, circumspect and zealous. The eye of the Lord was upon them, the eye of the world also, to see "how we live, how we rule, and how we obey; and joy would it be to some to see us halt, hear evil tidings of our proceedings, as it would be a heavy and an unspeakable grief to those that wish well to our Zion." The Lord had brought them there, he said, had tried them with liberty and with power; precious opportunities were in their hands, and they should not lose these through perversity, but sanctify God in their heart, so that no enchantment might prevail against Jacob nor divination against Israel; "but your tents shall be goodly and your dwellings glorious, which is the daily humble supplication of my soul to God and your God, and to my Father and your Father, who are, with unfeigned love in that lasting relation, your, tender, faithful friend and brother."

The ketch "Endeavor," just arrived from England with letters and dispatches, was got ready to carry the Governor back again. He commissioned the Provincial Council to act in his stead while he was away, intrusting the great seal to Thomas Lloyd, the president. Nicholas More, William Welch, William Wood, Robert Turner, and John Eckly were made provincial judges for two years; Markham was secretary of Council, and James Harrison was steward of the house and manor of Pennsbury. He em-

barked at and sailed from Philadelphia Aug. 12, 1684, sending from on board the vessel ere she sailed a final letter of parting to Lloyd, Claypoole, Simcock, Christopher Taylor, and James Harrison, in which he expresses the deepest affection for those faithful friends, and sends them his prayers and blessings. They had many responsibilities upon their shoulders, and he hoped they would do their duty. The letter concluded with a fervent prayer for Philadelphia, "the virgin settlement of the province, named before thou wert born." Penn arrived in England on the 3d of October, and did not again see his virgin city and his beloved province until 1699. The causes that detained him, the cares that consumed him during that long divorce, have been elsewhere detailed.

Penn had given a great deal of attention and time to the proper and symmetrical division of his territories. His sense of the value of real estate was strong, and his grasp of property was firm, as the great number of manors and lots reserved for himself and family proves. The manor of Springettsbury lay between Vine Street and Pegg's Run, from Delaware to Schuylkill, widening at Ridge road, and contained eighteen hundred and thirty acres. It was clipped and cut down by grants and sales, however, until, in the final partition of Penn's estates in 1787, only one-tenth part of the original tract remained. Nicholas More, president of the Free Society of Traders, and one of Penn's judges, was the first purchaser who had a manor granted to him. This was a tract of 9815 acres on a branch of the Poquessing Creek, granted in November, 1682. It was called the manor and township of Moreland, and lay partly in Bucks County. Mountjoy, another manor, was laid out in 1683 for Penn's daughter Letitia. It contained 7800 acres, and extended from the Welsh tract to the Schuylkill. It was afterwards included in Upper Merion township. Opposite Mountjoy, on the east side of the Schuylkill, was the manor of Williamstadt, granted to William Penn, Jr., who sold it, during his brief and debauched sojourn in the province, to Isaac Norris. It became the township of Norriton. Springfield Manor, laid out for Gulielma Maria Penn, was northeast of Germantown; Gilbert's Manor, one of Penn's reservations, was on east side of Schuylkill, over against the present town of Phoenixville; above Mountjoy was William Lowther's manor of Billton, while Penn had, besides, Highlands and Pennsbury Manors, in Bucks, and Rockland Manor, in New Castle County, between Naaman's and Brandywine Creeks.¹

The township of Byberry was in the northeast of Philadelphia County, bounded by Poquessing Creek. This was settled by the Waltons before Penn came over, some of the "Welcome's" passengers locating in it likewise. West and northwest of Byberry was Moreland;

below it, fronting on the Delaware and cut in two by Pennepack Creek, was Dublin township, the lands in which were taken up by Fairman, Waddy, Lehman (Penn's private secretary), and in general by a body of English Quakers, who also occupied Oxford township, just below it on the Delaware. The Northern Liberties lay north of Springettsbury Manor, including Hartsfelder's tract, north of the Cohoquinoque, and Shackamaxon, extending clear across the peninsula from Schuylkill to Delaware. Bristol township adjoined Bucks County, having Tacony Creek on the east and Germantown south and west of it. The lands in this township were taken up by such men as Samuel Carpenter, Richard Townshend, William Frampton, John Ashman, Thomas Rutter, John Day, John Songhurst, Samuel Benezet, Griffith Jones, etc. The Western Liberties, afterwards part of Blockley township, lay south of Merion, extending from Schuylkill to the county line. Kingessing was a township lying in the parallelogram formed by Bow Creek, Karakung Creek, the Delaware, and Schuylkill. West of Germantown, east of Schuylkill, was Roxborough township, settled by Claypoole, Turner, Lane, etc. Some of the intervening tracts lying in and between these manors and townships were taken up by Capt. Markham, Jasper Farmer, Philip Ford, Benjamin Chambers, Jacob Pelles, Samuel Buckley, Sir Matthias Vincent, Adrian Vrouzen, Benjamin Furlong, etc.

Purchasers of river-front lots had the idea that they would acquire with them riparian rights, or else that Penn meant to reserve all the river-front and the levee between Front Street and the Delaware for the common use of the inhabitants of the city. Penn, however, had simply reserved them for himself, and, as the city began to grow up, he leased these lots, for wharf and warehouse purposes, at very good figures. Samuel Carpenter paid twenty shillings rent for two hundred and fifty feet on the river, a quay to be built there, and the lease not to fall in until the expiration of fifty-one years, the tenant to pave a thirty-foot roadway for all passengers, keep the wharf and bank in repair, and build two stairways from the top of the bank to the river's brink. Robert Turner got a similar patent for a wharf between High and Mulberry Streets, while the Free Society of Traders secured the river front south of Dock Creek. Many more bank and wharf grants were made, some of them leading to a great deal of complaint, fault-finding, petitioning, and litigation.

Philip Ford, in May, 1682, made up for Holme's use a list of first purchasers and the acres they had taken, the total sales amounting to 565,500 acres. This list Holme was to use in apportioning the city lots, a task of no little difficulty. Holme, however, numbered the lots on his plat and divided them among the purchasers, the choice of localities being bestowed in proportion to the size of tracts bought. The purchasers of 1000 acres or more were given lots on Front and High Streets. Of these there were 81

¹ Westcott's History of Philadelphia, chap. xxvii.

lots apportioned, some of them, however, to five, six, seven, and eight parties, who had "pooled" their purses so as to get a body of land of 1000 acres and the advantage in choice of town lots. The Delaware back lots, numbering 193, were apportioned to purchasers of less than 1000 acres; the front lots on Schuylkill, which were apportioned in the same way, numbered 84, and the back lots 150.¹

The proceedings of Council and Assembly between 1684 and 1699, while they might fill several pages in a volume of annals, may be summed up in a few paragraphs in a history such as this. The transactions were, as a rule, not very important, and the major part of the record, outside of the regular routine of appointments, etc., is taken up with the quarrels of public officers among themselves and the complaints of the people against Penn and the government generally. A French ship with irregular papers was seized, condemned, and sold by order of Council under the English navigation laws. There must have been a great many vessels on the coast and in the bays at this time which could not give a good account of themselves, and complaints of piracy are loud and frequent, the colonial governments being sometimes accused of undue leniency in their dealings with the freebooters. Governor Fletcher, of New York, who was also Governor of Pennsylvania during the suspension of Penn's authority in May, 1693, was on friendly terms with Kidd and others, and Nichols, one of his Council, was commonly charged with being agent of the sea-rovers. Governor Markham's alleged son-in-law, James Brown, was denied his seat in the Assembly, and put in prison for sailing in a pirate's vessel. The people of Lewes openly dealt with Kidd, exchanging their provisions for his fine goods. Teach, called Blackbeard, was often about the Delaware, and it was charged that he and the Governor of North Carolina and other officials of that State were altogether too intimate.

The Council provided in 1685 for a ferry-boat, large enough for horses and cattle, across the Schuylkill at High Street, proof enough of the town's rapid growth. Another evidence is to be found in the provisions for a night-watch, and in a letter from Penn, written in July, 1685, showing that he was very observant of affairs in the city he had founded, and was well informed of matters there. He had heard much complaint, he said, about the number of drinking-houses and of loose conduct in the "caves." He required that ordinaries should be reduced in numbers without respect of persons and no matter what objections

arose, and that only respectable landlords, and such as are most tender of God's glory and the reputation of the province, should be allowed to continue in business. As for the caves, they should be purged. They were his property; he had let persons occupy them for limited times (three years) while building, that they might not be houseless, but their time was up, they should be cleared, and the caves held for the use of other deserving persons immigrating under similar circumstances. "Whatever ye do," adds Penn, "let vertue be cherisht." The tavern-keepers were summoned before the Council and compelled to give security to keep good order. There were seven of these at this time, one of whom was ordered to "seek some other way for a livelihood." The cave-dwellers also received notice to get themselves house-room and vacate these cheap premises. These caves are matters of curious interest to the antiquarian. It is not unlikely, as has been shown on a previous page, that some of these excavations, if not the most of them, had been made by Indians for their winter-quarters. The falling in of any part of a river-bank, in consequence of freshets or changes in the current of the stream, would expose the extensive burrowings of muskrats and other animals, and suggest their enlargement to the savages for their own use. For defense or concealment in case of raids by hostile tribes nothing more serviceable could be devised. The Swedes dwelt in such caves in some instances at least, and in 1682 probably one-third the new settlers on the site of Philadelphia wintered in them, of course enlarging them and making them more comfortable. In 1685 these caves seem to have become low resorts, taverns, and the like. One of them at least was occupied by Joseph Knight, the publican whom the Council had refused to allow to continue his traffic. The grand jury presented him and the whole cave system, and the excavations were gradually filled up by throwing down upon them the superincumbent bank.

Penn's noticeable tact and skill as a peace-maker and composer of personal difficulties were sadly missed after his departure for England. The Assembly and Council got into a serious squabble in consequence of a difference about the prerogatives and dignity of the two bodies. Chief Justice Nicholas More, though an able and probably upright man, was dictatorial and arbitrary as well as quarrelsome. He was not a Quaker, but he used very plain language sometimes, and was free-spoken. Him the Assembly formally impeached before Council on June 15, 1685, upon the ground of various malpractices and misdemeanors, chiefly technical, or growing out of his blunt manners. More was himself a member of the Assembly from Philadelphia City and County,² and that body invited him by vote to retire from the

¹ We give on the fac-simile of "Holme's Portraiture of the City of Philadelphia" a complete list of the lots and the names and original residences of the purchasers to whom they were apportioned. Such lists are full of material for the antiquarian and the genealogist. The uncertainties and contradictory opinions and views in regard to the time and manner of these apportionments are fully and ably discussed by Mr. Lawrence Lewis in his "Original Land Titles in Philadelphia." Some of the obscurities of the matter, however, seem to defy research and baffle conjecture.

² The delegation consisted of Nicholas More, Joseph Growden, Barnaby Wilcox, Lawrence Cock, Gunner Rambo, and Thomas Paschall.

sessions while his case was under consideration. His court clerk, Patrick Robinson, was ordered to fetch the records of the court and refused, so the sheriff took him in charge. More was also sent for to come to the Assembly, but he replied that the House had voted him out and it would have to vote him in again. He was forthwith expelled, and Clerk Robinson declared a public enemy of the province and the privileges of the General Assembly. He was finally compelled to go to the bar of the House, where he declared that there were no records of the court save such as he kept in Latin abbreviations, a short-hand of his own, which no one but himself, not even an "angel from heaven," could read. Further pressed, he threw himself full length on the floor, and became utterly obstreperous and unmanageable, whereupon it was resolved to ask the Provincial Council to make him ineligible to hold office thereafter. This sort of thing was hardly decorous in any sort of legislature, and must have been particularly offensive in view of the fact that the Assembly held its sessions in the "Bank" meeting-house. A Quaker meeting-house is ever the abode of silence, only broken by inspiration, and such scenes as these with Robinson must have been very offensive to the strict Friends. But the Council was slow to follow the lead of the House. More was twice summoned to appear before the Council, but would not, and was suspended from his judicial functions until he made answer to the articles of impeachment. Robinson's language was declared to be indecent and unallowable, but the Council declined to remove him from office until convicted of what was alleged against him. This was proper enough, but did not suit the Assembly, which appointed a committee to wait on Council and prosecute the impeachment. These gentlemen, Abraham Man and John Blunston, demanded to know if the Council had not forgotten themselves in not bringing Judge More to trial, whereupon the Council suggested that the committee had forgotten themselves in coming before it without a petition, and they were dismissed after a sharp reprimand. Penn was much vexed at these petty brawls. "For the love of God, me, and the poor country," he wrote to Lloyd, "be not so *governmentish*, so noisy and open in your dissatisfaction."

Penn at this time, besides his grave concerns at court, was busy looking after the home interests of his province on one side and its external interests on the other, now shipping wine, beer, seeds, and trees to Pennsylvania, anon publishing in London accounts and descriptions of the province and excerpts of letters received from its happy settlers. The proprietary was never fatigued even by the most minute details in any matter in which he desired to succeed, and his letters

show that he anticipated and thought about every thing. His supervision was needed, for Council, Assembly, and Governor seem to have been equally incompetent to do anything besides quarrel and disagree in regard to privilege. In fact, underneath these trivial bickerings a great struggle was going on between the representatives of the freemen of the province and the sponsors for Penn's personal interests and his proprietary prerogative. This contest lasted long, and Penn's friends in the end, without serving his political interests materially, contrived to deal his personal interests a cruel blow, by exciting the people of the province to hostile feelings against him, and provoking them to withhold rents and purchases, and reduce his income in every possible way. Penn himself wrote to Lloyd, in 1686, that the ill fame the province had gained on account of its bickerings had lost it fifteen thousand immigrants, who would have gone

THE BANK MEETING-HOUSE.

thither had its affairs appeared more settled, but as it was they went to North Carolina instead.

In 1687, James Claypoole became a member of Council for Philadelphia County, and its representatives in Assembly were Humphrey Murray, William Salway, John Bevan, Lacy Cock, Francis Daniel Pastorius, and Joseph Paul; John Eckley, Thomas Ellis, John Goodson, William Southerby, Barnabas Wilcox, Joshua Cart, and John Shelten receiving commissions as justices of the peace. The growth of the city is illustrated by the greater pains taken to buoy out the harbor and ship-channel and by the increased desire of the public to have improved roads. The road from Moyamensing to Philadelphia had already been complained of; now, in Council, a cart-road was ordered to be laid out between Philadelphia and Plymouth township, and the Radnor people wanted the fences from their township to the Schuylkill to be removed where they obstructed the road commonly used. A board of road-viewers was appointed at once to lay

out public roads from the Ferry to Radnor, and another to Darby township. The Assembly, which met in May, also passed a resolution to the effect that "the President and Council be requested to take care that necessary public roads be everywhere set forth and duly maintained, but more especially in the county of Philadelphia, that travelling for man and beast be made easie, safe, and certain." Already Penn had found it necessary to protect, by the appointment of a woodsman, the woodland and timber on his reservations from the wholesale depredations of timber-getters and squatters, and he now instructed Markham to have the offenders prosecuted, in order to prevent the town from being surrounded with thickets of brush and undergrowth that would afford

tween the two Houses, but curiously inspect the proceedings of both. They were further in Penn's name to disavow all laws passed since his absence, and to call a new Assembly to repass, modify, and alter the laws. When this commission was received, in February, 1688, both More and Claypoole were dead. Their places were supplied by Arthur Cook and John Simcock, and the new elections ordered gave Samuel Richardson the appointment of member of Council for three years, while Thomas Hooten, Thomas Fitzwalter, Lasse Cock, James Fox, Griffith Owen, and William Southersby were chosen members of Assembly. The contests for privilege between Council and Assembly were at once renewed; the Assembly swore its members to divulge no proceedings, and practically made its sessions

GREAT SEAL OF THE PROVINCE OF PENNSYLVANIA IN 1712, OBVERSE AND REVERSE.
[Reduced one-half.]

a harbor to vermin and tramps. The first regular jail seems to have been built this year, though, in 1683, William Clayton had constructed a "cage" for offenders. Lacy Cock built a log jail on Second Street, near Market. After it was built, however, it did not suit, and a house belonging to the recalcitrant clerk, Patrick Robinson, was rented instead. The new prison was built in the middle of Market Street, near Second. In 1702 this and the yard attached to it were presented by the grand jury as nuisances. This part of the wide area of Market Street was a grassy common, used by the town butcher for pasturing his sheep before they were slaughtered. Their carcasses, after the animals were slaughtered, were displayed for sale in the same place on a movable stall.

In February, 1687, Penn took the executive power away from the Council and intrusted it to a commission of five persons,—Thomas Lloyd, Nicholas More, James Claypoole, Robert Turner, and John Eckly, any three to have power to act. He sent over many instructions to this board, among others to compel the Council to their charter attendance or dissolve them without further ado and choose others, "for I will no more endure their most slothful and dishonorable attendance." The commissioners were enjoined to keep up the dignity of their station, in Council and out, and not to permit any disorders either in Council or Assembly, and not to allow any parleys or conferences be-

secret; the Council asserted its ancient prerogatives; in short, the quarrel was interminable except by what would be practically revolution, for on one side was a written charter and a system of iron-bound laws, on the other the popular determination, growing stronger every day, to secure for the freemen of the province and their representatives a larger share in the major concerns of government and legislation. The commission, in fact, would not work upon

trial, and before the year was out Penn sent over a Governor for the province, an old officer under the Commonwealth and Cromwell, and son-in-law of that Gen. Lambert who at one time was Monk's rival,—by name John Blackwell.

Governor Blackwell had a troublesome career in office. For a peaceable, non-resistant people, the Pennsylvania settlers had as many domestic difficulties on their hands as ever any happy family had. As soon as Blackwell was inducted he was brought in collision with Thomas Lloyd, who would not give up the great seal of the province, and declined to affix it to any commissions or documents of which he did not approve. As the misunderstanding grew deeper, the old issue of prerogative came up again, and it was declared that Blackwell was not Governor, for the reason that, under the charter, Penn could not create a Governor, but only appoint a Deputy Governor. An effort was made to expel from the Council a member who had insisted upon this view of the case; it failed, the Governor dissolved the Council, and at the next session the people re-elected John Richardson, the offending member, whom, however, Blackwell refused to permit to take his seat. From this the quarrel went on until we find Lloyd and Blackwell removing and reappointing officers, and the public officers declining to submit their records to the Council and the courts. Lloyd was elected member of

Council from Bucks County, and Blackwell refused to let him take his seat, which brought on a violent controversy. The general discussion of privilege and prerogative in connection with these differences led Bradford, the printer, to print for general use an edition of the "Form of Government and the Great Law," so that everybody might see for himself the right and the wrong of the matters in dispute. The expense of the publication, it is said, was borne by Joseph Growdon, a member of Council. It was considered a dangerous and incendiary act, and Bradford was summoned before the Council and closely interrogated, but he would not admit that he had printed the document, though he was the only person in the province who could have done it. There was a Council quarrel over this thing too, some men quoting Penn as favoring publicity for the acts of Assembly, another proclaiming his dread of the press, because the charter, in fact, made him a sort of independent prince. The result was the Council broke up in confusion, and for some time could not get a quorum together. The Assembly, meeting May 10th, was suddenly adjourned for the same reason, the popular party having discovered that by a negative, non-resistance policy of this sort the Governor's plans and purposes were paralyzed. There were no meetings of either Council or Assembly from the latter part of May till the last of August. Then Blackwell sprung upon the Council a great rumor of terrible things in store for the province: the Indians and Papists had leagued together; the Northern Indians were coming down the Susquehanna, and the lower counties were already mustering to resist the invasion of an army of nine thousand men on their way from Maryland to destroy Philadelphia. Blackwell wanted instant authority to levy a force for defense, but the Quakers took things rather more quietly. They did not want an army, and they did not believe the rumors. Clark said if any such scheme of invasion had ever been entertained it was now dead. Peter Alrichs said there was nothing to be scared about. John Simcock did not see "but what we are as safe, keeping peaceable, as those who have made all this strife." Griffith Jones said there was no cause of danger if they kept quiet. In fact, the Council not only objected to a levy, but they laughed at Blackwell's apprehensions. Markham said that all such talk had no effect but to scare the women and children. The Governor found he could do nothing, and adjourned the Council.

Next came news that James II. was dethroned and William of Orange king of England. The Council was called together, and the honest Quakers, not feeling sure which king they were under, determined neither to celebrate nor wear mourning, but to wait events, the Council amusing themselves in the mean time by keeping up their old feuds. Shrewsbury's letter announcing the new king's intention to make immediate war on the French king was laid before Council Oct. 1, 1689, and was accompanied with the usual warn-

ing about defensive measures and the need for commercial vessels to sail in company and under the protection of convoys. William and Mary were at once formally proclaimed in the province, and a fresh discussion arose in regard to the proper defensive measures and the necessity for an armed militia. The Quakers were utterly opposed to any sort of military preparations. If they armed themselves, it was urged, the Indians would at once rise. "As we are," said sensible Simcock, "we are in no danger but from bears and wolves. We are well and in peace and quiet. Let us keep ourselves so. I know naught but a peaceable spirit and that will do well." Griffith Jones, moreover, showed how much the thing would cost and how it would increase taxation. Finally, after long discussions, the Quakers withdrew from active opposition, and the preparations for defense were left to the discretion of the Governor. William Penn himself was now in deep difficulties and partly a fugitive in hiding. He was afraid to act openly any longer as the Governor of the province. Accordingly he made another change, and when Governor Blackwell called the Council together on Jan. 1, 1690, it was to inform them that he had been relieved of his office. He seemed glad to be free. "'Tis a good day," he said; "I have given and doe unfeignedly give God thanks for it (w^{ch} are not only words), for, to say no worse, I was very unequally yoked." Penn, in relieving Blackwell, sent his commission to the Council, authorizing them to select three persons from whom he would choose a Governor; until his choice was made the one having the highest number of votes was to act, for which end another commission was sent over, signed and sealed in blank. In sending his instructions to the Council along with these commissions, Penn wrote: "Whatever you do, I desire, beseech, and charge you all to avoyd factions and parties, Whisperings and reportings, and all animosities, that, putting your Common Shoulder to y^e Publick Work, you may have the Reward of Good Men and Patriots, and so I bid you heartily ffarewell."

No better work was done at this period than the establishment of the first public school in Pennsylvania and Philadelphia, founded in 1689 under Penn's directions to Thomas Lloyd. This grammar school was put in charge of George Keith, a well-known Quaker preacher of Scotch descent, who had accompanied Penn and Fox to Germany in 1677, and was later to cause a great religious controversy in the province by becoming the leader of a society of Friends who dissented from some of the tenets and practices of the Orthodox. His assistant was Benjamin Makin, who became principal when Keith abandoned pedagogy for polemics. Keith's salary was £50 per annum, with dwelling-house and school-house provided, and the profits of the school besides for one year. If he thought fit to stay longer and teach the children of the poor without charge, his salary was to be doubled for two years. The school was

afterwards chartered by enterprising citizens such as Samuel Carpenter, Anthony Morris, Edward Shippen, James Fox, David Lloyd, William Southby, and John Jones, and adopted a characteristic seal, with an open book containing the Greek motto "*Φίλε τε ἀλλήλους*" and the inscription, "Good Instruction is better than Riches." The building stood on Fourth Street, below Chestnut, and this old Philadelphia High School had a high reputation for a great many years, numbering among its teachers, besides Keith and Makin, such men as D. J. Dove, Robert Proud, the historian, William Wanney, Jeremiah Todd, and Charles Thomson, the secretary of the Continental Congress.

The Council, acting upon Penn's instructions and commission, on Jan. 2, 1690, elected Thomas Lloyd president and *de facto* Deputy Governor. Lloyd was also chosen justice of the peace for Philadelphia, along with John Eckly, Robert Turner, William Salway, Barnaby Wilcox, Francis Rawle, John Holme, and Lasse Cock. The Provincial Councilors elected for Philadelphia, May 31st, were Griffith Owen and Thomas Duckett, for the remaining term of John Eckly; Assemblymen, William Salway, Humphrey Murray, Thomas Fitzwalter, Charles Pickering, Paul Sanders, and Abraham Op de Graaff. The old French war, accompanied as it was with many atrocities by Indians near the border, gave the Philadelphians great concern about this time, but the Friends still continued to maintain their pacific and non-resisting attitude. In internal administration they were not so successful. To personal feuds were now added local jealousies. The lower Delaware counties were envious of the growth of Philadelphia, Bucks, and Chester. The traditions and manners of the different sections had little similarity. Finally the bad feeling grew so strong as to lead to secession. The Delaware counties (or "territories," as they were called) held a separate Council, elected their own judges, and finally compelled Penn, in 1691, much against his will, to divide the government, which he did by continuing Lloyd as Deputy Governor of the province, and appointing Markham Deputy Governor of the territories. George Keith also had at this time begun to agitate in behalf of his schism. He was a man of learning, but fierce, contentious, turbulent, and vindictive. A good preacher, his language was rude, coarse, and malignant, and he had every trait of the agitator in his character. Keith was an extremist. He held that Quakers could not consistently or lawfully take any part in the administration of civil government, therefore, in other words, that a Quaker community was impossible, and that Penn's "holy experiment" would not be conducted without departing from Penn's religious faith, and that it was contrary to Quaker principles to be concerned in the apprehension of criminals. He took advantage of a hue and cry raised for the capture of a certain Babbitt and his associates, who had stolen a boat and gone down the river upon a plundering and piratical

expedition, to lecture the magistracy severely for their reprehensible and un-Friendlike conduct. Keith set up a separate meeting in Philadelphia, whereupon he was dismissed by his society and finally presented by the grand jury, together with Thomas Budd, for defamation and trying to blacken the character of Samuel Jennings, a provincial judge. They were tried, convicted, and fined £5 each. Keith went to England, joined the Established Church, was ordained minister by the Bishop of London, and presently returned to Philadelphia a full-fledged Episcopalian divine, in surplice and cassock. His simple-minded followers could not recognize him in such a disguise, and the community ceased to be disturbed on his account. Finding his influence gone, he went to England again and secured a church living in Surrey, from which he wrote with much bitterness against the society to which he had formerly belonged. Keith's apostasy had the effect to drive a better man than he was out of the province. William Bradford had been arraigned before the Council for printing one of Keith's virulent tracts, and was treated with so much severity that he left Philadelphia and set up his forms and presses in New York.

The French and Indian hostilities on the frontier, the apathy and non-resistance of the Quakers, and the ambiguous position of Penn, lurking in concealment with an indictment hanging over his head, were made the pretexts for taking the government of Penn's province away from him. His intimate relations with the dethroned king, and the fact that his province, as well as the Delaware Hundreds, had been James' private property, and were still governed to some extent by "the Duke of York's laws," probably had much to do with prompting this extreme measure. Governor Benjamin Fletcher, of New York, was made "Captain-General" of Pennsylvania on Oct. 24, 1692, by royal patent. He came to Philadelphia April 26, 1693, had his letters patent read in the market-place, and offered the test oaths to the members of the Council. Thomas Lloyd refused to take them, but Markham, Andrew Robeson, William Turner, William Salway, and Lasse Cock all subscribed. Fletcher made Markham his Lieutenant-Governor, to preside over Council in the captain-general's absence in New York. He reunited the Delaware Hundreds to the province, but did not succeed in harmonizing affairs in his new government. The Council and he fell out about the election of representatives to the Assembly. When the Legislature met, Fletcher demanded men and money to aid New York in carrying on the war with the French and Indians. The Assembly refused to comply unless the vote of supplies was preceded by a redress of grievances. Fletcher tried to reason with them. "I would have you consider," he said in his speech to the Assembly, "the walls about your gardens and orchards, your doors and locks of your houses, mastiff dogs, and such other things as you make use of to defend your goods and property

against thieves and robbers, are the same courses that their majesties take for their forts, garrisons, and soldiers, etc., to secure their kingdom and provinces, and you as well as the rest of their subjects." But the Quakers were not to be convinced by any such arguments. Fletcher had reduced the number of Assemblymen, and when the Legislature met on May 16th, Philadelphia was represented by four persons,—Samuel Carpenter, Samuel Richardson, John White, and James Fox. The first thing before the General Assembly was a proposition to raise money by taxation,—the first tax levied in Pennsylvania,—and an act was passed levying a penny a pound on property for the support of government. The sum thus raised amounted to seven hundred and sixty pounds sixteen shillings, of which Philadelphia contributed three hundred and fourteen pounds eleven shillings, or forty-one per cent. of the whole. Thus far Fletcher succeeded, only to fail, however, when he attempted to secure the passage of a law providing for organizing the militia. The Assembly did pass an act providing for the education of children, and also one for the establishment of a post-office. A good deal of practical local improvement was made by the Council under Markham's influence, for he was an active, energetic man, and knew the town, the people, and their wants better than any other person could do. Among these regulations, without consultation with the Assembly, were several orders in regard to the Schuylkill ferry, where one man had attempted to set up a monopoly; and one for the establishment and conduct of the market, which was now removed from Delaware Front Street, corner of High, to Second Street where it crosses High. A place was to be staked out, bell-house erected, etc. There were to be two markets a week, on Wednesdays and Saturdays; all sorts of provisions brought to Philadelphia for sale—"flesh, fish, tame fowl, butter, eggs, cheese, herbs, fruitts, and roots, etc."—were to be sold in this market-place, under penalty of forfeiture if offered elsewhere. The market was to open at the sound of the bell, which was to be rung in summer between six and seven o'clock A.M., in winter between eight o'clock and nine; sales made before hours (except to Governor and Lieutenant-Governor) to be forfeited. All were forbidden to buy or price these provisions on their way to market, and hucksters could not buy until the market had been open two hours. The clerk of the market received half of all forfeitures, together with sixpence per head on all slaughtered cattle, two pence for each sheep, calf, and lamb, three pence for each pig, but no charge made on what the country people bring to market ready killed. He was also to be paid a penny each for "sealing" weights and measures.

In the winter of 1693, Penn was acquitted by the king of all charges against him and restored to favor, his government being confirmed to him anew by letters patent granted in August, 1694. Penn would probably have returned to his province immediately

after his exoneration, but his wife was ill, and died in February, 1694. This great affliction and the disordered state of his finances detained him in England several years longer. After his government was restored to him, his old friend and deputy, Thomas Lloyd, having died, Penn once more appointed his cousin, William Markham, to be Deputy Governor, with John Goodson and Samuel Carpenter for assistants. These commissions reached Markham on March 25, 1695.

In the mean time Governor Fletcher, with his deputy (this same Markham), had been encountering the old difficulties with Council and Assembly during 1694-95. The dread of French and Indians still prevailed, but it was not sufficient to induce the Quakers of the province to favor a military *régime*. Indeed, Tammany and his bands of Delawares had given the best proof of their pacific intentions by coming into Philadelphia and entreating the Governor and Council to interfere to prevent the Five Nations from forcing them into the fight with the French and Hurons. They did not want to have anything to do with the war, but to live, as they had been living, in concord and quiet with their neighbors the Friends. There is no evidence that the league of amity, implied or written, had ever been seriously broken. The Indians would sometimes be drunk and disorderly, and sometimes would steal a pig or a calf, but that was all. As Tammany said in this conference with Fletcher and Markham, "We and the Christians of this river have always had a free roadway to one another, and though sometimes a tree has fallen across the road, yet we have still removed it again and kept the path clear, and we design to continue the old friendship that has been between us and you." Fletcher promised to protect the Delawares from the Senecas and Onondagas, and told them it was to their interest to remain quiet and at peace. When the Legislature met (May 22, 1694), Fletcher, who had just returned from Albany, tried his best to get a vote of men and money, or either, for defensive purposes. He even suggested that they could quiet their scruples by raising money simply to feed the hungry and clothe the naked, but this round-about way did not commend itself to Quaker simplicity and straightforwardness. A tax of a penny per pound was laid to compensate Thomas Lloyd and William Markham for their past services, the surplus to constitute a fund to be disbursed by Governor and Council, but an account of the way it went was to be submitted to the next General Assembly. Further than this the Assembly would not go. Fletcher wanted the money to be presented to the king, to be appropriated as he chose for the aid of New York and the defense of Albany. He objected likewise to the Assembly naming tax-collectors in the act, but the Assembly asserted its undoubted right to control the disposition of money raised by taxation, and thereupon the Governor dissolved it.

In June, 1695, after Markham was well settled in his place as Penn's Deputy Governor, there were again wild rumors of French designs upon the colonies and of squadrons already at sea to assail them, and this was so far credited that a watch and lookout station was maintained for several months at Cape Henlopen. In the latter part of this same month Markham informed the Council that Governor Fletcher had made a requisition upon him for ninety-one men and officers, or the funds for maintaining that number for the defense of New York. This matter was pressed by Fletcher, but the Council decided that it was too weighty a business to be transacted without consulting the General Assembly, which would not meet before the second week of September. Markham suggested an earlier day for meeting, but the Council thought the securing of the crops a more important business than any proposition that the ex-captain-general had to lay before them. When the Assembly did meet in September, it at once revealed the cause of the continual discontents which had vexed the province, and gave Deputy Governor Markham the opportunity to prove that he was an honest man. It voted a tax of a penny per pound and six shillings per capita (from which probably £1500 would have been realized), proposing out of the receipts from the levy to pay Markham £300, contribute £250 towards the maintenance of government, and assign the surplusage to the payment of debts of the government. But the members accompanied this bill with another, a new act of settlement, in which the Assembly secured to itself the privileges which they had sought to obtain from Penn in vain. It was, as has justly been remarked,¹ a species of "log-rolling." It had long been practiced with success by Parliament upon the impetuous monarchs of England, and in these modern times has been reduced to a science by nearly all legislative bodies. Markham, however, refused the bait. He declined to give his assent to both bills; the Assembly refused to divorce them, and the Deputy Governor, in imitation of Fletcher's summary method, at once dissolved them in the very teeth of the charter he was refusing to supersede. Had they not been dissolved it is possible the General Assembly might have acted upon a petition in Markham's hands, which set forth some of the chief grievances of the citizens of Philadelphia in that day. They entreated that the persons put in office should be men "of good repute and Christian conversation, without respect to any profession or persuasion in religion;" that officers' fees be made public, and put up in every office for general inspection; "that theyr is now many ordinaries and tipling houses in this town of Philadelfia Kept by several as are not well qualified for such undertakings, tending to debauchery and corrupting of youth." Wherefore it is begged that none but sober, honest, conscientious persons be allowed to keep such houses;

that all the laws of the province be diligently enforced as the charter meant them to be; that some place, as stocks, or cage, be provided for the incarceration of "drunkards or other violators of the good laws of England and this province," when taken up by the watch or constables, so as to escape the need of sending them to prison for such misdemeanors, thus adding to the public expenses; "also that sum cours may bee taken that these Indians may bee brought to more sobriety, and not to go reeling and bauling on the streets, especially by night, to the disturbance of the peace of this town;" that the town crier be required to publish sales by auction of every sort of produce to the extent of each street, so as every inhabitant may have the benefit of such sales or the knowledge that they are to come off; "and also that theyr may bee a check put to hors raceing, which begets swearing, blaspheming God's holy name, drawing youth to vanaty, making such noises and public hooting and uncivil riding on the streets; also that dancing, fiddling, gameing, and what else may tend to debauch the inhabitanc and to blemish Christianity and dishonour the holy name of God, may be curbed and restrained, both at fairs and all other times." This memorial was signed by many leading citizens, such as Edward Shippen, Robert Ewer, R. Ward, Howell Griffith, Humphrey Murray, Casper Hoodt, William Carter, Isaac Norris, Thomas Fftzwalter, Evan Griffith, Joseph White, Thomas Wharton, James Fox, etc.

After Markham's first failure to walk in Fletcher's footsteps, he appears to have dispensed with both Council and Assembly for an entire year, governing the province as suited himself, with the aid of some few letters from Penn, made more infrequent by the war with France. On the 25th of September, 1696, however, he summoned a new Council, Philadelphia being represented in it by Edward Shippen, Anthony Morris, David Lloyd, and Patrick Robinson, the latter being secretary. The home government, through a letter from Queen Mary (the king being on the continent), it appeared, complained of the province for violating the laws regulating trade and plantations (probably in dealing with the West Indies). The Council advised the Governor to send out writs of election and convene a new Assembly on the 26th of October. He complied, and Philadelphia elected Samuel Carpenter, Samuel Richardson, James Fox, and Nicholas Waln to be her representatives. As soon as the Assembly met a contest began with the Governor. Markham urged that the queen's letter should be attended to, asking for supplies for defense, and also called their attention to William Penn's pledge that, when he regained his government, the interests of England should not be neglected. The Assembly replied with a remonstrance against the Governor's speech, and a petition for the restoration of the provincial charter as it was before the government was committed to Governor Fletcher's trust. That Governor was still asking for money and relief, and Markham entreated

¹ Westcott's History of Philadelphia, chapter xl.

that a tax might be levied, and, if consciences needed to be quieted in the matter, the money could be appropriated for the purchase of food and raiment for those nations of Indians that had lately suffered so much by the French. This proposition became the basis of a compromise, the Assembly agreeing to vote a tax of one penny per pound, provided the Governor convened a new Assembly, with a full number of representatives according to the old charter, to meet March 10, 1697, to serve in Provincial Council and Assembly, according to charter, until the lord proprietary's pleasure could be known about the matter; if he disapproved, the act was to be void. Markham yielded, his Council drew up the supply bill and a new charter or frame of government, and both bills became laws.

Markham's new Constitution, adopted Nov. 7, 1696, was couched upon the proposition that "the former frame of government, modeled by act of settlement and charter of liberties, is not deemed in all respects suitably accommodated to our present circumstances." The Council was to consist of two representatives from each county, the Assembly of four; elections to take place on the 10th of March each year, and the General Assembly to meet on the 10th of May each year. The Markham charter goes into details in regard to the oaths or affirmations of officials of all classes, jurors, witnesses, etc.; it sets the pay of Councilmen and members of Assembly, and is on the whole a clearer and more satisfactory frame of government than the one which it superseded, while not varying in many substantive features from that instrument. The Assembly secured at least one-half what the framers of the province had so long been fighting for, to wit: "That the representatives of the freemen, when met in Assembly, *shall have power to prepare and propose to the Governor and Council all such bills as they or the major part of them shall at any time see needful to be passed into law within the said province and territories.*" This was a great victory for the popular cause. Another equally important point gained was a clause declaring the General Assembly indissoluble for the time for which its members were elected, and giving it power to sit upon its own adjournments and committees, and to continue its sessions in order to propose and prepare bills, redress grievances, and impeach criminals.

The imperial business on which Markham had called the Council together in 1696 was charges made to the Lords of Trade that the Philadelphians had not only harbored Avery, the pirate, but had systematically encouraged the extensive smuggling operations conducted by the Scotch and the Dutch. After waiting in vain to hear from Markham, the Lords summoned Penn and laid the charges before him. The proprietary immediately (Sept. 5, 1697) wrote a sharp letter to Markham and the Council in regard to these charges, and also in regard to an anonymous letter he had received from Philadelphia, in which

that town is set forth as a modern Sodom, "overrun with wickedness;" "sins so very scandalous, openly committed in defiance of law and virtue, facts so foul that I am forbid by common modesty to relate them." A committee of Council was appointed to investigate the charges, by whom the piracy matter was explained, the contraband trade denied, and as for looseness and vice, they were admitted to have increased with the city's growth, but the magistracy ought not to be impeached for that, since they did their duty. However, it was admitted that public-houses were too numerous, and that vicious habits were increased on that account. A proclamation was issued covering the substance of the report and enjoining greater diligence upon magistrates in the suppression of vice. The lookout at Cape Henlopen was again stationed, and Markham, hearing of a French privateer on the coast, equipped and sent an armed vessel to take her. The British government took an effectual way to prevent the Philadelphians from renewing their connection with either pirates or smugglers by strengthening the power of the Admiralty Court. The judge of this court, Quarry, with Attorney-General Randolph, and an informer named Snead, gave Markham and his government no end of trouble and annoyance. Quarry and Randolph were particularly hostile to the Society of Friends, and wished to induce the English government to take Penn's charter away from him. They believed, or affected to do so, that Markham was actually in league with the pirates. Their accusations were the more serious from the fact that Capt. Kidd's crew had just been disbanded in New York and many of them had come to the Delaware. The judges of the Provincial Court came in collision with Quarry and were forced to resign. Randolph aggravated Markham to such a degree that finally the Deputy Governor seized the crown's attorney, sent him to prison and had him locked up.

We reproduce on the following page, from John Blair Linn's learned and satisfactory treatise on "The Duke of York's Laws," fac-similes of the autographs of Governors, Deputy Governors, presidents of Council, assistants in the government, and Speakers of Assembly from 1682 to the time of Penn's return and resumption of authority in his province. These signatures have a force and character of their own such as would seem to become the autographs of leading men. They include William Penn, proprietary and Governor, 1681-93, 1695-1718. William Markham, Deputy Governor of the province, 1681-82, 1695-99; of lower counties, 1691-93; Lieutenant-Governor of province, 1693-95. Thomas Lloyd, president of Council, 1684-88, 1690-91; president of governmental commission, 1688 (February to December); Deputy Governor of province, 1691-93. John Blackwell, Deputy Governor, 1688-90. John Goodson, Samuel Carpenter, assistants in government, 1695-96. Speakers of Assembly: Thomas Wynne, 1683; Nicholas More, 1684 (it is not certain that More was Speaker of the first Assembly of 1682);

Arthur Cooke, 1689; Joseph Growdon, 1690-93; William Clarke, 1692; David Lloyd, 1694; Edward Shippen, 1695; John Simcocke, 1696; John Blunston, 1697, 1699, 1700; Phineas Pemberton, 1698. All these are reproduced from authentic documents in the archives of the State.

There is not much more to say about the history of this period. The Colonial Records furnish a barren tale of new roads petitioned for and laid out; fires, and precautions taken against them and preparations to meet them; tax-bills, etc. William Penn sailed from Cowes on Sept. 9, 1699, for his province. He had arranged his English affairs; he brought his second wife and his daughter and infants with him; probably he expected this time at least to remain in

the province for good and all. He reached Philadelphia December 3d, and took lodgings with Edward Shippen. The city of his love was quiet, sad, gloomy. It was just beginning to react after having been frightfully ravaged by an epidemic of yellow fever, attended with great mortality, and the people who survived were sober and quiet enough to suit the tastes of the most exacting Quaker.

CHAPTER XI.

MANNERS AND CUSTOMS OF THE PRIMITIVE SETTLERS.

"So twice five miles of fertile ground
With walls and towers were girdled round;
And here were gardens bright with sinuous rills,
Where blossom'd many an incense-bearing tree;
And here were forests, ancient as the hills,
Enfolding sunny spots of greenery."

COLERIDGE.

It was the boast of the Emperor Augustus, in regard to Rome, that "*Marmoream se relinquere, quam lateritiam accepisset.*" When Penn came to Philadelphia with his colony of first purchasers he found a forest, with thickets and swamps, lying between two rivers, the sole population some scanty bands of savages, with here and there a hut or cabin, with a few acres about it of cleared land, marking the habitation of some pioneer of the white race. When the Lord Proprietary returned to Philadelphia on his second visit, in 1699, he found a province of ten thousand people and a city of seven hundred houses,¹ well laid off with streets, squares, wharves, market, churches, prison, etc., well governed, having an established foreign and domestic trade, and some substantial foundations laid for manufactures. No wonder Penn looked at his work with hearty enjoyment, as he wrote, in one of his last letters to the colony, "It was no small satisfaction to me that I have not been disappointed in seeing them prosper and growing up to a flourishing country, blessed with liberty, ease, and plenty, beyond what many of themselves could expect, and wanting nothing to make themselves happy but what, with a right temper of mind and prudent conduct, they might give themselves."²

The political history of this country, prospering and growing up in a flourishing way, blessed with liberty, ease, and plenty, would not be complete if we did not pause here, at the beginning of a new century, and when the banks of the Delaware had been more or less occupied by Europeans for nearly two generations, to give something like a picture of the social and domestic life of the early settlers, the pioneers among those hardy pale-faces before whose advance the natives of the soil melted away and disappeared.

Gabriel Thomas, "A Historical Description of Pennsylvania," etc., 1697-98, says "two thousand houses, all inhabited," an obvious exaggeration. There were less than three thousand houses in 1749. The authority for the number of houses is Dr. James Mease's "Picture of Philadelphia," 1811. He gives the returns as follows: 1683, houses, 80; 1700, houses, 700; 1749, houses, 2076; 1769, houses, 4474, etc. The estimates of 1700 and 1749, however, were simply for Philadelphia proper. If we suppose that Thomas estimated, as later calculators did, so as to include Northern Liberties, Wicaco (Southwark), Passayunk, and Moyamensing, the seven hundred would (on the basis of later proportions) be only thirty-nine per cent. of the whole, and adding Kensington (Shackamaxon) we should easily have from eighteen hundred to two thousand houses.

² Penn's expostulatory letter to Edward Shippen and "Old Friends," 29th June, 1710.

There is no distinct, positive evidence of permanent Indian villages anywhere upon the ground within the present limits of Philadelphia since the first white man explored the Delaware. The presence of the commonly found Indian relics at several places, as, for instance, at or near the mouth of the Pennepacka Creek, would indicate that villages had stood there at some period or other, but perhaps not within the time since white settlers began to come thither. The Minquas and the Delaware Indians, hunters and fishers, had still their permanent homes, with corn-fields and patches for beans, squashes, and melons. Their stockades were always hard by more or less of cleared land, as was the case with the Nanticoke villages in the Delaware peninsula, the Susquehannas at the mouth of Octorara Creek, and the Senecas and associated tribes dwelling between the Mohawk and the Allegheny Rivers. But the Delawares who occupied the site of Philadelphia, and the other tribes who visited them there must have been, from the necessity of the case, forest Indians, fishers, hunters, and trappers of the beaver, the otter, and the muskrat. No fact is better established than that the ground on which Philadelphia now stands was closely occupied when the white men first saw it, and until Penn's colonists came in, with a continuous growth of the primeval forests, except where swamp and marsh and the daily flow of the tide prevented the trees from growing. Capt. Cornelis Hendrickson, of Munnickhuysen, in his report of August, 1616, to the States General of Holland, says of the country explored by him along the Delaware, "He hath found the said country full of trees, to wit, oak, hickories, and pines, which trees were in some places covered with vines. He hath seen in said country bucks and does, turkeys and partridges," inhabitants of the great woods. The Swedes and the Dutch both of them found it easier work to plant on the sandy plains and clear up the scrub pine thickets of the lower Delaware counties, or to dyke and reclaim the rich alluvial flats (valleys they called them) on the Brandywine and other kindred streams, than to attempt to cut down the enormous forest-trees that towered above the firm lands of Coaquannock. Capt. Markham, when he first reached Pennsylvania and the site of Philadelphia, reported back to his employer that "it is a very fine country, if it were not so overgrown with woods." But these woods had one advantage which the settlers ought to have appreciated. As is the case with the forest parts of Kentucky to-day, the deep, rich soil encouraged such an enormous girth and altitude of trees that there was little or no undergrowth, except where the swamps prevailed or the beavers had constructed their dams and felled a part of the trees. Hence the woods afforded the best sort of pasturage of good, sweet herbage, on which all sorts of stock thrive wonderfully. Traveling was not difficult in this sort of forest, and Capt. Markham notes that "We have very good horses and the men ride madly on them. They think

nothing of riding eighty miles a day, and when they get to their journey's end, turn their horses into the field. They never shoe them." Penn, also, in a letter already quoted from, speaks with alarm of the indiscriminate destruction of the forests around Philadelphia as tending to choke the country with undergrowth and thickets, destroy pasturage, and encourage all sorts of vermin to multiply. And Acrelius¹ says that "when the Christians first came to the country the grass was up to the flanks of animals, and was good for pasture and hay-making; but as soon as the country had been settled the grass has died out from the roots, so that scarcely anything but black earth is left in the forests. Back in the country, where the people have not yet settled, the same grass is found, and is called wild-rye."

In these deep but not impenetrable forests, these broad park-like expanses, with their profound shade from lofty trees and clambering vines, a few, but not many, Indians had their lodges or huts. The hunting and fishing were good; the deer came to the borders of all the small streams, and the surface of the waters was populous with dense flocks of wild-fowl, while their depths teemed with fishes of every size, from the sturgeon to the smallest pan-fish. The great oak-groves were favorite resorts of the wild pigeons, and there seems to have been a regular "pigeon-roost," or breeding-place for the gregarious bird (if we may accept the ordinary interpretation of such Indian names) at Moyamensing.² In the spring and early summer months, just after the Indians of the interior had planted their corn and beans, the Delaware and Schuylkill were filled with incalculably large shoals of the migratory fish, pressing towards fresh water in order to deposit their spawn, and pursued by schools of the predatory sea-fish. At these seasons the shores of the rivers were thronged with Indians and their lodges, while their canoes darted gayly over the surface, men, women, and children spearing or netting fish, and cleaning and drying them. The sturgeon, the porpoise, now and then the salmon, were all caught, with innumerable shad, herring, alewives and bream, pike and perch. In the autumn again the Indians were drawn to the river-shore by the wild fowl which flew low near the waters. This was in the interval after the corn harvesting and the beginning of the winter hunting. Besides this, the site of Philadelphia seems to have grown to be a familiar spot for councils and general conferences of the tribes. The Delawares, whether Heckewelder and the earlier students of Indian customs and traditions be right or not in conceiving this tribe to have been conquered and made "women" of by the fierce Iroquois, were on friendly terms with nearly all the other tribes.

¹ History of New Sweden, chap. viii.

² "Moyamensing signifies an unclean place, a dung-heap. At one time great flocks of pigeons had their roost in the forest and made the place unclean for the Indians, from whom it received its name."—Acrelius.

They, and perhaps the land which it was conceded they owned, were in some sort of fashion under a "taboo." Probably the fact of their controlling the fish and oyster grounds of the Hudson and the Delaware, and the Susquehanna also in part, had a good deal to do with this. At any rate, at the time the whites came to the Delaware, and for many years afterwards, Shackamaxon, Wicaco, and other places within the area of the present city of Philadelphia were "neutral ground," where representatives of all the tribes on fresh water and east of the Alleghanies, between the Potomac, the Hudson, and the lakes,—the Iroquois, the Nanticokes, the Susquehannocks, and the Shawanees,—were accustomed to kindle their council fires, smoke the pipe of deliberation, exchange the wampum belts of explanation and treaty, and drive hard bargains with one another for peltries, provision, and supplies of various kinds. The trails made by the savages in going to and from this point of union were deep and broad at the time of the Dutch and Swedes, and were as far as convenient made available by the Europeans. But the Indian trails lay in directions best suited for their own convenience in going from their lodges to the rivers; whereas the white men's roads were between their own settlements. The Senecas and Oneida Indians used the waterways, descending the Susquehanna and Delaware in their light birches, and then, excepting a few portages, traversing the whole distance from their castles to Shackamaxon along the network of streams which make their way down from the great watershed of Western New York.

The first white settlers upon the site of Philadelphia, as has already been shown in the preceding chapters, and the only white settlers previous to the coming of Penn who made any distinct and durable impress upon the country, were the Swedes. Their first, second, and third colonies, which arrived out in 1638 and 1640, and the fifth colony also, which came between those of Printz and Risingh, contained a good many Dutch, and were indeed partly recruited and fitted out in the Netherlands, with Dutch capital and under Dutch management. The first expedition was commanded by Minuet, a Dutchman, and Sparling and Blommaert, the leading spirits in its management, were Dutchmen. So with the expedition of Hollandaer.³

It is also the fact that the Dutch sent parties frequently to the Zuydt River to settle and plant, as well as to trade with the Indians, and that Stuyvesant, after the recapture of Fort Casimir, the overthrow of Risingh's government and the subjugation of New Sweden, sent many of his people to the south side of Delaware to settle the country. For all that the Swedes were the first permanent colonists. The

³ See Prof. Odhner's *Founding of New Sweden, Pennsylvania Magazine*, vol. II., where much new light is thrown on the obscure annals of these early settlements.

Dutch were adventurers, fond of trading and navigation. As a rule they did not bring their families to the Delaware with them, and they could easily reach their own countrymen in New York after English rule had been established by Lovelace, and the trade in furs and peltries was no longer profitable so low down on the Delaware. The Swedes and Finns, on the other hand, had no such migratory propensity. They were like trees, and grew in the soil to which they had been transplanted, as if they had never known any other. As a rule they had not emigrated from their native country from choice, but were transplanted by force. One reason, indeed, why the Dutch partners had been invited to co-operate with the Swedish West India Company was that emigrants and volunteers to the new country were so hard to procure. When the project of the Swedish colony was first thrown out by Usselinckx, and adroitly fostered by his able and ingenious pen in the various contributions to the *Argonautica Gustaviana*, the leading people in Scandinavia were full of the scheme and subscribed eagerly. The colony was to be a refuge for liberty and Protestantism; no slavery, no tyranny were to be tolerated there, and the widows and orphans made desolate by the Thirty Years' war were to find there new homes and cheap and certain means of livelihood. But this fever died out long before 1637.

The Swedish and Finnish peasants had very strong local attachments. They did not wish to abandon their native soil, in spite of the scanty livelihood it insured them. The "Kalmar Nyckel" and the "Gripen" were delayed a long time in getting their passengers for the first voyage under Minuet. It is not certainly known that of this party with Minuet, more than one person—Lieut. Moens Kling—was a Swede. Anders Svensson Bonde, Peter Gunnarsson Rambo, Per Andersson, Anders Larsson Daalbo, Sven Larsson, Sven Gunnarsson, his son, Sven Svenson, Lars Svensson Käckin, Moens Andersson, Iven Thorsson, and Mårten Göttersson were all of them certainly in New Sweden in 1640,¹ but it cannot be shown whether they came over with Minuet or with his successor, Hollandaer. As Prof. Odhner shows by the record, "the people entertained a repugnance to the long sea-voyage to the remote and heathen land. It is affirmed in the letters of the administration to the Governors of the provinces of Elfsborg and Värmland, that no one spontaneously offered to accompany Capt. Van Vliet (who was originally appointed to command the ship that bore Hollandaer's party, but was superseded before sailing by Capt. Powel Jansen). The government ordered these officers, therefore, to lay hands on such married soldiers as had either evaded service or committed some other offense, and transport them, with their wives and children, to

New Sweden, with the promise to bring them home again within two years,—to do this, however, 'justly and discreetly,' that no riot might ensue." In 1640 again the Governor of the province of Örebro was ordered to prevail upon the unsettled Finns to betake themselves, with their wives and children, to New Sweden. Lieut. Moens Kling, who was now back in Sweden, was sent to recruit for emigrants in the mining regions of Westmanland and Dalarna. He was also particularly instructed to enlist the "roaming Finns," who were tramps, or squatters living rent free in the forests. Next year, when Printz had received his commission, he was sent to hunt up the same class of persons, the Governors of Dal and Värmland receiving orders to capture and imprison, provided they could not give security or would not go to America, the "forest-destroying Finns," who, as described in a royal mandate, "against our edict and proclamation, destroy the forests by setting tracts of wood on fire, in order to sow in the ashes, and who maliciously fell trees." A trooper in the Province of Skaraborg, who had broken into the cloister garden of the royal monastery at Varnhem, in Westergöthland, and committed the heinous crime of cutting down six apple-trees and two cherry-trees, was given the option of emigrating or being hung. The "Charitas," which sailed in 1641 for New Sweden, had four criminals in a total of thirty-two passengers, the greater number of the remainder being indentured servants and low persons. In fact, Lieut.-Col. Printz was himself a disgraced man, having been court-martialed and dismissed from the army for the dishonorable and cowardly capitulation of Chemnitz, of which he was commandant, so that his appointment to the colony of New Sweden was in some sort a punishment and a banishment.

But this very reluctance of the Swedes to emigrate made them the best of immigrants. They stayed in the place to which they had been removed, and became permanent fixtures in the new soil just as they had wished to be left in the old. They were quiet, orderly, decent, with no injurious vices, and in that kindly soil and climate the natural fruitfulness of their families was greatly increased. Acrelius, noticing this prolificness, says quaintly, "Joseph Cobson, in Chester, twenty years ago, had the blessing to have his wife have twins, his cow two calves, and his ewe two lambs, all on one night in the month of March. All continued to live." And he gives several other instances of the sort. Be this as it may, the Swedes remained on the spot through all the changes of administration as if *adscripti glebæ*, and they multiplied so rapidly that when Carl Christopherson Springer wrote his letter (already quoted from) to Postmaster Thelin at Stockholm, in 1693, only forty-five years after the first immigration, he was able to furnish "a roll of all the (Swedish) men, women and children which are found and still live in New Sweden, now called Pennsylvania, on the Dela-

¹ *Rolla der Voleker*, in Royal Archives of Sweden, quoted by translator of Prof. Odhner's article in *Penna. Magazine*.

ware River," to the number of one hundred and eighty-eight families, nine hundred and forty-two persons. This does not include the Swedes on the other side of the Delaware, many families residing on the east bank being included in the list of "Tydable" (taxable) persons returned to the Duke of York's Court at Upland, in November, 1677.¹

¹ It is perhaps expedient to give these lists, commencing with the one forwarded by Springer to Thelin. The names which are italicized in this list are such as likewise occur in the Upland list:

The Swedes on the Delaware have sometimes been reproached as a lazy people because they did not clear the forests at a rapid rate, nor build themselves fine houses. But this is not the character which Penn gives them, nor that to which their performances entitle them. Penn says, "They are a plain, strong, industrious people, yet have made no great progress

"Hereditary surnames," says Mr. Edward Armstrong (quoting M. A. Lower, on English Surnames), "are said to have been unknown in Sweden before the fourteenth century. A much later date must be assigned as the period when they became permanent, for surnames were not in every case established among the Swedes in Pennsylvania until some time after the arrival of Penn, when intermarriage, and the more rigid usage of the English, compelled them to adhere to the last combination; as for example with respect to the name of *Olla Paul-son*, the 'son' became permanently affixed to the name, and ceased to distinguish the degree of relationship." This, however, is not singular with the Scandinavian people, Mr. Armstrong should have observed. It has prevailed in all countries down to a late period, and especially among the English races, where the corruption of surnames is still going on. 'No bad spelling can do more harm than bad pronouncing, nor is it worse to turn Lorenz, Laers, Larse into Lasse (just as common people nowadays pronounce arsenal as if it were spelt assenal) than to corrupt Esterling into Stradling, Majoribanks into Marchbanks, Pierce into Purse, Taliaferro into Tolliver, Enroughy into Doughty, etc. The Swedish system, however, is a little complicated, and made much more so by the loose spelling of contemporary chroniclers and clerks. Some instances of the transmutations of names may help the reader to enlighten himself about these

in the culture or propagation of fruit-trees, as if they desired to have enough, not a superfluity." He speaks also of their respect to authority, adding, "As they are a people proper and strong of body, so they have fine children, and almost every house full; rare to find one of them without three or four boys and as many girls; some six, seven, and eight sons. And I must do them that right, I see few men more sober and industrious." In speaking of their lack of diversified husbandry, Penn forgot that their leading crop was tobacco, which, being without slaves almost entirely, they had to cultivate with their own hands. Their intelligence must have been at least equal to their loyalty, for they were more than fully represented, on the basis of comparative population, in all the early assemblies, councils, and magistrates' courts, under Lovelace and Penn, and they were the only interpreters Penn could get in his intercourse with the Indians. They were not devoid, moreover, of what would nowadays be esteemed remarkable industrial enterprise. There can be no doubt that the Swedes—probably those "wandering Finns" from the Swedish iron ore regions—discovered and worked the ore banks of Cecil and Harford Counties, Md., long before George Talbot's manor of Susquehanna was patented or Principio Furnace thought of. The mill afterwards used by Talbot and to which all his tenants were compelled to bring their corn to be ground was originally started by the Swedes to drive a rude bellows blast of their own.

The Swedes, as emigrants from an exceedingly well

lists. Eric Goranson is Eric, son of Goran (Jüran), and Goran (Jüran) Ericsson is Goran, son of Eric, a grandson of Goran. Peter Petersen is Peter, son of Peter; Swensen was originally Swen. Nilson, or Neelson, may be found transposed to Jones, as in the case of the son of Jonas Nilson, styled Mouns (Moen, Mäns), Andrew, and Neils Jones. Sometimes the puzzle is made worse by an *alias*,—e.g., Jans Justasse (*alias* Illack), and Pelle Laerson (*alias* Put Pelle). Changes in orthography have helped materially to confound names. Bengtssen becomes Bankson and Benson; Boen, Bonde, becomes Bond and Boon; Swensen becomes Swanson and Swann; Cock becomes Cook and Cox; Juccum, or Jookum, becomes Yocum; Kyn, or Kien, becomes Keen; Mortense, Martens. The descendants of Lasse Cock, son of Oele Cock, may be called either Allison or Willson. Many older Scandinavian names have been still more violently changed in their orthography in the course of the trituration of centuries, or in their passage to another language more or less affiliated. Thus it is hard to detect, reading as we run, that Ulfstein is simply the Danish form of the Norwegian Vulfstan; that in English, Harald hinn Harfagra is Harold Fairfax; Rollo, Rolf, and Ralph are the same. In the lists given above, Huling, or Hulling, becomes Fulling; Gústafsson becomes Justis, Justice, or Justison; Kyn, Kean; Coln, Colen; Van Colen, Collins; Hasselius, Issilis; Coleberg, Colesbury; Deidrickson, Derrickson; Cock, Kock, etc.; Hendrickson, Henderson; Mårten, Morton; Iwarson, Iverson and Ivson; Jonasson, Jones; Hoppman, Hoffman; Wihler, Wheeler; Nilson, or Neelson, Neilson, or Nelson; Fisk is sometimes Fish; Bure, Buren or Burns; Collman, Coleman; Broor, Brewer; Anders, Andrews; Matt, Matthews; De Voss, Voss; Marte, Martin; Staake, Stark and Stack; Rosse, Rosser; Vander Weer, Vandiver; Pehrsson, Pierson and Pearson; Paulsson, Poulson; Paul, Powell; Olle, Will, William; Sahlung, Saling; Rasse, Raese, Raisin; Brita, Bridget; Gostaf, Gustavus; Knute, Knott; Lucasson, Lucas; Incoren, Inkhorn; Onimerson, Emerson; Grantrum, Grantham; Claesen, Clawson; Cobb, Cobb; Oelssen, Wilson, etc. Lavs and Laers become Lear; Laerson, Lawson; Goron, Jüran, Jurien, and Julian; Bengat is Benedict, or Benjamin, or Bennett; Halling is Hewling; Senecka is Sinnickson; Voorhees, Ferris.

watered country, cut up in every direction by bays, sounds, rivers, lakes, and fiords, naturally followed the water-courses in the new country. They found a homelike something in the network of streams back of Tinnecum Island and thence to the Schuylkill, and in the rivers and meadows about Christiana Creek and the Brandywine. They clung to these localities tenaciously, and the only thing in Penn's government which roused their resentment and threatened to shake their loyalty was the attempted interference with their titles to these lands and the actual reduction of their holdings by the proprietary and his agents. It is a fact that some of their tenures were very uncertain and precarious in the eyes of plain and definite English law, and probably the Quakers took advantage of this to acquire escheat titles to many very desirable pieces of land which the Swedes fancied to be indisputably their own. The purchasers of New Sweden from the Indians had vested the title to the entire tract bought in the Swedish crown, and this right of property was recognized and exercised by the crown. Two land grants from Queen Christina are on record in Upland Court, one to Lieut. Swen Schute, and Printz several times solicited a grant to himself, which finally he obtained, giving the property to his daughter Armgart, Pappagoya's wife. The other land-holders secured their tracts in accordance with the fifth article of the queen's instructions to "the noble and well-born John Printz." In this article, after describing the bounds of the territory of New Sweden, and the terms of the contract under which it was acquired from "the wild inhabitants of the country, its rightful lords," it is laid down that this tract or district of country extends in length about thirty German miles, but in breadth and into the interior it is, in and by the contract, conditioned that "her Royal Majesty's subjects and the participants in this Company of navigators may hereafter occupy as much land as they may desire." The land thus bought in a single block and attached to the crown was originally managed by the Swedish West India Company. The revenue and public expenses were paid out of an excise on tobacco, and it was the interest of the company to have tobacco planted largely. In part this was accomplished by servants indentured to the company, who were sent over and paid regular wages by the month.¹

¹ Mäns Kling, lieutenant and surveyor, received forty riksdaler per month; he commanded on the Schuylkill. Sundry adventurers, seeking experience, received free passage out and maintenance, but no pay. Olof Persson Stille, millwright, received at start fifty daler, and to be paid for whatever work he did for the company. Matts Hansson, gunner at the fort and tobacco-grower, on wages; Anders Hansson, servant of the company, to cultivate tobacco, received twenty riksdaler per year and a coat; he served four years. Carl Jansson, book-keeper, sent with the expedition "for punishment," was afterwards favored by Printz, who gave him charge of the store-house at Tinnecum, paid him ten riksdaler a month wages, and recommended the home government to pardon him. Peter Larsson Cock, father of Lasse Cock, came out originally for punishment (*ein gefangener knecht*, a bond servant), receiving his food and clothing and two dollars at the start. He was free

In part the land was regularly conveyed to settlers who sought to better their fortunes; finally, criminals and malefactors were sent out to some extent at first to labor in chain-gangs upon the roads and public works. The land secured by settlers and servants who had worked out their term of years was granted in fee under power which came directly or indirectly from the crown. The difficulties about title which vexed the Swedes grew out of the changes in the tenure under the Swedish, Dutch, English, and later under Penn's grants, all of them having peculiar features of their own. It is important to understand these differences, which have not been clearly explained by writers on the subject, some of whom have hastily concluded that the land tenure system in Pennsylvania originated with Penn's laws. So far as land is concerned, Penn's "great law" and the subsequent enactments were all founded upon the "Duke of York's laws," the titles under which Penn was particular to quiet and secure.¹

in four years, and became afterwards a judge of Upland Court. These indentured servants were not badly treated either by the Swedes or the Friends. Their usual term of service was four years, and they received a grant of land, generally fifty acres, at the expiration of the term. The system was originally contrived in Maryland in order to increase the labor of the province, and many of the bound servants were persons of good character but without means, who sold their services for four or five years in order to secure a passage across the ocean to the new land of promise. A great many of them went to Pennsylvania during Penn's régime and afterwards, both from Great Britain and the continent of Europe. The terms upon which they were hired to the different colonies were nearly the same in every case. The following is about the form commonly used. It may be found in John Gilmory Shea's introduction to Gowan's reprint of Alsop's "Character of the Province of Maryland," London, 1666: "*The Forme of Binding a Servant.* 'This indenture, made the — day of —, in the — yeare of our Sovereigne Lord King Charles &c betweene — of the one party and — of the other party, Witnesseth that the said — doth hereby covenant, promise and grant to and with the said — his Executors and Assigns, to serve him from the day of the date hereof, vntill his first and next arrivall in — and after for and during the tearme of — yeares, in such service and employment as the said — or his assignes shall there employ him, according to the custome of the countrey in the like kind. In consideration whereof, the said — doth promise and grant, to and with the said — to pay for his passage and to find him with Meat, Drinke, Apparell and Lodging, with other necessaries during the said terme; and at the end of the said terme, to give him one whole yeares provision of Corne and fifty acres of Land, according to the order of the countrey. In witness whereof, the said — hath hereunto put his hand and seale the day and yeere above written.

"Sealed and delivered }
in the presence of }

¹ Penn, in fact, borrowed many other things from the duke's laws, particularly the much admired provision for "peacemakers," or arbitrators, to prevent litigation, which provision, by the way, became a dead letter within ten years after its enactment, and was dropped in Lieutenant-Governor Markham's Act of Settlement in 1696. This was much more actively enforced in the duke's laws, which provide that "all actions of Debt or Trespass under the value of five pounds between Neighbours shall be put to Arbitration of two indifferent persons of the Neighbourhood, to be nominated by the Constable of the place; And if either or both parties shall refuse (upon any pretence) their Arbitration, Then the next Justice of the peace, upon notice thereof by the Constable, shall choose three other indifferent persons, who are to meet at the Dissenter's charge from the first Arbitration, and both Plaintiff and Defendant are to be concluded by the award of the persons so chosen by the justice."

The Swedes, both under Minuet's and later instructions, were allowed to take up as much land as they could cultivate, avoiding land already improved and that reserved for the purposes of the Swedish West India Company. This land, so taken up, was to remain to the possessors and their descendants "as allodial and hereditary property," including all appurtenances and privileges, as "fruit of the surface, minerals, springs, rivers, woods, forests, fish, chase, even of birds, the establishments upon water, wind-mills, and every advantage which they shall find established or may establish." The only conditions were allegiance to the Swedish crown and a payment of three florins per annum *per family*.² This form of quit-rent per family gave something of a communal aspect to the Swedish tenures, and it was probably the case that but few tracts were definitely bounded and surveyed in the earlier days of the settlement. Governor Printz received no special instructions in regard to land grants further than to encourage agriculture and to use his discretion in all matters, guided by the laws, customs, and usages of Sweden. We may suppose he followed the colonial system which was already in operation. Governor Risingh's instructions* from the Swedish General College of Commerce required him to give the same title and possession to those who purchased land from the savages as to those who bought from the company, with all allodial privileges and franchises, "but no one to enter into possession but by consent of the government, so that no one be deprived improperly of what he already possesses." The Swedish tenure, therefore, was by grant from the crown, through the Governor, the quit-rent being commuted into a capitation tax, payable annually by heads of families, the only limits to tracts granted being that they do not trespass on other holdings and are cultivated. After the conquest of New Sweden by the Dutch the Swedes were ordered to come in, take the oath of allegiance, and have their land titles renewed. The Dutch were very liberal in their grants, especially under D'Hinoyossa, but the tenure of lands was entirely changed, and a quit-rent was now required to be paid of 12 stivers per morgen, equal to 3.6 cents per acre.³ This was a high rent, in comparison with that which the Swedes had been paying, and with the rents charged by the English. Besides, the land had to be surveyed, and the cost of survey, record, and deeds for a tract of 200 or 300 acres was 500 or 600 pounds of tobacco. Many Swedes were unwilling, some perhaps unable, to pay these fees and rents; some abandoned their lands entirely, some sold, and

² See grant to Henry Hockhammer, etc., Hazard's Annals, i. 53.

³ Writers have caused confusion in this matter by computing the stiver at 2 cents, and the guilder at 40 cents. The actual value of the stiver, as settled by the Upland court at this time, was $\frac{3}{16}$ ths of a penny, the guilder thus being worth 6 pence. In sterling values, therefore, the rent of an acre would have been 3.6 cents. In Pennsylvania currency, which perhaps was the standard used in the Upland calculations, the rent would be 2.21 cents per acre.

many paid no heed to the mandate, thus in fact converting themselves into squatters.

After the English took possession new oaths of allegiance and new confirmations of title were required. Andross and Lovelace made patents very freely, doing all they could to promote and extend the settlements, but the Duke of York's laws exacted a quit-rent of one bushel of wheat per one hundred acres. Wheat, as we find by the Upland record, was taken for taxes (and of course for rent likewise) at the rate of "five guilders per scipple,"—five guilders per *scheepel* or bushel, thirty pence sterling, or sixty cents, or thirty pence Pennsylvania currency, equal to forty-four and one-fifth cents,—a rent, therefore, of three-fifths or two-fifths of a cent per acre. Under Penn the regular quit-rents were a penny per acre, the conveyancing costing fourteen to eighteen shillings per plat, and the surveying and registering as much more, say thirty shillings, or seven dollars and fifty cents, initial payment, and two dollars annual payment per one hundred acres. This was in addition to the local tax for county and court expenses, amounting to thirty-five or forty guilders per tydable,—four dollars and fifty cents per family or per freeman,—and an occasional "war tax" of a penny in the pound on a valuation which, in 1694, reached £182,000 currency. There is no wonder that the Swedes, who had under their own rules paid only a nominal rent, should have shrunk in fright at these heavy charges, and either gave up their land or neglected to take out deeds for it, and thus lost possession of it entirely under Penn's severe law of 1707. As Acrelius says, in his general statement of these changes of tenure, "Under the Swedish government no deeds were given for the land; at least there are no signs of any, excepting those which were given as briefs by Queen Christina.¹ The Hollanders, indeed, made out quite a mass of deeds in 1656, but most of them were upon building lots at Sandhook. Meanwhile, no rents were imposed. The land was uncleared, the inhabitants lazy, so that the income was scarcely more than was necessary for their sustenance. But when the English administration came, all were summoned to take out new deeds for their land in New York. . . . A part took the deeds; but others did not trouble themselves about them, but only agreed with the Indians for a piece of land for which they gave a gun, a kettle, a fur coat, or the like, and they sold them again to others for the same, for the land was superabundant, the inhabitants few, and the government not strict. . . . Many who took deeds upon large tracts of land were in great distress about their rents, which, however, were very light if people cultivated the lands, but heavy enough when they made no use of them; and they therefore trans-

ferred the greater part of them to others, which their descendants now lament."²

Acrelius is not just to his fellow-countrymen in calling them idle. They were timid, and they lacked enterprise to enable them to grapple with the possibilities of the situation. They were simple peasants of a primitive race and a secluded country, thrown in among people of the two most energetic commercial and mercantile nations the world has ever seen. They were among strangers, who spoke strange tongues and had ways such as the Swedes could not understand. It is no wonder that they should have shrunk back, bewildered, and contented themselves with small farms in retired neighborhoods. But these small farms, after the Swedes settled down upon them, were well and laboriously tilled, and, small though they were, we have the acknowledgment of the Swedes themselves that they yielded a comfortable support, with a goodly surplus each year besides to those large and rapidly increasing families which attracted William Penn's attention and commanded his admiration.

The husbandry of the Swedes was homely, but it was thorough. The soil which they chiefly tilled was light and kindly. In the bottoms, swamps, and marshes along the streams, which the Swedes knew quite as well as the Dutch how to dyke and convert into meadows,—the Brandywine meadows are to this day famous as examples of reclaimed lands,—the soil was deep, rich, and very productive. The earlier Swedes did not sow the cultivated grasses on these meadows, they simply dyked them and mowed the natural grass, planting corn and tobacco, and sowing wheat wherever it was dry enough. Acrelius speaks of the high price which these lands brought in his time—"six hundred dollars copper coin [sixty dollars] per acre"—when thoroughly ditched and reclaimed, though constantly liable to inundations from the tunneling of the muskrat and the crayfish. The Upland soils were excellently adapted to corn, wheat, and tobacco when they had been cleared. The forest growth on these soils comprised the several varieties of American oak familiar in the Middle States, the black-walnut, chestnut, hickory, poplar (tulip-tree), sassafras, cedar, maple, the gums, locust, dogwood, wild cherry, persimmon, button-wood, spice-wood, pine, alder, hazel, etc. The forests gave the Swedes much trouble, and undoubtedly had an influence upon the modes of cultivation employed. The cost of labor made it difficult to clear the thick woods.³

² Acrelius, *Hist. New Sweden*, pp. 106-7. Penna. Hist. Society's edition, 1874.

³ Wages are always interesting to study, for their averages are evidences which cannot be contradicted of the condition of a people. The earlier servants in the employment of the Swedish company received, as a rule, twenty copper dollars (two dollars of our money) for outfit and twenty *riksdaler* wages per annum (equal to twelve dollars). The wages of freemen, however, were more than double this, and these wages moreover included board and lodgings. With wheat, at an average, fifty cents per bushel, a freeman's wages were equal to about sixty dollars a year at

¹ No deeds are found because the Dutch destroyed the Swedish local records, and they and the English required all deeds in the hands of Swedes to be surrendered in exchange for new deeds under the new government's seal.

Hence the common expedient was resorted to of removing bushes and undergrowth only and girdling the larger trees, which were left to stand leafless and dead till they rotted and fell, when the logs were after a time "niggered up," or cut into lengths, rolled into piles, and burnt. It was difficult to plow between and among so many trunks and stumps, and this led the Swedes, in order further to economize labor, to resort to a system of husbandry which still, in a great measure, regulates the pitching and rotation of crops in the Delaware, Maryland, and Virginia peninsula. The ground was cleared in the winter, and then, unless tobacco was grown, the "new ground," as it was called, was planted in corn in the spring. The process, which is known as "listing," was to throw two furrows or four furrows together, by plowing up and down the field instead of around it, leaving a series of ridges with an unplowed space between. The soil of the ridges was pulverized with the harrow and then stepped off into hills about four feet apart, the corn-planter dropping his five grains in each hill, scooping the hill out, dropping and covering with a heavy hoe,—a simple operation which experts dispatched with two motions of the implement. At the last working of the corn, when it had grown stout and waist or breast high, the "middle" of the lists were plowed out and the fresh earth thrown about the roots of the vigorous plant. This "listing" process was found excellently well suited to the low, flat lands of the peninsula, as, besides saving labor, it afforded a sort of easy drainage, the bottom of every furrow being a small ditch, and this enabled the

farmers to plant their corn much earlier than they otherwise could have done. When the corn had gone through the "tasseling" and "silking" processes and the ear was fully developed, the "blades" were pulled and the "tops" cut for fodder. In September the ground was lightly plowed with small shovel-plows (as yet the "cultivator" was not) and sowed in wheat, the stalks being broken down after frost with the hoe or by running rollers over them. Wheat thus sowed on ridges was so well protected by the drainage from frost and "winter-killing" that many farmers in the peninsula still throw their wheat-ground into corn-rows even where they use drills to sow it. Where wheat was not sowed on the corn-ground, and oats was not sowed in the spring, the stalk-field was summer-fallowed, being plowed in May, July, and again before seeding. The wheat was cut with sickles, bound in sheaves, and thrown into "dozens," each shock being expected to yield a bushel. Rye, wheat, and oats were thrashed with flails, and the former, sowed in November, was a favorite crop with the Swedes, the straw being sometimes shipped to Europe. Buckwheat was often sowed on the rye, wheat, or oats stubble, the grain being used to feed stock. Flax and oats were sowed in the spring, either on the corn-ground or stubble-fields. Potatoes were planted on the bare ground and covered with the listing-plow. Sweet potatoes, however, were planted in hills after the ground had been deeply furrowed. Turnips were not much sown, except on new ground, and tobacco, in Acrelius' time, was only planted on such tracts or in the gardens.

The implements were few and rude, as were also the apparatus of the farm animals. The plows often had wooden mould-boards, and were not capable of working deeply; the harrows were of the primitive triangular shape, and the oxen or horses working them were attached by means of double links to the apex of the V. The ox-yokes had bows made of bent hickory-wood, the horses' traces were of twisted deer-hide, and the collars of plaited corn-husks. The rest of the harness was home-made, of the same serviceable deer-skins, and the farmers and their lads, all fond of riding on horseback, were content with a bear- or a deer-skin girt about the horse, with a rawhide surcingle in lieu of a saddle, imitating the Indians in dispensing with stirrups. Beans, pumpkins, squashes, and melons were commonly planted in the hills with the corn. Much cabbage was produced, but the variety of other vegetables was limited to onions, peas, beets, parsnips, turnips, radishes, peppers, lettuce, pepper-grass and scurvy-grass, with a few herbs, such as chamomile, sage, thyme, rue, sweet marjoram, lavender, savory, etc., to supply the domestic pharmacy, or afford seasoning for the sausages, liver-puddings, head-cheese, etc., which were made at "hog-killing."

Penn, in his letter to the Free Society of Traders, speaks rather disparagingly of the orchards of the

present values, besides keep. The Upland records show that just prior to Penn's occupancy wages had sensibly bettered. In March, 1780, Thomas Kerby and Rolberd Drawton, servants, sued Gilbert Wheeler for wages. Kerby wanted pay for seventy days, between October 7th and January 7th, "so much as is usual to be given p^r day, w^{ch} is fower (4) guilders p^r diem wth costs." The court allowed Kerby and Drawton each fifty stivers (two and a half guilders) per day, the latter to be paid "in Corne or other good pay in y^e River." The four guilders was probably the "usuall" rate of summer wages, the award of the court represented fall and winter wages. "Corne in y^e river"—that is, delivered where it could be shipped—was valued at three guilders per scippel (or bushel). The winter wages therefore were equivalent to thirty cents a day in modern money, but in purchasing power, rating corn at the average present price of fifty cents per bushel, amounted to forty-one and sixty-six hundredths cents per day, summer rates being actual forty-eight cents, with a purchasing power of sixty-two cents. March 12, 1678, Israel Helm bough' of Rolberd Hutchinson, attorney for Ralph Hutchinson, "assignee of Daniel Juniper, of Accomac," "a Certayne man Servant named William Bromfield, for y^e terme & space of four Jears [years] servitude now next Ensuing. . . . The above named Servant, William Bromfield, being in Co^rt, did promise to serve the s^d m^r Israel helm faithfully & truly the aboves^d terme of four Jears. The worpp^l Co^rt (upon ye Request of both parties concerned) Did order that w^{ch} is abovesaid to bee so recorded." The price paid by Helm was "twelve hundred Guilders." This was equal to three hundred guilders per annum, and it shows how valuable labor was and how prosperous agriculture must have been at that day on the Delaware. Helm paid (and other court entries show he simply paid the average price for such labor) one hundred and forty-four dollars in money (the present exchangeable value of which in corn is one hundred and ninety-two dollars) for four years' services of a man whom he had to board, lodge, clothe, care for when sick, and provide with an outfit when free. At twenty years' purchase this would be nearly one thousand dollars for a servant for life. Farming must have been very profitable to enable such prices to be paid.

Swedes, as if they declined to profit by the peculiar adaptedness of their soils to fruit culture. Yet they must have been the first to naturalize the apple, the cherry, and the peach on the Delaware, and we must give them the credit of having anticipated the cherry and apple orchards of Eastern Pennsylvania and Cumberland Valley, and the grand peach-tree rows for which the streets of Germantown became famous. It was a Dutchman, settled among the earlier Swedes,¹ who produced the best cooking apple, and one of the best sort for eating—the Vandevere—that is grown in the Middle States, and it was descendants of Delaware Swedes² who earliest cultivated the peach by wholesale, and made it an article of commerce. The peach-tree probably came to Delaware from Maryland, having traveled along the coast from the early Spanish settlements in Florida, but it has nowhere become so completely naturalized, so healthy, so productive of large, succulent, delicious fruit as in the country which the Swedes first reclaimed from the wilderness. In the time of Acrelius the peach was supposed to be indigenous, and was cultivated so extensively as to be relied upon as a standard food for swine.

Domestic animals increased very rapidly among the Swedes. They imported their own milch kine and oxen in the first instance, but they found horses and swine running at large and wild, many having escaped into the "backwoods" from the Maryland planters.³ These horses had a good touch of the true Barb blood in them, as descendants of Virginia thoroughbred sires, and they were probably crossed with pony stock from Sweden. It seems likely that it is to this cross and the wild, half-starved existence they have led for two hundred years, living on salt grass and asparagus and fish, bedding in the sand and defying storm and mosquitoes, that we owe the incomparable breed of "beach" or Chingoteague ponies, fast, wiry, true as steel, untiring, sound, with hoofs as hard as iron and spirits that never flag. Acrelius noticed them acutely. He would not have been a parson if he had not had a keen eye for a horse. He says, "The horses are real ponies, and are seldom found over sixteen hands high. He who has a good riding horse never employs him for draught, which is also the less necessary, as journeys are for the most part made on horseback. It must be the result of this, more than of any particular breed in the horse, that the country excels in fast horses, so that horse-races are often made for very high stakes. A good horse will go more than a Swedish mile (six and three-quarter English miles) in an hour, and is not to be bought for less than six hundred dollars copper coinage" (sixty dol-

lars). The cattle, says Acrelius, are middling, yielding, when fresh and when on good pasture, a gallon of milk a day. The upland meadows abounded in red and white clover, says this close observer, but only the first Swedish settlers had stabling for their stocks, except in cases of exceptionally good husbandry. Horses, cattle, sheep, and hogs ran out all the time, being inclosed at night, and sometimes sheltered in severe weather. They were, however, fed with grain, such as oats, corn, and buckwheat, in addition to fodder, in winter, the food of milch cows being bran or other ground mill-stuff. Acrelius says, in his dry, humorous way, "the man-servant takes care of the foddering of the cattle, whilst the housewife and women-folks roast themselves by the kitchen fire, doubting whether any one can do that better than themselves."

The excellent Swedish pastor was a connoisseur in drinks as well as horse-flesh, and he has catalogued the beverages used by the Swedes with the accuracy and minuteness of detail of a manager of a rustic fair. After enumerating the imported wines, of which Madeira was the favorite of course, he describes, like an expert, the composition of sangaree, mulled wine, cherry and currant wine, and how cider, cider royal, cider-wine, and mulled cider are prepared. Our reverend observer makes the following commentary upon the text of rum: "This is made at the sugar-plantations in the West India Islands. It is in quality like French brandy, but has no unpleasant odor. It makes up a large part of the English and French commerce with the West India Islands. The strongest comes from Jamaica, is called Jamaica spirits, and is the favorite article for punch. Next in quality to this is the rum from Barbadoes, then that from Antigua, Montserrat, Nevis, St. Christopher's, etc. The heaviest consumption is in harvest-time, when the laborers most frequently take a sup, and then immediately a drink of water, from which the body performs its work more easily and perspires better than when rye whiskey or malt liquors are used." Rum, he tells us, was drunk raw, or as egg-nog ("egg-dram"), or in the form of cherry bounce or billberry bounce; "punch," our learned author says, "is made of fresh spring-water, sugar, lemon-juice, and Jamaica spirits. Instead of lemons, a West India fruit called limes, or its juice, which is imported in flasks, is used. Punch is always drunk cold; but sometimes a slice of bread is toasted and placed in it warm to moderate the cold in winter-time, or it is heated with a red-hot iron. Punch is mostly used just before dinner, and is called 'a meridian.'"⁴ The other preparations in which rum was an ingredient included *Mämm* (mum), made of water, sugar, and rum ("is the most common drink in the interior of the country, and has set up many a tavern-keeper"); "Manatham," small beer, rum, and

¹ Philip Van der Weer's brick house at Truellers' Hook, on the Brandywine, was built before 1655.

² The Reyholds.

³ Bacon's Laws of Maryland (1635-1751) are full of statutes relating to wild horses and their depredations, and to ear-marks and inclosures for all kinds of stock.

⁴ Not because it aided "navigation," but because our Swedes dined at twelve o'clock.

sugar; "tiff" or "flipp," same as foregoing, with the addition of a slice of toasted and buttered bread; hot rum punch, rum and water warmed up, with sugar and allspice,—“customary at funerals;” mulled rum, hot, with eggs and allspice; *Hütt-Püt*, warmed beer with rum added; “Sampson,” warmed cider with rum added; grog; “sling” or “long sup,” half-and-half sweetened rum and water; milk punch; mint-water; egg-punch, etc. “Sillibub” is made like the Swedish “Oelost,” of milk-warm milk, wine, and water,—a cooling beverage in summer-time; “still-liquor” was the country name for peach or apple brandy; whiskey, our author says, “is used far up in the interior of the country, where rum is very dear on account of the transportation.” The people in the town drink beer and small beer; in the country, spruce, persimmon-beer, and mead. Besides this there are numerous liquors. Tea was commonly used, but often brandy was put in it; coffee was coming into use as a breakfast beverage, the berries imported from Martinique, San Domingo, and Surinam, and chocolate also was not neglected.

In spite of all these liquids the early Swedes did not neglect solids. Their meals were four a day,—breakfast, dinner, “four o’clock piece,” and supper, the latter sometimes dispensed with. There was no great variety of dishes, but such as were served were substantial; ham, beef tongue, roast beef, fowls, “with cabbage set round about,” was one bill of fare; roast mutton or veal, with potatoes or turnips, another; a third might be a pasty of deer, turkey, chickens, partridges, or lamb; a fourth, beef-steak, veal cutlets, mutton-chops, or turkey; goose or fowls, with potatoes set around, “stewed green peas, Turkish beans, or some other beans;” apple, peach, cherry, or cranberry pie “form another course. When cheese and butter are added, one has an ordinary meal.” For breakfast, tea or coffee, with chipped beef in summer, milk-toast and buckwheat-cakes in winter, the “four o’clock piece” being like the breakfast. Chocolate was commonly taken with supper. The Swedes used very little soup and very little fish, either fresh or cured. “The arrangement of meals among country people is usually this: for breakfast, in summer, cold milk and bread, rice, milk-pudding, cheese, butter, and cold meat. In winter, mush and milk, milk-porridge, hominy, and milk; supper the same. For noon, in summer, ‘*säppa*’ (the French *bouillon*, meat-broth, with bread-crumbs added, either drunk or eaten with spoons out of common tin cups), fresh meat, dried beef, and bacon, with cabbage, apples, potatoes, Turkish beans, large beans, all kinds of roots, mashed turnips, pumpkins, cashaws, and squashes. One or more of these are distributed around the dish; also boiled or baked pudding, dumplings, bacon and eggs, pies of apples, cherries, peaches, etc.”¹

¹ The pudding, says Acrelius in a note, was boiled in a bag; it was called a fine pudding when fruit was added; baked pudding was the

The land was so settled in the time of Acrelius that each had his separate ground, and mostly fenced in. “So far as possible the people took up their abodes on navigable streams, so that the farms stretched from the water in small strips up into the land.” The Swedes used boats a great deal. They always went to church in boats if the ice permitted, and they had a great quarrel with Chambers, to whom Penn had given the monopoly of the Schuylkill Ferry, because he would not let their boats cross without paying toll. The houses were solid; in Acrelius’ time mostly built of brick or stone, but earlier of logs, often squared oak logs, not often more than a story and a half high. The roofs were covered with oak or cedar shingles; the walls plastered and white-washed once a year. The windows were large, often with hinged frames, but very small panes of glass when any at all was used, and all the chimneys smoked. In some houses straw carpets were to be found, but the furniture was always simple and primitive, made of country woods, with now and then a mahogany piece. The clothing was plain, domestic linen being worn in summer, and domestic woolens, kerseys, and linseys in winter, with some calicoes and cottons of imported stocks. The domestic cloth was good in quality, but badly dyed. For finer occasions plush and satin were sometimes worn. Our good parson, by whose observations we have been profiting, notes the progress luxury had been making among the Swedes. He says, “The times within fifty years are as changed as night is from day. . . . Formerly the church people could come some Swedish miles on foot to church; now the young, as well as the old, must be upon horseback. Then many a good and honest man rode upon a piece of bear-skin; now scarcely any saddle is valued unless it has a saddle-cloth with galloon and fringe. Then servants and girls were seen in church barefooted; now young people will be like persons of quality in their dress; servants are seen with *perruques du crains* and the like, girls with hooped skirts, fine stuff-shoes, and other finery. Then respectable families lived in low log houses, where the chimney was made of sticks covered with clay; now they erect painted houses of stone and brick in the country. Then they used ale and brandy, now wine and punch. Then they lived upon grits and mush, now upon tea, coffee, and chocolate.”

Stray hints of the simple manners of these primitive times, and of the honesty, ingenuousness, and quaint religious faith of the people crop out now and then in the accounts which Acrelius gives of the churches and his predecessors in their pulpits. When the “upper settlers” and “lower settlers” quarreled

young people’s pancake; dumplings and puddings were called “Quakers’ food.” Apple-pie was used all the year,—“the evening meal of children. House-pie, in country places, is made of apples neither peeled nor freed from their cores, and its crust is not broken if a wagon-wheel goes over it!”

about the place for their new church, and Wicaco carried the day, the lower settlers were placated with a flat-boat, maintained at the expense of the congregation, to ferry them over the Schuylkill. The church wardens kept the keys of the boat. This was the beginning of the church. "Gloria Dei," so venerable in the eyes of Philadelphians. The pastor's pay was sixty pounds, the sexton's eight pounds. If a man came drunk to church he was fined forty shillings and made to do public penance. The penalty for "making sport of God's word or sacraments" was five pounds fine, and penance. For "untimely singing," five shillings fine. If one refused to submit to this sort of discipline he was excluded from the society and his body could not be buried in the churchyard. The pastor and wardens looked carefully after betrothals and marriages. The whole congregation were catechized and also examined upon the contents of the sermon. There were also "spiritual examinations" made once a year in families. Each church had its glebe, the income from which was the pastor's, who also received a considerable sum from funerals, marriages, etc. The church bell was swung in a tree. Among the fixtures of the parsonage was a negro woman belonging to the congregation and included in the inventory of glebe property. When she grew old, "contrary," and "useless," she was sold for seven shillings. When the Christina Church was restored there was a great feast and a general revival of interest in the ancient Swedish ways. Matins were held at Christmas, Easter, and Pentecost; garlanded lights and side lights of pine wood for Christmas service, and bridal pairs came to the services in the church with crowns and garlands, their hair dressed after the old-time Swedish custom. Among the new regulations of Pastor Hesselius was one to prevent people from driving across the churchyard, another forbidding them to sing as if they were calling their cows. People with harsh voices were ordered to stand mute or "sing softly." The Christina Church owned town-lots in Wilmington, and used to hire out its "pall-cloth" for five shillings each funeral. The charge for burying a grown person was twelve shillings, children half-price.

The Swedish pastors were generally learned and accomplished men, who exerted themselves successfully in directing the minds of their congregations to the necessity of education. The original settlers were ignorant people, few of whom could write their names. Even Lasse Cock, agent for Penn and Markham for twenty years, could not at first do better than sign his "mark" to writings. The pastors, however, always made a brave stand for education, and were the means of preventing the Swedish tongue in America from sinking into oblivion. They also maintained as many of the old observances and religious ceremonies as possible, such as baptism soon after birth, an actual instead of formal sponsorship on the part of the god-

parents, the old service of the churching of women, a general attendance upon the service and sacrament of the altar, and a return to the ancient forms of betrothal and marriage. "The old speak of the joy," says Acrelius, "with which their bridal parties formerly came to church and sat during the whole service before the altar." Burials were solemn occasions, but had their feasts as well. The corpse was borne to the grave on a bier, the pall-bearers, chosen from those of the same sex and age of the deceased, walking close alongside and holding up the corners of the pall.

A few of the log cabins occupied by the primitive Swedes were standing within a few years. Watson, in his *Annals*, describes one of the better class in Swanson's house, near Wicaco. John Hill Martin, in his *History of Chester*, recalls two or three of these ancient houses. They were very rude affairs, with seldom more than a living-room with a loft over it, doors so low that one had to enter stooping, windows small square holes cut in the logs, protected by isinglass or oiled paper, or thin stretched bladders, often with nothing but a sliding board shutter. The chimney was in the corner, of sticks and clay, or sandstone blocks, generally built outside the house. The first Swede settlers imitated the Indians by dressing in skins and wearing moccasins. The women's jackets and petticoats and the bedclothes were of the same materials. The furs were by and by superseded by leather breeches and jerkins, while the women spun, wove, or knit their own woolen wear, as well as the linen for summer. The women, old and married, wore hoods in winter, linen caps in summer, but the unmarried girls went uncovered except in the hot sun, dressing their abundant yellow hair in long, broad plaits.

The proof of the industry of the early Swedes is to be sought in their works. They were a scattered, ignorant race, with no capital, few tools, and no occupations but those of husbandry and hunting. They were only a thousand strong when Penn came over, yet they had extended their settlements over a tract nearly two hundred miles long and seven or eight miles deep, building three churches and five or six block-houses and forts, clearing up forests and draining swamps to convert them into meadow land. They had discovered and worked the iron deposits of Maryland in two or three places. They had built about a hundred houses, fenced in much of their land, and made all their own clothes, importing nothing but the merest trifles, besides arms and ammunition, hymn-books, and catechisms. They had built grist-mills and saw-mills, having at least four of the latter in operation before Penn's arrival.¹ According to Ferris, however, the frame of the house in which Governor Lovelace entertained George Fox in 1672 was made entirely of hewn timbers, none of the stuff being

¹ Bishop, *History of Manufactures*, i. 110.

sawed, the mortar and cement being made of oyster-shell lime: the house itself was built of brick. Governor Printz found a wind-mill at Christiana in 1643, but he says it never would work. On the other side of the river there were horse-mills. One at South Amboy in 1685, it was estimated, would clear the owner £100 a year, the toll for grinding a "Scotch bell" (six bushels) of Indian corn being two shillings sterling, equal to one bushel in every four and a half. But probably more than half the early settlers had to do as a primitive denizen in Burlington reports himself as doing, pounding Indian corn one day for the next. In 1680, two years before Penn, Thomas Olive had finished his water-mill at Ranocas Creek, and Robert Stacey his at Trenton. Printz's mill on Cobb's Creek was built in 1643, and Campanius reports it as doing admirable work. Joost Andriansen & Co. built a grist-mill at New Castle in 1662. In 1671 there was a proposition made by New Castle to erect a distillery for grain, but the court negatived it, except the grain be "unfit to grind and bould," because the process of distilling consumed such "an immense amount of grain."

Hallam is right in saying that "No chapter in the history of national manners would illustrate so well, if duly executed, the progress of social life as that dedicated to domestic architecture." After the saw-mill the brick-kiln follows naturally and rapidly. Hazard produces a petition to New Amstel court, in 1656, from Jacobus Crabbe, referring to a plantation "near the corner where bricks and stones are made and baked." The Dutch introduced brick-making on the Delaware, the Swedes being used to wooden houses in their own country. The court-house at Upland, in which Penn's first Assembly was held, was of brick.

The Swedes not only made tea of the sassafras, but they made both beer and brandy from the persimmon, and small beer from Indian corn. Kalm says that the brewing and distilling were conducted by the women. The Dutch had several breweries in the settlement about 1662. Coffee was too high to be much used in the seventeenth century. Penn's books show that it cost eighteen shillings and sixpence per pound in New York, and that would buy nearly a barrel of rum. Tea fetched from twenty-two to fifty shillings, currency, a pound.

Governor Printz was expressly instructed to encourage all sorts of domestic manufactures and the propagation of sheep. There were eighty of these animals in New Sweden in 1663, and the people made enough woolen and linen cloth to supplement their furs and give them bed and table linen. They also tanned their own leather, and made their own boots and shoes, when they wore any. Hemp was as much spun and wove almost as flax. The Swedes who had the land owned large herds of cattle, forty and sixty head in a herd. The Dutch commissaries enjoined to search closely for all sorts of mineral wealth on the

South River, and those who discovered valuable metal of any kind were allowed the sole use of it for ten years. The Dutch discovered and worked iron in the Kittatinny Mountains, and, as has already been shown, the Swedes opened iron ore pits in Cecil County, Md. Charles Pickering found the copper with which he debased the Spanish reals and the Massachusetts pine-tree shillings on land of his own in Chester County.

When William Penn arrived in the Delaware in 1682, on October 27th, there were probably 3500 white people in the province and territories and on the eastern bank of the Delaware from Trenton to Salem. A few wigwags and not over twenty houses were to be found within the entire limits of what is now Philadelphia County. There were small towns at Hore-kills, New Castle, Christiana, Upland, Burlington, and Trenton, and a Swedish hamlet or two at Tinicum and near Wicaco. Before the end of his first year in the province eighty houses had been built in the new city of Philadelphia, various industrial pursuits had been inaugurated, and a fair and paying trade was opened with the Indians. When Penn left the province in 1684 his government was fully established, his chief town laid out, his province divided into six counties and twenty-two townships. He had sold 600,000 acres of land for £20,000 cash and annual quit-rents of £500. The population exceeded 7000 souls, of whom 2500 resided in Philadelphia, which had already 300 houses built, and had established a considerable trade with the West Indies, South America, England, and the Mediterranean. When Penn returned again in 1699, the population of the province exceeded 20,000, and Philadelphia and its liberties had nigh 5000 people. It was a very strange population moreover. Not gathered together by the force of material and temporary inducements, not drawn on by community of interests nor the desire of betterments instinctive in the human heart, with no homogenousness of race, religion, custom, and habit, one common principle attracted them to the spot, and that was the desire of religious liberty, the intense longing to escape from under the baneful, withering shadow of politico-religious persecution to which the chief tenet of their faith, non-resistance and submission to the civil authority, prevented them from offering any opposition. They desired to flee because their religious opinions bound them not to fight. They were not of the church militant, like the Puritans and Huguenots and Anabaptists, and so it became them to join the church migratory and seek in uninhabited wilds the freedom of conscience denied them among the communities of men. They were radicals and revolutionists in the highest degree, for they upheld, and died on the scaffold and at the stake sooner than cease to maintain, the right of the people to think for themselves, and think their own thoughts instead of what their self-constituted rulers and teachers commanded them to think. But they did not resist authority: when the statute and their con-

sciences were at variance they calmly obeyed the latter and took the consequences. They knew themselves to be abused and shamefully misused, but they believed in the final supremacy of moral and intellectual forces over despotic forces. They believed with Wiclif that "Dominion belongs to grace," and they waited hopefully for the coming of the period of intellectual freedom which should justify their action before men and prove the correctness of their faith in human progress. But all this trust in themselves and the future did not contribute materially to lighten the burden of persecution in the present, and they sought with anxiety for a place which would give them rest from the weariness of man's injustice. They became pilgrims, and gathered their little congregation together wherever a faint lifting in the black cloud of persecution could be discerned. Thus it was that they drifted into Holland and the lower Rhine provinces of Germany, and became wanderers everywhere, seeking an asylum for conscience' sake,—a lodge in some wilderness, where "rumor of oppression and deceit might never reach," and where they might await in comparative peace the better time that was coming. The great King Gustavus Adolphus perhaps meant to offer them such an asylum in America, but his message was sent in the hurry of war and it was not audible in the din of battles. When, however, this offer was renewed and repeated in the plain language of the Quakers by William Penn, it was both heard and understood, and the persecuted peoples made haste to accept the generous asylum and avail themselves of the liberal offer. They did so in a spirit of perfect faith that is creditable both to their own ingenuousness and to the character which Penn had established among his contemporaries for uprightness and fair and square dealing. It is pathetic to read, in the records of the Swiss Mennonites, how, after they had decided to emigrate, "they returned to the Palatinate to seek their wives and children, who are scattered everywhere in Switzerland, in Alsace, and in the Palatinate, and they know not where they are to be found."

Thus the movement into Pennsylvania began, a strange gathering of a strange people, much suffering, capable of much enduring. Of the Germans themselves one of their own preachers¹ wrote: "They were naturally very rugged people, who could endure much hardships; they wore long and unshaven beards, disordered clothing, great shoes, which were heavily hammered with iron and large nails; they had lived in the mountains of Switzerland, far from cities and towns, with little intercourse with other men; their speech is rude and uncouth, and they have difficulty in understanding any one who does not speak just their way; they are very zealous to serve God with prayer and reading and in other ways, and very innocent in all their doings as lambs and

doves." The Quakers, too, bore proof in their looks of the double annealing of fanaticism and persecution. They wore strange garbs, had unworldly manners and customs, and many of them had cropped ears and slit noses, and were gaunt and hollow-eyed from long confinement in jails and prison-houses. The influence of George Fox's suit of leather clothes was still felt among them. They were chiefly of the plebeian classes, the true English democracy, yeomen, tinkers, tradesmen, mechanics, retail shopmen of the cities and towns; scarcely one of the gentry and very few of the university people and educated classes. From Wales, however, the Thomases, Rees, and Griffiths came, with red, freckled faces, shaggy beards, and pedigrees dating back to Adam. Persecution had destroyed their hitherto unconquerable devotion to their own mountains, but they took their pedigrees with them in emigrating, and settling on a tract of hills and quaking mosses, where the soil recommended itself much less to them than the face of the country, they sought to feel at home by giving to the new localities names which recalled the places from which they had banished themselves.

Such were the emigrants who sailed—mostly from London and Bristol—to help build up Penn's asylum in the wilderness. The voyage was tedious, and could seldom be made in less than two months. The vessels in which they sailed were ill appointed and crowded. Yet at least fifteen thousand persons, men, women, and children, took this voyage between 1681 and 1700. The average passage-money was, allowing for children, about seventy shillings per head, so the emigrants expended £50,000 in this one way. Their purchases of land cost them £25,000 more; the average purchases were about £6 for each head of family; quit-rents one shilling sixpence. The general cost of emigration is set forth in a pamphlet of 1682, republished by the Pennsylvania Historical Society, and attributed to Penn, and he must have directed the publication, though it is anonymous. In this pamphlet it is suggested that a man with £100 in pieces-of-eight may pay his own way and his family's by judicious speculation. The "advance in money"—i.e., the difference between specie value in London and on the Delaware—is thirty per cent., on goods the advance is fifty per cent., and this pamphlet supposes that these advances will pay the cost of emigration. The figures are too liberal; however, they give us an idea of what the expenses were which a family had to incur. They are as follows:

	£	s.	d.
For five persons'—man and wife, two servants, and a child of ten—passage-money	22	10	0
For a ton of goods—freight (each taking out a chest without charge for freight).....	2	0	0
Ship's surgeon, 2s. 6d. per head.....	12	6	
Four gallons of brandy, 24 lbs. sugar.....	1	0	0
Clothes for servants (6 shirts, 2 waistcoats, a summer and winter suit, hat, 2 pair shoes, underclothing, etc.).....	12	0	0
Cost of building a house.....	15	0	0
Stock for farm.....	24	10	0
Year's provisions for family.....	16	17	6
Total.....	£96	00	00

¹ Laurens Hendricks, of Nimeguen.

This, it will be observed, on a favorable, one-sided showing, is £20 per capita for man, woman, child, and servant, outside of the cost of land. If we allow £10 additional for cost of land, transportation, and other extras, leaving out clothes for the family, we shall have £30 a head as the cost of immigration and one year's keep until the land begins to produce crops. It thus appears that the early immigrants into Pennsylvania must have expended at least £450,000 in getting there in the cheapest way. The actual cost was probably more than double that amount. In a letter written by Edward Jones, "Chirurgion," from "Skoolkill River," Aug. 26, 1682, to John ap Thomas, founder of the first Welsh settlement, we have some particulars of a voyage across the ocean at that time. Thomas and sixteen others had bought a five-thousand-acre tract of Penn. The rest sailed from Liverpool, but Thomas was ill, and not able to come. Hence the letter, which is published in a memoir of "John ap Thomas and his friends," in the *Pennsylvania Magazine*, vol. iv. The voyage took eleven weeks. "And in all this time we wanted neither meat, drink, or water, though several hogsheds of water ran out. Our ordinary allowance of beer was three pints a day for each whole head and a quart of water, 3 biskedd (biscuits) a day & sometimes more. We laid in about half hundred of biskedd, one barrell of beere, one hogshed of water, the quantity for each whole head, & 3 barrells of boefe for the whole number—40—and we had one to come ashore. A great many could eat little or no beefe, though it was good. Butter and cheese eats well upon ye sea. Y^e remainder of our cheese & butter is little or no worster; butter & cheese is at 6d. per pound here, if not more. We have oat-meale to spare, but it is well y^t we have it, for here is little or no corn till they begin to sow their corn, they have plenty of it. . . . Y^e name of town lots is called now Wicoco; here is a Crowd of people striving for y^e Country land, for y^e town lot is not divided, & therefore we are forced to take up y^e Country lots. We had much adoe to get a grant of it, but it Cost us 4 or 5 days attendance, besides some score of miles we travelled before we brought it to pass. I hope it will please thee and the rest y^t are concerned, for it hath most rare timber. I have not seen the like in all these parts." Mr. Jones also states that the rate for surveying one hundred acres was twenty shillings—half as much as the price of the land. At this rate, Jones, Thomas and company had to pay £50 for surveying their tract of five thousand acres.

It will be noticed that the face of the country pleased Dr. Jones, and he is satisfied with the land selected by him. All the early immigrants and colonists were pleased with the new land, and enthusiastic in regard to its beauty and its promise of productiveness. Penn is not more so than the least prosperous of his followers. Indeed it is a lovely country to-day, and in its wild, virgin beauty must have had a rare charm and attraction for the ocean-

weary first settlers. They all write about it in the same warm strain. Thus, for instance, let us quote from the letter written in 1680 to his brother by Mahlon Stacey, who built the first mill on the site of the city of Trenton. Stacey was a man of good education and family. He had traveled much in Pennsylvania and New Jersey, where he made a great fortune and became a leading citizen, his children intermarrying with the best people in the two colonies. The letter, which we quote from Gen. Davis' "History of Bucks County," says that "it is a country that produces all things for the sustenance of man in a plentiful manner. . . . I have traveled through most of the settled places, and some that are not, and find the country very apt to answer the expectations of the diligent. I have seen orchards laden with fruit to admiration, planted by the Swedes, their very limbs torn to pieces with the weight, and most delicious to the taste and lovely to behold. I have seen an apple-tree from a pippin kernel yield a barrel of curious cider, and peaches in such plenty that some people took their carts a peach gathering. I could not but smile at the sight of it. They are a very delicate fruit, and hang almost like our onions that are tied on ropes. I have seen and known this summer forty bushels of bolted wheat harvested from one sown. We have from the time called May to Michaelmas great stores of very good wild fruits, as strawberries, cranberries, and huckleberries, which are much like bilberries in England, but far sweeter; the cranberries much like cherries for color and bigness, which may be kept till fruit comes in again. An excellent sauce is made of them for venison, turkey, and great fowl; they are better to make tarts than either cherries or gooseberries; the Indians bring them to our houses in great plenty. My brother Robert had as many cherries this year as would have loaded several carts. From what I have observed it is my judgment that fruit-trees in this country destroy themselves by the very weight of their fruit. As for venison and fowls, we have great plenty; we have brought home to our houses by the Indians seven or eight fat bucks of a day, and sometimes put by as many, having no occasion for them. My cousin Revels and I, with some of my men, went last Third month into the river to catch herrings, for at that time they came in great shoals into the shallows. We had no net, but, after the Indian fashion, made a round pinfold about two yards over and a foot high, but left a gap for the fish to go in at, and made a bush to lay in the gap to keep the fish in. When that was done we took two long birches and tied their tops together, and went about a stone's cast above our said pinfold; then hauling these birch boughs down the stream, we drove thousands before us, and as many got into our trap as it would hold. Then we began to throw them on shore as fast as three or four of us could bag two or three at a time. After this manner in half an hour we could have filled a

three-bushel sack with as fine herring as ever I saw. . . . As to beef and pork, there is a great plenty of it and cheap; also good sheep. The common grass of the country feeds beef very fat. . . . We have great plenty of most sorts of fishes that ever I saw in England, besides several sorts that are not known there, as rock, catfish, shad, sheepshead, and sturgeon; and fowls are as plenty—ducks, geese, turkeys, pheasants, partridges, and many other sorts. Indeed the country, take it as a wilderness, is a brave country, though no place will please all. There is some barren land, and more wood than some would have upon their land; neither will the country produce corn without labor, nor is cattle got without something to buy them, nor bread with idleness, else it would be a brave country indeed. I question not but all would then give it a good word. For my part I like it so well I never had the least thought of returning to England except on account of trade.” “I wonder at our Yorkshire people,” says Stacey, in another letter of the same date, “that they had rather live in servitude, work hard all the year, and not be threepence better at the year’s end, than to stir out of the chimney-corner and transport themselves to a place where, with the like pains, in two or three years they might know better things. I live as well to my content and in as great plenty as ever I did, and in a far more likely way to get an estate.”

Judge John Holme, in his so-called poem on “the flourishing State of Pennsylvania,” written in 1696, seems to have tried to set the views of Stacey to music. True there is not much tune nor rhythm in the verse, but the Pennsylvania writer of Georgics has a shrewd eye for a catalogue, and he would have shone as an auctioneer. He sings the goodness of the soil, the cheapness of the land, the trees so abundant in variety that scarcely any man can name them all, the fruits and nuts, mulberries, hazelnuts, strawberries, and “plumbs,” “which pleaseth those well who to eat them comes,” the orchards, cherries so plentiful that the planters bring them to town in boats (these are the Swedes, of course), peaches so plenty the people cannot eat half of them, apples, pears, and quinces,

“And fruit-trees do grow so fast in this ground
That we begin with cider to abound.”

The fields and gardens rejoice in the variety as well as the abundance of their products; in the woods are found “wax-berries, elkermis, turmerick, and sarsifrax;” the maple trunks trickle with sugar, and our author tells how to boil it; he gives the names of fish, flesh, and fowls, including whales and sturgeons, and describes the industries of Philadelphia, of which he says, “Strangers do wonder, and some say,—

“What mean these Quakers thus to raise
These stately fabrics to their praise?
Since we well know and understand
When they were in their native land
They were in prison trodden down,
And can they now build such a town?”

The royalists of that day, however, saw the growth of the new city and province with quite another eye, and they were filled with foreboding as they saw, in the language of one of their rhymesters,—

“How Pennsylvania’s air agrees with Quakers,
And Carolina’s with Associators,
Both e’en too good for madmen and for traitors.
Truth is, the land with saints is so run o’er,
And every age produces such a store,
That now there’s need of two New Englands more.”

Richard Frame was author of another poem on Pennsylvania, “printed and sold by William Bradford, 1692.” It is like that of Holme’s, mainly descriptive, and prophetic likewise of the coming wealth and greatness of the province. “No doubt,” he says,—

“No doubt but you will like this country well.
We that did leave our country thought it strange
That ever we should make so good a change.”

This poem was written and printed only seven or eight years after the settlement of Germantown, yet Frame says,—

“The German Town of which I spoke before,
Which is at least in length one Mile and More,
Where lives High German People and Low Dutch,
Whose trade in weaving Linnen cloth is much,
There grows the Flax, as also you may know,
That from the same they do divide the Tow,” etc.

Traders, he says, are brotherly; one brings in employment for another, and the linen rags of Germantown have led naturally to the paper-mill near the Wissahickon. Of the Welsh he makes a passing reference, as well as of the many townships laid out and the “multitudes of new plantations.”

The Englishman of that day was still untamed. He had a passion, inherited from his Anglo-Saxon forbears, for the woods and streams, for outdoor life and the adventures which attend it. He had not forgotten that he was only a generation or two younger than Robin Hood and Will Scarlet, and he could not be persuaded that the poacher was a criminal. All the emigration advertisements, circulars, and prospectuses sought to profit by this passion in presenting the natural charms of America in the most seductive style. While the Spanish enlisting officers worked by the spell of the magic word “gold!” and the canny Amsterdam merchants talked “beaver” and “barter” and “cent. per cent.,” the English solicitors for colonists and laborers never ceased to dwell upon the normal attractions of the bright new land, the adventures it offered, and the easy freedom to be enjoyed there. Thus in advocating his West Jersey settlements John Fenwick wrote in this way: “If there be any terrestrial happiness to be had by any People, especially of any inferior rank, it must certainly be here. Here any one may furnish himself with Land, and live Rent free, yea, with such a quantity of Land, that he may weary himself with walking over his Fields of Corn, and all sorts of Grain, and let his Stock amount to some hundreds; he needs not fear their want of Pasture in the Summer or

Fodder in the Winter, the Woods affording sufficient supply, where you have Grass as high as a Man's Knees, nay, as his Waste, interlaced with Pea-Vines and other Weeds that Cattell much delight in, as much as a Man can pass through; and these Woods also every Mile and half mile are furnished with fresh Ponds, Brooks, or Rivers, where all sorts of cattell, during the heat of the Day, do quench their thirst and Cool themselves. These Brooks and Rivers being invironed of each side with several sorts of Trees and Grape-Vines, Arbor-like interchanging places, and crossing these Rivers, do shade and shelter them from the scorching beams of the Sun. Such as by their utmost labors can scarcely get a Living may here procure Inheritance of Lands and Possessions, stock themselves with all sorts of Cattle, enjoy the benefit of them while they live and leave them to their Children when they die. Here you need not trouble the Shambles for Meat, nor Bakers and Brewers for Beer and Bread, nor run to a Linen-Draper for a supply, every one making their own Linen and a great part of their Woollen Cloth for their ordinary wearing. And how prodigal (if I may say) hath Nature been to furnish this Country with all sorts of Wild Beast and Fowl, which every one hath an interest in and may Hunt at his pleasure, where, besides the pleasure in Hunting, he may furnish his House with excellent fat Venison, Turkies, Geese, Heath-hens, Cranes, Swans, Ducks, Pigeons, and the like; and, wearied with that, he may go a Fishing, where the Rivers are so furnished that he may supply himself with Fish before he can leave off the Recreation. Here one may Travel by Land upon the same Continent hundreds of Miles, and pass through Towns and Villages, and never hear the least complaint for want nor hear any ask him for a farthing. Here one may lodge in the Fields and Woods, travel from one end of the Country to another, with as much security as if he were lock'd within his own Chamber; and if one chance to meet with an Indian Town, they shall give him the best Entertainment they have, and upon his desire direct him on his Way. But that which adds happiness to all the rest is the healthfulness of the Place, where many People in twenty years' time never know what Sickness is; where they look upon it as a great Mortality if two or three die out of a Town in a year's time. Besides the sweetness of the Air, the Country itself sends forth such a fragrant smell that it may be perceived at Sea before they can make the Land; No evil Fog or Vapor doth any sooner appear but a North-West or Westerly Wind immediately dissolves it and drives it away. Moreover, you shall scarce see a House but the South side is begirt with Hives of Bees, which increase after an incredible manner; so that if there be any terrestrial Canaan, 'tis surely here, where the land floweth with Milk and Honey."

This is the tenor of all the Maryland invitations to immigration likewise, and Penn follows the model closely. His letter to the Society of Free Traders

in 1683 has already been mentioned, and also his proposals for colonists. In December, 1685, he issued a "Further Account of Pennsylvania," a supplement to the letter of 1683. He says that ninety vessels had sailed with passengers, not one of them meeting with any miscarriage. They had taken out seven thousand two hundred persons. He describes the growth of the city, the laying out of townships, etc. There are at least fifty of these, and he had visited many, finding improvements much advanced. "Houses over their heads and Garden-plots, coverts for their cattle, an increase of stock, and several inclosures in Corn, especially the first comers, and I may say of some poor men was the beginning of an Estate, the difference of laboring for themselves and for others, of an Inheritance and a Rack Lease being never better understood." The soil had produced beyond expectation, yielding corn from thirty to sixty fold; three pecks of wheat sowed an acre; all English root crops thrive; low lands were excellent for rope, hemp, and flax; cattle find abundant food in the woods; English grass seed takes well and yields fattening hay; all sorts of English fruits have taken "mighty well;" good wine may be made from native grapes; the coast and bay abound in whales, the rivers in delicate fish; and provisions were abundant and cheap, in proof of which he gives a price current. Penn concludes by quoting an encouraging letter he had received from Robert Turner.

In 1687, Penn published another pamphlet, containing a letter from Dr. More, "with passages out of several letters from Persons of Good Credit, relating to the State and Improvement of the Province of Pennsylvania." In 1691 again he printed a third pamphlet, containing "Some Letters and an Abstract of Letters from Pennsylvania." Dr. More takes pains to show the plenty and prosperity which surround the people of the province. "Our lands have been grateful to us," he says, "and have begun to reward our Labors by abounding Crops of Corn." There was plenty of good fresh pork in market at two and a half pence per pound, currency; beef, the same; butter, sixpence; wheat, three shillings per bushel; rye at eight groats; corn, two shillings in country money, and some for export. Dr. More had got a fine crop of wheat on his corn ground by simply harrowing it in; his hop garden was very promising. Arnoldus de la Grange had raised one thousand bushels of English grain this year, and Dr. More says, "Every one here is now persuaded of the fertility of the ground and goodness of climate, here being nothing wanting, with industry, that grows in England, and many delicious things not attainable there; and we have this common advantage above England, that all things grow better and with less labour." Penn's steward and gardener are represented as writing to him that the peach-trees are broken down with fruit; all the plants sent out from England are growing; barn, porch, and shed full of

corn; seeds sprout in half the time they require in England; bulbs and flowers grow apace. David Lloyd writes that "Wheat (as good, I think, as any in England) is sold at three shillings and sixpence per Bushel, Country money, and for three shillings ready money (which makes two shillings five pence English sterling), and if God continues his blessing to us, this province will certainly be the granary of America."¹ James Claypoole writes that he has never seen brighter and better corn than in these parts. The whale fishery was considerable; one company would take several hundred barrels of oil, useful, with tobacco, skins, and furs, for commerce and to bring in small money (of which there is a scarcity) for exchange. John Goodson writes to Penn of the country that "it is in a prosperous condition beyond what many of our Friends can imagine;" if Penn and his family were there "surely your Hearts would be greatly comforted to behold this Wilderness Land how it is becoming a fruitful Field and pleasant Garden." Robert James writes to Nathaniel Wilmer: "God prospers his People and their honest Endeavors in the Wilderness, and many have cause to Bless and Praise his holy Arm, who in his Love hath spread a Table large unto us, even beyond the expectation or belief of many, yea, to the admiration of our Neighboring Colonies. . . . God is amongst his People and the wilderness is his, and he waters and refreshes it with his moistening Dew, whereby the Barren are become pleasant Fields and Gardens of his delight; blessed be his Name, saith my Soul, and Peace and Happiness to all God's People everywhere."

In 1685 a pamphlet called "Good Order Established," and giving an account of Pennsylvania, was published by Thomas Budd, a Quaker, who had held office in West Jersey. Budd was a visionary, mixed up with Keith's heresy, and wanted to get a bank established in Philadelphia. He built largely in that city, and was a close observer. He pays particular attention to the natural advantages of the country in its soil, climate, products, and geographical relations. The days in winter are two hours longer, and in summer two hours shorter than in England, he says, and hence grain and fruits mature more swiftly. He enumerates the wild fowl and fish, the fruits and garden stuff, and thinks that the Delaware marshes, once drained, would be equal to the meadows of the Thames for wheat, peas, barley, hemp, flax, rape, and hops. The French settlers were already growing grapes for wine, and Budd thought that attempts should be made to produce rice, anise seed, licorice, madder, and woad. He has much to say about the development of

manufactures, and he proposes to have a granary built on the Delaware in a fashion which is a curious anticipation of the modern elevator, and he projects a very sensible scheme for co-operative farm-work, on the community plan, the land to be eventually divided after it has been fully cleared and improved, and the families of the commune have grown up.

In 1698 was published Gabriel Thomas' "Historical and Geographical Account of the Province and Country of Pennsylvania and West New Jersey, in America." This well-known brochure descants in florid and loose terms upon "The richness of the Soil, the sweetness of the Situation, the Wholesomeness of the Air, the Navigable Rivers and others, the prodigious increase of Corn, the flourishing condition of the City of Philadelphia, etc. The strange creatures, as Birds, Beasts, Fishes, and Fowls, with the Several Sorts of Minerals, Purging Waters, and Stones lately discovered. The Natives, Aborigines, and their Language, Religion, Laws, and Customs. The first Planters, Dutch, Swedes, and English, with the number of its Inhabitants; as also a Touch upon George Keith's New Religion, in his second change since he left the Quakers; with a Map of both Counties." The title-page leaves the book but little to say. Gabriel is enthusiastic about pretty much everything. He makes some shrewd remarks, however, as when he says that he has reason to believe Pennsylvania contains coal, "for I have observed the runs of water have the same color as that which proceeds from the coal mines in Wales." He shows the abundance of game by telling how he had bought of the Indians a whole buck (both skin and carcass) for two gills of gunpowder. Land had advanced in twelve years from fifteen or eighteen shillings to eighty pounds per one hundred acres, over a thousand per cent. (in the city), and was fetching round prices in the adjacent country.

Thomas represents Philadelphia as containing two thousand houses in 1697. Mr. Westcott declares this to be a great exaggeration. "In 1700 there were only seven hundred houses, and in 1749 but two thousand and seventy-six."² Mr. Westcott's figures are, of course, the right ones, yet it must be observed that Richard Norris, a sea captain, just come from Philadelphia, writing to Penn under date of Dec. 12, 1690, a letter which Penn himself published in pamphlet form in London,³ states that "The Bank and River-Street is so filled with Houses that it makes an inclosed Street with the Front in many places, which before lay open to the River Delaware. There is within the bounds of the City at least fourteen Hundred Houses, a considerable part of which are very large and fair buildings of Brick; we have likewise wharfs Built out into the River, that a Ship of a Hundred Tun may lay her side to." All the writers quoted above have much to say of the rapid growth and de-

¹ "Country money" was produce in barter, such as furs, tobacco, grain, stock, etc., at rates established by the courts in collecting fees, etc.; "ready money" was Spanish or New England coin, which was at 25 per cent. discount in Old England. See Sumner, "History of American Currency." The differences are set out in "Madame Knight's Journal." According to the above the discount on country money was 31 per cent. and on ready money 20 per cent.

² History of Philadelphia, chapter xlii.

³ See *Pennsylvania Magazine*, vol. iv. p. 200; see also a note on this subject at the foot of a preceding page.

velopment of Philadelphia, which seems to strike every one as if it were a sort of miracle. Mr. Thomas, in the letter just mentioned, says that they have a plentiful market two days in the week, with all manner of provisions and fruit in great plenty. "Many Houses were Built the last Summer, and I heard many more are agreed for to be built." The city had a good trade with the West Indies in biscuit, flour, beef, and pork. Capt. Morris said he noticed the city's rapid growth each time he returned to it. His cargo to England consisted of "Skins, Beavers, Otters, Minks, Dear, Bear, Fox, and Cats, with other sorts, with Oyle and Whalebone." A great flock of sheep was kept in the town liberties, and a woolen-factory at work, employing several carders and spinners, and turning out "very good Stuff and Serges." "Philadelphia is mightily improved," writes William Rodney the same year, "(for its famous Buildings, Stone, Brick and Timber Houses of very great Value, and good Wharfs for our Shipping) the most of any new settlement in the World for its time." R. Hill (same year) writes to Penn of the pleasure he has received in beholding the improvements in "that Famous City (in our parts) and situation of Philadelphia, from which we in Maryland have lately received great benefit and supply for our Fleet, by being furnished with Bread, Beer, Flower, and other provisions, to great quantities at reasonable Rates and short warning." C. Pickering writes: "Philadelphia will flourish; here are more good Houses Built this Summer (1690) than ever was in one Year yet; things, that is Provision and Corn, are very plentiful; . . . an oil-mill is erecting to make Coal (colza) and Rape-seed oyle," etc. William Bradford tells the Governor that Samuel Carpenter and he are building a paper-mill about a mile from Penn's mills at Schuylkill, and hope to have paper within four months; "the Woollen Manufactories have made a beginning here, and we have got a Publick Flock of Sheep in this Town, and a Sheepheard or two to attend them." Alexander Beardsley writes that the city has received an access of population from New York, among them Jacob Telner (the original patentee of Germantown):

"Mine friends and others are already come, so that if we do not prevent it ourselves by misliving, this is likely to be a good place. Methinks it seems to me as if the Lord had a blessing in store for this place; here is a good government, and the magistrates are careful to keep good order, to suppress Vice and encourage Virtuous Living; and a watch is kept every Night by the Housekeepers, to see that no Looseness nor Drunkenness take place. The People go on with Building very much, since thou went from here many good Houses are Built on the Front, at the least twenty this Year; the Bank (by the River) is taken up, all from the Blue Anchor beyond the penny Pot-House. . . . People seem eager in Building, and House Rent towards the River is high." "Philadelphia thrives to admiration," says another writer quoted in this abstract of letters, "both in way of Trade and also in Building, and is much altered since thou wert here." In John Goodson's letter we are told that "We now begin to have a Trade abroad as well as at home; here be several merchants that Transport several Ship-loads of Bread, Flower, Beef and Pork to Barbadoes and Jamaica; a fine Trade here in the Town, consisting of many Trades-Men, which are eight Merchants, Responsible Men, House-Keepers, twenty-nine Shop-Keepers, great and small, three Brewers that send off many a Ton of good Malt-

Beer, three Maltsters in this Town also, besides many that are in the Country, seven Master Bakers, some of them bake and send away many Thousand Bushels in a Year of Bread and Flour, this is Truth; four Master Butchers, nine Master Carpenters, seven Master Bricklayers, four Brick-Makers with Brick-Kills, nine Master Shoemakers, nine Master Taylors, two Pewterers, one Brasier, one Saddler, one Clock and Watch-Maker, one Potter, three Tallow-Chandlers, two Sope-Makers, three Woolen-Weavers that are entering upon the Woolen Manufactory in the Town, besides several in the country; and five miles off is a Town of Dutch and German People that have set up the Linnen Manufactory, which weave and make many Hundred Yards of pure fine Linnen Cloth in a Year, that in a short time I doubt not but the country will live happily; five Smiths, one Comb-Maker, one Tobacco-Pipe Maker, three Dyers, one Joyner, one Cabinet-Maker, one Rope-Maker that makes Ropes for Shipping, three Master Ship-Carpenters, three Barbers, two Chirurgeons, three Plasterers, several Victualing Houses or Ordinaries. All the fore-mentioned Trades are sufficient House-Keepers, and live gallantly; four Master Coopers that make abundance of cask for these seas, besides many families of labouring People and Sawyers that live happily, six Carters that have Teams daily employed to carry and fetch Timber and Bricks, Stones and Lime for Building, which goeth on to Admiration. They Build all with Brick and Stone now, except the very meanest sort of people, which Build framed Houses with Timber and Fetheredg-Boards without side, and lath'd and plaster'd within, two stories high, very pretty houses; they are like the Buildings at the Park in Southwark. We have Rocks of Lime-Stones, where many Hundreds, yea Thousands of Bushels of Lime is made in a year for this Town." "My Friends," concludes this pious John Goodson, "have all about twenty-one Meeting-Places established in Pennsylvania, and six meetings fixed about the city, all within six miles."

These contemporary letters seem to disarm the published accounts of Philadelphia's progress of any suspicion of exaggeration. They make it plain that the city was growing very rapidly under the stimulus of an accelerated immigration and a commerce and internal trade which was very profitable and increased every day. The shipping was comparatively large, and the frequent arrivals and departures gave the place a busy, bustling aspect, which even extended itself to Chester, New Castle, Christina, Horekills, Salem, Burlington, and other parts on the river. The number of sailors of every nationality, of foreign merchants and traders come to buy and sell, had already led to the introduction of no little of the sorts of vice and debauchery which naturally attach to active seaport towns, greatly scandalizing the quiet Quakers. The letters of Penn and the orders and remonstrances and explanations of Council on this subject bear ample testimony to this debauchery.¹

It was not difficult for merchants who were largely engaged in trade with the New England colonies, the West Indies, and with Europe, and making a profit of nigh upon one hundred per cent. on each venture and its return (English goods, that is to say, exchanged either directly for furs, etc., or indirectly for Pennsylvania flour and bread sent to the West Indies and there bartered for tropical products for the English market) to rebuild their original frame cabins with

¹ See Council proceedings and Penn correspondence, 1689-99. It may be said here, to avoid the necessity of a reference for each sentence of this chapter, that every fact stated in it rests upon contemporary authority, such as those just named and the body of original letters which have been already quoted in connection with this subject. The Pennsylvania Historical Society has done a great work in republishing these originals.

stately piles of brick. Fortunes were swiftly made, and, invested in improvements in and around the city, went a great way. Labor was comparatively high, but materials were cheap. Budd estimates that the

alleys and lanes, several fine squares and courts within this magnificent city. As for the particular names of the several streets contained therein, the principal are as follows, viz.: Walnut Street, Vine Street,

THE OLD SLATE-ROOF HOUSE.

six hundred thousand bricks for his proposed granary could be bought for eight shillings per thousand. "Madam Farmer," who was the first person to burn stone lime in Philadelphia (Budd, in 1685, says no stone lime had then been discovered) offered, in 1686-87, to sell ten thousand bushels of Schuylkill lime at sixpence per bushel at the kiln. The frames of houses, all of hewn timber, cost little beyond the charges for hewing and handling, and sawed lumber was cheap and plentiful. Hence there must have been as much building going on as was required by the increase of population, in addition to the new and larger structures which took the place of more primitive ones as wealth increased. Penn, in his "Further Account of Pennsylvania" (1685), mentions nine streets running from river to river and twenty-one streets crossing them at right angles. Of these he names sixteen streets, "the names," he says, "being mostly taken from the things that grew spontaneously in the county."¹ Gabriel Thomas, describing the city as he saw it in 1697, says, "There are many lanes and alleys, as, first, Hutton's Lane, Morris Lane, Jones' Lane, wherein are very good buildings; Shuter's Alley, Yower's Lane, Walter's Alley, Turner's Lane, Sikes' Alley, and Flowers' Alley. All these alleys and lanes extend from the Front Street to the Second Street. There is another alley in the Second Street called Carter's Alley. There are also, besides these

Chestnut Street, Sassafras Street, taking their names from the abundance of those trees that formerly grew there;² High Street, Broad Street, Delaware Street, Front Street, with several of less note, too tedious to insert here."³

² Rather named to accommodate Penn's whim. "Chestnut Street was at first called Wynne, after Dr. Thomas Wynne, of Wales, who came here in the good ship 'Welcome' with William Penn. The founder had desired his province to be called Sylvania, but, yielding obedience to his monarch's pleasure, he submitted to its being called Pennsylvania. It was indeed a sylvan scene,—earth never saw a fairer,—and so, as a matter of course, the streets of the city, that he doubted not was to be one of the mighty ones of the world, were to be named after the trees of the beautiful forest that then covered almost all of the land."—*Townsend Ward in Penna. Mag.*, vol. iv. p. 409; "Second Street and the Second Street Road and their Associations."

³ In a note to the forty-second chapter of his "History of Philadelphia" Mr. Thompson Westcott says that none of these names of lanes and alleys, except Carter's Alley, is now borne by streets or alleys. "Jones' Lane was the first above High Street, running from Front to Second, adjoining a lot of Griffith Jones. It was afterwards called Jones' Alley, then Pewter Platter Alley, from the sign of a tavern once in it, then Jones' Alley again, and now Church Alley. Carter's Lane, now called Carter's Street, is the first below Chestnut Street. . . . It was named from William Carter, owner of an adjoining lot on Second Street." . . . Hutton's Lane, afterwards Gray's Alley, the second above Walnut Street, now called Gatzmer Street. Thomas Hooton owned an adjoining lot. Turner's Lane, from Robert Turner, the first below Mulberry Street, now Coombs' Alley. Yower's (Ewer's) Lane, above Chestnut Street, now Black Horse Alley. Morris' Alley is supposed to be what is now called Gothic Street. Sikes' Lane is now Ingles' Street, and Shelter's, Flower's, and Waller's Alleys cannot be assigned definite positions. According to Townsend Ward, Col. Clement Biddle lived corner of Gray's Alley and Front Street; on the southeast corner of Second Street and Morris' Alley, where the building of the Chamber of Commerce now is, Samuel Carpenter built, in 1687, the slate-roof house, which stood till 1867. It was much the finest house in the city. William Penn lived there in 1699, James Logan entertained Lord Cornbury there in 1702, and Governor James Hamilton,

¹ Of the streets named, "the situation of Cranberry, Plumb, Hickory, Oak, Beech, Ash, and Poplar Streets is not now to be ascertained."—*Westcott*, chap. xxxi.

There were three fairs a year and two markets every week in Philadelphia in Thomas' time. "They kill above twenty fat bullocks every week in the hottest time of summer, besides many sheep, calves, and hogs. . . . Here is lately built a noble town-house, or guild-hall, also a handsome market-house and a convenient prison."¹ The large and commodious wharves are also mentioned, and timber-yards, and Robert Turner's ship-yard. The stairs to the water's edge at Carpenter's and Tresse's wharves, Carpenter's derrick, granaries, and store-houses, Wilcox's rope-walk, and the large breweries and bake-houses are all spoken of; also the schools, the cook-shops, the paper-mill, the wool-weavers, and the prosperous tradesmen. To cap the climax, Thomas declares that men in Philadelphia are not jealous and old maids do not exist, "for all do commonly marry before they are twenty years of age." Some mansions and warehouses of that day must have been really handsome buildings, judging from the attention they attracted. Of such were the seats of Joseph Growden, in the suburbs, who had a thousand

apple-trees about his place, and Edward Shippen, on Second Street, with its handsome grounds, gardens, and orchards.

The streets have been spoken of already. They were not paved until quite a late period. In 1700, August 15th, during Penn's second visit, it was ordered in Council "y^t the King's Highway or publick Road & the bridges y^{tn} from y^e town of Philadelphia to the falls of Delaware y^t now are, be w^t all expedition sufficientlie cut & cleared from all timber, trees & stumps of trees, Loggs, & from all other nunsances whatsoever y^t Ly cross y^e s^d way, & y^t y^e same, with all passages in & outt of all creeks & Branches, may be made passable, Comodious, safe, and easie for man, horse, cart, waggon, or team, be y^e rescive (respective) overseers of the highways and Bridges w^{thin} the rescive precincts, townships, and Counties of philadelphia & Bucks, according to Law. And y^t y^e respective Courts of Justice & Justices of y^e peace in y^e s^d Counties, Cause y^e same be duliae p^{formed}, & the Laws in those Cases made & provided to be strictlie put in execu^{on}, und^r y^e rexive penalties y^{tn} contained, & y^t y^e Sec^{ie} take care to send a Copie of this ord^r to y^e Counties of philadelphia & Bucks respectivelie." This means that the streets were all roads, and poor ones at that. It took Isaac Norris' team all day to carry a load from Fair Hill to Philadelphia and back, yet the Germantown road was one of the earliest laid out. The Swedes had no roads. They followed bridle-paths on foot or on horseback, and carried their freight by water. It was in 1686 that the people of Philadelphia began to move for better highways. The Schuylkill ferry monopoly was then exciting public attention, and the Council took the whole matter of thoroughfares into consideration. There was a petition calling attention to the badness of the way from Moyamensing to Philadelphia. It was referred to "y^e County Court, who it's presumed has power to appoynt Roads to Landing Places, to Court and to Markett." In 1686, 19th of Ninth month, the Council appointed R. Turner, J. Barnes, A. Cook, and T. Janney, with the Surveyors of Bucks and Philadelphia Counties, to meet and lay out a more commodious road from Broad Street to the falls of Delaware. This was the Bristol road. The Germantown road was at first an Indian trail to the Swedes' ford on the Schuylkill and to the Susquehanna River at Octorara. On 5th of Second month, 1687, the inhabitants of Plymouth township petitioned for a cart-road to their town. The road from Radnor to the ferry of Schuylkill was adjusted by Council in 1687; a part of it had been closed by fences, showing that it was not previously a public highway. The same had been the case with the road to Bristol, the farmers fencing across it and changing the bed, so that complaint was made to Council that the people in Bucks County were taking their grain to sell or be ground to Burlington instead of Philadelphia. In 1689 we find Robert Turner, Benjamin Chambers, and other peti-

Mrs. Howell, and Mrs. Graydon were successively its occupants, the ladies using it for a boarding-house. Mr. Ward adds that "From the frequent changes in the names of streets in Philadelphia one might suppose we here were afflicted with a perpetual French Revolution, the main features of which, since the disuse of the guillotine, being an entire change in the names of streets. But if it be not owing to French influence, it may be that the movement in favor of women's rights has disturbed us, since, for all the world, our streets are like a parcel of school-girls, who so frequently and so entirely change their names that their own mothers no longer know them. Gothic Street was first Morris' Lane, then Norris' Alley. Gatzmer Street was Hutton's Lane, then Gray's Alley. Inglis Street was Syke's Lane, then Abraham Taylor's Alley. Gold Street was first New Bank Alley, then Bank Alley. Lodge Alley is lost, or it is now considered a continuation of and is called Gothic Street. Carter, as a name, is preserved, notwithstanding a desperate attempt to change it. The alley part is lost, but the fact that Carter had made a bequest to the poor of the city saved the name."

¹ "At the time when Gabriel Thomas wrote, in 1697, there was no town-house, or guild-hall, in Philadelphia, and no market-house, and the prison was a rented house. These buildings were erected in later years."—*Westcott*, chap. xlii. There was, however, a market-place as early as 1683, where butchers, etc., erected movable stalls; these may have become fixtures in the time of Thomas. In 1693 there was a bell for market, which argues a belfry, and the clerk was an important officer, being wood-corder as well as examiner of weights and measures. (*Colonial Records*, vols. i. and ii.) As to prisons, the Council proceedings contain the following:

(1) 16th of 11th Month, 1683, "Ordered, That Wm. Clayton build a Cage, against the next Council day, 7 foot high, 7 foot long & 5 foot broad."

(2) July 26, 1701. "Willm. Clayton, of Chichester, producing an acct. of Eleven pounds eleven Shills. due to his father, Wm. Cl., deceased, for building a Cage for Malefactors in the Town of Philadelphia, at the first settling of this Province, Ord^r, that the Prov^l. Treasurer discharge the Said acct."

(3) 31st of March, 1684. "The Petition of Samll Hersent was read, Concerning y^e finishing of y^e Prison. He is referred to y^e Justices of y^e County Court."

(4) In 1694 the county jail was a hired building and the rent was overdue. (Council proceedings, June 4, 1694.)

(5) In July, 1700, Penn in the chair, the subject of enforcing the law about work-houses and prisons was considered in Council. A lot had been already bought on Third Street, and a committee (Edw. Shippen and William Clark) was appointed to "go to y^e inhabitants adjacent to y^e prison, & to see what they & others will advance beforehand (to be deducted outt of the next County tax to be laid for building a Court house) towards removing y^e s^d gaol & Brick wall."

(6) In 1708 it was matter of complaint that the courts of Philadelphia had to sit in "an ale-house."

tioners for a road from Philadelphia to Bucks County. This was the beginning of the Oxford or Middle road. The York road, from Cheltenham to Philadelphia, was ordered in August, 1693.¹

The Old York road and the County-line road, running to Moreland, were laid out in 1697, from surveys made by Nicholas Scull, Susquehanna Street being laid out at the same time. The Germans at Germantown might be trusted to have good roads and proper fences. The supervision of these seems to have been the chief business of the courts there from the day of its organization in 1691.²

Besides the main road to Philadelphia the colonists at Germantown built for themselves a church road, a school-house road, a lime-kiln road, a paper-mill road, and several smaller lanes connecting with places in the vicinity. Richard Townshend, one of the "Welcome's" passengers, built a grist-mill on the church road as early as 1683. This supplied Germantown and a large circle of farmers with the best of flour. In 1700 Germantown had a mile of main street, lined on each side with peach-trees in full bearing, and each house had a fine garden. Towns such as this are what have contributed so much to earn for Phila-

delphia the reputation of having more beautiful suburbs than any other large city in America.

Precisely what sort of houses were built by the first settlers in Philadelphia may be known with satisfactory exactness from the contemporary records. In Penn's tract of "Information and Direction to such Persons as are inclined to America" we have a description of such houses, and we may assume that the "Welcome's" passengers erected exactly such structures during their probationary period of cave life or hut life in the wilderness. The dimensions given are almost those of the house of Pastorius: "To build them an House of thirty foot long and eighteen foot broad with a partition near the middle, and another to divide one end of the House into two small Rooms, there must be eight Trees of about sixteen inches square, and cut off to Posts of about fifteen foot long, which the House must stand upon, and four pieces, two of thirty foot long and two of eighteen foot long, for Plates, which must lie upon the top of these Posts, the whole length and breadth of the House, for the Gists (joists) to rest upon. There must be ten Gists of twenty foot long to bear the Loft, and two false Plates of thirty foot long to lie upon the ends of the Gists for the Rafters to be fixed upon, twelve pare of Rafters of about twenty foot to bear the Roof of the House, with several other small pieces, as Wind-beams, Braces, Studs, &c., which are made out of the Waste Timber. For covering the House, Ends and Sides, and for the Loft we use Clabboard, which is Rived feather-edged, of five foot and a half long,³ that, well Drawn, lyes close and smooth: The Lodging Room may be lined with the same, and filled up between, which is very Warm. These houses usually endure ten years without repair." The cost of such a house is given as follows: Carpenter's work (the owner and his servants assisting), £7; a barn of the same dimensions, £5; nails and other things to finish both, £3 10s.; total for house and barn, £15 10s. These houses had dirt floors, clapboard floors for garret. Oldmixon copies these directions verbatim in his description of the houses of the first settlers. The directions, however, are very incomplete; no provisions are made for doors, windows, or chimneys. Of the latter these houses had but one, built outside the gable of the sitting-room, sometimes of stone, sometimes of clay and sticks, sometimes of wood only. The doors could be made of riven stuff, of course, with deer-skin hinges and wooden latch and bar, and the windows could be closed with clapboard shutters. A large fireplace was needed, with a stone hearth; the table could be made of hewn stuff, resting on puncheons driven into the ground, and blocks, stools, and benches would answer for seats. Rude wooden bedsteads or berths could be contrived along the walls, and a few bear-skins, with the bedclothes brought over

¹ The first control of roads was by the courts, which appointed overseers and fence-viewers, the grand jury laying out the roads; in 1692 the control of roads was given to the townships, and this lasted until the adoption of a general road law.

² The apportionment of lots in Germantown was made in the cave of Pastorius, October, 1683. Pastorius then built himself a small cabin in Philadelphia, thirty by fifteen feet. This was the house that had the oiled-paper windows, and the Latin motto that made Penn laugh. In 1685 Germantown was finally laid off, the settlement then comprising twelve families, forty-one persons in all. Then the Germantown was begun with a main street sixty feet wide. This street was marked along the Indian trail spoken of, and it must have run through very thick woods, for it is recorded that as late as 1717 a bear climbed over the fence into James Logan's garden at Stenton, between Philadelphia and Germantown. In 1691, when the Germantown Germans were naturalized, there were sixty-four males and heads of families in the town. Their descendants are many of them still in the neighborhood, but the names have changed materially in spelling: Op de Graeff is Updegraff; Conderits, Conrad; Schumacher, Shoemaker; Rittinghuyzen, Rittenhouse; Strepers, Streeper; Souplis, Supplee; Scherker, Yerkes; Tissen, Tyson; Lucken, Lukens; Klever, Cleaver; Kurlis, Corlies; Cassels, Castle; Kestner, Castner; Backer, Baker, etc. In the same way the names of the original Welsh settlers at Merion and elsewhere have broken down and become modern English surnames. "Ap" for son of has either disappeared or been blended with the succeeding word, so that Ap Humphrey becomes Humphrey; Ap Howell, Powell; Ap Rees, Price, and Ap Hugh, Pugh. Ap John is converted into John's, Johns, or Jones; Ap Edward, Edwards; Ap William, Williams; Ap Robert, Roberts. Ap Owen becomes Bowen, and Ap Evan, Bevan. The words designating a man by his physical peculiarities, however, have not much changed.—Wynn, Winn, Gwynn still means fair, and is still in use; so also are Lloyd, brown, or gray, Gough (goch), red, and Vaughan (vychan), the younger, or little one. The Pennsylvania Railroad Company has carefully preserved the old Welsh names in some of its stations, as Wynnewood, Bryn Mawr, etc., but the owners of those original names have suffered them to be corrupted. Thus *Ciem* has turned into Combe, *Glynde* is Lind, and *Cuer-bryn* sinks into Coburn. But More (great), Gregg (hoarse), Balloch (speckle-face), Doe (black), Grlmm (strong) remain unchanged. Cradock is an ancient corruption of Caradoc, Chowne is from Chun, Meyrick and Merrick from Mairric, the source also of Meredith. Madoc is turned into Maddox. Pocock and Bocoock are from the Welsh *Bochog* (puffy-cheeked); Davy, Daffy, Dawes, Dawkins, Taffy, Davison, are all Welsh forms of David, or Davids (Ap David). The name Eye is a corruption of Ap Hugh.

³ "Feather-edged," with one side thinner than the other, as shingles are made.

by every emigrant, would make them warm. The other furniture would comprise chiefly kitchen utensils; pork fat, whale or sturgeon oil, and pine knots or "light wood" would give all the artificial light needed.

Iron articles were most costly and hardest to get. Edward Jones, at Merion, writes in August, 1682, for nails, sixpennies and eightpennies; for mill-iron, an iron kettle for his wife, and shoes, all of which he says are dear; "iron is about two and thirty or forty shillings a hundred; steel about 1s. 5d. per pound." In Penn's "Directions" he recommends colonists to bring out with them, in the way of utensils and goods, "English Woollen and German Linen, or ordinary Broad-Clothes, Kereseyes, Searges, Norwich-Stuffs, some Duffels, Cottons and Stroud-waters for the Natives, and White and Blew Ozenburgs [Osnaburgs], Shoes and Stockings, Buttons, Silk, Thread, Iron Ware, especially Felling Axes, Hows, Indian Hows, Saws, Frows [frowers, for splitting shingles], Drawing Knives, Nails, but of 6d. and 8d. a treble quantity, because they use them in shingling or covering of Houses." For the first year's stock for a farm he advises "three milch cows, with young calves by their sides, £10; yoke of oxen, £8; Brood mare, £5; two young Sows and a Boar, £1 10s.,—in all £24." For first year's provisions: Eight bushels of Indian corn per capita, and five bushels of English wheat, for five persons, £8 7s. 6d.; two barrels of molasses (for beer), £3; beef and pork, 120 pounds per head, at 2d. per pound, £5; five gallons spirits at 2s. per gallon, 10s. Three hands, with a little help from the woman and boy, can plant and tend 20,000 hills of corn (planted four feet each way, there are 2717 hills to an acre, or seven and one-third acres to the whole number of hills), and they may sow eight acres of spring wheat and oats, besides raising peas, potatoes, and garden stuff. The expected yield will be 400 bushels of corn, 120 bushels of oats and wheat, etc. These calculations were moderate for a virgin soil, free from vermin. Dr. More, in his letter to Penn in September, 1686, says, "I have had seventy ears of Rye upon one single root, proceeding from one single corn; forty-five of Wheat; eighty of Oats; ten, twelve, and fourteen of Barley out of one Corn. I took the curiosity to tell one of the twelve Ears from one Grain, and there was in it forty-five grains on that ear; above three thousand of oats from one single corn, and some I had that had much more, but it would seem a Romance rather than a Truth if I should speak what I have seen in these things."

A better class of houses than these clapboard ones with dirt floors were soon built. Indeed, the old log houses of the Swedes were more comfortable, especially when built like that of Sven Seners' at Wicaco, with a first story of stone and the superstructure of logs. A well-built log house, on a stone foundation, well filled in with bricks or stone and mortar, and ceiled inside with planking like a ship,

makes the driest, warmest, and most durable country-house that can be built. But in Philadelphia the settlers immediately began to burn bricks, and construct houses of them, often with a timber framework, in the old Tudor cottage style. This sort of building went on rapidly as soon as limestone began to be quarried and burnt. In Penn's "Farther Account," etc. (1685), he mentions the fact that he had built his brick house (probably the one in Letitia Court) in a good style and fashion "to encourage others, and that from building with wood," and he adds that "many have Brick Houses are now going up, with good cellars." He enumerates houses built by Arthur Cook, William Frampton, John Wheeler, the two brick-makers, Samuel Carpenter, John Test, N. Allen, and John Day, on Front Street chiefly. All these houses have balconies, he says. Pastorius is burning bricks at Germantown; Carpenter has a kiln for shell-lime on his wharf; a large plain brick house, in the centre, 60 feet by 40, is erecting for a meeting-house; another of the same dimensions on the river front or bank is also building for an evening meeting.

This better class of houses was of course, more elaborately furnished. It may be noticed that in John Goodson's directory cabinet-makers and other workmen in furniture and interior movables are mentioned, but all the first settlers must have brought or imported their furniture from Europe. It was stiff and heavy, scarcely anticipating that slim and spindling style which came in with the next English sovereignty, and has recently been revived with an extravagance of pursuit seldom exhibited except in bric-a-brac hunters and opera-bouffe artistes. As yet not much mahogany and rosewood were used by the Northern nations (except the Dutch), but good solid oak, well-carved, and walnut were the favorite woods. There were great chests of drawers, massive buffets, solid tables, with flaps and wings, straight-back oak chairs, well-carved, leathern-seated chairs, studded with brass nails, and tall Dutch clocks. Much of the table furniture was pewter or common delf ware; brass and copper served in the kitchen, where now tin is used. Wood was the only fuel, and the fireplaces, enormously capacious, had great iron dogs in them, to which, in winter-time, the back-log was often dragged by a yoke of oxen with the log-chain. Cranes and hooks, suspended in these fireplaces, held pots for the boiling, and the roasting was done on spits or upon "jacks," which dogs had to turn. The bread was baked in a brick oven usually outside the house, and the minor baking in "Dutch ovens," set upon and covered over with beds of red-hot coals. In the family part of the house the brass andirons and tongs and fender made the fire-glow upon the deep hearth look doubly cheerful. The Quakers did not use stoves until Benjamin Franklin inveigled them into it with that simulacrum of an open fireplace called the Franklin stove. The Swedes scarcely had chimneys, much less stoves, but the Germans early im-

ported the great porcelain stoves, which they were familiar with at home, and which they used until Christopher Saur, the Germantown printer, invented the ten-plate stove, for which lovers of the beautiful will scarcely know how to forgive him. All well-to-do families had good store of linen for bed clothes, blankets, etc.; the washing was not done often, and the chests of drawers were filled with homespun. Especially was this the case among the German settlers, who scarcely washed up the soiled house and person wear more than once in a quarter. It was the pride and test of a good housewife to have more linen made up than she knew what to do with, and this continues to be the case even to-day in Berks, York, and Lancaster Counties.¹ It is noteworthy that the Germans built their houses with one chimney, in the centre of the building, the English with a chimney at each end, and this distinction was so commonly marked as to attract the attention of travelers.² In their bedroom furniture the Germans substituted the "feather deck" for the blanket,—*more majorem*,—and this uncomfortable covering is still retained.

In the houses the floors down-stairs were sanded. There were no carpets as yet, not even home-made ones, and the Germans have not been using these for a hundred years. William Penn had no carpets in his Pennsbury Manor house. The large, heavy tables in the dining and living rooms of the early homes groaned with plenty, and the great pewter dishes were piled high. The people worked hard, and they did not stint themselves. The Swedes, Germans, and Quakers were all of them hearty feeders, and they liked gross food. No dread of dyspepsia limited their dishes; they had abundance and enjoyed it. Only a few men of English habits and fond of port, brandy, and madeira, like Capt. Markham, ever had the gout.³ The rivers teemed with fish, and the Quakers early learned the virtues and delicious flavor of the shad, broiled on a plank at one side the fireplace, while a johnny-cake browned on another plank at the other side of the fire. Penn grew so fond of these that in 1686 he wrote to Harrison to send him some "smoakt haunches of venison and pork. Gett them of the Sweeds. Some smoakt shadd and beef. *The old priest at Philadelphia (Fabricius) had rare shadd.* Also some peas and beans of that country." Richard Townshend, in 1682, says that the first year colonists almost lived on fish, of which great quantities were

caught, the winter being an open one, and venison,—
"We could buy a deer for about two shillings, and a large turkey for about one shilling, and Indian corn for about two shillings and sixpence per bushel." Six rockfish or six shad could be bought for a shilling; oysters two shillings a bushel, herrings one shilling and sixpence per hundred. Sturgeon were caught for food, and also for the oil they supplied. The Delaware and the Schuylkill and adjacent pools and marshes were the resort of myriads of wild-fowl, from swan and geese down to rail and reed birds. As soon as the settlers became established, the flesh of all domesticated animals was cheap in the markets. Every family kept its own cows, made its own butter and cheese, salted, cured, and smoked its own bacon, beef, herring, shad, venison, and mutton. The smoke-house, dairy, and poultry-house were appendages to all town houses, and most of them had their own vegetable gardens likewise. It was the custom then, and remained so until long after the beginning of the present century, for every house to be provisioned as if to stand a siege. The cellars had great bins for potatoes and other roots and apples; there were tiers of barrels of fresh cider and casks for vinegar to ripen in, and in a locked recess were usually some casks of madeira, sherry, port, rum, brandy, gin, etc., for the master and his guests, with marsala and malaga for the women and children. There was an astonishing amount of drinking going on all the time; all drank something, if it was only ale or small beer. The pantry and store-house of the mistress was for use, not ornament. Her barrels of saur-kraut were in the cellar, her firkins of apple-butter occupied the ample garret, along with strings of onions, hampers of dried peaches and apples, and great bundles of dried herbs; but in the store-room the deep-bottomed shelf was ranged around with gray stone jars of large capacity, filled with pickles, the shelf above it marshaled a battalion of glass jars of preserves of every sort, and the uppershelves bent under the weight of bottles filled with balsam apples for cuts and bruises in case of need, cordials, lavender, aromatic vinegars, and a hundred delft contrivances to tickle the palate, and deprave all stomachs but such as those of these hardy toilers in the open air.

The gardens yielded all the common vegetables, and people who ate so largely of salted meats and fish required much vegetable food and many sweets and acids to protect them from scorbutic affections. Onions, turnips, cabbage, potatoes were supplemented with the more delicate vegetables known in Germany. The Indians supplied the colonists with their first peas, beans, and squashes, taught them how to boil mush, to pound hominy, to roast the tender ears of corn, and prepare the delightful succotash. Much pastry was used, many sweetmeats and pickles, but not very high seasoning. At table, until tea and coffee became regular articles of diet with all classes, cider and the small beers of domestic brewing were

¹ In a clever little volume, published in 1873, called "Pennsylvania Dutch and other Essays," we read of one extremely provident and fore-handed damsel, who had a bureau full of linen shirts and other clothes ready made up for her future husband, whom she was yet to meet, and whose measure she could, of course, only guess at, by assuming that the right man, when he did come, would be of the size and figure she had in her mind's eye in cutting out the garments.

² Schoepf's "Reise Durch Pennsylvanien," 1783, quoted by I. D. Rupp, notes to Dr. Rush's pamphlet on "Manners of the Germans in Pennsylvania."

³ In Governor Fletcher's time the Council adjourned to meet again in Markham's house because the gout prevented him from going out, and Fletcher wanted a full attendance of his advisers.

served without stint at every meal. In winter the beers were sweetened, spiced, warmed, and drunk for possets. Wines did not appear except upon the tables of the well-to-do, but rum and spirits were in every house, and all took their morning and noon drams in some shape or other. The effects of alcohol were neutralized by the active outdoor life all led, and by the quantities of coarse food taken at every meal. In the journal of William Black, who was in Philadelphia in 1744,¹ it is made to appear among the duties of hospitality to be treating to something or other every hour in the day. This young fellow either had a very strong head, or alcohol did not make the same impression upon the strong, healthy frame of the youth of that day which it does upon modern effeminate men. There was bread, cider, and punch for lunch, rum and brandy before dinner, punch, madeira, port, and sherry at dinner, bounce and liqueurs with the ladies, and wine and spirits *ad libitum* till bedtime. The party are welcomed too with a bowl of fine lemon punch big enough to have "swimm'd half a dozen young geese." After five or six glasses of this "poured down our throats," they rode to the Governor's house, were introduced and taken into another room, "where we was presented with a glass of wine," and it was punch, spirits, or "a few glasses of wine" wherever they went during their stay, his friends being, as he says, as liberal with their good wine "as an apple-tree of its fruit on a windy day in the month of July."

The dress of the people of Philadelphia in the early days of which we write was simple, plain, but not formal as that of the Quakers subsequently became. The country people, for their ordinary wear, made much use of serviceable leather doublets and breeches, woolen waistcoats, felt hats, heavy shoes with leather leggings, or else boots. They wore stout flannel next to the skin in winter, rough coats, and many woolen wraps about the throat; in summer, coarse Osnaburgs and home-made linens. All wore wigs, and the dress suits of cloth or camlet were brave with buttons, braid, and buckles, silk stockings and embroidered waistcoats, gold-laced hats and fine lace ruffles and cravats. Gentlemen wore their small swords; workmen and laborers either dressed in leather, druggets, serge, fustian, or lockram, or else in Osnaburgs. Common women and servants wore linen and domestics, linseys and calicoes; on their heads a hood or quilted bonnet, heavy shoes, home-knit stockings of thread or yarn, petticoats and short gowns, with a handkerchief pinned about the shoulders. The ladies had of course more brilliant and varied wardrobes; the hat was high-crowned, the hair much dressed; stomachers and corsage long and stiff; much cambric about the neck and bosom, much gimp, ribbon, and

galloon; silk or satin petticoats, and dainty shoes and stockings. A friend in 1697 sent Phineas Pemberton's wife "an alamode hood," and the ladies would contrive always to have something "*à la mode*." In the inventory of Christopher Taylor's estate are enumerated "a baratine body, stomacher, and petticoat, cambric kerchiefs, and forehead cloths." In that of John Moon were a "fine Brussels camlet petticoat, a yellow silk mantle, silk band and sash, silk and satin caps, hoods, lute-strings, white silk hoods." William Stanley's store had for sale "frieze, serge, broadcloth, Holland linen, yellow, green, and black calicoes, satins, lute-strings, tabby, silk plush, ribbon, striped petticoats, phillimot, ferret, flowered silks, thread laces, gimps, whalebones, galloons." Letitia Penn did not disdain to buy finery in Philadelphia,—caps, buckles, a watch, and other goldsmith's articles. There was not a great amount of luxury, however, nor much plate nor display of fine articles. The people's habits were simple. They were all industrious, ploddingly so, and the laws and sentiment and temper of the influential classes frowned equally upon display and extravagance. The wild youth, the sailors and laborers sometimes broke bounds, but the curb was in their mouths and they were soon reined up.

The population seemed to realize that they had their fortunes to make, and that good pay and great industrial opportunities made idleness and loose, extravagant living inexcusable. Wages were comparatively high, labor was respectable and respected, and no community has ever exceeded, in rapidity and symmetry of industrial development, the progress made by Philadelphia and its environs during the first twenty years of the town's existence. In 1689 there were ten vessels sent to the West Indies freighted with produce of the province, and the same year fourteen cargoes of tobacco were exported. In 1698 the river-front abounded with the conveniences and facilities requisite for an extensive commerce, and for building and repairing vessels, as well as loading and unloading them. Ship carpenters earned five and six shillings a day in wages, and on that pay would soon save money. The trade to the West Indies and Brazil consisted of horses and other live-stock, provisions, staves, etc. The vessels themselves were sold with their cargoes, and every one might have his little venture in a traffic which paid double the investment on each risk. Thus the ship carpenter, who laid by one day's wages a week, could, in a month or two, be trading to the Indies so as to give him £50 or £60 clear money at the end of a year, and that would buy him a farm, build him a house, or give him a share in some vessel on the stocks. In ten years he could become a capitalist, as many of his trade did so become. The timber of the Susquehanna and Delaware was sometimes sent across the ocean in hugeraft ships, rigged with sails and manned by regular crews. We read of one of these, the

¹ Black was a young Virginian, secretary of the commissioners appointed by Governor Gooch, of Virginia, to unite with those of Pennsylvania and Maryland to treat with the Six Nations in 1744. His diary has been published in the *Penna. Magazine*, vol. i.

"Baron Renfrew," measuring five thousand tons, which arrived safely in the Downs.

Mills were established rapidly under the proprietary government. Penn had two on the Schuylkill. Richard Townshend had one at Chester, and one on Church Creek in 1683. The Society of Free Traders had a saw-mill and a glass-house in Philadelphia the same year. The saw-mills still could not meet the demand for lumber, and in 1698 hand-sawyers were paid six and seven shillings per hundred for sawing pine boards; in 1705, ten shillings. Shingles in 1698 sold for ten shillings per thousand; hemlock "cul-lings," ten shillings per hundred; timber, six shillings per ton. Printz's grist-mill on the Karakung was soon duplicated after the proprietary government took possession. Pastorius says the colony had mills enough; the Frankford Company had established several as early as 1686. In 1698, Thomas Parsons had a mill at Frankford, and Richard Dungworth one in Oxford township. In that same year the Darby Creek was lined with corn- and fulling-mills, doing superior work.¹ Garrett Rittenhouse had a grist-mill on Cresheim Creek in 1697, and the Robesons at the same time had one at Roxborough, on the Wissahickon. There were mills on the Pennypack before this, and some of these large mills added to their profits by having bakeries connected, where ship-bread was baked in quantities for sea-going vessels.

We have already spoken of the early manufacture of bricks. The Swedes' Church at Wicaco, still standing, was built of brick in 1700. The first Proprietary Assembly at Upland was held in a brick house, but these bricks were probably imported. The Centre Quaker meeting-house in Philadelphia was of brick, built in 1684. Robert Turner's brick house, Front and Arch Streets, was built in 1685, and Daniel Pegg's, above the creek, the same year. Penn tried to get this house for an executive mansion. Anthony Morris had a large brew-house at Dock Creek in 1697. Penn's brew-house at Pennsbury, still standing, was built before his mansion. Penn, Dr. More, and several others of the first settlers made strong efforts to improve native grapes, introduce the exotic grape and manufacture wine. They had wine made of fox-grape juice, and fancied it was as good as claret. Penn set out a vineyard at Springettsbury, and had a French vigneron to tend it. The experiment failed, however, and was abandoned before Penn's second visit. Pastorius was deceived also, and wrote to Germany for a supply of wine-barrels, which, however, he never filled, unless with cider or peach-brandy. No wonder Penn wanted to make wine at home,—his

province imported four hundred thousand gallons of rum and sixty thousand gallons of wine a year, costing over fifty thousand pounds annually.

Penn's leading object in establishing fairs in Philadelphia and the province was to promote industrial enterprises. At the first fair in 1686 only ten dollars worth of goods was sold. There was no money in Philadelphia, and exchanges could not be made. The fairs were held twice a year, three days each in May and November. These gatherings became very popular, and led to license and riot, races, gambling, and drunkenness, such as made the strict Quakers groan. Numerous complaints were recorded against them in the courts and proceedings of Council and Assembly, and they were finally suppressed, as supporters of vice and immorality, in 1783. Another plan of Penn's was to offer prizes for superior work in manufactures. In 1686, Abraham Op den Graaffe,

PENN'S OLD BREW-HOUSE, NEAR BRISTOL, BUCKS COUNTY.

of Germantown, petitioned Council to grant him the Governor's premium for "the first and finest piece of linen cloth." About the same time Wigart Levering, one of the Germantown colonists, began weaving in Roxborough. Matthew Houlgate, in 1698, bought property in the same township, and began a fulling-mill on the Wissahickon. The price in 1688 for spinning worsted and linen was two shillings per pound; knitting heavy yarn stockings, half a crown per pair. Wool-combers received twelve pence per pound; linen-weavers twelve pence per yard of stuff half a yard wide; journeyman tailors were paid twelve shillings a week and "their diet." There were several tailors early set up in Philadelphia, one of whom, Charles Blackman, did work for Governor Penn. The domestic manufactures of the day in linen and woolen wear supplied a large part of family wants. Fabrics were coarse but serviceable; and the women of the household, after the men had broke and hackled the flax and sheared the sheep,

¹ Gabriel Thomas.

did all the subsequent work of carding, spinning, weaving, bleaching, and dyeing. While wages were good, the clothes of apprentices and laborers were not expensive. Leather shoes with brass buckles and wooden heels lasted as long almost as leather breeches and aprons. Hemp and flax Osnaburghs, dyed blue, cost only a shilling or one and sixpence per yard, and a felt or wool hat and two or three pairs of coarse yarn stockings were good for two seasons. Wealthy people, who wore imported velvets, satins, silks, and nankeens, however, had to pay extravagant prices for them, and the cost of a fashionable outfit often exceeded the money value of an eligible farm. The rapid increase of their "bestial" not only gave the Pennsylvania planters a valuable line of exports, but also early encouraged the manufacture of leather. Penn and the Free Society of Traders established a tannery in Philadelphia in 1683, and it was well supplied both with bark and hides. Leather was in general use for articles of clothing, such as are now made of other goods. Penn himself wore leather stockings, for which he paid twenty-two shillings a pair. In 1695 the exportation of dressed and undressed deer-skins was prohibited, in order to promote their utilization at home. Raw hides cost one and a half pennies per pound, while leather sold for twelve pence. A fat cow went to the butcher for three pounds, while beef sold for from three to four and a half pence per pound, a profit of over one hundred per cent. to butcher and tanner. But land was cheap, the Barbadoes market was always ready to pay well for cattle on the hoof, and these things secured good wages for labor in the mechanic arts. Curriers, who paid twenty pence a gallon for their oil, received three shillings and four pence a hide for dressing leather. Journeymen shoemakers were paid two shillings a pair for men's and women's shoes, and last-makers got ten shillings a dozen for lasts; heel-makers two shillings a dozen for wooden heels. Men's shoes sold for six shillings sixpence, and women's for five shillings per pair. In 1699 there were two tanneries, Hudson's and Lambert's, in Philadelphia, in "the swamp," on Dock Creek. Great skill and taste were displayed in the various makes of "white leather," soft leather, and buckskin for domestic wear, a branch of manufactures taken up by the Swedes in imitation of the Indians.

The mineral wealth of Pennsylvania, suspected by the Swedes, began to be revealed very early to the primitive settlers under the proprietary government. A Dutch colony is claimed to have worked iron in the Minnesink long before Penn came over, but there is nothing but tradition in regard to these pioneers. Penn wrote to Lord Keeper North, in 1683, that copper and iron had been found in divers places in the province. Gabriel Thomas speaks of the existence of iron-stone richer and less drossy than that of England; the copper, he says, "far exceeding ours,

being richer, finer, and of a more glorious color." These "finds" were in Chester County, the seat of the earliest iron-works in the province. Thomas also mentions limestone, lodestone, isinglass, asbestos, and amianthus. Blacksmiths earned high wages; one is mentioned who, with his negroes, by working up old iron at sixpence per pound, earned fifty shillings a day. All the contemporary writers speak of the heavy charges for smith-work, though there was no horseshoeing to be done. Silversmiths got half a crown or three shillings per ounce for working up silver, "and for gold, equivalent." There was a furnace and forges at Durham, in Bucks, before the eighteenth century set in.

Where there was so much hand-work done, and so many things to be accomplished by mere manual labor, there was naturally not much call nor room for brain-work. The habits of the Swedes, the system and culture of the Society of Friends were not particularly favorable to intellectual growth nor to education. Many more scholars, wits, and learned men came to Pennsylvania in the first two generations than went out of it. The learned Swedish pastors were exotics, and their successors, from Campanius to Collins, had to be imported from the mother-country. They did not grow up in the Delaware country. Nor did Penn's "wooden country" (as Samuel Keimer, Franklin's odd companion at the case, calls it) produce any parallels or equals to the university scholars who, like Penn, the Lloyds, Logan, Growden, Shippen, Nicholas and John More, Pastorius, Wynne, White, Guest, Mompesson, and others, devoted their talents and learning to the service of the infant commonwealth. There is some truth in the satire of Rufus Choate when he toasted Pennsylvania's two greatest men, "One born in New England, and the other in Old England." Penn himself, it was alleged in Council, on the trial of Bradford for the unlicensed printing of the charter and laws (a work which he was instigated to by Judge Growden), had taken the Virginia Governor Berkeley's rule for his pattern, and wished to discourage publications of all sorts. The learned and elegant professions indeed were not well nurtured in Pennsylvania's early days. In Goodson's inventory of occupations the "chirurgeon" was put down between the barbers and the staymakers. Gabriel Thomas shows that the professions were contemned. "Of Lawyers and Physicians," he observes, "I shall say nothing, because this Country is very Peaceable and Healthy; long may it so continue and never have occasion for the Tongue of the one or the Pen of the other, both equally destructive to men's Estates and Lives." Where the sole source of Divinity was "the Inner Light," cultivated persons were not to be looked for in the ministry; education was rather esteemed a hindrance than a help to the free and perfect expression of inspiration. It was a "snare" and a "device," like the steeple on the church's tower, the

stained glass in its windows, like the organ in the choir, and the gowns and also the salaries and benefices of the clergymen.

Bradford was driven out of Philadelphia more by the indifference of its people to the sort of work he chose to make his living by than on account of prosecution and intolerance. He did not care how active hostilities were against him, being a belligerent himself, but apathy was something which baffled him. He printed all that offered; he made work for himself, yet could not get enough to do to support him. The little printing he did outside of official matters, forms, briefs, and almanacs, was chiefly polemical, acrid as the exudations of the toad, and dry enough to reduce a proof-reader's brains to pumice-stone. No man of Bradford's energetic and volatile temperament could oscillate between John Burnyeat's "Epistles" and George Keith's "Serious Appeal" and live. Bradford stood it for eight years and then fled. He did some good work while in the province. His *Kalendarium Pennsilvaniense* shows that a man's individuality may impress itself even upon an almanac. This, the earliest book printed in the province, came out late in 1685 as the calendar of the coming year. It has all the features of such works, with a touch of Bradford throughout. His chronology begins with the Noachian deluge, "3979 years before the almanac," and the building of London, "2793 years before the almanac," and concludes with "the beginning of government here by the Lord Penn. five years before the almanac." And Council forced him to blot over his "Lord" Penn with a full-inked "three M quad." Bradford published the poem of Richard Frame, which has been quoted from on a preceding page. He published one Burlington and two Philadelphia almanacs, a good many broadsides and tracts, "The Temple of Wisdom for the Little World," which contains (a proof of the printer's taste) Bacon's Essays and Thomas Quarles' Emblems, proposals for printing the Bible, large copy, by subscription, a number of Keith's offensive diatribes, several papers by Gershom Bulkeley on the Connecticut Charter, several tracts in answer to Keith, and an anti-slavery poem attacking Samuel Jennings. Bradford went to New York in 1693, to be succeeded after some years by Reynier Jansen, who is thought to have been the first printer's apprentice.

There is really as little to say about the doctors and lawyers of the province as Thomas allows. The Dutch Annals mention a surgeon of the name of Jan Oosting, another, William Van Rasenberg, who was called indifferently barber and surgeon, and Everts and Arent Pietersen. These three in three years received government pay to the amount of two thousand seven hundred and eighty-eight florins as physicians and "comforters of the sick."¹ In the journal of Sluyter and Dankers, Otto Ernest Cock is

called a physician, or rather "a late medicus." In addition to Drs. Thomas Wynne, Griffith Owen, and Nicholas More, John Goodson was also a physician under Penn's government, and so was Edward Jones, founder of Merion, and son-in-law of Dr. Wynne. Dr. John Le Pierre, who was reputed to be an alchemist, came over about the same time as Penn. Dr. More did not practice his profession in the colony, but Griffith Owen was a regular physician from the date of his arrival. There were several other "chirurgions" among the "first purchasers," but it is not ascertained that any of them immigrated to the province. Doctors could not be well dispensed with, since, in addition to colds, consumptions, and constant malarial disorders, the province was visited by three or four severe epidemics, including a fatal influenza which attacked all the settlements and colonies on the Atlantic, an outbreak of pleurisy which was noticeably destructive at Upland and New Castle, and a plague of yellow fever in Philadelphia in 1699. The smallpox likewise was a regular and terrible visitor of the coast, though its most fearful ravages were among the Indians.

In addition to the leading lawyers already named, Charles Pickering appears to have been a member of the bar, as well as a planter on a large scale, a miner, and copper- and iron-worker, a manufacturer of adulterated coins, and a sort of warden of the territory in dispute between Penn and Lord Baltimore. Patrick Robinson, the recalcitrant clerk of Judge More's court, was an attorney, and Samuel Hersent was prosecuting attorney for the province in 1685, afterwards securing his election to the sheriffalty of Philadelphia. David Lloyd succeeded him as attorney-general, and distinguished himself in the controversies with Admiralty Judge Quarry. John Moore was the royal attorney in Quarry's court. John White and William Asheton were also lawyers in Philadelphia before the end of the sixteenth century.

These gentlemen of the bar found plenty of work to do. There were many disputed titles of land, there was a great deal of collecting to do in the triangular trade between the province, the West Indies, and the mother-country, and there were numbers of personal issues and suits for assaults, libels, etc. Besides, while Penn himself did all he could to prevent litigations, the character of his laws necessarily called for the constant interference of the courts in affairs not properly their concern. There were some sumptuary laws, many restrictive ones, and the whole system was unpleasantly inquisitive and meddlesome. It kept up the same sort of obnoxious interference with private business and personal habits which made the Puritan system so intolerable, but its penalties had none of the Puritan's atrocious severity and bloodthirst. It must be confessed that the unorthodox person of gay temperament who sought to amuse himself in primitive Philadelphia was likely to have a hard time of it. The sailor who landed there on liberty after a tedious

¹ Westcott's History of Philadelphia, chap. lii.

three months' cruise soon found that he was not at Wapping. The Quakers had learned to despise riot and debauchery, less perhaps because it was vicious and demoralizing than for the reason that it was offensive to their ingrained love of quiet and order and to their passion for thrift and economy. Wildness, sport, all the livelier amusements were abhorrent to them because they signified extravagance and waste. The skirts of their Christian charity, admirable, thoughtful, and deep as that was, seemed never broad enough to embrace or condone prodigality. When the prodigal son came home to them the fatted calf was not killed, but the question was wonderingly and seriously asked (saving the oath), "*Mais, que diable allait-il faire dans cette galère ?*" That was the way precisely in which they treated William Penn, Jr., when he was arrested for rioting and beating the watch in a tavern. Instead of excusing him for his youth and for his worthy father's sake, they accused him on that account, and the father's great character actually became a part of the body of the indictment against the profligate son. No wonder that the father should have cried in the bitterness of his heart, "See how much more easily the bad Friends' treatment of him stumbled him from the blessed truths than those he acknowledged to be good ones could prevail to keep him in possession of it."

In fact, all that was not exactly according to Quaker ways was narrowly looked upon as vice and to be suppressed. Christmas mumming was accused as flagrant licentiousness. Horse-racing was prevented by the grand jury. It offended the sobriety of the community for ships to fire salutes on arriving and departing. The laws against the small vices were so promiscuous and indiscriminate and the penalties so ill balanced that when the Pennsylvania code was finally presented to Queen Anne for approval, her ministers drew their pens through half the list of misdemeanors and penalties, for the reason that they "restrain her Majesty's subjects from innocent sports and diversions. However, if the Assembly of Pennsylvania shall pass an act for preventing of riotous sports, and for restraining such as are contrary to the laws of this kingdom, there will be no objection thereto, so it contains nothing else."¹ The character of these unnatural restraints is fully illustrated in certain "extracts from the records of Germantown Court" (1691 to 1707) and "presentments, petitions, etc., between 1702 and 1774."² For example, Peter Keurlis, charged with not coming when the justices sent for him, with refusing to lodge travelers, with selling barley-malt at four pence per quart, and with violating Germantown law by selling more than a gill of rum and a quart of beer every half-day to each individual. Peter's answers cover the whole case of

the absurdity of such apron-string government. He did not come because he had much work to do; he did not entertain travelers, because he only sold drink and did not keep an ordinary; he knew nothing about the four pence a quart law of the province, and as for the Germantown statute, the *people he sold to being able to bear more*, he could not or would not obey the law. The court, however, took his license away from him and forbade him to sell any drink, under penalty of £5. Oaths and charges of lying, when brought to the court's notice, if the offender acknowledged his fault and begged pardon, were "forgiven and laid by," the law making them finable offenses. Reinert Peters fined twenty shillings for calling the sheriff a liar and a rascal in open street. A case of Smith *vs.* Falkner was continued because the day when it was called "was the day wherein Herod slew the Innocents." George Muller, for his drunkenness, was condemned to five days' imprisonment; "*item*, to pay the Constable two shillings for serving the warrant in the case of his laying a wager to smoke above one hundred pipes in one day." Herman Dors, being drunk, called Trinke op den Graeff a naughty name, accused Peters of being too kind to Trinke, called his own sister a witch and another vile name, and said his children were thieves; brought before the court, "and there did particularly clear all and every one of the said injured persons, who, upon his acknowledgments of the wrongs done them by him, freely forgave him;" the court fined him five shillings. Peter Shoemaker, Jr., accuses the horses of John van der Willderness of being "unlawful," because they "go over the fence where it had its full height." The jury, however, found Shoemaker's fences to be "unlawful." The court orders that "none who hath no lot nor land in this corporation shall tie his horse or mare or any other cattle upon the fences or lands thereof, either by day or night, under the penalty of five shillings." Abraham op den Graeff is before court for slandering David Sherker, saying no honest man would be in his company. Verdict for defendant. "Nov. 28th, 1704, Daniel Falkner, coming into this Court, behaved himself very ill, *like one that was last night drunk, and not yet having recovered his wits.*" Falkner seemed so aggressive that the sheriff and constable were ordered to "bring him out," which was done, he crying, "You are all fools!" which indeed was not the remark of a drunken but a sober man. No court could continue to waste time in preposterous trivial proceedings of such sort without exhausting the patience of a community and making it impossible for people to avoid such outbursts as those of Falkner.

Among the Philadelphia grand jury presentments, etc., quoted in these papers, we find one against George Robinson, butcher, "for being a person of evell fame as a common swearer and a common drinker, and particularly upon the 23d day of this inst., for swearing three oaths in the market-place, and also for utter-

¹ Privy Council to Governor on repealing certain laws, Pennsylvania Archives, 1709, vol. i. p. 155, First Series.

² Published in Volume First of Collections of the Pennsylvania Historical Society, pp. 243-58 *et seq.*

ing two very bad curses the 26th day of this inst." Philip Gilbeck utters three curses also; presented and fined for terrifying "the Queen's liege people." John Smith, living in Strawberry Alley, presented "for being maskt or disguised in womens' apparell; walking openly through the streets of this city from house to house on or about the 26th of the 10th month [day after Christmas], *it being against the Law of God, the Law of this province and the Law of nature, to the staining of holy profession and Incorridging of wickedness in this place.*" All this against an innocent Christmas masquerade! Children and servants robbing orchards is presented as a "great abuse" and "licentious liberty," a "common nuisance" and "agreviance." Such ridiculous exaggeration destroys the respect for law which alone secures obedience to it. John Joyce, Jr., is presented "for having to wives at once, which is boath against y^e Law of God and Man." Dorothy, wife of Richard Canterrill, presented for masking in men's clothes the day after Christmas, "walking and dancing in the house of John Simes at 9 or 10 o'clock at night,"—not even charged with being in the street! Sarah Stiner, same offense, but on the streets, "dressed in man's Clothes, contrary to y^e nature of her sects . . . to y^e grate Disturbance of well minded persons, and incorridging of vice in this place." John Simes, who gave the masquerade party, is presented for keeping a disorderly house, "a nursery to Debotch y^e inhabitants and youth of this city . . . to y^e Greef of and disturbance of peaceable minds and *propigating ye Throne of wickedness amongst us.*" Peter Evans, gentleman, presented for sending a challenge to Francis Phillips to fight with swords.¹ The grand jury report that their predecessors having frequently before presented the necessity of a ducking-stool and house of correction "for the just punishment of scolding, Drunken Women, as well as Divers other profligate and Unruly persons in this place, who are become a Publick Nuisance and disturbance to this Town in Generall, Therefore we, the Present Grand Jury, do Earnestly again present the same to this Court of Quarter Sessions for the City, desiring their immediate Care, That those public Conveniences may not be any longer Delay'd." Certainly it is a novel idea to class ducking-stools and houses of correction among "public con-

veniences." There are three successive presentments to this effect.² The grand-jury also present negroes for noisy assemblages in the streets on Sunday, and think that they ought to be forbidden to walk the streets in company after dark without their masters' leave. Mary, wife of John Austin, the cordwainer, is presented because she was and yet is a common scold: "a Comon and public disturber, And Strife and Debate amongst her Neighbours, a Comon Sower and Mover, To the great Disturbance of the Liege Subjects," etc. In spite of all these presentments and indictments, however, and especially those against drunkenness and tippling-houses, we find in a presentment drawn by Benjamin Franklin in 1744 that these houses, the "Nurseries of Vice and Debauchery," are on the increase. The bill says there were upwards of one hundred licensed retail liquor-houses in the city, which, with the small groceries, "make by our computation near a tenth part of the city, a Proportion that appears to us much too great." One place, where these houses are thickest, has "obtained among the common People the shocking name of *Hell-town.*"

CHAPTER XII.

PENN'S ADMINISTRATION, 1699-1701 — PENNSBURY MANOR—THE PROPRIETARY RETURNS TO ENGLAND.

THE ship—the "Canterbury," Capt. Fryers—in which William Penn crossed the ocean to his province in 1699, came up to Chester on December 1st. The next day, on landing, the Governor's arrival was heralded with a military salute, in the course of which a young man had his arm blown off by the premature discharge of the cannon. On Sunday, December 3d, Penn reached Philadelphia, and made a formal call upon his deputy, Governor Markham, the other dignitaries of the town and province, including Judge Quarry, of the Admiralty Court, and John Moore, crown prosecutor, having met and received him at the water's edge. From Markham's house Penn proceeded to the Friends' meeting-house at Second and High Streets, and took part in the afternoon meeting, offering a prayer, and delivering one of those short, incisive addresses in which he was so happy. Penn was very well received by all classes in the community, says James Logan, who had come out with the Governor, and was in constant attendance upon him. It was rumored by the *quidnuncs* of the day, and the party hostile to Penn's administration and to the proprietary government, that there would be some difficulty in regard to Penn's resumption of his active functions as Governor, on account of his

¹ Evans' challenge was as follows: "Sir: You have basely slandered a Gentlewoman that I have a profound respect for, And for my part shall give you a fair opportunity to defend yourself to-morrow morning, on the west side of Jos. Carpenter's Garden, betwixt seven and 8, where I shall expect to meet you, *Gladio cinctus*, in failure whereof depend upon the usage you deserve from yr, etc.

"PETER EVANS.

"I am at y^e Pewter Platter."

Phillips appears to have been arrested, for the grand jury present him for contriving to "deprive, annihilate, and contemn" the authority of mayor and recorder by saying, "Tell the mayor, Robert Hill, and the recorder, Robert Asheton, that I say they are no better than Rogues, Villains, and Scoundrells, for they have not done me justice, and might as well have sent a man to pick my pocket or rob my house as to have taken away my servant," etc.

² It would be curious to inquire how the great moral idea of the ducking-stool, as a public convenience and a cure for scolding women, originated.

inability to take the oaths prescribed by Parliament. Judge Quarry, who had been in bitter controversy with Markham, Attorney-General Lloyd, and the Council for some time, had, as it was known, denounced the testimony on affirmation in the piracy cases as being unworthy of credit, and, in fact, not testimony at all. It was, perhaps, hoped and believed by the faction which sought to upset Penn's government and convert his province into a fief of the crown that Judge Quarry would apply his rule to the case of the Governor's return to office, and thus provoke an open issue forthwith. Quarry and Moore, however, did nothing of the kind, but, by being present to receive Penn, practically admitted that his authority was unimpeachable. On the other hand, Penn's supporters, the Quakers and Germans, and all who were really anxious for a stable government and

the settlement of feuds and disorders, welcomed the proprietary's arrival as an auspicious event and the harbinger of peace. In Logan's words, they "concluded that, after all their sufferings, this province now scarcely wanted anything to render it completely happy." Penn, indeed, soon had a long interview with Judge Quarry, in which there was an abundance of courtesy on both sides, and by mutual consent it was agreed that a little concession on the

part of the high contending parties would not be difficult when both confessed they had made mistakes, and that nothing else was needed to estab-

by P. F. Goist.]

lish a *modus vivendi* between the representatives of the imperial and the proprietary governments. No such complete understanding was indeed arrived at until after Penn's diplomacy had secured the removal of Judge Quarry and the appointment of Judge Mompesson in his stead. Penn and Quarry came to quarrel with each other more violently, and with more bitter language than had been used between Markham and the Admiralty Court, but meantime it was important to have the community know that they were at least temporarily on good terms, and that Penn did not feel himself obliged to take up Markham's controversies, or follow precisely in his footsteps. The proprietary's position would

be greatly strengthened if people should look up to him as the Governor of the whole province, the friend of all parties, the arbiter in all difficulties and misunderstandings, and one who was so far above factions as to be out of reach of improper influences and prejudices.

After the meeting was over and Friends had dispersed to their homes, Penn and his suite went to the house of Edward Shippen,¹ residing there for a

¹ West side of Second Street, north of Spruce Street, called the "Great House," and also the "Governor's House." It was inclosed on two sides by a garden, extending to Laurel or Levant Street; in this garden stood two tall pine-trees of the primeval forest, a well-known landmark, visible for a great distance in every direction. The house was built in 1693; Shippen had only occupied it from 1695 to 1696. After Penn left the house, Lord Cornbury lodged and dined there when he came over to proclaim Queen Anne's accession. Lords were not frequent visitors at that day in any of the colonies, except Virginia, and Cornbury's presence made a great deal to do. James Logan wrote to Penn of how he hastily got up a splendid dinner for him at the slate-roof house, followed by another at the Shippen house, with covers for thirty persons, and supplemented by an entertainment at Pennsbury, which place his lordship found much to admire in. An old lady's disappointment is chronicled who, hearing that "my lord" was passing by, ran out in great haste to have a look at the well-born man of titles, and found him not different from other people, except that he wore "leather stockings." Shippen and his family resided in the house after Penn left it, and his son was here arrested for assault and battery on Thomas Clark, Esq. Governor Sir William Keith

lived here while in the executive chair of the province, 1717 to 1726, and William Denny also, Deputy Governor from 1756 to 1759. Ellis Lewis made it his residence, and it was in his widow's possession during the British occupation of Philadelphia, Maj. Baurmester, a Hessian officer, being quartered on her. Cornwallis is likewise thought to have lived here for a time. The house was built by Edward Shippen, born in England in 1639, son of a Yorkshire gentleman named William Shippen. The family was one of consequence, Edward's nephew, Rev. Dr. Robert Shippen, being principal of Brazen Nose College and vice-chancellor of Oxford University, and another nephew, William, was the "downright Shippen" of Pope's verses, leader of the Jacobites, whom Walpole confessed to be proof against corruption, and whose courage and integrity in Parliament procured him a commitment to the Tower in 1717. Edward Shippen came to America in 1668, settled in Boston, and got rich as a merchant. He was a member of the Established Church, and belonged to the artillery company, but in 1671 he married Elizabeth Lybrand, a Quakeress, and joined the Society of Friends. He became at once a mark for New England intolerance and fanaticism, and was forced to take his share of the "jailments" and scourgings which were visited upon his

month, when he took up his residence in the "Slate-Roof House," his city home during the remainder of his sojourn in the province.¹

sect. In 1693 a meteor appeared in the Massachusetts atmosphere and was made the signal for a fresh persecution of Quakers and Baptists, in which Shippen was banished. He probably knew Penn and was invited to Philadelphia. At any rate he went there, bought his lot, built his house, and by the end of 1694 had closed up his business and removed his family to the new city, having first erected a memorial "on a green" near a "pair of gallows, where several of our friends had suffered death for the truth and were thrown into a hole." Shippen was a man of wealth, handsome face and figure, talents and high character, and his mansion was a "princely place." He soon stepped to the front in the new community, and Penn lavished honors and positions on him. He was Speaker of the Assembly in 1695, first mayor of Philadelphia (1701), and in 1702-4 president of Council, after Andrew Hamilton's death, and *ex-officio* Deputy Governor of the province until Penn sent over William Penn, Jr., and John Evans to supersede him. In 1704, Shippen married his third wife, Elizabeth James, and, as she was not a Quaker, he himself withdrew from the society, but continued on good terms with them and prominent in public affairs until his death in 1712.

¹ This old mansion, when first built the largest house in Philadelphia, better known even than the "Letitia House," or any other of the historic places connected with Penn and the city he founded (except the Shackamaxon treaty elm), was only recently removed (in 1867), to make way for the imposing structure erected by the Chamber of Commerce. It was a quaint-looking house, with a sort of individuality of its own that quite became it, and in its original state, with extensive gardens surrounding it, inclosed within a high wall, must have had a commanding aspect. Graydon, who lived there (his mother, the "Desdy" or Desdemona of the port British officers of the day, kept the place as a boarding-house just before the Revolution), describes the old house:—It stood on the corner of Second Street and Norris Alley, afterwards Gothic Street,—as a "singular, old-fashioned structure, laid out in the style of a fortification, with abundance of angles, both salient and re-entering. Its two wings projected to the street in the manner of bastions, to which the main building, retreating from sixteen to eighteen feet, served for a curtain. Within it was cut up into a number of apartments, and on that account was exceedingly well adapted to the purpose of a lodging-house, to which use it had long been appropriated." The yard or garden was graced with a row of venerable pine-trees, and the association of the place gave it a substantial historic interest. It bore much less the look of a fortress than Graydon's military eye conceived. The back building was as peaceful-looking as the culinary offices should be, and the neat little chambers in the so-called bastions were cosy nooks, with chimney-places in the corners. The kitchen had a giant pile of chimney, with a great fireplace, and the garrets were high and roomy. The house was roofed with slate said to have been brought from England, but plenty of the material was to be had near Philadelphia, and Pennsbury was roofed with this, according to Gabriel Thomas. This house was built for Samuel Carpenter by James Porteus. It was erected about 1698, and Penn was probably its earliest occupant. Carpenter had built in 1684-85 a house on Front Street, near his wharf and warehouses, and it is likely he lived there after the slate-roof house was completed. Carpenter was a man of great ability and enterprise, accumulating wealth rapidly and doing much to build up the city of his adoption. He married Hannah Hardiman, a Welsh Quakeress and preacher, in 1684, and held many important positions,—member of the Assembly, treasurer of the province, etc. He bought large tracts of land, owned numerous vessels, mines, quarries, and mill-seats, so much property in fact that it impoverished him and threw him into serious pecuniary embarrassment, though he was ranked as the richest man in the province. He died in his house in King Street (now Water Street), between Chestnut and Walnut Streets, April 10, 1714, and the Friends' Meeting, after his death, said of him that "he was a pattern of humility, patience, and self-denial; a man fearing God and hating covetousness, much given to hospitality and good works. He was a loving, affectionate husband, tender father, and a faithful friend and brother." Carpenter's brother Joshua, a brewer, was nominated for alderman of Philadelphia in Penn's charter for the city, 1701, but declined the place, having made a "vow or oath" never to serve under the proprietary. (Penn and Logan Correspondence.) The Carpenters were English, arriving out soon after Penn's first visit. Samuel himself was opposed to Penn's conduct of affairs in the province, and signed a memorial and protest to Queen Anne in 1709. Carpenter's house, which was let to Penn furnished, was occupied during Penn's

Penn and his family moved into the slate-roof house in January, 1700, and there, on the 29th of that month, was born John Penn, called "the American," the proprietary's only child not of English birth, son of William Penn by his second wife, Hannah Callowhill.

This confinement of Mrs. Penn, the need to look about him and ascertain the real condition of public affairs, so greatly entangled, and the sickness and depression prevailing in Philadelphia, prevented Penn from dispatching much business until some time after his arrival. He was in Philadelphia three weeks before calling a meeting of the Council. The sickness in the city must have been distressing, though it could not have been a return of the yellow fever, since it occurred long after the season of frost. In the Logan papers a letter from Isaac Norris to his English correspondent in 1699 speaks of illness and daily deaths for quite a number of weeks, and he gives the names of many prominent Friends who had succumbed or were supposed to be dying. In another of these letters, written in March, 1701, the same writer speaks of the infant John Penn in this fashion: "Their little son is a comely, lovely babe, and has much of his father's grace and air, and hope he will not want a good portion of his mother's sweetness, who is a woman extremely well beloved here, exemplary in her station and of an excellent spirit, which adds lustre to her character, and has a great place in the hearts of good people." When spring opened Penn and his family removed to the manor house at Pennsbury, and probably resided there all summer as well as during the spring and summer of

unexpired term and afterwards by James Logan; when Governor Evans, William Penn, Jr., and Judge Mompesson came over in 1704, the four kept bachelor's hall at the Clark mansion (later Pemberton's), southwest corner of Third and Chestnut Streets. The slate-roof house had been sold in the latter part of 1703 to William Trent, the Inverness miller, who founded and gave his name to Trenton, N. J. Trent paid £850 for it. In 1709 he sold it for £900 Pennsylvania currency to Isaac Norris, who occupied it until his removal to Fairhill in 1717. The Norris family owned the house until 1867, when it was bought by the Chamber of Commerce and torn down. From 1717 onwards it appears to have been used as a boarding and lodging-house, being in several hands besides those of Mrs. Graydon. Gen. Forbes, Braddock's successor, died there in 1759, at which time the house was kept by Mrs. Howell. Baron de Kalb lodged there in 1768-69, when he was the secret agent of France. Sir William Draper, the target of Junius' sarcasm, lodged there with Mrs. Graydon during his visit to the colonies. James Rivington, the Tory printer and publisher, ate and slept there, and the house is reported also to have lodged John Hancock and George Washington during the first sessions of the Continental Congress. Baron Steuben, Peter S. Duponceau, and others lodged here for a while after the British evacuated Philadelphia. Later it was the seat of a boarding school, kept by Madame Berdean, reputed to be the widow of Dr. Johnson's Dr. Dodd, hung in London for forgery in 1777; then it became a workshop, a place of business, and a tenement-house, with shops on the ground floor, which were occupied by tailors, engravers, watch-makers, silver-smiths, etc. Under one of the "bastions" a notable oyster cellar was opened, the resort of the merchants and bankers doing business in that vicinity. Logan was very desirous that Penn should buy the house when Trent offered it for sale, and said that it was hard that the Governor did not have the money to spare. "I would give twenty to thirty pounds out of my own pocket that it were thine, nobody's but thine," said honest James.

1701, until they returned to England. Mrs. Deborah Logan has preserved a pretty tradition of the mother and child, told her in youth by an aged woman of Bucks County, who remembered that when she was a girl she went to the manor house at Pennsbury with a basket containing some rustic tribute or other, and saw the proprietary's wife, "a delicate and pretty woman, sitting beside the cradle of her infant." A vivid photograph this of the life at Pennsbury, of that domestic serenity and quiet which Penn yearned for, and yet from which his wife and daughter Letitia were incessantly eager to hurry him away. They were weary of the solitude of Pennsbury, broken only by the soft tread of the Indian, or by the petty squabbles and small concerns of the Philadelphia politicians. They were used to country life, but it was the country life of old England, with mansions that looked out on smooth green lawns inclosed with hedges of privet and hawthorn, not a life in the frayed selvage of the measureless backwoods, with a deep river in front, and behind nothing but insolent bears and wolves and painted savages with scalps hanging at their belts!

In the slate-roof house and at Pennsbury the proprietary maintained a good deal of state. He entertained much and liberally, and had a large retinue of attachés and servants. When he went from his manor to his capital city, to attend the meetings of Council or look after other business, he proceeded in his eight-oared barge; and must have looked well passing ceremoniously along the river-front to the landing-place. There may have been something of policy in this stately parade and in the insignia of office with which Penn chose to surround himself as the lord paramount of a great and prosperous territory, rapidly growing in population and consequence. But Penn was rather fond of display for its own sake. He cherished power, both because it gave him influence for good and because he liked to know that he had influence. In the same way he enjoyed the sense of his proprietorship of such a great domain, the work of his own hand, and he liked to show himself as the "monarch of all he surveyed." This was so openly and ingenuously done that it provoked comment and satire. The people, who thought that a Governor who kept such state and entertained so liberally must be very rich, complained that he should be demanding subsidies and extorting quit-rents from them. The English party, headed by Judge Quarry and others, who wanted the crown to take possession of the government, looked upon this lofty post of the Governor's as the assumption of too independent an attitude towards the mother-country. The vulgar and envious were disposed to carp and sneer at a dignity which they proclaimed to be altogether unsuited to the humility and plainness of one holding the self-subduing faith of the Society of Friends. In 1703 one Francis Bugg, an apostate Quaker, who had bloomed into a full-grown churchman, published a

tract in London called "News from Pennsylvania," in which ample expression is given to this mean spirit of detraction. "Our present Governor, William Penn," writes Bugg, "wants the sacred unction, tho' he seems not to want majesty, for the grandeur and magnificence of his mien (tho' his clothes be sordid in respect to his mind, being not arrayed in royal robes) is equivalent to that of the Great Mogul, and his word in many cases as absolute and binding. The gate of his house (or palace) is always guarded with a janissary armed with a varnished club of nearly ten foot long, crowned with a large silver head, embossed and chased as an hieroglyphic of its master's pride. There are certain days in the week appointed for audience, and as for the rest you must keep your distance. His *corps du gard* generally consists of seven or eight of his chief magistrates, both ecclesiastical and civil, which always attend him, and sometimes there are more. When he perambulates the city, one, bareheaded, with a long white wand on his shoulder, in imitation of the Lord Marshal of England, marches grandly before him and his train, and sometimes proclamation is made to clear the way. At their meeting-houses," continues Bugg, whose pen is rather more clever than truthful or generous, "first William leads the van like a mighty champion of war, rattling as fast as the wheels of his leathern convenience.¹ After him follow the mighty Dons according to their several movings, and then for the chorus the Feminine Prophets tune their Quail pipes for the space of three or four hours, and having ended as they began with howlings and yawlings, hems and haws, gripings and graspings, they spend the remainder of the day in feasting each other, and tomorrow they go into the country, and so on from meeting-house to meeting-house, till, like the Eastern armies in former times, they have devoured all the provisions both for men and beasts about the country, and then the spirit ceasing they return to their own outward homes."

While Penn sojourned at Pennsbury, James Logan remained at the slate-roof house, with patient fidelity and comprehensive grasp of mind seeking to acquaint himself with all the details of the proprietary's complicated business and all the multiplied affairs of the province and city. Never was man or State better served than Penn and Pennsylvania by James Logan, a character so admirable that one comes to have an affectionate regard for him as for all who merit the epitaph: "Well done, good and faithful servant." Self-poised, sedate, retiring, and even reserved, a scholar with some of the tendencies of the recluse, he seemed to know nothing but his loyalty and duty to the friend who trusted him and to the community whose most intimate interests were in his keeping. He was everything to Penn and Penn's family from

¹ Penn *did* have a state coach for four horses, and it must have rattled a good deal in traversing the stumpy, root-roughened road from Pennsbury to Philadelphia.

the day when he entered the proprietary's service, and his zeal and industry were made doubly effective by tact, shrewdness, diplomatic skill, and a composed intelligence always steadily concentrated upon the one object of his life. Penn was not always fortunate in his judgment of character and in selecting his agents, but he was not deceived in the implicit faith

JAMES LOGAN.

with which Logan inspired him. "I have left thee," wrote Penn, after going on shipboard to return to England in 1701, "in an uncommon trust, with a singular dependence on thy justice and care, which I expect thou wilt faithfully employ in advancing my honest interests." Nobly did Logan discharge that trust, and nobly did this virtuous and accomplished gentleman bear himself in every relation of life. He was not largely recompensed, for Penn allowed him no more than £100 a year, and Hannah Penn, for the heirs, only deeded to him a part of the Springettsbury Manor. He became rich, but it was by his own intelligent operations in the Indian trade and in real estate. Of course his position gave him many opportunities to pursue these adventures with success, but he was never a mercenary nor a grasping man, and when he was able to retire from the public service without injury to it, he did not any longer seek to make money but gave himself up with ardor to his favorite pursuits of literature. William Black's diary describes him as he was in the period of his retirement and ill health,—a recluse almost, with an austere and melancholy face, monosyllabic at table, but rousing up and becoming animated and cheerful in the act of showing to his visitors the library and literary treasures he had gathered around him in the classic retreat of Stenton. Most fittingly he made the gift of that library to the city of his adoption and love,

the crowning act of a long life of benevolence and exalted public spirit.¹

¹ The lives of men like James Logan ennoble the pages of history and make its study an elevating pursuit and a reinforcement to the resources of public morality. This man was worthy the compliment which the steadfast Shawanee warrior paid him when he put aside his own name and took that of Logan simply; worthy to have been the trusted friend of William Penn, and to have had Benjamin Franklin for his printer. How many men has the world produced who, after forty years spent in the whirl and muddy currents of active business and intense political strife, can, with clean hands and unsullied reputation, calmly step aside out of the turmoil and retire to the company of books and authors, to endow a library, and make a translation of Cicero's "De Senectute," printing it, as the writer himself pleasantly says, "in a large and fair character," so that old men may not be vexed by their defective eyesight in reading what was so appropriate to their years? When John Davis, the English traveler in America, visited the Loganian Library, in 1798, he wrote: "I contemplated with reverence the portrait of James Logan, which graces the room, *magnum et venerabile nomen*. I could not repress my exclamations. As I am only a stranger, said I, in this country, I affect no enthusiasm on beholding the statues of her generals and statesmen,—I have left a church filled with them on the shore of Albion that have a prior claim to such feeling. But I here behold the portrait of a man whom I consider so great a benefactor to literature, that he is scarcely less illustrious than its munificent patrons of Italy; his soul has certainly been admitted to the company of the congenial spirits of a Cosmo and Lorenzo of Medici. The Greek and Roman authors, forgotten on their native banks of Ilyssus and Tiber, delight, by the kindness of a Logan, the votaries of learning on those of the Delaware." James Logan, a man of old and reputable family and himself aristocratic in all his tendencies, was born in Lurgan, Ireland, 28th October, 1674. His father, Patrick Logan, grandson of Sir Robert Logan, of Restalrig, Scotland, sprang from that stock of proud Scottish lairds, distinguished for long pedigrees and barren acres, whose children have lent their genius to the service of the world. The Logans went on crusades with the Douglasses; they fought the English on sea and on land; they lost their estates by forfeitures in consequence of the Gowrie conspiracy. Patrick Logan was an alumnus of Edinburgh University, educated for the church, but early connecting himself with the followers of George Fox. His wife was Isabel Hume, of the family of Dundas and Panmure. James was a lad of precocious mind,—at sixteen he knew Latin, Greek, and Hebrew, and had made rapid progress in mathematics. He afterwards mastered French, Italian, and Spanish, and probably Dutch and German, spoke Latin with ease and grace, and was familiar with several Indian dialects. He went into trade; linen-draper's apprentice in Dublin, then in the Bristol trade for himself. At Bristol he met Penn, and became his private secretary and devoted follower ever after. This was in 1698. From the time of Penn's return to England in 1701 to Logan's death, in 1751, he was always the power behind the proprietary throne, wielding what was sometimes almost absolute authority with singular propriety and judgment. He was secretary of the province, commissioner of property and of Indian affairs, member and president of Council, acting Governor and chief justice. His love of books was constant and sincere, and after a broken thigh compelled him to live retired at Stenton the pursuit of literature became his passion. But even in seclusion and invalidism he never neglected his public duties for his private tastes, nor lapsed into indifference on account of personal infirmities. Many important affairs of state were transacted at Stenton, which was nearly always surrounded by deputations of Indians, who camped about the house to seek advice and favors from their honored friend "hid in the bushes." Logan's literary and scientific pursuits and associations were very respectable, and he was widely known among his contemporaries. His own Latin tracts on botany, electricity, navigation, and optics had a place in leading scientific journals. Thomas Godfrey's improvements in the quadrant were made at Stenton under Logan's eye, and Franklin and he worked together with a thorough appreciation of each other's good qualities. Logan was an unsuccessful suitor for the hand of Ann, daughter of Edward Shippin, who married Thomas Story. His wife was Sarah Read, daughter of a wealthy merchant of Philadelphia, to whom he was wedded eight years after his ill-success with Miss Shippin. His children were not literary in their tastes, and it was on this account that he left his library to Philadelphia, endowing it, for its perpetual maintenance, with the Springettsbury Manor property which he had received from Penn's estate. Logan was a personable man, tall, well proportioned, with graceful but grave demeanor. His complexion

At Pennsbury the proprietary led very much the life of a lord of the manor. No picture of the ancient place is extant, but our regret at the neglect of contemporary chroniclers is mitigated by the skill, industry, and intelligent research with which the late J. Francis Fisher has reconstructed the history of Penn's private and domestic life during his residence at this pleasant seat. Penn had the true-born Englishman's genuine fondness for country life. He was as much a rural squire as a courtier, and he resembled Sir Robert Walpole at once in his ambition, his pliant facility and easy humor in dealing with men, and in that pleasant satisfaction which he derived, "*procul negotiis*," in driving his cattle afield across the mellow mould of his own broad acres,—

"Quis non malarum, quas amor curas habet,
Hæc inter obliviscitur?"

It was the dream of Penn's life to settle permanently upon this manor and become himself the patriarch of his extensive plantations. Before he reached the province this estate had been selected provisionally for him by Markham in pursuance of his orders, and he had had building commenced there in the hope to occupy it forthwith after his arrival. There is no evidence, however, that Penn spent any time at Pennsbury during his first visit, and if he did bring over materials for erecting a house there it is probable that these were rather employed in constructing the Letitia house in the city, as his more immediate needs suggested. No vestige of the old plantation now remains, except some decayed cherry-trees, which tradition points to as having been planted by Penn's own hand. The old brew-house stood until 1864, when it was pulled down,—a substantial building, twenty by thirty-five feet, with solid brick chimney and founda-

had the warm and florid tone of health even when he was far advanced in years; his eyes never failed him, nor did his brown hair turn gray, though he wore a powdered wig on all state occasions. His manner was dignified yet courteous, and his conversation quiet and reserved. He was a diligent correspondent with learned persons all over Europe and America, numbering among those to whom he wrote regularly Cadwalader Colden, Governor Burnett, Franklin, Col. Hunter, Collinson, Fothergill, Mead, Flamsteed, the father of Sir William Jones, Sir Hans Sloane, Fabricius, Gronovius, and Linnaeus. The latter gave Logan's name to one of his classes in botany. But the real labors and the great glory of Logan are to be sought in his services to the Penn family and to the commonwealth founded by Penn. He shaped and controlled the development of the province with an intelligent purpose and an untiring resolution no less remarkable because his tastes drew him all the other way and his work was most disagreeable to him. "These duties," he wrote, "make my life so uncomfortable that it is not worth the living." "I know not," he repeated, "what any of the comforts of life are." He withstood the popular party and faced impeachment, imprisonment, and persecution with unblenching resolution, triumphing over his adversaries with the same calm composure with which he had encountered their fierce opposition and bitter reproaches. He was always a dauntless man, because one who was just and feared not. The Indians revered him as a saint while they loved him like a brother, and when he died they pitifully besought the provincial government to send them another righteous man like Logan. No second Logan was to be found, however. As Gordon, in his "History of Pennsylvania," says, "Never was power and trust more safely bestowed for the donor. The secretary faithfully devoted his time and his thoughts to promote the interests of his master, and bore with firmness, if not with cheerfulness, the odium which his unlimited devotion drew upon himself."

tions, ten-inch sills and posts, and weather-boarded with dressed cedar. The mansion at Pennsbury stood on a gentle eminence facing the Delaware, Welcome Creek winding two-thirds of the way around it. The main structure was two stories high, with lofty garget, built of brick, and stately in appearance; it was sixty feet long by thirty feet deep; the bricks were probably burnt on the premises, Penn having sent over workmen for that purpose in 1685. There was a high porch front and rear, with steps, rails, and banisters. On the first floor a wide hall traversed the building, used for receptions and public occasions, and on this floor were parlor, dining-room, smaller hall, and closets. Above were four apartments on the second floor, with offices, etc. The building was roofed with tile or slate of native production, and there was a reservoir on the roof which had a lining of lead. The outbuildings comprised, as ordered by Penn in a letter to James Harrison, August, 1684, "a kitchen, two larders, a wash-house, a room to iron in, a brew-house, a Milan-oven for baking in, and stabling for twelve horses." These buildings were to be a story and a half high, and to be arranged in straight lines, "not *ascu*." The proprietary had a horror of any divergence from right lines and angles in town construction and in landscape architecture. Dean Prideaux accused him of laying off Philadelphia according to the Scriptural descriptions of Babylon. He was probably simply obeying his own instinctive taste for right lines and rectangular forms. He did not despise ornament, but, on the contrary, delighted in decoration, and was particular in enjoining Harrison not to let the front of the Pennsbury house be "common," but he did not think departures from straight lines to be ornamental. He carefully supervised the construction of the building even while the broad ocean rolled between him and his steward, Harrison; selected the hands and discharged them if they did not please him.¹ Penn spent over £5000 on Pennsbury. The grounds were elaborately and handsomely laid off, with lawns, vistas, and park-like appointments. There was a broad pebble walk, on each side of it a row of tall poplars. Bridges were thrown over Welcome Creek, and steps led down to the landing and the boat-house sheltering Penn's barge, which he thought much of, quarreling with Harrison because he permitted it to be used for transporting lime. The gardens and shrubberies were cared for at great expense, gardeners being sent from England for that purpose, as well as all sorts of rare seeds and plants. Trees were transplanted from Maryland, and many wild-flowers from the forest were domesticated in the gardens. The lawn was seeded with English grasses, and a good deal of the land around

¹ James was to finish the work his men began; J. Redman furnished the bricks, John Parsons the plank. James was discharged by Logan because the Governor thought him "too much of a gentleman," wanting two servants to do the work proper for his own hands. The Governor's carpenter was named Henry Gibbs.

it brought under cultivation. Penn was proud of his stock, importing some fine horses from England, among others "Tamerlane," a thoroughbred stallion, by the Godolphin Arabian, that famous barb, who, with the Darley horse, established the stock of English race-horses.

The manor house at Pennsbury was well furnished. In the best bedroom was a state bedstead of great proportions, a silk quilt, satin curtains and cushions, mirrors, etc. The table appurtenances were in good taste, damask cloths and napkins, Tunbridge ware, white and blue china, with two or three services of silver. The furniture down-stairs was of solid oak; there was a tall clock, which may be seen to-day in the Philadelphia Library. The cellar and larder were

well supplied, and the retinue of domestics was large. There was cheer at the manor house for all, and it never lacked visitors. Generally there were some Indian wigwams pitched about among the trees in the lawn and forest, and a deputation of savages almost every morning waited in the hall, seated upon the floor on their haunches, with their knees drawn up under their chins, observant but silent. Penn was a very liberal man in his expenditures. He let his friends and relatives dip into his purse at all times.

William Penn, Jr., could al-

ways depend upon him to pay his debts, and his son-in-law Aubrey actually compelled him, with ineffable meanness, to pay him exorbitant interest on some delayed payments upon Letitia's portion given to her, and he was greedy for money all the time. The proprietary's charities were no small tax upon his stinted resources. He gave to all who asked or all who seemed needy. And this was the way he kept house at Pennsbury, entertaining the leading people of the province, distinguished visitors from abroad, his own guests and a horde of dependants and Indians. He received the Governors of Maryland and Virginia with great state and profuse hospitality when they came to visit him. His steward bought a ton of flour at the time, molasses by the hogshead, cranberries by the bushel, barrels of cider, and dozens of cases of select wines. There was a barrel of olives in the pantry for the dinner and lunch table; butter was fetched from Rhode Island, and for candles the steward sent to Boston. The wine,—madeira, sherry, port, claret,—the brandy and gin, and strong beer and ale were shipped from London; the rum came from Jamaica, and, though this was meant chiefly for the Indians, Penn ordered the best in sealed bottles, so as to be sure it was not watered or otherwise tampered with.

Occasional runnels of ale were procured in Philadelphia, and the small beer was brewed at home. The Swedes furnished fresh fish at the manor house; the bacon, flour, meal, chocolate, coffee, sugar, etc., came from Philadelphia.

After James Harrison's death, in 1687, John Sotcher became steward at Pennsbury; Mary Loftly was house-keeper. There were several gardeners at different times; one of them, for three years' service, receiving his passage-money, thirty pounds in cash, and sixty acres of land to settle on. This gardener was required to train two subordinates under him. Another gardener was Hugh Sharp, whose pay was thirty shillings a week, who was to have three men under him. Five gardeners at one time was rather extravagant. There was besides a vigneron and his attendants at the grapery on Vineyard Hill, afterwards Springettsbury farm, and when the grapes turned out good for nothing Penn must still have the Frenchman in charge provided for and given some kind of work. There were three or four carpenters at Pennsbury always at work. The coachman was a negro, named John, one of Penn's slaves, and there were some ten or twelve servants besides about the house.¹

Penn traveled in state when he went abroad with his family, either in his barge, his coach, or his calash. In August, 1700, he wrote to Logan that if the justices did not make the Pennepacka and Poquessing bridges passable he could not come to town. For his own traveling he preferred the barge or his horse. He was probably a bold rider, and one time, at Pennsbury, was laid up with a crippled leg, having hurt it riding (and healed it with an oil made in Philadelphia by Ann Parsons). We read of his picking up barefoot girls by the roadside and taking them to ride behind him. His wife and daughter had their side-saddles, and may have ridden with him sometimes. His long excursions to view his territories and visit the Indians in their villages were necessarily made on horseback. He certainly took his family with him to fairs and to the Indian "canticoes." When he returned to England a part at least of his equipment for the voyage was his "hair-trunk, leather stockings, and twelve bottles of Madeira wine." Conceive the founder of Pennsylvania crossing the ocean with a hair-trunk to contain his luggage and his stout calves

¹ "Among other employes of the manor house were Ann Nichols, the cook; Robert Beckman, man-servant; Dorothy Mullers, maid; Dorcas, negress; Howman, a ranger (who, in 1688, was complained of 'for killing y^e said Luke Watson's hogg'); James Reed, servant; Ellis Jones and his wife Jane, with children,—Barbara, Dorothy, Mary, and Jane,—who came from Wales in 1682; Jack, a negro, probably cook, whose wife, Parthena, was sold to Barbadoes because Hannah Penn doubted her honesty. There was, besides, a Capt. Hians, with whom Penn had a difficulty, which, however, was 'adjusted,' so that the captain stayed." . . . Penn employed one new hand in 1701, of whom he wrote to Logan that he could neither plow nor mow, but could swear. Peter, assistant gardener, received thirty pounds per annum. There were also some bought negroes, "Old Sam," his wife Sue, James, Chevalier, etc. There were four indentured servants and Stephen Gould, Penn's clerk. See Gen. Davis' "History of Bucks County," pp. 181-83, from which some of these particulars are derived.

PENN'S CLOCK.

encased in a pair of leather galligaskins, for which he had paid one pound two shillings!

Mr. Janney, in his "Life of Penn," is greatly distressed that the proprietary should have been a slaveholder. In his eagerness to palliate the facts he is in danger of doing Penn a gross injustice. He forgets that slave-holding was not forbidden by the Quaker discipline until many years after Penn's death. Penn directed his slaves to be free at his death, but the will was never executed, nor were its provisions respected. His daughter took one of the slaves, the woman "Sue." His executors sold three to pay his debts. It is shown in the preceding note that Parthena was sold by Penn to Barbadoes, thus separating her from her husband, because she was thought dishonest. In writing about his gardener and the assistants whom he was to train, Penn says, "It were better they were blacks, for then a man has them while he lives." In fact, nobody at that time had any idea of the heinousness, immorality, or crime of slavery, unless perhaps the little German colony, who had Pastorius for their leader. Fox was "exercised" about the slaves, but it was not the fact of their being in bondage, but the way in which they were treated which troubled him. Penn was "exercised" on the same subject, and he went so far as to persuade the Council and try to persuade the Assembly to pass a law regulating the marriages of negroes. But it would be unjust to Penn to require him to become an abolitionist a hundred years before there were any such. Slavery was not thought a crime in his times, nor was the slave considered unfortunate, unless he happened to have a severe master. The slave trade with Africa was indeed repudiated, but rather from its impolicy than its immorality. Some sort of servitude was almost universal, and one-half the early settlers in Pennsylvania, in 1682-83, were servants bought and sold by the Quakers for a term of years. Even Indian slaves were often to be met in Philadelphia, in spite of Penn's affection for that race, and his own Deputy Governor, William Markham, owned one, Ectus Frankson, born in 1700, who by his will was to be free at the age of twenty-four, all his other slaves and servants being devised to his wife.

In the course of his residence at Pennsbury the Governor paid a visit to New York, and also one to Maryland. He was accompanied (says John Richardson's journal) to the Quaker meeting at Tredhaven Creek (now Easton, Talbot Co.) by Lord Baltimore and his wife with a numerous retinue. They did not get to the meeting until late, and, in fact, says Richardson, "the strength and glory of the heavenly power of the Lord was going off from the meeting. So the lady was much disappointed, as I understand by William Penn, for she told him 'she did not want to hear him and such as he, for he was a scholar and a wise man, and she did not question but he could preach; but she wanted to hear some of our mechanics preach, as husbandmen, shoemakers, and such like

rustics, for she thought they could not preach to any purpose.' William Penn told her 'some of these were rather the best preachers we had among us,' or near these words."

But we have only been describing the proprietary's periods of refreshment and recreation. He had plenty of hard work and many disagreeable tasks in the time between these intervals of rest and ease. His situation was peculiar. There were two parties in the province, one of which sought to subvert his proprietorship absolutely, the other to modify and curtail his authority by procuring a new charter or radical amendments to the existing one. Col. Quarry and John Moore, the British admiralty judge and crown attorney, were in the lead of one party, David Lloyd, attorney-general of the province and the popular leader in the Assembly, directed the movements of the other party. Penn had the sympathies of neither, for while his support of Markham in the controversy with Quarry had procured him the enmity of the latter, he had since his arrival in the province aroused the personal animosity of Lloyd, a brilliant and versatile but vindictive man, by rebuking his intemperate attitude towards Quarry, which could not be maintained, he said, without doing hurt to the interests of the province. Lloyd resented this, and he was further incensed at Penn's relations with Quarry, which seemed to assume that Markham and Lloyd had not been altogether right in their dispute with the crown officers. Logan describes this quarrel in a letter to William Penn, Jr., in which he characterizes the attorney-general as "a man very stiff in all his undertakings, of a sound judgment and a good lawyer, but extremely pertinacious and somewhat revengeful." The question of the seizure of the goods at New Castle and the contempt of the king's authority coming up in Council, "David resolutely defended all that had been done, and too highly opposed the Governor's resolution of composing all by mildness and moderation, and reconciling all animosities by his own intervention, which he thought the only advisable expedient to put an end to those differences that had cost him so much trouble. This soon created some small misunderstanding; several of the most noted Friends were involved more or less in David's business, and, though troubled at his stiffness, yet wished him in the right, because the most active enemy and assiduous counselor against the other party, who on all occasions would be glad, they thought, of their utter ruin." Penn would not tolerate David Lloyd's obstinacy. Lloyd "knew not what it was to bend," and so Penn made a life-long enemy of the most daring and implacable, and in some respects the ablest man in the province. David Lloyd's character and his audacity are illustrated by Quarry's charge against him that at a county court, when the marshal of the Admiralty Court produced his commission under the broad seal, with "his most sacred majesty's effigy"

stamped on it, Lloyd took the seal, held it up before the people, and exclaimed, "What is this? Do you think to scare us with a great box (meaning the seal in a tin box) and a little baby? (the effigy.) 'Tis true fine pictures please children, but we are not to be frightened at such a rate."

The substantial charge against Lloyd, that he had advised the magistrates to take goods by force out of the king's warehouse at New Castle in contempt of the Admiralty Court, was a serious business for Penn. The Privy Council had received repeated charges against Penn's government as having made light of the royal authority, winked at piracy and smuggling, and set the navigation laws at naught, and the Admiralty Court had been established at Philadelphia expressly to put a stop to such things. Penn, moreover, in securing the restoration of the province to his control, had given express pledges to see that the irregularities complained of were rectified, and, moreover, to secure from the province the subsidy for the support of operations against the Indians, which the Assembly had hitherto refused to vote. If Lloyd should be permitted to have his own way Penn could not hope to redeem either of these pledges, and so was sure to find himself again embroiled with the king and his cabinet.

The situation was further complicated by the fact that Lloyd was the leader of the popular party, including all the younger and more ardent Quakers, and these, a vast majority in the Assembly, were seriously bent upon securing from Penn a more liberal Constitution and especially the concession to the Assembly of the right to originate supply bills. Under such circumstances there is no cause for wonder that Penn should have delayed meeting his Council for some time, while he was studying the situation and consulting his friends.

The first Council attended by Penn met on Dec. 21, 1699, and the issue between the Admiralty Court and the provincial government was given immediate prominence. Col. Quarry was invited to attend the next day's Council meeting, and it was resolved that a proclamation should be forthwith published discouraging piracy and illegal trade. Quarry's charge against Penn's government was that the justices of Philadelphia Court had issued a writ of replevin, and sent the sheriff (Claypoole) to seize goods which were in the custody of the marshal of the Admiralty Court, having been legally seized in the name of the crown; that the justices had been offensive and insolent to Judge Quarry, challenging his commission and claiming that their jurisdiction was coextensive with his and their authority to unloose fully as great as his to bind; that the sheriff made a pretence of keeping certain pirates in custody, while in fact they were at large every day. *Per contra*, Markham, after showing that he repudiated the act and the conduct of the justices and had reproved the sheriff, claimed that Judge Quarry was in contempt of the provincial

government for having arrested certain alleged pirates within its jurisdiction and sent them to Barbadoes for trial, and for having pretended that the provincial officers, because qualified on affirmation and not on oath, were not duly qualified according to the statute. At the next day's Council, December 22d, Anthony Morris, the chief of the offending justices, and Judge Quarry were both present. Morris surrendered his commission as justice, and further said, after pleading his sacrifices in the public service, that he had issued the writ of replevin in the case complained of in good faith, "in pursuance (as hee thought) of his duty, believing hee was in the right & *yt hee was induced yerto by advice of those that hee thought were well skilled in ye Law, who told him yt was the priviledge of the subject*; and further said *yt hee had no interest in the owner nor goods, nor no self nor sinister in so doing.*" The Governor said "*That his signing ye sd replevin was a verie indeliberate, rash, & (in his opinion) unwarrantable act,*" which neither the justice could nor the Governor would justify. Morris evidently wanted to make it plain that he had acted upon David Lloyd's advice, and Penn to make it equally plain that he condemned and repudiated all such counsel. As Lloyd was present, he could not fail to feel a strong resentment at the course matters had taken. To Judge Quarry the Governor said that it was the most sincere intention of his government, by all lawful means, to discourage, discountenance, and severely punish piracy and illegal trade, in which he desired the advice, assistance, and co-operation of the judge and all the other king's officers. At the next Council meeting Penn spoke of the necessity of calling a General Assembly to take further measures for the suppression of piracy and illicit trade. A day or two later Robert Turner, Griffith Jones, Francis Rawle, and Joseph Wilcox appeared as petitioning the Governor on the subject of a revision of the charter and asked a hearing. This led to a long conference, and it had the result that the Assembly to be called would come prepared to agitate the question of constitutional amendment, as well as that of piracy and illicit trade. It was decided to call the old Assembly to meet on January 25th, a new election being ordered in New Castle County, which had neglected to choose representatives for the last Assembly. On January 24th the Council again met, and Judge Quarry and Justice Morris were confronted. Quarry, after stating his case, said that "this his action was no less than to Question whether his *ma^{ty}* or *y^e s^d Anthonie has most power.*" The act of Parliament governed both courts, and the justice could not pretend ignorance when he had been so long on the bench. He therefore wished Penn and Council to have Morris prosecuted for violence and compelled to make good to the king the appraised value of the goods replevined. Morris, in reply, urged that he signed the writ of replevin through ignorance and not from malice against the king or his officers, "y^t

he was persuaded to do it by advice of y^m y^t knew y^e Laws," and therefore he hoped he would be excused; it would be very hard if any justice should be made to suffer for an error in judgment. The security given by the petitioner who had taken out the writ was, he believed, ample to cover the value of the goods. Penn said he would see that the appraised value of the things taken was made good to the marshal, and told Quarry further that "if he was not satisfied w^t Anthony Morris' being out of Commission of the peace & w^t his p^{sent} submission, hee might propose in writing what other satisfaction he expected, and it should be considered of. To wth call. Quarry made an^{sr}, y^t hee had no p^{sonal} animositie ag^t M^r. Morris and y^t for his p^t he was well satisfied with y^e Pro^r & Gov^rs promise, & M^r. Morris' submission." This disagreeable business was thus for the time being adjusted, but only for the time being.

The next day after this meeting of the Council the Assembly came together; the records, now kept by James Logan, assuming at once and henceforth a more satisfactory and intelligent shape for those consulting them, e.g., "PROVINCE OF PENNSYLVANIA AND TERRITORIES, ss.—*Minutes of Council in the Assembly, Anno Ri. Rs. Gulielmi tertii Anglie, etc., decimo, 25th January, 1699-70. Att a Council held at Philadelphia die Juris, 25th January, 1699-70.*"

The sheriff of New Castle County returned, in answer to the Governor's writ, that Richard Halliwell and Robert French were elected members of Council, and John Healy, Adam Peterson, William Guest, and William Houston members of Assembly. The writ for this election is interesting from its unusual form: "To R. Halliwell, Jⁿ. Donaldson, and Rob^t French, of Newcastle: Inclosed I send you a writ for y^e County of Newcastle, to return their Representative for a Council and Assembly, that I am forced to call with all possible speed. Piracies and Illegal trade have made such a noise in Eng^{ld}, and y^e jealousies of their being so much encouraged in these Am^{can} parts, such an Impression on the minds of sev^l great ones, that I think myself obliged to give them earlier Demonstrations of our Zeal ag^t all such Practices than an expectation of y^e next Assembly (w^{ch} comes not on till the Spring), or a full consideration of the Constitution and present frame of Governm^t will admit of. The business of this I now call will be very short, and soon over, & y^e new Assembly meets soon after, in which I hope to take such effectual measures for the future & better settlem^t of this Governm^t as will give full satisfaction to all.

P^r. DYER.

"Phila^{da}, 12 m^o, 1699-1700."

Some of the New Castle people complained that they did not have any sufficient notice of this election. Penn said the sheriff should be punished for his neglect, but in the mean time there would be no business before the present session except what was named in the writ, in which he hoped all would concur, without making the New Castle case a precedent for the

future. Committees of Council and Assembly were appointed to consider the subject of the two proposed bills, which, after several conferences and some debate, were passed. The Assembly did not like the clause forbidding trade with Madagascar and Natal; these places, it was explained, had become retreats and retiring places of the pirates, and trade with them was accordingly forbidden for three years. Penn then dissolved the Assembly, after informing them that he intended to call the next General Assembly according to charter at the usual annual session. Penn had not signified to the Assembly whether or not he approved of the charter granted by Markham in 1694. Nor did he ever formally approve it, for the charter finally granted by Penn in 1701 appeared as if it were an amendment to or substitute for the charter of 1683. Penn apparently was not on very good terms with Markham at this time, or else the latter's ill health (he died in 1704 after a long illness) no longer suffered him to take an active part in government affairs.¹

Penn showed himself determined at this time to

¹ Watson, in his "Annals of Philadelphia," says that Markham was but twenty-one years of age when he came out to Pennsylvania, but this must be a mistake, as it would make him only forty-five when he died. At that time he was spoken of as the "old gentleman," and he had two grandchildren. Besides, he died of retrocedent gout, seldom fatal at such an early age. His knowledge of affairs and the confidential positions given him would imply a much older man. He left a widow, a daughter, a son-in-law, two grandchildren, and a "daughter-in-law" at his death. It is probable that Markham's retirement was on account of suspicious circumstances connecting him with the pirates, who, since the French Admiral Pointis had driven them away from the Caribbean Sea, were become active in Northern waters. Kidd harbored about New York, Avery and Blackbeard about the Delaware; some of Avery's men were in prison in Philadelphia, and Col. Quarry complained more than once that their confinement was a farce, as they could go when and where they chose. It is certain that Markham suffered some of these men (who had their pockets full of gold) to be treated very leniently. One of Avery's men, Birmingham by name, had intrusted his money to Markham's keeping, and he was allowed by Sheriff Claypoole to walk the streets in summer in custody of a deputy, and in winter to have his own fire. Another person suspected of connection with Avery was James Brown, member of the Assembly from Kent in 1698, and then expelled on account of his relations to the pirates. Penn had him arrested in 1699 for having come over with Avery. He was sent to Boston to be tried by the Earl of Bellamont, Governor of New York. This man is usually suspected of having been Markham's son-in-law, the husband of his daughter, "Mrs. Ann Brown." Penn's letter to Markham, dated 27th January, 1699-1700, is generally supposed to refer to him. It is as follows: "Cosin Markham, —When I was with thee to-day thou offered to be bound for thy son-in-law should he bring thee into trouble, it is all the Portion I believe he has with thy daughter. What thou hast I may venture to say thou hast got by this Governm^t. I think it strange y^rfore thou shouldst make a Difficulty in binding thy Execut^{ve} with thyself for his appearance. Should another be bound, no man will take thy Bond for thy own Life, only for a counter security. Thou knowest it is Contrary to the form of all Obligations, & I cannot but take it hard thou should be unwilling to venture so much for thy own Credit as well as that of the Governm^t and for the Husband of thy only Child from those I am not concerned with. I expect a more express answer than thou hast yet given and remain thy affectio^{nate} Kinsman, —W. P."—(Penn. Archives, i. 126.)

Gordon says the pirates were largely reinforced after the peace of Ryswyk, and they made harbor on the Delaware, because they could easily impose on the unarmed, pacific Quakers. They sacked the town of Lewes, and captured many vessels off the Delaware capes. There is nothing improbable in the supposition that Markham was retired on account of the ineffective means employed by him for the suppression of these public plunderers.

break up the piracy in the Delaware. He even went a little into the detective and private inquiry business himself. He wrote to Luke Watson: "Thy Son's Wife has made Affidavit to-day before me of what she saw & knows of Geo. Thomson having East India goods by him about y^e time Kidd's Ship came to yo^r Capes: Thy Son doubtless knows much more of the business; I desire therefore thee would cause him to make affidavit before thee of what he knows either of Georges Goods or any of y^e rest." To the magistrates at New Castle he wrote that he had information that Pirates or persons suspected of piracy had "lately landed below, on this and t'other side the River, & that some hover about New Castle, full of Gold. These are to desire you to use your utmost Endeavor and Diligence in discovering and app'hending all such p'sons as you may know or hear of that may be so suspected, according to my Proclamation." A similar letter was sent to Nehemiah Ffield and Jonathan Bailey.

William Penn's capacity to rule men has never been doubted, but we think it is revealed with unexpected force in his administration of 1699-1701. We have outlined the difficulties that were in his way,—stumbling blocks so many and so serious that he himself said in his striking letter to Lawton, "What I have mett with here is without Example, and what a *Dia-dem* would not tempt to undergoe seven years,—faction in Govern^t, and almost indissoluble knots in Property." Let us see now how he did meet these difficulties. It required a firm hand, and a firm hand he put to it. The very existence of his government depended upon his setting himself right with the crown in the matter of piracy and illicit trade, to prevent the Lords of Trade from proceeding against his charter with a writ of *quo warranto*, which he knew to be the object that Col. Quarry and Attorney-General Edmund Randolph had in view. Accordingly, he resorted to severe measures against all who were in any way suspected in connection with these matters, going further than Judge Quarry went, and seeming to be guided and counseled by that intemperate official in a way which at once flattered and deceived him. All the time, however, he was quite aware of Quarry's hostility to him, and was preparing a sure trap for his feet. When Penn was satisfied that he had done all that the Lords of Trade and commissioners of custom would demand or expect of him, he turned next to the Assembly and the Council. The proceedings of the Legislature in regard to the revision of the charter extended over a period of eighteen months, and will be presently exhibited, as they can be most lucidly, as a consecutive whole. Suffice now to say that with consummate adroitness he first purged his Council of the disorganizing elements in it by reversing the proceedings of 1690 which had resulted in the disqualification of Robert Turner and some more of Penn's most devoted friends,—proceedings instigated by David Lloyd, —and then procuring the disqualification of Lloyd

himself as member of Council by instigating Judge Quarry to prefer in writing such charges against him of contempt to the crown and its officers as compelled Penn to suspend him. Lloyd wanted to be tried at once, but Penn said, "Oh, no," that this was merely an investigation, not an indictment, and the time for trial had not come yet. Thus Lloyd was put out of the way, and incapacitated from doing injury to Penn's more immediate projects. Next the Assembly having failed to agree upon the amendments to the charter, Penn required them categorically to decide whether they would be governed by that instrument any longer or no. They voted no, and surrendered the charter to him, whereupon he put it coolly in his pocket, dissolved and sent them home, quietly informing him that he would for the time being at least govern them himself under his patent from Charles II., and the acts of settlement and union. "Friends," said Penn, "since you were dissatisfied w^t y^e charter you had, and y^t you could not agree among yorselves about a new one, I shall be easie in ruling you by the king's Letters patent and act of Union, and shall in the ruling of you Consider my grant from the king and you that I am to rule, and shall from time to time endeavor to give you satisfaction. I advise you to be not easily displeased one with another, be slow to anger and swift to charity, so I wish you all well to your homes." This was short and to the point. It was a perfectly safe proceeding, for the Assembly had already passed all the laws demanded by the proprietary, including the tax-bill of a penny a pound and six shillings per head, and the custom bill levying a duty on imported liquors and other goods, and had also confirmed and continued until after the next Legislature should meet all the necessary laws then in existence and unrepealed.

The next thing to do was to deal with Quarry and his satellites, and it must be confessed that Penn temporized with this obstacle, while preparing the way for its removal, in a fashion that entitled him to the epithet of "Jesuit;" at any rate there is no excess of the straightforward Quaker "yea and nay" in Penn's part of the business.¹ Birch, collector of customs at New Castle, wrote to Penn under date of May 28, 1700, complaining of vessels having gone down from and come up to Philadelphia without reporting to him. Penn answered he was sorry that masters were so lacking in respect. There was a bill now before the Assembly to make the offense penal. But he thinks a customs collector ought to have a boat, if he wanted to secure the enforcement of the laws, which were all on his side. "Thou canst not expect that any at Philadelphia, 40 miles distant from you, can putt Laws in execution at N. Castle, without any care or vigilance of officers there, if so there needed

¹ The letters on this subject are to be found in volume first of the Pennsylvania Archives, p. 131 *et seq.*

none in the place, especially since no place in the River or Bay yields y^e prospect y^t is at New Castle of seeing 20 miles one way and a dozen the other, any vessel coming either up or down." Penn confesses he thinks the particular care he had taken of the interests of the king and his immediate officers deserved a better return "than such testy expressions as thou flings out in thy Letters both to myself and of one to y^e members of Council." Birch is reminded that he has forgotten the respect due to the proprietary's station and conduct, and that he should not make Penn a sufferer on account of his pique against the collector at Philadelphia, a matter with which he neither had nor wanted anything to do. "*Let your Masters at home decide it; what comes fairly before me I shall acquitt myself of, with Hon^r & Justice to y^e best of my understanding w^hout regard to fear or favour, for those sordid passions shall never move y^e Propriet^r & Gov^r of Pensilvania.*" But Penn was not done with Mr. Birch yet. In a postscript he says he hears that the collector talks of writing home, and making he knows not what complaints. "*I hope thou wilt be cautious in that point lest I should write too, which, when I doe, may prove loud enough to make thee sensible of it at a distance. If thou understands not this, it shall be explained to thee at our next meeting, when I am more at Leisure.*" This letter, full of conscious power, was palpably meant for Quarry quite as much as Birch. Penn sent the whole correspondence to the Lords of Trade, and when Birch died shortly afterwards, Penn himself appointed his successor *pro tem.*, in order, as he said, to protect his Majesty's interests,—in other words, implying that those interests were not served by either Birch or Quarry. He had already awakened a fear in the minds of the Lords of Trade that Quarry was overdoing his part in the business. The Episcopalians had now built Christ Church in Philadelphia, and the Bishop of London, Penn's adversary of old, sent over Rev. Mr. Evans as incumbent. Penn proceeded at once to conciliate and disarm this new ally of Quarry's party. "He appears a man sober & of a mild Disposition," writes the proprietary to Robert Assheton (his kinsman); "I must therefore desire thee to use all early methods by thyself and such others of yo^r Church as are for Peace and a friendly understanding, to make impressions on his mind for the best, and by all seasonable means endeavor to dispose him to an easiness of mind and good inclinations to the Publick, and the People in general he is now to live amongst, assuring him that while he behaves himself with Candour and Ingenuity, he shall want no Goodwill from me, nor kindness that I can shew him, and that he may expect as much favour in all reasonable things as he could from any Governor of his own way."

Quarry and his officers had seized and condemned a ship called the "Providence," Capt. Lumby, upon a technicality, there being some defect in the registry. The law allowed Penn one-third of the prize

money, the other two-thirds going to the crown. Penn at once sent his third to the owners, telling them he could not think of such a thing as profiting by an accidental oversight on their part, and advising them to compromise for the other two-thirds on the best terms they could get, he having prevailed on Quarry to accept two hundred pounds in Pennsylvania money (one hundred and thirty pounds sterling) in lieu of the libel. This letter also Penn took care should be shown before the Lords of Trade. A few days later the Governor wrote a letter to Quarry, in reply to one received from the judge. The latter had been complaining of reports circulating among the Quakers that he had been ordered home, and all the proceedings of the Admiralty Court were to be quashed and made void. If Quarry would give the names of those who spread such reports, Penn promised to have them proceeded against with the utmost vigor as defamers and spreaders of false news and lies. He regretted to see that the judge let such things disturb him so much. There were very injurious reports out against him too, but he thought it his duty to "make allowance for ye giddy and weak side of mankind." Then he dismisses the matter as if not worthy to be further discussed, and proceeds to explain to the judge some action of the Philadelphia courts. At the very time that Penn was writing this to Quarry he had not only determined on his removal, but had fixed upon a man to succeed him. This is evident from his letter to Squire Lawton of about the same date. Lawton was one of Penn's confidential agents in London, and to him he discloses the game he had been playing since his return to the province. After mentioning the fact that he had not only fully advised the Commissioners of Trade and Plantations of all his proceedings, sending them copies of the entire correspondence with Quarry and his officers, etc., but had also written personal letters to Chief Justice Holt, Lords Somers, Romney, and the lords of the admiralty, he promises Lawton that his agency shall be worth more to him than house rent, without giving him much trouble. He rebukes Lawton for his impatience, one moment kind, the next stormy,—"*but I know thee so well and in the main reasonable in thy Resentm^t that I will say no more of it, only,*"—that his correspondent seems to forget *he* has his difficulties and worries too. Lawton is instructed to confer with "the Quaker's lawyer" in Doctor's Commons, John Edge, and see that the case of the "Providence" is properly presented. Then Penn opens his batteries on Quarry; the admiralty was as uneasy about the rigor of the judge's enforcement of the laws as it had previously been about their laxness. "*If it were worth while at first to erect Courts of Admiralty in America,*" Penn says, "*it would be for the king's service to have experienced officers in it; for as these manage, great Discourage^{mt} is given to trade, 4 ships having gone to other ports y^t were bound hither, by w^h I have lost 50^{lbs} and y^e county 100^{lbs} by each, and y^e passengers*

suffer greatly." He shows that Quarry and his officers were voracious, ruling to condemn vessels for their fees and trying to tempt him with his "thirds." Also they were not impartial in selling condemned stuff, of which he gives some instances; "*but if a churchman come in play he is favored*—of this proof can be made by Depositions." "Salute me Lord Haversham," Penn says, "and tell him the Admiralty is no Inheritance to him, but the common Law is, and hope he will not countenance their Ignorance: y^e Judge affirmed the Court had more power here than that in England; they pursue the letter of their Commissions; the Advocate confessed there was not one in America understood the Civil Law or Doctors Commons; at what a pass then are Proprietary Governments, who, unless they will run their heads against the wall, are in danger of being *quo warranto* by the late Act ag^t Piracy, a weak thing, what done this Assembly about y^e Act of Piracy. As for y^e Commission, if I can make a Mayor and not an officer under him, 'tis odd; and to have 300 miles of water and yet no power to serve a Writt on it, is to grant a country without a way to it; y^e Contrary has been practiced ever since a Gov^{mt} till these Gent^{men} had their Com^{missions}, and now what is granted by y^e 7th and 8th of W^m ye 3^d is allowed them, but they will have all the power even in Creeks not 20 feet over, without considering what is *infra Corpus Comitatus*, and will have all actions tried by ye Admiralty, whatsoever it is, without a Jury; but I hope, if I live 7 years, to see those y^e give away men's estates without a Jury punish^t though not so vigorously as Empson and Dudley, —and of Lumby's business, too, where both Judge and Advocate are parties for ye thirds. *I am too far off to make trips to Whitehall, otherwise Westminster, ye Parliament, etc., should have rung of it as well as ye Exchange.* 'Tis a great affront and Injustice that my Waters should be under another Vice-Admiralty; to talk of a country and no waters, a proprietary, or palatine & no vice-admiralty, nor to be Lord of ye Waters, has a contradiction in it; *inculcate this to ye Lords of Admiralty & Trade, for I have sent over a Dep^{ts}'s name for approbation.*"¹

¹ That Penn was determined, if the worst came, to make a fight in Privy Council on the rights conveyed to him by the Royal Charter and Patent is obvious from the fact that he begs Lawton to make particular inquiry concerning "y^e Nature & Custom of y^e Castle of Windsor." This was in reference to the particular character of the tenure, the third article of the Royal Charter to Penn, giving to him (saving allegiance and loyal sovereignty), "to have, hold, possess, and enjoy, the said tract of land, country, isles, inlets, and other the premises . . . forever, to be holden of us our heirs and successors kings of England, as of our castle of Windsor, in the county of Berks, in free and common soccage, by fealty only, for all services," etc. "Custom" is a feudal law term, implying established usage in contradistinction to written or statute law. Thus the districts of Northern France were styled *pays coutumier* in contradistinction to those of the South, which, governed by the civil law, were styled *pays du droit Latin*. The "custom of Paris" became finally, as formulated by Louis IX., the common law of France. The law of customs was that when a *general* custom was concerned, any infraction of it was to be tried by Parliament or Privy Council, aided by the courts; but a breach of a *local* custom was to be tried by jury. The "custom of

The spirit of this letter we cannot admire, but every one must admit the skill and adroitness of it, especially in the suggestion of arguments appealing at once to the experience and the prejudices of Lord Haversham, the English judge of the Common Pleas. Penn is making a case in the Privy Council against Judge Quarry, and every word he says is meant to tell with men like Somers, Holt, and Haversham. Even his bitterness, scarcely so reserved as is usual with him, has a deliberate purpose in it, and is the echo of feelings which he knows must still be strong among lawyers fresh from the English state trials which hastened the expulsion of King James from the throne. Penn proceeds with his indictment of his enemies in the following terms: "Hinder Randal [Edmund Randolph] our Enemy, a knave, &c., from returning [he] has played many pranks; was prerogative's tool to Destroy N. England's character; occasioned my disputes 5 years; treated with y^e pirates for pardon. I send an original Lett^r of his to W. Clark, wth whom he dispensed without an oath, tho' he made that a great charge against us; Sir R. Southwel was his protect^r, and wⁿ I left Londoⁿ his great Enemy for baseness. R. Harley has great power wth him, who had a better man in his eye, one Brinton; Sir R. S. has Interest. Coll. Bass and Coll. Barkstead are Alsations, wooden colonels, little will, &c., ingrate to y^e last, my great Enemies; Bass & a Liar y^e same, lete him not come hither; y^e popish friar his fr^d & his wife are dead, both cunning and his fr^{ds}. See R. West on this, Gov^r. Ham^l fr^d ag^t Bass."² Penn further advises his agent to "give R. West a guinea now and then." "I fear him in y^e surrender of y^e Jerseys; he has always profest friendship, putt him in mind of it." Also, his agent is to choose a good lawyer, "not full of practice," to ascertain the power of the Council Board and House of Lords to take cognizance of cases of law before them; after the opinion is got it is to be shown to Mompesson (who was afterwards appointed to succeed Quarry). Penn says that West wanted him to stay in England and fight out the difficulty with Quarry before the Privy Council, but Quarry's letters, backed by the Bishop of London and Gr. Nicolson, would not suffer it. "Church is their cry and to disturb us their merit, whose labors have made the place; they misrepresent all we doe, & would make us dissenters in our own country." The church party have had every concession possible made to them, says Penn, and have three of the five counties, but they want everything, although "we are much Superior to them in Number & Estates; 2 to 1 in Numbers, 4 to 1 in estates, 20 to 1 in first

Windsor" was the general feudal rule of the English monarchs regarding tenure of lands, and as old as William the Conqueror; but in respect of being local to Windsor, in a specified county, Penn could demand a jury if accused of violating the charter.

² It is anything but honest in Penn to quarrel with Randolph for being "prerogative's tool;" he himself was precisely that sort of instrument during the reigns of Charles and James.

adventurers.¹ G. K.'s [George Keith's] Hypocrisy first open'd y^e way for this violent spirit." After repeating his injunction to Lawton to spare no pains to get the Bishop of London's good will and advising him that several things in this letter "are not to be showed," Penn. concludes this epistle, which is written a great deal more in the style of Barillon, Gonde-mar, Burleigh, or Godolphin than in that of the quiet Quaker, humbly pursuing his own path and leaving worldly things to the management of Providence. The spirit of intrigue and cunning breathes through every line, and the founder of Pennsylvania does not scruple to bribe lobbyists at Whitehall, nor to practice upon the prejudices of the law lords in King William's Privy Council. He shows that Mompesson, the man who came out in 1704 with Evans and William Penn, Jr., to succeed Col. Quarry as judge of the Court of Admiralty, was already in his confidence so deeply as to be retained as counselor in the most intimate affairs.

The records of Council at this period are not rich in minor matters of interest respecting Philadelphia. The price of wheat had gone up to five shillings sixpence a bushel, whereupon the bakers reduced the size of the loaf, and were complained against. The result was that the standard weight of the loaf was reduced in order to enable the bakers to live. There were other market regulations of a similar character. At the session of the Assembly and Council, in October, 1700, at New Castle, there was a general revision of laws, and a tax bill was passed to raise two thousand pounds, of which Philadelphia contributed a little more than half. One hundred and four acts were passed at this session of the General Assembly, the most of them being modifications of existing laws, or acts of local character and minor importance. The purchase of land from Indians without consent of the proprietary was forbidden; better provision was made for the poor; dueling and challenging to combat visited with three months' imprisonment; bound servants forbidden to be sold without their consent and that of two magistrates, and at the expiration of their term of service were to have clothes and implements given them. An act relating to roads gave the regulation of county roads to county justices, and the king's highway and public roads to the Governor and Council; inclosures were to be regulated, corn-field fences to be made pig-tight and five feet high of rails or logs; when such fences were not provided the delinquent to be liable for all damages from stock. The counties were to provide railed bridges over streams at their own expense and to appoint overseers

of highways and viewers of fences. A health bill was also passed, providing quarantine for vessels with disease aboard. An ordinance was also made by Council restricting the firing of salutes by vessels in the river, some Seneca Indians in Philadelphia, on a visit to Penn, having been frightened off by one of these promiscuous cannonades. The Governor took great pains to conciliate the terrified Indians, made them a speech, and ended by sending them to inspect the vessels in person and find out why and how salutes were fired. The Council also followed the lead of the Friends' Yearly Meeting in providing for the marriage of negroes and the spiritual welfare of them and the Indians, as well as trying to discourage the importation of African slaves; but the Assembly declined to carry out the proposed legislation. Negroes were property, and the Legislature was slow to do anything impairing their value. A negro slave named Jack, in September, 1700, shot and killed a white youth, but it does not seem as if he could be brought to trial. His conviction and execution would have destroyed that much property.² In order to render the enactment against piracy more effective a strict system of passes for goers and comers was instituted, and the old law revived requiring people intending to move away to publish due notice thereof. Pastorius and the people of Germantown attempted but did not succeed in having their borough divorced from Philadelphia, as far as taxes were concerned. The sewerage system of Philadelphia was defective, the streets being washed and flooded by every rain. A commission was accordingly appointed to regulate the streets and water-courses, and they were authorized to levy for five hundred pounds to enable them to perform their work.³

There being complaint of the drain of coin from the province to pay for neat cattle imported from East Jersey, the Council agreed upon a series of regulations for the Assembly to act upon, requiring every holder of forty acres of cleared land to keep ten sheep; prohibiting any one to sell or kill more than half his neat cattle; none to be killed or sold in Philadelphia under any pretence between 10th of June and 10th of September; none but strictly mar-

² The murdered man was buried in the Friends' burying-ground on Fourth and Mulberry Streets, and here, in 1815, his tombstone was dug up, bearing the following inscription:

"Here lies a Plant,
Too many have seen it,
Flourish'd and perisht
In half a minute;
Joseph Rakestraw,
The son of William,
Shott by a negro
The 30th day of Sept.,
1700, in the 19th year
and 4th mo. of his age."

—Westcott quoting from Hazard's Register.

¹ This shows conclusively the wane of the Society of Friends in Pennsylvania after twenty years of settlement. They still retained the preponderance in property, but since 1682 had declined in proportion of numbers from twenty to one to two to one, and were in a minority in the lower counties, the Delaware Hundreds. The motion for the secession of these counties in 1699 and 1702, and the reason why the Quakers took this secession so easily, are thus fully explained.

³ The members of this commission were Francis Cook, James Atkinson, Charles Read, Jonathan Dickinson, Thomas Masters, and John Parsons.

ketable cattle to be killed at any time, nor less than twenty-four hours after being driven; slaughter-houses to be forbidden in the city limits; but all slaughtering to be done on the east side of Delaware, where the tide might carry off the offal; finally, the duty on rum of the West Indies imported in vessels belonging to the province was taken off, on other vessels one penny per gallon; but if rum be retailed in quantities less than ten gallons it was to pay duty. No person to keep more than four horses without fences; no stallion to go at large. The Assembly was called together, Aug. 1, 1701, again to consider a letter from the king asking £350 to repair and build forts in New York. The application was, however, refused, the Assembly, not without a dig at Penn, representing the province as being poor through previous contributions, and having arrears of quit-rent to pay up. The Assembly was very loyal and humble, but gave unmistakable evidence of its unwillingness to be taxed for the warlike purposes of another colony.

The subject of the unsatisfactory condition of the trade with the Indians was several times brought before Council, there being reason to believe that French emissaries had helped to debauch them with rum and false rumors. The Council ordered the arrest and imprisonment of the French traders, Louis and P. Besalion, and took measures looking to let out the trade to a company or a limited number of persons, "who should take all measures to induce the Indians to a true Value and Esteem for the Christian Religion by setting before them good Examples of Probity and Candour, both in Commerce and Behaviour, and that care should be taken to have them duly instructed in the fundamentals of Christianity."

A sort of joint-stock company was proposed, the old traders to be admitted, and all who should subscribe to rules and regulations to be laid down by Council. Many efforts were made to prevent or restrict the traffic in rum with the Indians, but, though a bill to this effect was passed by the Assembly before Penn's departure, it was not stringent enough to accomplish the end sought. In the mean time, however, Penn had had many conferences with the tribes, and established good relations with them. In 1696, through Governor Dongan, of New York, he had bought from the Five Nations the right to all the lands on the Susquehanna. This purchase was not considered satisfactory by the Indians on the spot, and consequently the representatives of the Susquehannas, the Indians at the head of the Potomac, the Shawanese, and delegates from the Five Nations were summoned to Philadelphia to meet Penn and his Council. A formal treaty was negotiated between the contracting parties, in which the Susquehanna land purchases were fully ratified and a treaty of amity agreed upon, by which a "firm and lasting peace" was forever established, "and that they shall forever hereafter be a one Head and One Heart, & live in true friendship

& Amity as one People." By this treaty common measures were taken against all acts of violence, and mutual guarantees of full immunities, free intercourse, and safe conduct exchanged; any hostile intentions on the part of either party should be anticipated by due notice given to the other party, and evil reports were not to be credited until investigated; the Susquehannas were not to permit strange Indians to settle on their lands, nor to trade with any but the commissioned agents of the province. Before Penn left the province he again met these Indians in a grand council at Pennsbury, where he took leave of them, gave them every assurance of his interest in them and their well-being, and received from them the most solemn assurances of continued fidelity. They told him, as John Richardson reports in his journal, that "they never broke covenant with any people, for"—and here they smote three times upon their heads and their hearts with their hands—"they did not make treaties in their heads but in their hearts." Then they kindled their council fires in the grounds about the mansion, and performed their "canticoes" and dances, singing their songs and sounding their long war-whoops until the forests on the other side of the Delaware echoed with the wild refrain.

A new Assembly was called to meet on the 15th of September, 1701. The proprietary told them he would have been glad to defer the session to the usual time, but he was summoned away to England by news seriously threatening his and their interests. A combined effort was making in Parliament to obtain an act for annexing the several proprietary governments to the crown. A bill for that purpose had passed its second reading in the House of Lords, and it was absolutely necessary for Penn to be on the spot to prevent the success of these schemes. When the Assembly met (Philadelphia being represented by Anthony Morris, Samuel Richardson, Nicholas Waln, and Isaac Norris), Penn told them he contemplated the voyage with great reluctance, "having promised myself the Quietness of a wilderness," but, finding he could best serve them on the other side of the water, "neither the rudeness of the season nor the tender circumstances of my family can overrule my intention to undertake it."¹ At the first regular session of the Assembly since his return (April, 1700) Penn had addressed them on the subject of reforming the charter and laws. Some laws were obsolete, he said, some

¹ In strict honesty, while Penn was pleading the "tender circumstances" of his family, he should have added that both his wife and daughter were urging his departure, and that he might perhaps have stayed in the wilderness if they had given him any hopes of enjoying quietude there. In a letter to James Logan, dated Sept. 8, 1701, he wrote: "I cannot prevail on my wife to stay, and still less with *Tiah*. I know not what to do. Samuel Carpenter seems to excuse her in it, but to all that speak of it say I shall have no need to stay, and great interest to return." Penn evidently wanted to leave his wife and daughter at Pennsbury, so as to put himself under speedy bonds to return after a brief run over to England.

hurtful, some imperfect and needing improvement, new ones needed to be made also. "We cannot go too slowly to make them, nor too fast to execute them when made, and that with diligence and discretion." If any law needed repair, alter it. If new laws are demanded, propose them. But do not play at government. "I wish there were no need of any." "Government is not an end but a means; he who thinks it is an end aims at profit, to make a trade of it; but he who thinks it to be a means understands the true end of government. Friends, away with all parties, and look on yourselves and on what is good for all as a body politic. . . . Study peace and be at amity. Provide for the good of all, and I desire to see mine no otherwise than in the public's prosperity." This was salutary and timely counsel; but the Assembly did not heed it. They demanded a new charter, and were not rebuffed by Penn's retort, "whether they thought the old charter was living, dead, or asleep?" Now, when the Assembly met before his departure, the proprietary brought the same subject plainly to their attention. "Think, therefore," said he, "since all men are mortal, of some suitable expedient and Provision for your safety, as well in your Privileges as Property, and you will find me ready to comply with whatsoever may render us happy, by a nearer Union of our Interest." The Assembly expressed its sorrow at his intended departure and gave him thanks, in a formal address, for his interest in the province's behalf.

All this, however, was simply preliminary. The Assembly made a remonstrance and petitions of the people of Philadelphia which had been presented to Governor Markham in April, 1697, and again brought before Penn,¹ the occasion for an address to the proprietary. This address was in twenty-one articles, and embraced the substance of what the Assembly conceived should be entertained in any new charter. It was made up of specific demands for political privileges and territorial concessions, and, as Gordon observes, was "the germ of a long and bitter controversy." The political privileges demanded were that in case the proprietary left the province, due care should be taken to have him represented by persons of integrity and considerable known estate, with full power to deal with lands and titles, that an ample protective charter should be granted, that all property questions should be settled in the courts, and no longer allowed to go before Governor and Council, and that the justices should license and regulate ordinaries and drinking-houses. The rest of the articles were in reference to the land question, and the freedom of the demands provoked the Governor, who said, on hearing the articles read, that if he had freely

expressed his inclination to indulge them, "they were altogether as free in their cravings," and there were several of the articles which could not concern them "as a House of Representatives conven'd on affairs of Gov'm't." In fact, the Assembly demanded (1) that the proprietary should cease to exercise the right of reviewing and altering the land contracts made in his name by the Deputy Governor, and that the latter should have power to remedy all shortages and over measures; (2) that the charter should secure all titles and clear all Indian purchases; (3) that there should be no more delay in confirming lands and granting patents, and the ten in the hundred should be allowed as agreed upon; (4) no surveyor, secretary, or other person to take any extra fees beyond the law's allowance; (5) the ancient land records, made before Penn's coming, should be "lodged in such hands as y^e Assembly shall judge to be most safe;" (6) a patent office should be created, like that of Jamaica; (7) that the original terms for laying out Philadelphia were clogged with rents and reservations contrary to the design of the first grant, and these should be eased; (8) "that the Land lying back of that part of the town already built remain for common, and that no leases be Granted, for the future, to make Inclosures to the damage of the Publick, until such time as the respective owners shall be ready to build or Improve thereon, and that the Islands and flats near the Town be left to the Inhabitants of this town to get their winter fodder;" (9) that the streets of the town should be regulated and bounded, the ends on Delaware and Schuylkill to be unlimited and left free, and free public landing-places be confirmed at the Blue Anchor Tavern and the Penny Pot-House; (10) the deeds of enfeoffment from the Duke of York for the lower counties should be recorded in their courts, and all lands not disposed of then be letted at the old rate of a bushel of wheat the hundred acres; (11) New Castle should receive the one thousand acres of common land promised to it, and bank-lots these to be confirmed to owners of front lots at low-water mark, at the rent of a bushel of wheat per lot; (12) all the hay-marshes should be laid out for commons, except such as were already granted; (13) that all patents hereafter to be granted to the territories should be on the same conditions as the warrants or grants were obtained, and that people should have liberty to buy up their quit-rents, as formerly promised.²

² Some of these propositions were obviously untenable, and some amounted to a charge of bad faith against the proprietary. Gordon says (*History of Pennsylvania*, p. 118),—

"I. In the surveys to the first emigrants an allowance had been made by the proprietary of ten acres in the hundred for roads, uneven grounds, and errors of survey. Subsequent purchasers claimed this allowance also as a right. The situation of every tract did not admit of such addition, and the surveyors sometimes omitted to embrace it when it might have been obtained. . . . An attempt was made to satisfy the claimants in the preceding year by the passage of an act giving to those whose surveys included so much, or more, the full ten per cent, and two per cent, to those who had the nett hundred. The inequality of this provision was obvious, and the landholders were consequently dissatisfied. The

¹ It was a protest against the right of the Assembly and Council, as then constituted, to pass laws and raise taxes. It was signed by Arthur Cook and one hundred and thirteen leading citizens of the place. Penn referred it to Robert Turner, Griffith Jones, Francis Rawle, and Joseph Wilcox.

Penn informed the Assembly that their address was solely on property, and chiefly in relation to private contracts between him and individuals, whereas he had recommended them to consider their privileges, the bulwark of property. He would never suffer any Assembly to intermeddle with his property. The Assembly retorted that they were of opinion they had privileges sufficient as Englishmen, and would leave the rest to Providence. As to the king's letter demanding a subsidy, the country was too much straitened of late by the necessary payment of their debts and taxes; other colonies did not seem to have done anything, and they must therefore beg to be excused.

Penn now made answer to the address, article by article; he would appoint such deputies as he had confidence in, and he hoped they would be of honest character, unexceptionable, and capable of doing what was right by proprietary and province; he was willing to grant a new charter, and to dispense with delays in granting patents; fees he was willing should be regulated by law, but hoped he would not be expected to pay them; the custody of the records was as much his business as the Assembly's; if the Jamaica patent law would improve things he was willing to have it adopted; the claim for town lots was erroneous; the reservations in the city were his own, not the property of the inhabitants; improvements of bed of streets conceded; license proposition conceded; the deeds for Delaware counties were recorded by Ephraim Herman; the other propositions, in substance, so far as they were important, were negatived or referred for revision.

In the course of the discussions the representatives of the lower counties took offense and withdrew from the Assembly; they objected to having the As-

sembly demanded the full ten per cent. on all lands then sold, and five per cent. on future sales." (This Penn refused, offering six per cent. all round. This caused much trouble until 1712, when a settlement was effected on the basis of six per cent.) "The examination of this question of surplusage, though attended with much vexations, proved of pecuniary advantage to the proprietary. An act of Assembly was passed directing a resurvey of all located lands, at the expense of William Penn, within two years; and large quantities of land were found included in former surveys not covered by the warrants, for which he justly demanded payment. But this exaction was most unreasonably considered by some of the tenants as hard and oppressive.

"II. The pretension of the freeholders to a full participation of the benefits especially granted to the first purchasers, were not confined to the allowance for roads. The city lots, now rapidly increasing in value were claimed as appendages to country purchases, and every holder of a farm demanded a city lot of a size proportioned to the number of acres he possessed.

"III. The inhabitants of the city of Philadelphia required that the vacant town lots should remain in common. . . . Whilst these extravagant claims were advanced by the freemen of the province those of the territories asked that the price of lands in their counties should not be raised, and that future grants should be made at the original quit-rents.

"IV. In resurveying the quit-rents the proprietary intended not only to secure to himself a permanent revenue, but to preserve that connection between the grantor and grantee which had been the soul of the feudal system and which was still considered necessary though all the incidents of that system, save fealty, escheat, and rent, frequently nominal, had ceased."

sembly confirm and re-enact the laws passed at New Castle, since they regarded these as already permanent and established. This was only preliminary to the final separation of the Delaware counties from Pennsylvania. Finally the Assembly was dissolved on Oct. 28, 1701, the Governor having signed an act to establish courts of judicature for the punishment of petty larceny; for minor attachments; for preventing clandestine marriages; for preventing fires in towns; for preventing swine from running at large; for the destruction of blackbirds and crows, and against selling rum to the Indians. Penn also signed the Charter of Privileges, "with a

SEAL OF PHILADELPHIA IN 1701

Warrant to Affix the Great Seal to it, w^{ch} was delivered with it to Thomas Story, Keeper of the said Seal, and master of the Rolls, to be Sealed and Recorded." At the same time he signed a charter incorporating the city of Philadelphia.

The Charter of Privileges, after a specific preamble, begins by confirming freedom of conscience and liberty of religious profession and worship in ample terms, as had been done in the earlier form of government; it provided for an Assembly of four members from each county, to be elected by the freemen each year on October 1st, and meet in General Assembly October 14th at Philadelphia. The Assembly to choose its own Speaker and officers, judge the qualification and election of its own members, sit upon its own adjournments, appoint committees, prepare bills in or to pass into laws, impeach criminals and redress grievances, "and shall have all other powers and privileges of an Assembly, according to the rights of the freeborn subjects of England, and as is usual in any of the King's Plantations in America." The freemen of each county, on the election day for assemblymen, were to select two persons for sheriff and two for coroner, the Governor to commission a sheriff and a coroner, each to serve for three years, from the persons so chosen for him to select from. If the voters neglected to nominate candidates for these offices, the county justices should remedy the defect. "Fourthly, that the Laws of this Govr^t shall be in this stile, viz: [By the Governour with the Consent and Approbation of the freemen in General Assembly mett] and shall be, after Confirmation by the Governour, forthwith Recorded in the Rolls office, and kept at Philadia, unless the Govr. and Assembly shall agree to appoint another place. Fifthly, all criminals to have the same privilege of witness and

counsel as their accusers; complaints as to property not to be heard anywhere but in courts of justice, unless upon appeal lawfully provided for; no licenses for ordinaries, &c., to be granted but upon recommendation of the County Justices, who also can suppress such houses for disorder and misconduct; suicide was not to work escheat of property nor affect its regular descent to legal heirs; no forfeiture of estates to proprietary in consequence of accidents. The charter was not to be amended or altered in any way but by consent of the Governor and six-sevenths of the Assembly, and the first article, guaranteeing liberty of conscience, "shall be kept and remain without any alteration, Inviably forever." The Assembly, by this charter, at last secured what it had been contending for ever since the first session at Upland,—the parliamentary privilege of originating bills, which must be inherent in every properly constituted legislative body. Penn, in fact, conceded everything but the margin of acres for shortage, the town lots, and the quit-rents. To expedite the conveyance of patents, titles, and land grants he created a commission of property, consisting of Edward Shippen, Griffith Owen, Thomas Story, and James Logan, with power to grant lots and lands and make titles. The new charter did away with an elective Council, and the legislative power was vested exclusively in the Assembly. But Penn commissioned a Council under his own seal to consult and assist him or his deputy or lieutenant in all the public affairs of the province. The Council thus commissioned were to hold their places at the Governor's pleasure, the Deputy Governor to have the power to appoint men where there was a vacancy, to nominate a president of Council, and even to increase the number of members. The Council as nominated by Penn consisted of Edward Shippen, John Guest, Samuel Carpenter, William Clark, Thomas Story, Griffith Owen, Phineas Pemberton, Samuel Finney, Caleb Pusey, and John Blunston, any four of them to be a quorum. In the charter for Philadelphia, Edward Shippen was named mayor and Thomas Story recorder.

On or about Nov. 1, 1701, William Penn, with his wife Hannah, his daughter Letitia, and his infant son John, embarked on board the ship "Dalmahoy" for England. Mrs. Penn, who had promised to return with the Governor, should he come back, appears to have made a good impression in the province. Isaac Norris writes that "she is beloved by all (I believe I may say in its fullest extent), so is her leaving us heavy and of real sorrow to her friends; she has carried under and through all with a wonderful evenness, humility, and freedom; her sweetness and goodness have become her character, and are indeed extraordinary. In short, we love her and she deserves it." Penn commissioned Andrew Hamilton, formerly Governor of East and West New Jersey, to be his Lieutenant-Governor; and he made James Logan provincial secretary and clerk of Council.

While the ship dropped down the river the proprietary wrote his letter of instructions to Logan, from which extracts have been given above. And so Penn passed away from the province he had created, never to return to it again.

CHAPTER XIII.

THE QUAKER CITY—1701-1750.

THE charter of the city of Philadelphia, which William Penn granted Oct. 25, 1701, begins:

"WILLIAM PENN, Proprietary and Governor of the province of Pennsylvania, etc., to all to whom these presents may come, sends greeting:

"*Know ye*, that at the humble request of the inhabitants and settlers of this town of Philadelphia, being some of the first adventurers and purchasers within this province, for their encouragement, and for the more immediate and entire government of the said town, and better regulation of trade therein, I have, by virtue of the king's letters patent, under the great seal of England, erected the said town into a borough, and by these presents do erect the said town and borough of Philadelphia into a CITY, which said city shall extend the limits and bounds as it is laid out between Delaware and Schuylkill."

The charter provides that the streets are to continue forever as they are now laid out and regulated, the Delaware end to be free, as now, for the use and service of the city and people, with power to improve and build wharves, etc., as the mayor and Common Council shall determine. Edward Shippen is named present mayor, "who shall so continue until another be chosen, as is hereinafter directed." Thomas Story to be recorder; Thomas Farmer, sheriff; and Robert Ashton, town clerk, clerk of the peace, and of the courts; Joshua Carpenter, Griffith Jones, Anthony Morris, Joseph Wilcox, Nathan Stanbury, Charles Read, Thomas Masters, and William Carter, aldermen; and John Parsons, William Hudson, William Lee, Nehemiah Allen, Thomas Paschall, John Budd, Jr., Edward Smout, Samuel Buckley, James Atkinson, Pentecost Teague, Francis Cook, and Henry Badcocke, common councilmen.

The mayor, recorder, aldermen, and common councilmen and their successors are declared to be "one body corporate and politic in deed," by the name of "the mayor and commonalty of the city of Philadelphia, in the province of Pennsylvania;" and as such, persons capable in law to "have, get, receive, and possess" real and personal property, rents, franchises, liberties, jurisdictions, etc., and to dispose of the same, as well as to sue and be sued like any other persons, and to have a seal.

The mayor is to be elected annually, by the mayor and commonalty, on the first third day of the week in the eighth month, and is to qualify within three days before the Governor, making the test declarations provided in 1 William, iii.; other officers to qualify before the mayor. The aldermen and Common Council are to be chosen at the same time that the mayor is elected, when such choice is necessary.

The mayor, recorder, and aldermen are made justices of the peace and of Oyer and Terminer, with plenary jurisdiction within the liberties of the city, and any four or more of them (the mayor and recorder being two) are given power and authority to hear and inquire into all crimes and felonies, larcenies, riots, unlawful assemblies, and breaches of the peace, and to try and punish all crimes and vices, etc. They are to hold a court of record quarterly or oftener, and to abate nuisances and arrest encroachments, and they are constituted of the quorum of the justices of the County Courts, Quarter Sessions, Oyer and Terminer, and Gaol Delivery of Philadelphia County.

They may erect a jail and court-house, take cognizance of debts according to the statute of merchants and of action burnel, and appoint a clerk of the market, who shall have assize of bread, wine, beer, wood, etc.

The existing coroner of Philadelphia County is to act for the city, but the freemen of the city may choose their coroners and sheriffs as such officers are chosen in the counties, the sheriff to act as water bailiff on the Delaware.

The mayor may be removed for misconduct by the recorder and five aldermen and nine common councilmen; a successor in that case, or in case of death, to be elected within four days, the senior alderman to act as mayor during the latter's absence or disability.

The recorder may be removed for misconduct by the mayor and two-thirds of the commonalty; the person chosen to succeed him must be skilled in the law. Aldermen and other officers are made removable by kindred processes. Persons refusing to serve in any of these offices to be punished by fine, not exceeding, in the mayor's case, forty pounds; in the case of aldermen, thirty-five pounds; and common councilmen, twenty pounds.

A quorum of the Common Council shall consist of the mayor and recorder, and not less than three aldermen and nine councilmen. They are given authority to admit other freemen into their corporation; to make and execute constitutional laws and ordinances; to fine and amerce. No persons are to be admitted freemen of the city, or capable of being elected to office, unless free denizens and inhabitants of the city, twenty-one years old, freeholders, or worth fifty pounds in money or stock, "and have been resident in the said city for the space of two years, or shall purchase their freedom of the mayor and commonalty aforesaid."

Two market-days a week are provided for, two annual fairs, lasting three days each, and Philadelphia is made a port of entry, all under the charge of the mayor and commonalty. Landing-places are provided for,—the Penny-pot house and the Blue Anchor tavern,—and the swamp between Budd's buildings and Society Hill is reserved for docks and harbors.

Vacant land within the liberties is to remain open for pasture until taken up for improvement; but Penn

reserves the right to fence the land between Centre meeting-house and the Schuylkill without its being deemed an encroachment.

The charter is to be construed liberally, and in favor of the corporation.

The minutes of the proceedings of the mayor and commonalty from 1701 to 1704 are not extant. Those which commence October 3d, in the latter year, have been preserved. We find in the first day's proceedings¹ that Griffith Jones, at that meeting elected mayor for the ensuing year, was just suing to have his fine of twenty pounds remitted, that having been imposed on him for refusing to serve during the previous year. In fact, it took some time for the people to understand the need of a separate municipal government. The first mayor, Edward Shippen, was also president of Council, and the Council and Assembly, especially since the defection of the Delaware Hundreds, seemed little other than the legislative body of Philadelphia and its suburbs.

Independent of local affairs, the proceedings of Governor, Council, and Assembly, from the date of Penn's departure in 1701 to the time of the Stamp Act, are monotonous and dreary. A constant struggle was going on, but it had no variations. The same issues were being all the time fought out, over the same familiar ground and by the same parties. The interests of the crown, the interests of the proprietary, the interests of the people, did not harmonize; there was a continual and incessant clash, and yet nothing was settled. The Governors were of inferior metal, the people vexed and complaining, the Penns wanted money, the crown wanted supplies and money, was jealous and solicitous about prerogative, everything seemed to be at odds and outs, yet the colony grew and prospered amazingly. The various and conflicting interests did not disturb a people who were peacefully reaping the fruits of their labors on a kindly soil in a gentle climate, almost untaxed and almost ungoverned, and immigration flowed in like a steadily mounting tide. The people were frugal, industrious, forehanded; and the Quakers, who had control of affairs, had been unpersecuted land-owners long enough to quite forget their early unnatural fanaticism and settle down into a staid sobriety, which was as impassive a substitute for conservatism as could be desired. They objected, on principle, to much government of any sort; their non-resistance doctrine had the effect of steady resistance. They were like a break upon the wheel of a vehicle, preventing accidents and danger, but making the wagon drag a little. From the time of Penn's second return to England until the time of Braddock's defeat and the riot of the Paxton boys, they had practically control of the domestic affairs of the province, and they kept Philadelphia, as it was intended it should be, the Quaker City.

¹ Oct. 3, 1704, Anthony Morris, mayor; David Lloyd, recorder.

In all political and public matters, within the dates named above, the history of the city is "a record of quarrels between the Lieutenant-Governors and the various Assemblies of the province. The latter were usually composed in majority of members of the Society of Friends, holding peculiar doctrines in relation to the unlawfulness of war. The members of the Penn family had returned to the religion of the Church of England, and the Lieutenant-Governors appointed by them held no conscientious scruples against the right of using arms when necessary. Great Britain was involved in several wars with European nations, and her American colonies were in danger of attack and capture. Whenever these necessities arose, Lieutenant-Governors called upon the Assemblies for appropriations of money to raise troops, which requisitions were frequently denied or evaded upon various pretexts, some of which were founded upon the alleged dishonesty of the proprietaries in evading their own obligations on such occasions, and endeavoring to throw them upon the people."¹ The case could not be more compactly yet completely summed up. In fact, Penn and his successors in the proprietaryship had a difficult course to pursue, and they could not pursue it prosperously, it seemed to them, without temporizing. That was a policy which was not disagreeable to Penn himself, nor, it appears likely, to his heirs. But it gave the province an inferior class of Governors, men without convictions, without great honesty, hangers-on of the court, protégés of the Lords in Council. Penn returned to England in 1701 to prevent the consummation of a concerted assault upon his charter. When Queen Anne succeeded to the throne he could hope, as a courtier, to frustrate the schemes of other courtiers against his principality. But he must have known at the same time that it was the settled policy of the thoughtful parliamentary leaders of England—the government—to take the first occasion to break the colonial charters, unite the colonies into three or four separate governments, and make them vicerealties, entirely dependent upon the Lords and Commons at home. This had been the plan of James II., defeated by his misfortunes. The establishment of the church in the colonies in 1694 looked to the same end. William went no farther, because he had no time to think of the colonies; the Netherlands demanded all his attention and absorbed all his thoughts. But James' policy was revived under Queen Anne. It was esteemed by Halifax. Cornbury was sent to New Jersey and Lovelace to New York in the hope to accomplish the consolidation of Pennsylvania, Delaware, New Jersey, and New York into a single province, New England to be a second province, and Maryland, Virginia, and the Carolinas a third. Penn must have known that Judge Quarry, his own enemy, member of Council at the same time in five colonies, and one

of the most influential men of his day, was actively and industriously urging this particular time as the one most propitious for the consolidation which was contemplated.² Penn knew also that the Quakers were more mistrusted in England than any other colonists except the New England republicans. They were suspected of being what Ingoldsby, Deputy-Governor of New Jersey under Cornbury, accused,—“men notoriously known to be uneasy under all government; men never known to be consistent with themselves; men to whom all the factions and confusions in the government of New Jersey and Pennsylvania for many years are wholly owing,” etc.

When Penn at last succumbed, borne down by debt, imprisonment, disappointments, chagrins, and the sturdy opposition of his provincials to all his demands and all his plans, he himself proposed to settle the whole vexed question by vacating his charter and selling all his rights and privileges to the crown for twelve thousand pounds, and only his own illness and subsequent imbecility prevented the sale from being ratified. After his death, when the estates and franchises of the Penns began to become very valuable, a formidable party sprang up in the province itself, headed by Franklin, in favor of abrogating the charter and vacating the proprietary government. To prevent this the Penns had to temporize again, concede here and stoop there, and so it happened that the Lieutenant-Governors of the province were never strong men, nor ever representative of any particular, leading interest. They were the creatures of compromise and non-policy,—what are called, in the slang of modern politics, “dough-faces.” The provincials did not respect them, and continually resented their interference and despised their recommendations.

Andrew Hamilton, the first of these Governors, and the nearest to Penn's mind and purposes, had been Governor of East and West New Jersey, and was one of the proprietors of East New Jersey. He died in office, having accomplished but little. His appointment was opposed in England, and his acts withheld from ratification; at home the Assembly refused to ratify Penn's charter, and the Delaware Hundreds persisted in refusing to reunite with Penn-

² Quarry, who held office by appointment of the Lords of Trade (a board created in 1696 at the suggestion of Lord Somers), was in constant correspondence with them. He had adopted the idea put forth by Robert Livingston, of New York, in a letter to the Lords of Trade in 1701, recommending that “one form of government be established in all the neighboring colonies on this continent,” an idea partly carried out by the commissioning of Lord Bellamont as captain-general over New Jersey, New York, New Hampshire, and Massachusetts. In a memorial to the lords dated June 16, 1703, Quarry wrote, after giving a full account of the internal concerns of the colonies and the political opinions prevalent there, that “I may now say, that now or never is the time to support the queen's prerogative, and put a stop to these wrong, pernicious notions, which are improving daily, not only in Virginia, but in all her majesty's governments. I cannot recommend a more effective means than what I formerly mentioned,—the reducing all her majesty's governments on the main under one constitution and government as near as possible.”

¹ Thompson Westcott.

sylvania. On his sudden death, April 20, 1703, Edward Shippen became acting Lieutenant-Governor. He was succeeded, in February, 1704, by John Evans, a Welsh youth, a friend of young William Penn, appointed, it should seem, in deference to the wishes of influential persons in the *entourage* of the queen. Evans was not a Quaker, but hostile to them; he was, besides, a rattle-pate, without judgment or

GOVERNOR SIR WILLIAM KEITH.

discretion, and very capable of doing mischief by rash acts. He was so unpopular that Logan, his intimate, was regarded with suspicion, and was complained against. He failed to accomplish any object which he set himself to achieve, became embroiled with every one, and was at last superseded by Penn, who, early in the year 1709, sent out Charles Gookin to succeed him. Gookin was a soldier, a man of years and experience, and Penn seemed to expect much from him. He wrote to his intimates in Philadelphia that Gookin was "of an easy, quiet temper." The queen approved of him; so did Godolphin, who wished him a good journey, and said he would be ready to serve him. "He is sober," wrote Penn, "understands to command and obey, moderate in his temper, and of what you call a good family, his grandfather, Sir Vincent Gookin, having been an early great planter in Ireland in King James I. and the first Charles' days, and he intends, if not ill treated, to lay his bones, as well as substance, among you, having taken leave of the war and both England and Ireland to live amongst you; and as he is not voluptuous, so I hope he will be an example of thriftiness." But the Assembly met Gookin, on his very

arrival, with a complaining address, full of Evans and other grievances, and he had no rest thereafter. They told Gookin, as they had told Evans, when he asked them for money both for Penn and for himself, that under his grant and charter Penn was rich enough in the proceeds of land sales and in quit-rents to maintain him and his Lieutenant-Governor likewise "answerable to their station." This must have been hard for even a quiet man to bear.

The Governor also asked for Pennsylvania's quota of one hundred and fifty men for the war, or the cost of equipping and supplying that number, promising the men should be forthcoming if the money was furnished. The reply of Assembly and Council was that the raising of money to hire men to fight and kill one another was a matter of conscience with them and against their principles; however, they would make the queen a present of five hundred pounds in gratitude for many great favors she had done them.¹

The Governor asked for more money, but the Assembly steadily refused to grant it. They did, however, vote two hundred pounds for his support and three hundred pounds to repair injuries done by French privateers at Lewes, demanding, however, in return, executive sanction to several important bills. They also persisted in the impeachment of James Logan.

Logan went to England, Penn wrote a strong letter to the province, a new Legislature of a more harmonious spirit was chosen, and two thousand pounds was voted for the queen's use on the eve of the expedition to Canada. In 1714, however, another Assembly renewed the quarrel, and there was no more peace. In 1717 Gookin bade them farewell. He had become erratic and violent towards the end of his career, turned his back on the Assembly committees, kicked a judge, and gave evidence of mental aberration. He was succeeded by Sir William Keith, a Scotchman, who had been surveyor of customs in the Carolinas, an adroit and perhaps unscrupulous politician, of easy, affable manners, accessible, avoiding

¹ The queen had befriended them. In 1705 the Legislature of Connecticut had passed an act to the effect, "that all who shall entertain any Quakers, Ranters, Adamites, and other Hereticks, are made liable to the penalty of five pounds, and five pounds per week for any town that shall so entertain them; that all Quakers shall be committed to prison or sent out of the colony; that whoever shall hold any unnecessary discourse with Quakers shall forfeit twenty shillings; that whoever shall keep any Quakers' books, the Governor, magistrates, and elders excepted, shall forfeit ten shillings; that all such books shall be suppressed, and no master of any vessel to land any Quakers without carrying them away again, under the penalty of twenty pounds." This hard law the queen strongly disapproved, as contrary to the liberty of conscience granted to dissenters by the laws of England, and she accordingly repealed it and declared it void and of no effect. Consequently, the London Quakers sent a memorial to the throne expressive of their gratitude, and assuring her majesty of their "Christian and peaceable subjection, and unfeigned joy for the queen's mild and gentle government, aiming at the good of all her people." To this the queen replied: "Let the gentlemen know I thank them heartily for this address; and that, while they continue so good subjects, they need not doubt of my protection."

offense, willing and able to play the demagogue to serve his private ends. Keith treated with the Indians, wheedled the Assemblies into passing bills which advanced his interests, issued a paper-currency, organized an equity court, himself chancellor, and laid the foundation for a militia system. He at times allied himself with the Assembly against the Council and Secretary, who represented the proprietary interests, and craftily courted the Quakers. He was superseded in July, 1726, and was at once elected to the Assembly, where he tried to play the firebrand, but with little success. He published a history of Virginia in 1738, and died poor and neglected in London in 1749, leaving his widow to eke out her life in poverty in Philadelphia. Keith probably invented the paper-money scheme, of which he was so strenuous an advocate, and which had the immediate effect to drive all coin of every kind out of the province and send up exchange on London to ruinous rates. He formed a league with David Lloyd against the Council and James Logan, and the latter finally prevailed upon Hannah Penn to supersede him.

P. Gordon

His successor was Maj. Patrick Gordon, a soldier, who had served in the regular British army, and rather prided himself on his blunt speech and his ignorance of the ways and wiles of the politicians. Gordon continued Lieutenant-Governor until 1736, his career in office being signalized by frankness and integrity. During his administration several disturbances occurred among the Indians, chiefly incited by strong drink, which were participated in by worthless bands, who had strayed away from the tribes to which they belonged. In these affrays several were killed and

wounded. Governor Gordon took prompt measures to apprehend and punish the offenders, and succeeded in preventing hostilities. He concluded a treaty with the Five Nations, and at a council held at Philadelphia, on the 26th of May, 1728, for the purpose of renewing treaties with the several Indian tribes there represented, Captain Civility spoke in behalf of the chieftains, and in referring to the Governor's address, previously delivered to them at Conestoga, said that "the Governor's words were all right and good; that they never had any such speech made to them since William Penn was here." These conferences with the Indians were frequent, and were attended with much expense, being generally coupled with treaties for the transfer of land. The Assembly, at its meeting in 1729, drew a distinction between the expense of treaties for the preservation of peace in the colony and those for the acquisition of territory, claiming that the latter should be borne by the proprietors, thus dividing, says Mr. Armor, the burden of the "frequent visits of the chiefs and their followers to polish the chain of friendship with English blankets, broadcloths, and metals."¹ Gordon was still in office at the moment of his death, and James Logan, as president of Council, became the *locum tenens* for two years, until Gordon's successor arrived in Philadelphia, in 1738, in the person of Col. George Thomas, formerly an Antigua planter. He was a man of ability and well disposed, but in 1740-41 the war with France and Spain broke out, the government wanted money, the Governor asked for it, and the usual disputes began with the Assembly. Some money was voted, but not all that the Governor asked, and he became embroiled with the Legislature because he sanctioned and encouraged the enlistment of indentured apprentices, servants, and redemptioners. There were serious election riots during this administration, and some difficulties threatened with the Indians, which, however, Governor Thomas adroitly managed to smooth over. He resigned in the summer of 1747, Anthony Palmer, president of Council, acting as Governor until November, 1748, when James Hamilton, a native of Pennsylvania, came over from England with the commission of Lieutenant-Governor. He was the son of Andrew Hamilton, the lawyer, wealthy, and esteemed and popular. He set himself to work to pacify the Indians on the Western border, and resigned on the eve of the Seven Years' war, foreseeing a renewal of the old contest between the Assembly and the Governor, as the representative of the crown and the proprietary.

Robert Hunter Morris relieved Hamilton in October, 1754. He was the son of Lewis Morris, formerly Governor of New Jersey, and his first act was to come in collision with the Assembly on a money bill. The war was beginning to rage furiously, and Pennsylvania was called upon for three thousand recruits,

¹ Lives of the Governors of Pennsylvania.

subsistence, camp equipage, and transportation. While the haggling over the ways and means was at its height, came the news of Braddock's defeat, the border left defenseless, the savages raiding to Cumberland Valley. The Assembly at once voted fifty thousand pounds for the public defense, but the Governor returned the bill unapproved, because it provided for taxing the property of the proprietors the same as other estates. Morris would not be moved from this position, but the Assembly contrived to borrow fifteen thousand pounds to aid in expeditions against the French, and the proprietors contributed five thousand pounds as a bonus. On this foundation a money bill was at last passed and provision made for the organization of a volunteer militia. A force was raised and marched against the Indians, who were driven back, and the Quakers finally persuaded the most of them to bury the hatchet and retire. The question of taxing the proprietary estates, however, was lurking behind the next supply bill, when Governor Morris was relieved, and William Denny became Governor in his stead.

Denny acceded to the Lieutenant-Governorship Aug. 20, 1756, and he was joyfully received until it was found that his instructions bound him to refuse assent to any bill voting money that did not place the proceeds at the joint disposal of the Assembly and Governor, to veto any emission of paper money in excess of forty thousand pounds, and all taxes on proprietary property which were made a lien on the lands. So he and the Assembly quarreled, of course, and pretty bitterly at that. He told them bluntly that he was reconciled to the detraction and personal abuse showered upon him, because it was obvious, "from your conduct to those before me, you are not so much displeased with the person governing as impatient of being governed at all." Probably there was a good deal of truth in this.

The Pennsylvania troops took the field and behaved well; but the treasury was frightfully embarrassed. Money must be had. One hundred thousand pounds was voted, to be levied impartially upon all estates, real and personal, and Governor Denny rejected the bill. The emergency was so great that another bill was passed, in which the proprietary property was exempt; but Franklin and Isaac Norris were sent as commissioners to England to remonstrate before the throne and ask Parliament to vacate the charter and unite the province with the crown. In 1759 the able diplomatists carried their point. Parliament sanctioned a money bill on the basis of an impartial levy, the Governor, however, to co-operate with the Assembly in disposing the revenue and the proprietary untitled lands to be assessed at minimum rates. Thus the Assembly won in this long fight. Governor Denny had received no pay since his arrival in the colony; the Assembly voted him one thousand pounds, he signed the money bill taxing proprietary estates, and the Penns immediately recalled him, James Hamilton

succeeding, and holding office until November, 1763, when John Penn, son of Richard Penn, became Deputy-Governor.

The secret of this steady resistance of the people of the province, through the popular branch of the Legislature, to the claims of the proprietary and the pretensions of royal authority is to be sought in part in the sturdy determination of people of the English race to vote no supplies which they do not expend, and to lay no taxes which recognize privileges. But it must still more be sought in the non-resistance policy of the Quakers, and to understand that policy fully we must understand this singular sect itself.¹ Logan, writing to Penn in 1701, in the first days of the administration of Lieutenant-Governor Hamilton, and animadverting upon the general policy of the Governor to sustain the Court by meeting its war measures more than half-way, comments upon the proclamation of the new Queen Anne of Denmark, the war with France and Spain, and Hamilton's notion that a militia force should at once be equipped for the defense of the colony. The "Hot Church party," who wanted to put the Quakers in the wrong, opposed volunteer enlistments. Logan wrote: "Lowther (the captain seeking recruits) on beating up the town with drums found only the meaner sort came forward to enlist; others would not enlist because they believed it the readiest way to secure the Quakers in the government. He mustered them a second time, which was the last, finding the opposition too great to struggle with, persons being daily employed in private to divert the inclinations of those who had shown a forwardness that way. Of this there might considerable advantage have been made by the government against that party who had shown themselves basely discouraging it; but that being in the hands of Friends, whose profession is directly opposite, they were tied up and could not appear."

Tied up by their professions. Yet the Quakers of this and subsequent periods, while their professions were the same and as binding, were a very different class from the wild, fanatical enthusiasts of two generations back. In ceasing to be persecuted they had lost the white glow of their fervor. They had settled and become sedate and sober quietists, a certain gleam and later radiance of mysticism in their principles still, which did not prevent their ways and views of life from being practical and matter-of-fact in the last degree. They were not quite yet so merely formal as they afterwards became, but their age of self-immolation and martyrdom was past, and they did not wrestle with the Spirit in public any more, go naked in the streets, make raids upon Grand Turks and "steeple-houses," and willingly bare their backs at the cart's tail. The pillory and the whipping-post ceased to have charms for shrewd and canny

¹ The Quakers are treated more at length in this work under the head of "Religious Denominations."

traders and planters with money and property. Peace and prosperity had cured the enthusiasm which inspired them in the past.

Lieutenant-Governor Andrew Hamilton first met the Council on Nov. 14, 1701, and next day came up a debate about the road leading out of the north end of the town and the bridge across it, called Daye's bridge, which was broken by a freshet. The subject came up again on the 18th, and urgent demands were made for the bridge's repair. The road was made on a causeway over a swamp, and the bridge being now broken and some of the embankment probably caved, some persons wanted a new road laid out on safer ground, and more convenient perhaps to them. Others urged the original cost of the causeway as a reason for continuing to use the old bed. A commission was appointed—Griffith Jones, John Goodson, Samuel Richardson, Nicholas Waln, Robert Heath, Daniel Pastorius, and Arnold Castell—of those desiring the new road, and seven other persons of those that stood for the old road,—Peter Deal, Thomas Parsons, Joseph Fisher, Benjamin Duffield, Robert Adams, John Worrall, and William Preston. They met, examined, surveyed, consulted, could not agree, and referred the matter to the Governor. What he decided is not on record. The new road was not laid off, however, and the old one, "crossing what was afterwards called Pool's bridge, on Front Street, over the Cohoquinque (Pegg's Run), continued for many years the most frequented crossing-place at the upper part of the town."¹

Edward Shippen, Nathan Stanbury, Isaac Norris, and William Carter, assessors of the proprietary tax of two thousand pounds laid on the town and county of Philadelphia, reported to Council, on Feb. 3, 1702, that Thomas Farmer, Penn's sheriff and *ex-officio* tax collector, was not doing his duty so far as their charge was concerned. Evidently the people did not like such a levy, and Farmer would not press it for fear of making himself unpopular. On the recommendation of the assessors, the Governor and Council appointed William Tonge, the deputy sheriff, to complete the collection, and do it promptly. Deputy Tonge, however, had to levy by distraint, and then it was objected that the municipal charter had made questionable the jurisdiction and authority of the magistrates, so that their warrants were invalid. This, however, the Council overruled, and ordered the warrants to issue and be executed forthwith. Probably the people did not choose to contribute to the proprietary's support more than they were forced to do. The tax was heavy, the Council was an aristocratic and unpopular body, and did not attempt to identify itself with the popular interests. This was showed at this time by the adoption of an order that "all affairs of p'ticular Persons, Cognizable before this Board (not being the Publick affairs of y^e Gov-

ernment), shall be brought in by Petition to y^e Gover. & Council, Deliv'd to y^e Secry or Clerk y^eof, for wch he shall receive six Shillings, & y^e Door-Keeper or Messenger for every Petition one Shill. & Eight pence." Such a rule passed to-day by any governing board would raise such a storm of indignation as would demolish them forthwith. Men in the Assembly like David Lloyd are always swift to profit by such errors of judgment as this.

The Governor and Council ordered Anne of Denmark to be proclaimed Queen of Great Britain on July 10th, in advance of official instructions, principally because war had been declared with France and Spain, and the use of the sovereign's name was necessary in calling out the militia for defense. This determination to involve the colony in military measures at once provoked the passive resistance of the Quakers and of their representatives, the Assembly, with results already stated. When the time came for the Assembly to meet, the lower counties were not represented. An adjournment was had, elections held, and new representatives chosen, but they likewise refused to go to Philadelphia, and so the Quakers of that county, Bucks and Chester, had things all their own way. Hamilton's authority to recommend distasteful measures was impaired by the fact that he could show no evidence that he was recognized as Governor by the Queen,—her government had not communicated with him in any way,—and he was put to the rather pitiful plea of suggesting that no possible Governor who succeeded him would object to measures taken to protect the province from insult by foreign enemies. His situation was indeed a painful and embarrassing one, for, as Logan's correspondence shows, David Lloyd and John Moore, leaders of the popular party in the Assembly, were intriguing, in co-operation with Quarry and the "Hot Church party," to produce such confusion and disorder as would lead to the overthrow of the charter and the proprietary government. The contrivance of these astute lawyers was to make trouble about the interpretation of the municipal charter so as to arrest the administration of justice. They had already made this issue in connection with the distraint warrants for taxes, and the question of the conflicting jurisdiction of city and county justices was simply extending their operations into other fields.

The grand jury, in the latter part of 1702, made some presentments which mirror the morals of the town at that time. Men's sons and servants, they said, were too fond of taking the "licenceus liberty" of robbing orchards and "committing unruly actions, especially on the first day of the week, commonly called the Lord's Day." On that day also the community was plagued by "the great abuse and the ill consequence" of negroes collecting in crowds on the streets, with riot and disorder. "Multitudes of dogges needlessly kepte in this citty" caused great damage

¹ Westcott.

to the inhabitants "by the great loss of their sleep and other damages." The safety of property was imperiled by stacks of hay and reeds in private yards close to dwellings and outbuildings. And butchers killed their meat daily in the streets, "throwing the blood, dung, and gargish in the streets, which is very hurtful to the health of the inhabitants." The grand jury also asked to have negroes prevented from working on Sunday. John Simes was presented by this grand jury, as has been shown in a preceding chapter, for keeping a disorderly house, "a nursery to debotch y^e inhabitants and youth of this city, and suffering masqueraded persons in the house to dance and revoll." Next year a man was presented for building his hay stack in the street and throwing a fence around it, and four barbers for "trimming people on first days of the week." The growth of the city was noted by the observant Logan, who calls Penn's attention to the fact that while in 1699 the collections for customs duties were only fifteen hundred pounds, in 1702 they had reached eight thousand pounds,—“New York not the half of it.”

Andrew Hamilton died April 20, 1703, while on a visit to his family in South Amboy, N. J. Edward Shippen's administration as his successor *pro tem.* was uneventful. Quarry objected to some of the forms of oaths administered; Lord Cornbury, Governor of New Jersey, came to Philadelphia on a visit; Teague, coroner, got an order that his fees and charges for inquest should come out of decedent's estate; Assembly met in October and adjourned till May, 1704, the Philadelphia delegates being Nicholas Waln, Samuel Richardson, Isaac Norris, Anthony Morris, Jr., Samuel Cart, Griffith Jones, Joseph Wilcox, Charles Read, and David Lloyd, who was Speaker. In November, 1703, the road from Goshen through Haverford to Philadelphia was laid out.

John Evans, Penn's new Governor, arrived in Philadelphia Feb. 2, 1704. He arrived at night. Next day his commission and the queen's sanction of it were published "at y^e market place, in solemn form & order: the s^d Govern^r being present, & attended with the Council of State, the mayor, aldermen, & Council of Philadelphia Citty, the Principal officers, Gentlemen & Inhabitants of the place, from whence returning to y^e Council Chamber, The Govern^r took y^e Chair & held a Council." Evans, after acknowledging the members of the Council, as named in Penn's commission to them, desired to qualify himself all around. Accordingly, Judge Guest administered to him the oath of allegiance to the queen, the oath of abjuration of papal supremacy, and the test oath; having taken and subscribed all which, he wished also to take the oath enjoined by the Acts of Trade, and Col. Quarry, John Moore, and Jasper Yeates, of the royal commissioners, under the king's *Dedimus Potestatem*, were summoned to administer it also. Penn wrote that Evans, though only six and twenty, was "sober and sensible," and he must have

thought so or he would not have intrusted his son to him as a companion; he was, besides, "the son of an old friend who loveth me no little." With William, Jr., and Evans came also Roger Mompesson, Quarry's successor, and the proprietary's attorney-general.

Penn was totally mistaken in Evans, yet he began his career prudently enough. He, young Penn, Mompesson, and Logan, hired a house to live together.¹

CLARKE'S HALL AND DOCK CREEK.
[From an old drawing in Philadelphia Library.]

He did not interfere with the Council, more than to infuse into it new blood, adding to it Penn, Jr., Mompesson, Logan, William Rodgers, William Trent, Richard Hill, and Jasper Yeates, to none of whom any one could have the slightest objection. But, in a very brief while, he began to reveal himself in his true colors. He became involved in a quarrel with the Assembly upon a mere personal question of punctilio, in connection with a member of the Council. He failed in procuring the return of the representation of the Lower Counties to the Assembly, alienating them more completely still, and irritating the represented counties by his methods of procedure. He kept the fever about prerogative, always alive; was underhand and deceptive in his mode of dealing with a people who prided themselves upon the directness of their yea and nay; attempted to raise a militia on his own responsibility without the means to pay them, and capped the climax by engaging in a tavern frolic and fracas with young Penn, whom he is said to have aided to beat the watch.

The correspondence of Logan, the records of Provincial Council, and the minutes of Common Council, with private letters still extant from leading Friends, enable us to get some insight into the local affairs of Philadelphia at this time. We discover the growth and progress of the city, the demands and needs of trade, and the first dawns of the manufacturing spirit, instinctively looking to government for "pro-

¹ This house, known as "Clarke's Hall," stood on Chestnut Street where the branch of Dock Creek crossed it. The lot had a front of ninety-nine feet and a depth of two hundred and fifty-five feet, embellished with a garden in the Dutch style. The property passed into the Pemberton family, and the officers of the United States government were in the house prior to the removal to Washington.—*Westcott*.

tection" in the shape of restrictions imposed upon competitors. Thus, the building interest was important enough to ask for legislation by the Assembly concerning party walls; the transportation and commercial interests petitioned for a cart-way "under the bank," and were very angry with the proprietary for compelling those who wanted "bank-lots" to buy them, and pay sound prices; the municipal interests demanded a new court-house, repairs of the prison wall, and abatement of nuisances committed by prisoners, etc. The shoemakers and saddlers wanted a law for preventing the importation of leather, and a bill to that end was ordered to be prepared; there were petitions for a law to prohibit the exportation of deer skins in the hair; to encourage the killing of wolves (the bonus for wolf scalps was set at fifteen shillings for old ones, and seven shillings sixpence apiece for young ones); the felt-makers asked for a law to prohibit the exportation of all beavers, furs, and raccoon match-coats, such as could be made up in the province, while the farmers asked for a duty on imported hops.

Evans had promised, on his own responsibility, that those who enlisted in the militia should be exempted from watch duty, and it thus becomes apparent that the constable and watchman service was by patrol of citizens. This was not a slight duty, in the nighttime at least. The minutes of Council record (Sept. 3, 1704) that "several complaints have been publicly made of great disorders lately committed within y^e citty in y^e night season, to y^e great disturbance of y^e sober inhabitants, and y^e encouragement of vice by evil examples." Anthony Morris, mayor, on behalf of the corporation, complained of the exemptions, as discouraging people from taking their turns in watching the city; to which the Governor and Council absurdly answered that "the safety of the people by the maintenance of a militia was greater than safety by a watch and ward." They also decided that county justices possessed concurrent jurisdiction in the city with the city magistrate. This was irritating, for the Governor, while he would not license inn-keepers recommended by the mayor's court unless the County Court indorsed the recommendation, had by proclamation set aside a verdict of the mayor's court and forbidden officers to execute it.¹

There were currency troubles at this time already; coin was very scarce, and not to be had out of Philadelphia, so that, as Logan says, "many good farmers scarce see a piece of eight [a dollar] of their own throughout the year," rent and other charges had to be paid in kind, and this affected the price of produce, so that wheat for two years was "worth very little." The Council, on Dec. 8, 1704, received from the Lords of Trade a queen's proclamation "for settle-

ing and ascertaining the curraent rates of forieng coins in Her Majesty's colonies and plantations in America, together with a computation made by Mr. Newton, master worker of the mint, according to which all forieng coins may pass in the said plantations, in proportion to the rates limited by the said proclamation." These rates were the next day proclaimed accordingly, but we are not told whether the revision of the standard by Sir Isaac Newton helped to relieve the stringency in the currency. This change, however, established by act of Parliament, was thought sufficient to forestall any action of the sort by Assembly, and accordingly, in 1709, the Queen's Council repealed an act of the province regulating the value of foreign coins.

Evans wanted to regulate tavern licenses. Probably he had a reason for it. At any rate, he, young Penn, Sheriff Finney, Thomas Gray, and Joseph Ralph, roysterers all, were concerned in a night broil and affray at Enoch Story's tavern, in Coombs Alley. The constable, James Wood, and night-watchman, James Dough, entered the place; there was a quarrel about Evans' militia, the argument ended in blows; Penn called for a pistol, Wood and Dough and Story were beaten; outsiders came in, including Alderman Wilcox, who beat Penn, under excuse he did not know him. The party were fetched before the mayor; Penn was defiant, played gentleman, and was rated sharply. The Council took the matter up, making it appear as if "some gentleman" had been greatly abused by the watch, backed by the mayor, recorder, and Alderman Wilcox; a trial in another place than the mayor's court was asked, but the Council would not interfere. Penn and his companions were indicted, but the Governor forbade the trial by proclamation. After this indictment young Penn renounced the Quaker principles and faith, and his personal friends were indignant. But the community was indignant likewise at such behavior, and with good reason. "I wish things had been better or that he had never come," wrote Isaac Norris; and not many were sorry when he took short occasion to depart.

The minutes of the Common Council begin in October of this year thus: "City of Philada. Att a Meeting of the Mayor, Aldermen, & Comon Council at the House of Barbert Carry [Herbert Carey] of this City, Inn holder, the Third day of October, 1704, Pr,s,nt."¹ Griffith Jones was elected mayor for the ensuing year, and his fine remitted for declining a previous election. As "Csonabl (considerable) mischief" had lately been done by cartmen in the city

¹ The county justices appointed at this time were John Guest, Samuel Finney, George Roche, Samuel Richardson, Nathan Stanbury, John Jones, Joseph Pidgeon, Edward Farmer, Rowland Ellis, and Andrew Bankson, Jr.

¹ The mayor was Anthony Morris; David Lloyd, recorder; Aldermen, Edward Shippen, Griffith Jones, Joseph Willcox, Nathan Stanbury, Charles Read, Thomas Masters, William Carter, John Jones; Common Council, John Parsons, William Hudson, William Lee, John Budd, Jr., Edward Smout, James Atkinson, Penticost Teague, Francis Cook, Henry Badcock, Robert Yieldhall, Joseph Yard, Thomas Griffith, John Redman, Sr.

through reckless driving, an ordinance was ordered to be drawn up for their regulation, and the cartmen summoned and admonished to take care. We thus get the names of all the persons in the local transportation service of Philadelphia at this time.¹ The people of the town, by ordinance, were divided into ten patrols, and "each Constable bring in a Number to have an Equall Number assign'd to serve upon the Watch, and that nine persons besides the Constable Attend the Watch each night." Thus the patrol was a squad of ten, each division of citizens contributing a patrolman each night. John Budd and Henry Badcock were allowed four pounds apiece for wintering the two town bulls, from December 1st to June 15th. John Knowles, Nath. Webb, James Wood, George Painter, Nathaniel Tylee, Edward Evan, Abram Carlisle, John Test, Thomas England, "this day took out their freedoms;" that is to say, they became members of the corporation, and acquired the rights of citizens, either by becoming free as apprentices or indentured servants, or in other ways. It was ordered that a watch-house should be built in the market-place, sixteen feet long by fourteen feet wide, and that John Redman, Joseph Yard, and John Parsons calculate the cost and report to next meeting. (The sum was sixty-five pounds.) The expediency was considered of an ordinance to prevent the boiling of tar into pitch and heating pitch on the wharf or within twenty feet of any building, and of forbidding haystacks "in the back-sides." The town-crier was ordered to give public notice that the act for preventing fires would be vigorously put in execution, and the mayor was ordered to inspect the bakeries once a month, to see if bread was of proper weight. On December 15th fifteen more freemen were admitted. The city was ordered to be divided into ten wards. One hundred and fifty pounds were asked for repairing the wharves, according to a survey made by Shippen, Willcox, Carter, and John Parsons, to wit: £50 to repair and make good the "Arch wharf," £20 for High Street wharf, £30 for Chestnut Street wharf, and £50 for Walnut Street wharf.

In 1705 the Common Council transacted a good amount of municipal business. The poor were taken care of, the Council agreeing to indemnify the mayor in any engagement he should make with the overseers in their behalf. His first payment to the overseers was £3 16s. 8d. out of his own pocket, "which he is to be repaid out of the first money raised." The committee to divide the city into wards (Aldermen Willcox and Carter and Councilmen John Parsons, Francis Cook, John Budd, John Redman, and Thomas Pascall) reported their work done, as follows: *Dock Ward*, inhabitants between Delaware

River and Seventh Street, south of Walnut Street, the south side of that street included; *Walnut Ward*, between Walnut and Chestnut Streets, from the west side of Front to the east side of Second Street (inclusive); *Chestnut Ward*, between Chestnut and High Streets, from Front to Second Street; *Lower Delaware Ward*, between Front Street and Delaware River, from the end of Walnut Street to the end of High Street, "both vpon & vnder y^e Bank;" *Upper Delaware Ward*, between Front Street and Delaware River, from High Street to the north end of the city;² *High Street Ward*, between High Street and Mulberry Street, from Front to Second Street; *Mulberry Ward*, north side of Mulberry Street to the extent of the city, from Front to Seventh Street; *North Ward*, between Mulberry Street and High Street, from Second to Seventh Street; *Middle Ward*, between High Street and Chestnut Street, from Second to Seventh Street; *South Ward*, between Chestnut and Walnut Streets, from Second to Seventh Street.³ Alderman Willcox and Recorder Story were ordered to draw up an ordinance for the regulation of the city watch. This was done and the new ordinance adopted and published, whereupon Governor Evans construed it as a defiance of his militia proclamation, and summoned the mayor and municipal officers before him. It was easy to purge themselves of the charge of contempt by disclaiming any such intention, and they were excused. Nevertheless, the Governor published his proclamation anew. None of the wards of the city extended beyond Seventh Street, because, as appears by ordinances adopted at this time, the outlying parts were reserved for meadow and pasture, were grubbed, cleared, and sowed in "English grass." The crier took an account of all cows, and for every cow of two years old and upwards an annual tax of twelve pence was levied for the purchase and maintenance of the town bulls. The aldermen and members of Council divided among themselves the duty of superintending the wharves and bridges of the city.

A source of revenue at this time was found in a tax for admission to the privileges of a freeman of the city. It was needed, for as yet there was no regular municipal tax, and only a few licenses and fines, as, for example, the fine of three shillings imposed on

² This point was in dispute. The same day that the wards were divided the following order was passed: "This Council being Informed that the bounds of this City is Incrocht vpon, & that tis Suggested that it Terminates Northward on the River Delaware at the Penny Pott house, Whereas it is made appear to this Council that it Extends to the Runn on this Side Daniel Peggs Land & so was first laid out. It is therefore ordered that the Recorder consider on some pp. [proper] & legal Method to Ascertain the True bounds thereof & report the same at the Next Meeting." The commissioners of property, however, refused to join with the corporation in ascertaining these bounds, and the recorder was directed to consider the matter further. There is no evidence that anything was done, however, and this same matter came up again in the Council in 1720 without apparent action.

³ Redivisions of the wards at subsequent periods are fully discussed in the chapter on the topography of Philadelphia.

¹ They were: Richard Pruse, John Till, Widow Bristow, Myles Godforth, Christopher Hobb, Philip Wollis, William Bywater, Isaac Bland, Nicholas Pearce, Samuel Parker, James Jacobs, Henry Carter, Thomas Shall, John Mitchenor, John Mifflin, Nathan Poole, sixteen in all.

aldermen and councilmen absent from regular meetings or dilatory in attendance upon them. The duty on freemen, therefore, was popular with the members of Council, and they took steps to increase the returns from it by methods of "gentle suasion." The charge for admission ranged from two shillings sixpence to three pounds and upwards,¹ and women as well as men were admitted. The privileges were not trifling; none but freemen were eligible to corporation offices, and this rule was strictly enforced, so that after election the persons elected were constrained to take out their freedoms before qualifying, and none but freemen could vote for members of Assembly. The precise terms of the immunities and privileges could not be determined at once, and the form of the freedom paper was several times changed. To add to the city's revenues it was planned to force persons to become freemen of the corporations, and accordingly it was ordered that none but freemen could keep shop or become master workmen. Numbers of persons became freemen under these rules, and to secure these immunities and privileges. At the same time, while the city was looking after its freemen and taking care of its poor, it was particular not to be burthened with the poor of other places, and an ordinance was adopted requiring all strangers coming into the town to give security that they would not become a burthen to it for seven years. This must have borne hardly upon poor German and Irish immigrants, and probably forced a good many to become indentured servants who would not otherwise have done so.

At this time also measures were taken to secure a piece of ground for a public cemetery and burial-place for strangers, each religious denomination, as a rule, already having its own churchyard. Penn's commissioners of property, upon petition of the mayor and Common Council, granted the city a square, one of those originally marked out by Penn for public uses,—five hundred feet long and the same in breadth, bounded north by Walnut Street, east by Sixth Street, south by a street forty feet wide, "for a common burying-place for the service of the city of Philadelphia, for interring the bodies of all manner of deceased persons whatsoever whom there shall be occasion to lay therein." It was to be held as of the manor of Springettsbury, in free and common socage, at the annual rent of an ear of corn. This was a public general cemetery, but used at first also as the Potter's Field. Other ordinances of an ephemeral and routine character relating to the jail, the market-house, the regulation of weights, preventing butchers from committing nuisances in connection with their slaughter-houses, appointing a wood-corder (his fee was five pence per cord), forbidding persons from riding through town at a gallop, etc., need only be mentioned as illustrative of the town's growth.

The public revenue, as distinguished from the municipal, was not large. The Assembly was almost resolute not to vote anything for Penn, contending that the proprietary's quit-rents of twelve pence per one hundred acres of purchased lands were tax enough for his support and for that of the government as well. However, £1200 was voted, and the tax put at 2½d. per pound and 10s. per head, with a regular tariff, but the Governor giving the Assembly fresh cause of offense, the whole matter was let drop. Evans at this time was trying to punish William Biles, one of the members of Assembly, for calling him a boy, unfit to be Governor, and saying "We'll kick him out," and the Assembly was resisting what it claimed would be a breach of privilege. It was nothing but a squabble on both sides, but it caused bad blood.

The Assembly had been meeting at this time (1705-6) in a school-house, and Thomas Makin complained it had cost him the loss of several scholars, and three pounds was ordered to be paid him by the county of Philadelphia. At the same time an address was presented to the Governor asking permission for the Assembly to sit in Chester and Bucks Counties, until Philadelphia County provided a State house or other convenient place for the Assembly to sit in. This Assembly revised and re-enacted many old laws, and passed some new ones; among others the Sunday law, by which all labor and worldly business on the first day of the week was forbidden, penalty twenty shillings, certain necessary labors excepted. Sunday tipping in taverns and ale-houses was forbidden also, with exception in favor of ordinaries and the traveling community. An election law was also passed, directing elections to be held annually on October 1st, or the first Monday in that month when it began on Sunday. The counties each had eight members, and Philadelphia City two. In Philadelphia the polling-place was at or near the market-house, and voters in Philadelphia must be natural born or naturalized subjects of the crown, two years resident in the State, and freeholders or possessed of fifty pounds clear personal property upon the spot. Voting was by ballot, the voter writing his own ticket. The Assembly must meet on October 14th. The pay of members was six shillings per day, three pence mileage. The Speaker was paid ten shillings. Many other acts of a general legislative character were passed, but none particularly relating to Philadelphia excepting one forbidding pigs to run at large within its limits, and another giving the corporation and county justices authority to regulate, license, or suppress vintners and ordinary keepers, the license for ordinaries and taverns in the city being £3 6s., paid to Governor and secretary.

Under date of May 15, 1706, there is the following in the minutes of the Common Council: "Whereas, the Gov^r having rec^d an Express from the Gov^r of Maryland of sevall vessels lately seen some few leagues off the Capes of Virginia, & two of them chasing &

¹ James Bingham was admitted 9th of April, 1705, and paid £3 2s. 6d.

firing several Shots at an English vessel bound to Virginia or Maryland, which are Suspected to be French vessels, & probably may have a design upon some of the Queen's Colonies. It is therefore ordered that the watch of this City be carefully and duly kept, and that the Constables at their pill [peril] take Care of the same, & in Case their appearance any show or danger of the Enemy, that they give the Alarm by ringing the Market Bell & that every night one of the Aldermen see the Watch sett & see that two Constables be sett thereupon till further order." There was no such express, no such news, but Evans had a "plan" to trick the people into giving him a militia by getting up a panic about invasion and pirates. Next day a messenger came post-haste from New Castle, saying the enemy's ships were in the river and making their way to the city. The alarm spread, the bell rang, the terrified people prepared for flight, vessels cast loose from the wharves, they and every vehicle loaded with goods hastily gathered, valuables were buried, women shrieked and children screamed, and in the midst of the confusion Evans rode on horseback into the excited streets, a drawn sword in his hand, calling upon the people to rise *en masse* to repel the invaders and defend the city. The Quakers may have been as much disturbed as any by this excitement, but they kept their outward composure and only four of them mustered in arms at Evans' call.¹ To make things worse, it was the day for Quaker meeting and for the half-yearly fair. However, there was not much harm done; the trick was soon discovered, and Evans' folly and knavery recoiled severely upon his own head, all his friends also being visited with the popular contempt, and some of them threatened so that they found it prudent to go into hiding. Logan suffered much from his intimacy with Evans at this time. The whole performance was, as Logan characterized it, "a most mischievous, boyish trick, and the next Assembly, when it met, treated Evans as a person not entitled to any consideration, nor to be heard on any subject without suspicion. The militia that was under arms melted away, and the next Assembly which was elected was composed for the most part of the Governor's enemies. Philadelphia County was represented by the Speaker, Daniel Lloyd, Joshua Carpenter, Robert Jones, John Roberts, Griffith Jones, Samuel Richardson, Joseph Willcox, and Francis Rawle; the city's members being Francis Cook and William Hudson.

This body gave the Governor no peace. They assailed Logan as Evans' pernicious counselor and an enemy to the province, and demanded his removal. He was charged with attempting to subvert and betray the rights and liberties of the people, was arrested, imprisoned, and would have been impeached but for the pressure of other concerns. But Evans had not

yet exhausted his powers of mischief. The Quakers could neither be driven nor frightened into catering to his itch for military measures. He turned to the seceding Delaware counties, and obtained their consent to build a fort at New Castle for the defense of the Delaware River. This was late in the autumn of 1706. The Friends in Philadelphia had no objection to the fort as a defensive outpost; as an obstruction to navigation and a hindrance to commerce, however, it became very offensive to them. The regulations in connection with it were such that every vessel passing up or down the river had to bring to and the captain was obliged to land, report, and get leave to continue his voyage. The penalty for refusing to come to anchor was a fine of five pounds, twenty shillings added for one gun, thirty shillings for the second shot, and forty shillings for the third and each succeeding shot fired in compelling obedience. Each inward bound ship, not owned by residents, had to pay a duty of half a pound of gunpowder for each ton of the ship's measurement. The merchants of Philadelphia remonstrated, but without effect. Then Richard Hill, a member of the Provincial Council, of the board of aldermen, and afterwards mayor, a man of energy and courage, determined to try if this obstruction could not be removed. He associated with him two leading Quakers, William Fishbourne and Samuel Preston, and the three went down the river in Hill's vessel, a sloop just cleared for a voyage across the ocean. This was May 1, 1707. When the fort was reached the vessel anchored, Hill's friends went ashore, produced the clearance papers and Governor's permit, and demanded to be allowed to go on. The captain of the fort refused, when Hill heaved up his anchor, hoisted sail, took the helm himself, and "ran the blockade" without other hurt than a shot through the mainsail. French, captain of the fort, pursued in a boat, was suffered to come abroad, then made a prisoner, when Hill took him to Salem, N. J., and delivered him to Lord Cornbury, who severely reprimanded the captain. Governor Evans pursued in another boat to Salem, but could get no satisfaction in spite of his rage.

Hill next brought the subject before the Representatives with a petition to the Assembly signed by two hundred and twenty citizens of Philadelphia. The Assembly pursued the matter in an address to the Governor so strongly couched that Evans was alarmed, suspended the proceedings, and gave no more trouble to navigation. When the Assembly met again, in February, 1707, it was very angry, and would keep no terms with Evans. Lloyd and he flagrantly quarreled, and the House sustained the Speaker; the impeachment bill against Logan was perfected and presented; the House refused to give the Governor an acceptable court bill; the Governor declined to try Logan's impeachment, and the Assembly petitioned Penn for his removal, declaring that he had, "by his excesses and misdemeanors, dishonored both God and

¹ Logan names Edward Shippen, Jr., John Hunt, Benjamin Wright, and two or three more.

the Queen, and has brought this government under very great and public scandals."¹

In spite, however, of these disagreements and of unquestionably bad government the province grew and thrived lustily. Isaac Norris, writing to Penn (then in the Fleet prison), computed imports at £14,000 to £15,000, paid for in return merchandise and produce, tobacco, furs, and skins. He thought the customs receipts for 1707 would exceed those of any previous year.

In 1708 the Assembly met without consent of or notice from Evans, who was either at Newcastle or in seclusion at his private house among the Swedes at Shakamaxon. French privateers, Capts. Crupant and Castrau, with others from Martinique, were off the Capes, and captured at least three vessels from or to Philadelphia. Evans again asked for supplies for defense and was again refused, and treated severely, even castigated for his encouragement to vice and debauchery. He knew that his removal was determined upon, and indeed the appointment of Col. Charles Gookin was approved by Queen and Privy Council as early as June 28, 1708, though he did not arrive in Philadelphia until Jan. 31, 1709. At Shakamaxon Evans lived in the stately house built by Thomas Fairman, a property Penn had several times, even as late as 1709, tried to buy for himself. This, nevertheless, was Penn's darkest hour, and he had only been able to get out of the debtors' prison at the end of December, 1708, by mortgaging his entire province.²

Slavery was not very different in Philadelphia at this time from what it was in the South at a later period. The white mechanics and laborers complained to the authorities that their wages were reduced by the competition of negroes hired out by their owners, and the owners objected to the capital punishment of slaves for crime, as thereby their property would be destroyed. In 1708 two slaves, Tony and Quashy, were sentenced to death for burglary, but their owners were allowed to sell them out of the province after a severe flogging had been given them upon the streets on three successive market-days.

Governor Gookin, upon his accession, added some members to the Council, and courteously declined to listen to the Assembly's complaints against his predecessor and against Logan. That body also tried to regulate the currency and the coinage anew, but was prevented by the Royal Council. They were in a querulous and petitioning mood, and called the at-

tention of the new Governor to several grievances. He, not to be outdone, asked for men and money for the expedition to Newfoundland. Thus the old quarrel was renewed, and in a short time there was a deadlock. In May, 1709, a privateer entered Delaware Bay and plundered the town of Lewes. Another, in July, being beaten off in an attempt to land at Lewes, stood up the bay. The Governor called upon the people to stand to their arms, and the whole militia to prepare to be called out, and summoned the Legislature in special session. They met and voted some small sums for presents to Indians and other minor matters, and then renewed the old disputes about the courts and James Logan, whom they denounced as an evil minister. They adjourned *sine die* in September, but the new Assembly elected to succeed them was still more unfriendly to all the proprietary interests. But little legislation could be perfected under such circumstances. Logan and Robert Asheton were particularly pursued by the Assembly as being hostile to the popular side of the matters in dispute, and the former, proposing to go to England, could only escape arrest on the writ of Speaker Lloyd by the direct interposition of Governor and Council. The Swedes were represented in this new Legislature, and their petitions and complaints began to be heard in regard to the changes made in the grants held by them under the Duke of York's laws.

At this time all the Germantown Germans were naturalized, in consequence of an attempt of John Henry Sprogle to get possession of their lands as the successor of the Frankford Company. Sprogle appears to have been the prototype of the now familiar "land-shark" of the West. He began his course of chicanery by retaining all the lawyers of the province, paying them contingent shares of the property he counted upon seizing. David Lloyd appears in a very unenviable light in connection with these transactions, of which it is enough to say that Sprogle's designs were baffled.³ The Municipal Council does

¹ More than one debauchery was alleged against Evans in connection with both Indian women and whites; he is charged with misappropriation of funds, with granting improper and unwarrantable tavern licenses, etc.

² The sum was £6800, the mortgagees were Henry Gouldney, Joshua Gee, Sylvanus Grove, John Woods, and John Field, of London; Thomas Callowhill, Thomas Dade, and Jeffrey Pennel, of Bristol; and Thomas Cuppige, of Ireland. They did not take possession, but appointed Edward Shippen, Samuel Carpenter, Richard Hill, and James Logan their agents to collect rents and sell lands to settle the debt.

³ Lloyd's pay was to have been one thousand acres of land, the property of Benjamin Furley. Sprogle himself was naturalized by special act of the Council. Under that passed for the relief of the Germans the following persons were naturalized: Francis Daniel Pastorius, John Jawert, Casper Hoodt, Dennis Kunders, and his three sons, viz., Conrad, Matthias, and John Conrads, Dirk and Peter Keyser, John Lurhen, Wilhelm Strepers, Abraham Tennis, Lenhard Arrets, Reinier Tysen, Isaac and Jacobus Dilbeck, John Deeden, Cornelius Siverts, Henry Sellen, Walter Simons, Dirk Jansen, Jr., Richard and John Rocloss Vanderwerf, John Strepers, Sr., Jacob, Peter, George, and Isaac Shoemaker, Matthias Van Belber, John Conrads, Sr., Lenwes and Henry Bartella, Conrad, Claus, John, and Wilhelm Jansen, Johannes and Peter Scholl, Matthias Lysen, Cornelius Vandergat, Peter Clever, George Gottschik, Paul and Jacob Engell, Haus Nons, Rainer and Adrian VanderSluys, Jacob Gottschalk, Gottschalk and — Vander Heggen, Caspar Kleinhoof, Henry Buchholtz, Herman Tymen, Paul and John Klumpges, John Neus, Matthias Neus, Cornelius Neus, Claus Ruttinghuysen, Caspar Stolls, Henry Tubben, William, Hendrick, and Laurence Hendricks, Henry Kesteberry, Johannes Rebenstock, Peter Verbymen, John Henry Kersten, John Radwitzer, John Gorgaes, John and William Krey, Peter and Evert in Hoffee, Peter Jansen, John Smith, Thomas Echelwich, Gabriel Senter, Wilhelm Putz, John Lensen.

not seem to have been busy. The members feasted the new Governor, carried forward a new project for a court-house, and began to consider proposals for a new and enlarged market-house. Additional steps were also taken to prevent fires, and secure their suppression in case they did break out. The Assembly did nothing at all, the Governor refusing to meet them.

A reaction appears to have set in October, 1710, possibly in consequence of the dead-lock obstructing all business, and in consequence also, perhaps, of the entreaties and pleadings of Penn with the Quakers and the exposure of David Lloyd's transactions with Sprogle. Whatever the cause, the Legislature elected in October, 1710, did not contain a single member of the Legislature of 1709. The people had swept every one of them out of the way, from David Lloyd down, and chosen entirely new men. Edward Farmar, William Trent, Edward Jones, Thomas Masters (ex-mayor), Thomas Jones, Samuel Cart, Jonathan Dickinson, and David Giffing were the members from Philadelphia County; and from the city, Richard Hill (ex-mayor, Speaker), and Isaac Norris. But, though this new House assumed more cordial relations with the Governor, no immediate business was done. The Municipal Council determined to build a new market-house at once, the aldermen being called upon to subscribe £5 each and the common councilmen £2 10s. each. Stalls in this new building were rented at nine shillings per annum, and the lessees could not sublet them to any but those having the freedom of the city.

The initial steps towards building a court-house had been taken in 1707, when the Assembly proposed to hold its sessions in some other place than Philadelphia. The cost of such a building as was needed was estimated at six hundred and twenty pounds, requiring a shrewd tax. The county magistrates would not levy for it unless the city people permitted the cost of two new county bridges, which were needed, to be levied for also, and to this the citizens objected very decidedly, claiming that they would take no good from the bridges. The county people retorted that the city would not help to build the bridges even at the town end and Frankford, and that the county courts, in the capital city of the province, had no better place to hold their sessions than an ale-house. Finally there was a compromise, upon the city agreeing to build the court-house at its own charge if the county would provide for building the bridges, the county courts, however, to have free use of the new building.

This, which was completed towards the close of the year 1710, was built at the eastern end of the old market-house, on High Street, between Second and Third Streets. It stood upon arches, with brick pillars for them to rest upon, the basement being open for market stalls. It was a quaint, old-fashioned structure, with a little cupola and a bell, and having a balcony in front, over the door, and flights of steps leading up to it. This balcony covered an inclosure

beneath it which was rented for a shop, and from the balcony nearly all the out-door speech-making in Philadelphia was heard. The Governors used to deliver their inaugural addresses here, and here it was that George Whitefield spoke to six thousand people. This court-house was the town hall and seat of the Legislature and the Municipal Council also, state-house, and town-house, until the State-House was erected in 1735.

OLD COURT-HOUSE, TOWN HALL, AND MARKET, IN 1710.

[From an old drawing in Philadelphia Library.]

The "Mayor, Recorder, Aldermen, Commonality, and other Inhabitation" petitioned [the General Assembly in 1710, before the court-house was finished, for a grant of more liberal powers to the corporation, in order to enable it to check the growth of vice and immorality, prevent the decay of the public credit, "and also to inable them to build a watch-house and cage, erect a work-house to imploy the poor and vagrant, mend the streets, make and Repair Warfs and Bridges, etc., and by Levying money on the Inhabitation and Estates of all Persons within the limits of the same for defraying the Public necessary charges thereof," etc., etc.¹

¹ The signers of this petition were Will. Allen, Leeson Loftus, John Warder, Caleb Jacob, Hugh Lowden, Jno. Beeton, William Kelly, Ralph Jackson, Owen Roberts, Matthew Robinson, Lionel Buters, George Blumley, Thomas Coldman, Richard Willis, Thos. M. Carey, Arthur Holton, Richard Armitt, Geo. Gray, Thomas Bradford, Thos. Griffith, Tho. Murray, Francis Richardson, Clem. Plumsted, Stephen Jackson, Wm. All, Jno. Budd, Sam^l Wamrise, Ed. Noble, Chas. Sober, Henry Flower, Jno. Redman, Thos. Wharton, Edw. Hadden, Francis Knowles, Daniel Radley, Joseph Claypoole, Thomas Eldridge, Jacob Warren, Wm. Lawrence, John Widdifield, Justinian Fox, Wm. Bartling, Wm. Oxley, Jos. Harrison, Jno. Harrison, Joseph Yard, Jr., William Hill, Anth. Morris, Jr., Nathaniel Tybe, John Bass, James Morris, Edw. Shippen, Jr., Wm. Fishbourn, Anthony Burton, James Wood, George Painter, James Estauigh, George Claypoole, T. Mason, Robert Burrough, Johannis Nys, Caleb Ransted, Jo'n Warder, Sam^l Holt, Richard Robinson, Thos. Pryor, Thos. Peters, Elisha Gatchell, Wm. Robinson, Cesar Ghiseling, John

There were numerous disputes in this period of Philadelphia's history about ferry rights, which those who held them regarded as valuable franchises, and the general community treated as invasions of public convenience. Some of these rights were granted by Penn. some by Council and Assembly, but usually when they came up they were subjects of protest and remonstrance by the corporation or by individuals.

Conferences with Indians were common, and they became more and more expensive as the nation receded farther into the interior. In previous times the presence of Indians in the streets of the town had been an every-day occurrence. They came as individuals unheralded, had no particular reception save on solemn occasions, as of a treaty or the like, and went as they came. But latterly, as many white settlements interposed between their villages and the city, the character of their visits changed. They came as tribes, or delegations from tribes. They sent messengers in advance, needed guides, an escort and carriers for their luggage; brought presents to emphasize their complaints and grievances, and in return looked for presents, entertainment, and lodging. This was costly in comparison to the older way of these visits, and, while it might tickle the fancy and gratify the pride of the Governors, was not very pleasant to the matter-of-fact people. There were numbers of these visits *en grande tenue* during the terms of Governors Gookin and Keith, and the latter indeed negotiated treaties of importance with them, both at Philadelphia and at other places. But one of these visits was like all the rest. There was the grave assemblage, the squatted circle, the metaphorical council fire, the passing round of the calumet (it is so called even in these colonial records), the speeches in turn, each point emphasized by the belt of wampum, the presents, the feasts, and the drunken Indians about town for some days afterwards. The presents from the Indians were of furs and skins; those in return were of clothes, arms, utensils, ammunition, etc. The chief interest these councils can have to us nowadays, so far as the personal and particular history of Philadelphia is concerned, is that they enable us to get a measure of the contemporary value of sundry services and com-

modities. Gookin, in June, 1710, sent two messengers to Conestogo to confer with the Shawanese and other Indians there. The bill of expenses was as follows: 4 shillings 6 pence for bread, 12 shillings for meat, £1 10s. for rum, 15s. for sugar, £4 for time of two men for baggage, and "John" (interpreter and guide) £1 4s. The chief expense, therefore, was for transportation; pack-horses had to be used, and all supplies for a journey carried on them. We find Col. French's bill for divers journeys to Conestogo, from 1707 to 1711, to have been £147 6s. 10d., all incurred in looking after the Indians, the remnants of the Susquehannas, and the fragments of tribes gathered around them. In June, 1711, Governor Gookin went to Conestogo and had a talk with the tribes through Indian Harry, the interpreter. The conference opened with the present of 50 pounds of powder, 100 pounds of shot, 1 piece of stroudwater, and another of duffels from the Governor. In May, 1712, there was a conference at Whitmarsh, in Philadelphia County, at which thirteen Delawares met the Governor and Council. They presented thirty-two belts of wampum, and the peace-pipe.¹ They also presented two packs of dressed deer-skins, and received presents in return, including laced stroudwater coats, and "white shirts," for the chiefs of the Five Nations. In July another delegation came to Philadelphia. They brought skins and furs worth seven pounds, and received six match-coats, six duffels, six white shirts, fifty pounds of powder, one hundred weight of lead, etc.²

In October, 1714, another Indian visit is alluded to, the presents being £3 15s. in furs; the return was £10 in goods, a present to Indian Harry, and the cost of entertaining them. In June, 1715, Opessah and Sassoonan, chiefs of the Delawares and Schuylkills, came on a visit to Philadelphia, and brought presents again.³ The presents given in return were valued at £34 4s. 6d. The list shows that a stroud match-coat

¹ "A long Indian pipe called the Calamet, with a stone head, a wooden or cane shaft and feathers fixt to it like wings, with other ornaments." This pipe, they said, had been given to them by the Five Nations in token of allegiance and protection."—*Minutes of Council*, ii. 546.

² The presents from the Indians included 30 deer-skins, valued at 30 shillings 6 pence each; 2 half bears, 7 shillings; 3 foxes, 18 pence each; 6 raccoons, 1 shilling each; 3 bears, at 5 shillings each; one dressed doe, at 3 shillings 6 pence. Another present from the Five Nations and the Delawares on their return was valued in all at £31 7s. 6d., and included: 5 bears, 7½ pounds, at 3 shillings 6 pence per pound; 25 bucks and does, at 3 shillings each; 2 bears, at 4 shillings 5 pence each. The Delawares gave: 49 bucks, at 5 shillings each; 71 does, at 2 shillings 6 pence. The Senecas: 15 beavers, 23½ pounds, at 3 shillings 6 pence; and 5 does, at 2 shillings 6 pence. In return, there was spent on these Indians by Mr. Farmer, £18 3s. 10d.; £50 6s. 6d. was given them in presents, and the bill for mending their guns was £2 6s. 5d. Besides, the treasurer showed disbursements on their account of £96 13s. 10¼d.

A list containing nearly all the leading citizens of Philadelphia at that day.

was valued at nineteen shillings; a duffel match-coat, at twelve shillings; a blanket, thirteen shillings four pence; a shirt, eight shillings six pence; powder, at one shilling ten pence per pound; lead and tobacco, three pence each per pound; pipes, four shillings six pence per gross. These Indians appear to have become very drunk during their visit; they complained much of the sale of rum within their territory, and the Governor gave them a written permit to stave the casks, and destroy whatever liquor should be brought among them.

The regular annual disbursements on Indian accounts were about one hundred pounds, in addition to the incidental expenses such as have been enumerated, and the presents and entertainments by the corporation and the Friends, so that it must have cost the province between three and four hundred pounds a year to maintain pacific relations with the savages. Governor Keith's bills in 1717, when he went to visit them in Conestogo, were £41 1s. 4½d. In June, 1718, on the return visit, the Indians brought skins worth £8 6s., and received presents valued at £10 12s. 2d., besides cost of entertaining them and traveling expenses. In 1720, Logan had a conference with them, and some came to him at Philadelphia and Stenton. The bills were £16 18s. 1d.; presents from Indians, £10 5s., as a drawback. The negotiations at Conestogo in 1721 by Keith and Logan cost £156 12s. 9d. Several hundred pounds were spent for presents and entertainments during the remainder of Sir William Keith's stay in office, while under Governor Gordon the presents were much larger and more costly, and the expenses of some negotiations were quite heavy.¹

In regard to negroes, as has been seen, the Assembly of Pennsylvania seemed to view with concern, and perhaps apprehension, the introduction of so many slaves into the province, and the depression of labor consequent upon slave competition with wage-earning white labor. The House would not consider any proposition to free negroes, deciding that to attempt to do so would be "neither just nor convenient," but it did resolve to discourage the importation of negroes from Africa and the West Indies. It laid a tax of twenty pounds a head upon all such importations. This and other similar per capita taxes at different rates were made inoperative by the refusal of the queen and Royal Council to approve them.

The face of the British government was set like a flint against any provincial attempt to arrest the African slave trade or tax it out of existence—that trade was a royal perquisite. It was looked upon also as an imperial necessity, in order to enable the American colonies to produce largely for the benefit of British trade. The consequence was that every act of the Legislature of Pennsylvania which looked to the imposition of any sort of restriction upon slavery or the intercolonial traffic in negroes was promptly repealed by the sovereign and the Royal Council. There were many of these acts, but they all met the same fate.²

This matter of the Provincial Legislature's power to tax negroes and mulattoes, and its right to regulate their importation and that of white apprentices and servants was continually coming up. The Assembly persisted in its capacity and right to tax and regulate,

² The policy was an established one. The British Board of Trade, in April, 1708, in writing to Evans for details in regard to the slave trade, prices, number of vessels, etc., said explicitly, with respect to the African trade, that it was absolutely necessary "that a Trade so beneficial to the Kingdom should be carried on to the greatest advantage, and the well-supplying of the Plantations and Colonies with sufficient numbers of Negroes at reasonable Prices is, in our opinion, the Chief point to be considered in regard to that Trade." The English attorney-general, in the same way, when acts of the Pennsylvania Assembly and Governor and Council came before him to be examined for the benefit of the Royal Council, always objected to any attempt to put a duty on the importation of negroes. In 1713, for instance, he says, "I submit to your Lo'pps (Lordships) Considerations how far it may be proper for them at Pensilvania to lay a Duty on Negroes, Wine, Rum, and Shipping, etc., and how far it may affect her Majesty's Subjects here, of which your L'pps are most proper judges." Again, of the act "To prevent the Importation of Negroes and Indians into this Province," he says, "How far this Act may interfere with the British Interest as to their Trading in Negroes, your Lo'pps are most proper Judges; But I observe this Act gives a power to break open houses to search upon suspicion of Negroes being there Generally, which Extends to Night as well as day, which power is rarely admitted by our Law in offences of an inferior nature." It must be added that the queen and Council were justified in repealing much Pennsylvania legislation, because, like the above, it was loosely drawn, and offensive either to prerogative or individual right. Thus the act against riotous sports, plays, and games (of 1709) was liable to the objection that it restrained her majesty's subjects from innocent sports and diversions; an act for acknowledging and recording deeds prevented women from recovering their dower, or thirds, in property aliened without her consent during coverture; another act attempted to alter the value of coins as set by Parliament; an act about courts, it was clearly shown, would multiply suits and the law's vexatious delays; of "An Act for Priority of Paym't of Debts to y^e Inhabitants of this Prov.," the attorney-general says, sharply and well, that "I apprehend among Traders, in point of Reason, all persons who give Credit to & make Contracts with others should stand on y^e same foot as to the Recovery of their debts, and I conceive that such a preference of Creditors as is given by this Act may prejudice all the subjects of Great Britain who deal with the Inhabitants of Pensilvania, & therefore that this ought to be repealed." The act regulating party walls and buildings, again, is condemned, because it authorizes suit in court for recovery by suit of damages awarded by mayor and board of aldermen, thus multiplying suits and yet allowing no chance for a final appeal. The act for the better government of Philadelphia is found objectionable. "This act inflicts five shillings penalty on persons riding a gallop and ten shillings for persons trotting with Drays or their Teams in the Streets, and five shillings for allowing a Dog or a Bitch going at large, or firing a Gun without Lycence, or if a Negro be found in any disorderly practices or other Misbehaviours may be whipt 21 lashes for any one offence or committed to prison, which words 'other misbehaviours' are very uncertain, and give very arbitrary powers where the punishment is great." It must be confessed such laws are repealed on sufficient grounds.

and the imperial government as regularly repealed all acts claiming such powers. In other respects also the relations of negroes to the community were anomalous; they were property and human beings at the same time, and the unsolved problem was how to punish the human part without robbing the master of the services of the slave part. The problem was not solved, but negroes were required to be tried by special commissions of the magistracy; they were sometimes ordered to be sold beyond his majesty's dominions, but were seldom executed, save for capital crimes, such as murder, rape, and arson. The status of indentured servants and apprentices became unsatisfactory likewise after population grew more dense and the drum and fife of the recruiting sergeant were familiarly heard. The apprentices and redemptioners belonged to their masters for a term of years, yet they would run away and enlist, and the recruiting officers would place them in the service, no matter what masters said. In the time of the old French war, and in that of Governor Hamilton, it was estimated that there were sixty thousand imported white servants of the several grades in the province, and sometimes as many as three or four thousand of these would be enlisted in the quotas of Pennsylvania, Delaware, and New Jersey. There was much dissatisfaction at this, considerable loss and disturbance of labor; the Assembly petitioned, protested, remonstrated; sometimes relief was given in the shape of bounty and drawback, sometimes the military leaders promised that the offense would be prohibited, but the grievance was not finally abated until 1776, after the outbreak of the Revolutionary war.

Towards the end of Governor Gookin's tenure of office, and in the beginning of Sir William Keith's, the province began to be uneasy at the large number of foreigners seeking refuge there. They came by shiploads, they could not speak a word of English, and they were averse to getting themselves naturalized. It was represented in Council that they were strangers to the Constitution and laws. They dispersed into the interior immediately after landing, without showing any credentials or evidence of who they were or where they came from. Captains were accordingly required to produce lists of the number and character of those imported by them, and the immigrants were notified to come forward and subscribe the proper oaths or affirmations. Logan, in one of his letters, speaks of the number of these incoming Palatines. They may be honest men, he said; but Swedes could come in in the same way, in like numbers, and Sweden has lately made pretensions of regaining her ancient possessions on the Delaware. In short, the province was in something of a panic in regard to what was becoming a leading source of its growth in wealth and other resources, and what furnished the sturdiest and most pacific part of its population.¹

¹ The extent of this immigration was indeed surprising, almost incredible, when we consider the defective means of transportation and

To facilitate the granting of lands, Penn left with his agents in the province a stamp of his signature, which was attached to a large number of patents for land instead of his written autograph. There is in the Ridgway Library a deed from William Penn to Samuel Barker, dated Nov. 22, 1682, signed with the stamped signature of William Penn.

Douglas, the historian, who wrote (or published) in 1755, in speaking of Pennsylvania, says, "This colony, by importation of foreigners and other strangers in very great numbers, grows prodigiously; by their laborious and penurious manner of living, in consequence they grow rich where others starve, and by their superior industry and frugality may in time drive out the British people from the colony. The greatest

the hardships of the long voyage. The pressure, however, of persecution for the faith, felt by generation after generation, the hopes of peace and every sort of betterments in a new land, were strong inducements, and it must not be forgotten that Penn himself and his family and representatives invited these people over, solicited them to come, and gave them every encouragement, for the sake of the added income in quit-rents derived from them. This they themselves understood, and claimed in specific terms when the Assembly sought to deal harshly with them in the matter of naturalization. Penn had made "particular agreements" with them, and they went to London to get their permits for occupying land and to find the vessels in which to embark. This land was sold to them in large tracts, apportioned and surveyed by Penn's commissioners of property. Thus, in 1710, a Swiss colony, headed by the Maylins, Kindigs, Oberholtzes, and others, took a body of ten thousand acres near Conestogo, for which they paid five hundred pounds sterling, in instalments running through six years, with twelve per cent. interest, and a quit-rent of a shilling sterling for each one hundred acres. The new settlers were Mennonites, Omishes, Dunkers, German Lutherans, etc., in companies. In one single volume of the colonial records we find the arrival of thirty companies of these immigrants. The average of heads of families was about one hundred to a vessel,—three hundred, including women and children,—so that in the four or five years covered by these entries there was an immigration of not less than ten thousand, or two thousand a year. In the naturalization papers of Martin Maylin it is distinctly expressed that these immigrants had "transported themselves and their estates" into the province "by encouragement given by the Honorable William Penn, Esq.," and by permission of the king. They were generally quiet and well-behaved, peaceable to a degree, but in some instances were unruly. They had so many collisions with the Irish that the latter were persuaded to go westward and move into Cumberland County; and they were charged with rioting and seizing the ballot-box on election day in Lancaster. In 1753, Franklin seems to have become very apprehensive on account of these large accessions of aliens to the population. In a letter to Peter Collinson that year, he said that he feared "measures of great temper are necessary with the Germans;" they were indiscreet, dull, credulous, ignorant, and their prejudices were inaccessible. "Not being used to liberty, they know not how to make a modest use of it. They behave, however, submissively enough at present to the civil government, which I wish they may continue to do, for I remember when they modestly declined intermeddling in our elections, but now they come in droves and carry all before them, except in one or two counties. . . . In short, unless the stream of their importation could be turned from this to other colonies, they will soon so outnumber us that all the advantages we have will, in my opinion, be not able to preserve our language, and even our government will become precarious. . . . Yet I am not for refusing to admit them entirely into our colonies. All that seems to me necessary is to distribute them more equally, mix them with the English, establish English schools where they are now too thick settled, and take some care to prevent the practice, lately fallen into by some of the ship-owners, of sweeping the German gails to make up the number of their passengers. I say I am not against the admission of the Germans in general, for they have their virtues. Their industry and frugality are exemplary. They are excellent husbandmen, and contribute greatly to the improvement of a country."

year of importation of Germans, Irish, a few Welsh and Scots, was from Dec. 25, 1728, to Dec. 25, 1729, being about 6200 people. In the year 1750, Germans imported into this province and territories were 4317; British and Irish passengers and servants, above 1000."

Lieut.-Governor Gookin, before the expiration of his term of office, became captious and unreasonable; quarreled with the Assembly about trifles, obstructed business, and came to be little regarded. It had been said from the first, in fact, that he owed his appointment to the fact that he was a "cheap" Governor. He was treated as such by the people, apparently, and when he threatened to demand his recall, if his requisitions were not complied with, the leaders in the province insisted that he should be recalled. He dined with the influential citizens at a banquet in honor of the new king's accession, and then spoke of some of them as traitors and hostile to a Whig government. He declared Richard Hill to be disaffected, and would not let him qualify by affirmation when elected mayor. He called Logan a Jacobite and a friend of the Pretender, and forced the House to declare that his strictures were unjustifiable. However, when his recall was assured, he became pacified and was glad to accept from the Assembly a vote of money.

Gookin's administration was not very eventful, except that the province and Philadelphia advanced very rapidly in the course of it. John Fontaine, an English traveler who visited the city in 1716, said that it seemed to be built very regularly, "the houses mostly of brick, of the English fashion. The streets are very wide and regular. There are many convenient docks for the building ships and sloops here. There is a great trade to all the islands belonging to the English, as also to Lisbon and the Madeira Islands. The produce of the country is chiefly wheat, barley, and all English grain, beef, butter, cheese, flax, and hemp. There are all sorts of trades established in this town. Money that is not milled passes for six shillings and fourpence the ounce."¹ In 1716 an iron furnace was set up near Germantown, by a smith named Thomas Rutter, and he is said to have produced a very good quality of metal. This Rutter was a member of the Assembly from Philadelphia County in 1715.

In 1713 the first almshouse was established. It was

determined by the City Council in July, 1712, that, as the poor of the city were daily increasing, a workhouse should be founded for employing the poor; the overseers to hire the house, and the Council to determine the rent and the pay of superintendence. The mayor, Aldermen Hill and Carter, and Councilmen Carpenter, Hudson, and Teague, were appointed to take the matter in charge. In the mean time, however, before the Councils acted finally, the Friends had founded their own almshouse. It was established in a small house on the south side of Walnut Street, between Third and Fourth Streets, where in 1729 the ancient, well-known building, called the Friends' Almshouse, was built, to stand until 1841. The lot belonged to John Martin and contained a small tenement. Martin was poor, and gave his property to the Society of Friends upon condition they would take care of him for the remainder of his days. A cluster

FRIENDS' OLD ALMSHOUSE.

of small houses was built to John Martin's tenement, and this was the Friends' Almshouse. In 1729 a front range of buildings was put up, connecting with the previous structures. It was a quaint pile, with an arched entrance, and all about the buildings looked antique and primitive. The Friends' Almshouse, at first in general public use, soon became a mere private retreat for indigent persons of the Quaker faith. Each family was separately lodged, and if any one had any trade or calling, he was expected to do what he could at it and so lessen the burthen of his expense to the Society.

In 1715 a ferry to Gloucester was established. "For convenience of exchange," and to prevent it from disappearing, English copper coin was ordered to be taken at the rate of three farthings for a penny, or three half-pence for two-pence; the system of recording deeds was improved; justices' courts were given power to give judgment in cases involving not over

¹ The imports of wines and liquors between March 25, 1711, and Feb. 6, 1713, not quite twenty-three months, were 459 pipes, 15 hogsheads, 25 quarter casks of wine, equal to 59,579 gallons; and 574 hogsheads, 360 tierces, 185 barrels, 1 kilderkin, 200 gallons, 1 pipe, 19 casks, 2 puncheons, and 4 gross bottles of rum, equal to 60,346 gallons. Later, the imports of rum ran up to 400,000 gallons a year, Philadelphia being the centre of supply for the Indian trade.

forty shillings; and the first challenge to fight a duel was passed. This case, which has already been referred to, was the cartel sent by Sheriff Peter Evans to Rev. Francis Phillips, Episcopal minister. There were indictments found both against Evans for the challenge, and Phillips for the libel, the latter being a message to the mayor, Richard Hill, and Robert Asheton, to the effect that they were "no better than rogues, villains, and scoundrels." Phillips was a pretender and a scamp, and the people of Philadelphia had a right to be angry with Governor Gookin for enabling him to protect himself behind an executive *nol. pros.* Later, when Phillips boasted of conquests among respectable ladies, he was sued, and Sheriff Evans would not let him to bail, whereupon there was a mob, the house where the witnesses lodged was pulled down and the jail would have followed it, had not Phillips been set free. He was soon found out, however, was dismissed from his curacy, and lost all his friends. Governor Gookin interposed a *nol. pros.* very offensively also for the protection of Hugh Lowden, who had tried to murder two of the Philadelphia justices, waylaying and threatening them with his pistols.

The corporation government attended to a number of small matters, in addition to those already enumerated, during the administration of Governor Gookin. Charges were imposed for wharfage, and the inhabitants were required to keep the streets swept clean in front of their houses. The mayor's court had jurisdiction in minor criminal offenses, and we find Caspar I. Lleinhoff praying to be relieved of a fine of nine pounds apiece "set upon him & his Now wife for fornication before their Intermarriage," and five pounds was abated from each fine. The mayor acquainted the board that "he has frequently had in his Consideration the many Providences this City has Mett with in that fires that have so often happened have done So little Damage, And thinks it is our Duty to Use all possible means to prevent and Extinguish fires for the future by providing of Bucketts, Hooks, Engines, &c., which being Considered, it is the opinion of this Board that Such Instruments Should be provided, And the Manner of Doing it is Refer'd to the Next Council." This was the beginning of the Philadelphia fire department, though the Governor and Council had done something towards providing ladders and buckets a long time before this, and chimney-sweeping had been regulated by a previous city ordinance, all chimneys being required to be burnt out at regular intervals, under supervision, for which a fee was charged. The collector of stall rents in the market-house was also collector of "the money for chimney firing." On Aug. 14, 1718, the following ordinance was adopted: "It being very Difficult to Convict such as Suffer theire chimneys to take fire, contrary to a law of this province, It is therefore ordered that if the Offender will Pay the forfeiture without further

Trouble, he Shall have Ten Shillings abated him." July 16, 1716, we find Alderman Carter presenting the following names of persons who had their chimneys fired: Anthony Morris, John Billing, John Croswhite, Abraham Bickley, William Dixy, William Belleridge, John Jones Boulder, Enoch Story, Isaac Norris, James Logan, Sarah Ratcliff, Richard Robeson, Joseph Redman, Walter Griffith, Samuel Preston, Robert Assheton, Peter Stretch, William Lingard, William Philpot, John Price,—who paid their fines apparently in money; "Caleb Ranstead, p'd by a Ladder, And Lock p'd Ald. Carter & Ald. Richardson, Wm. fishbourn p'd by Bucketts, Jon. Vanlear p'd Ald. Carter & Ald. Richardson, Hen. Badcock p'd Ald. Carter & Ald. Richardson, Jacob Usher, p'd by a Ladder, Emanuel Walker p'd by a Ladder, Caleb Cash p'd by Bucketts, Theodorus Lord p'd Ald. Carter." In December, 1718, the treasurer of the city was ordered to prosecute several persons who had given their notes for chimney firing, but refused to pay.

And now we enter on a new era in the business of protection from fires. Dec. 8, 1718, "this Councill having Agreed with Abraham Bickley for his fire Engine At y^e sum of £50. . . . It is Order'd that the Treasurer pay y^e S^d sum out of y^e Money Raised or to be Raised for chimney firing, with all Expedition possible." Mr. Bickley, however, had to wait for his money, for it was not paid on Dec. 19, 1719, when an engine-house was ordered to be provided. In January, 1721, a public chimney-sweeper was appointed, James Henderson by name. In December, 1726, the fire-engine is reported much out of repair, and a committee of aldermen are to view it and "think of a proper place to preserve it from the weather." Aug. 4, 1729, James Barrett was paid six pounds for satisfaction for twelve new leather buckets taken from him and used at the last fire on Chestnut Street. At the same time Richard Armitt was ordered to collect the chimney firing money, and was also appointed engineer in place of George Claypool, who had hitherto "played the fire-Engine of this city." In April, 1730, after an ineffective discussion of a subscription, etc., the Common Council, having conferred with the assessors, "agreed that three Engines be purchased, one of the Value of about fifty pounds, one at thirty-five pounds, and the other at about twenty pounds, and Two Hundred Leather Bucketts, and sent for to England; and that two hundred Bucketts, Twenty Ladders, and Twenty-five Hooks, with axes, be purchased here, and that a Tax of Two-pence per pound and Eight Shillings per head be Immediately assessed on the Inhabitants of this City for purchasing the said Engines, Bucketts, Ladders, &c." In August, 1730, an ordinance was ordered to prevent joiners and carpenters from laying shavings or rubbish in any street or alley, or setting fire to the same within one hundred yards of any house. October, same year, a bargain was made with Thomas Oldman

for one hundred leather buckets at nine shillings apiece, as per sample, to be well painted in oil-colors. The engines and fire-buckets arrived from England in January, 1731, and it was decided to lodge one engine in a corner of the great meeting-house yard, another on Francis Jones' lot, Front and Walnut Streets, the old engine in the Baptist meeting-house yard, the buckets to be hung up in the court-house. Keepers for the new apparatus were appointed, and sheds directed to be thrown up over it. There are no further Town Council minutes relating to this subject of any consequence prior to 1750, save a few memoranda showing failures to collect money for purchase of engines, charges for repairing fire-buckets, etc. In 1735, Anthony Nichols built an engine in Philadelphia, which he wanted the mayor and Council to buy, the charge being £89 11s. 8d. But, when "viewed," the engine was found to be heavy, unwieldy, hard to work, and not likely to wear well, so Mr. Nichols was dismissed with a gratuity for his good intentions.

Returning to 1712, we find that "fire and candle" for the watch the previous winter only cost eight pounds. All were obliged to work at repairing the streets and highways, but a day's labor could be commuted by the payment of one shilling sixpence to the overseers.¹ An ordinance was directed to be drawn to oblige owners to pave the fronts of their tenements. It was a common practice with the Council at this time and later to abate or reduce the amount of fines for fornication, selling liquor, and keeping public-house without license, etc. The common jail was voted a nuisance, and ordered to be pulled down and another built in its stead on a lot already purchased. In June, 1713, an ordinance was passed for regulating the city water-courses, nearly all the small streams being directed so as to flow into "y^e Dock." Sept. 30, 1713, "William Hill, the Beadle of this City, having lately in a heat broke his Bell, & given out that he would Continue no longer at the Place, but now Expresses a great Deal of Sorrow for his so doing, & humbly Desires to be Continued therein During his Good Behaviour, And the Premises being Considered, And the Vote put Whether he should Continue the Place any Longer, It past in y^e affirmative."

In 1714 we find the Common Council remitting fines of sailors for assaults, pushing forward the work on the Bridge Causeway to Society Hill, and offering encouragement for the erection of pumps. The pump was to belong to the person putting it in, who should keep it in repair at his own expense, and charge water-rent to his neighbors. Afterwards he paid a shilling a year to the corporation for the privilege, and had to get leave to plant his pump in the spot chosen before breaking ground. An entry in the minutes of the date March 17, 1713-14, shows a cer-

tain thrift in Councils. Mary Perkins' husband had been arrested for coining or counterfeiting Spanish money and thrown in jail, his goods being seized also. His wife petitioned to have these restored, as she had three children to support and no stock to trade on. The appeal was granted on the ground that the petitioner was in great want, she and her children likely to become a charge upon the inhabitants, and the goods being generally lumber and of small value.

Sellers of meal and grain in market were ordered to keep the mouths of their sacks open, that the inhabitants may see what they buy; masters of vessels loading or unloading at the free wharves of the city were to pay a shilling per ton, the time allowed for unloading being five days, and for loading ten days; if they exceeded fifteen days, to pay two shillings a day. Staves lying on wharves more than twenty-four hours to pay a penny a cord per hour, and a wharfinger was appointed to see to the enforcement of this ordinance. William Fishbourne, appointed treasurer, was to receive ten per cent. for collecting and disbursing the corporation's money. A committee was appointed to adjust the salary of the recorder (Robert Asheton). They found the corporation one hundred and forty pounds in arrears to him, but as he left the settlement entirely to them, and did not press his claims, the committee consented, if he would abate all past demands, to pay him twenty-four pounds per annum thereafter promptly, and give him all arrears of fines and forfeitures; and he was requested to keep the accounts of those entered as freemen of the city, receiving two shillings sixpence for each freedom, out of which he is to furnish the freedom papers. The crier's fee was sixpence for each freedom proclaimed.²

² Beginning with April 22, 1717, and ending May 27, in the same year, we have a list of the freemen admitted in a little over one month. We omit the sums paid. The usual amounts were five shillings sixpence and fifteen shillings sixpence. The list is: Edw^d Roberts, Henry Jones, Hugh Parsons, Thomas Venn, Joseph Waite, John Knight, John Davis, Evan Owen, John Jones, "Tobacco-ness," Abram Cox, boot-maker; William Phillips, shipwright; John Harcomb, taylor; Isaac Lenoir, Thomas Todd, Francis Knowles, Thomas Peters, jun., R. Peters, Henry flauk, Thomas Lucas, Ishmeal Rowland, Rob^t Bonel, Jacob Warren, John Blake, Nicholas Galleen, Benj. Pascall, Isaac L'Grou, weaver; William Pawlet, cryer; Wm Carter, jr., Thomas Bullock, Paul Preston, Thomas Armit, Joseph Calvart, George Hopper, John Lee, taylor; Edw^d Wooley, Wm Bowell, Rob^t Owen, John Cambell, Daniel Harrison, Wm Taylor, saddler; John Brown, George Calvart, George Champion, George Shiers, Barnabas Talbot, Samuel Kirk, Theophilus Spurrier, Edward Warner, John Williams, Wm Harry, John Cumming, Edw^d Scull, sr., Lyonel Brittain, John Smith, wheelwright; David Evans, Christopher Thompson, Giles Green, Daniel Ridge, Nicholas Crone, Samuel Massey, Henry Rothwell, cordwainer; Thomas Nevel, Thomas Oakley, Richard Willis, Wm Vallicot, Henry Paul, John Butler, Nicholas Ashmead, John Knowles, John Mason, Anthony Hartley, Phineas Boulit, Thomas Denton, Geo. Savage, Peter Allen, Thomas Stapleford, joiner; Rob^t Hubbard, joiner; Sam^l Shourds, cooper; James Tuthill, shop-keeper; Wm fisher, inn-holder; Wm Thomas, weaver; Joseph Kingstone, joiner; Robert Mullard, carver; Wm Pascoll, saddler; Thomas Cannon, tallow-chandler; John Dilling, saddler; Joseph Alfred, maltster; John Lewis, glazier; Oliver Galtrey, barber; Roger Thorn, Geo. Allen, cooper; Peter Wishart, tallow-chandler; Samuel Ring, inn-holder; Hugh Hughes, carpenter; George Plumly, cutler; Geo. Sheed, barber; Evan Thomas, stable-keeper; Rob^t Hubbard, baker; Joseph Noble, cutler; John Widdifield, joiner; Rich^d Crookshanks, cordwainer; Nicholas Dowdney, wool-comber; Wm Dobbs,

¹ This was about twenty-six cents in our money, and shows the rate of wages. A laborer on the highway seldom received much less than regular rates for unskilled day labor—not over one-fourth less, that is to say.

The cost of an indenture of apprenticeship at this time was fixed at three shillings to the town clerk for the indentures, and one shilling sixpence for the record. This was high, as was the cost of freedom

soap-boiler; Rob^t Hinds, carter; Nicholas Hitchcock, carpenter; Samuel Bennit, plasterer; Daniel Standish, bricklayer; Leeson Loftus, bolter; Charles Read, shop-keeper; W^m Powell, jr., John Read, carpenter; John Huddon, baker; W^m Fisher, carpenter; Walter Griffith, cordwainer; Joseph Davis, barber; Peter Taylor, shipwright; John Larouch, merch^t; Weinty, Collet, shop-keeper; Rich^d Koer, sail-maker; Anth^o Duche, glover; John Masson, sail-maker; John Evans, felt-maker; Nath^l Allen, cooper; Stephen Symons, Dan^l England, sail-maker; Chas^s Pas-lear, barber; John Parsons, saddler; Matt Birchfield, cordwainer; Bernard Taylor, mariner; Geo. Yard, bricklayer; Isaac Leader, mariner; Margaret Allyn, shop-keeper; John Henmarsh, carpenter; John Drago, shipwright; Hugh Tress, jr., slaughterer; Jacob Shoemaker, tanner; Joseph Taylor, brewer; Christian Crosthwaite, inn-holder; James Everet, pewterer; Gabriel Cox, saddler; Edm^d Jones, cabinet-maker; John Koster, carpenter; Matthew Ward, shipwright; John Clawson, taylor; Andrew Bradford, printer; Paul Morris, sail-maker; John Rakestraw, carter; W^m Rakestraw, carter; Tho. Robins, shipwright; Edw^d Bradley, glazier; W^m Wanless, taylor; Thomas Rutter, jr., blacksmith; Edw^d Keadwell, shop-keeper; Francis Richardson, goldsmith; Joseph Trotter, cutler; John Brooks, baker; Thomas Pearse, plasterer; John Heague, shipwright; W^m Pearl, merch^t; Geo. Coates, sadler; John Beer, cooper; Joseph Kent, blacksmith; W^m Lingard, smith; Martin Jarvis, shop-keep; Daniel Lewis, tailor; John Colly, felt-maker; Daniel Durborow, felt-maker; W^m Harmer, trader; Jos. Townshend, carpenter; James Moyes, rope-maker; Jacob Levering, joiner; Geo. Muller, cooper; Sam Robins, farmer; John George, paver; Stephen Jackson, shop-keeper; Mary Lock, shop-keeper; Thos. Carvel, slaughterer; W^m Class, cordwainer; John Dilworth, brewer; Jonathan Palmer, bricklayer; W^m Wilkins, taylor; Benj. Wait, taylor; James Bingham, saddler; Tho. Wood, cooper; John Hudson, chair-maker; Dennis Ratchford, potter; John Potts, shipwright; Aaron Goforth, joiner; Aaron Goforth, jr., joiner; Edw^d Jones, cooper; Rich^d Gosling, cutler; W^m florlune, rope-maker; Tho. Coates, brick-maker; Mark Dalmast, baker; James Brendley, felt-maker; Timothy Stevenson, smith; Isaac Ryall, blacksmith; Henry Livering, cooper; Tho. Broom, felt-maker; W^m Preston, shop-keeper; Hannah Pratt, shop-keeper; Tho. Pears, blacksmith; Sam^l Richardson, cooper; Anthony Stevens, cordwainer; Samuel Hudson, tanner; John Boyd, shipwright; Peter Worrell, glover; Thomas Owen, baker; Sarah Ratcliff, shop-keeper; Tho. Fisher, cordwainer; Austin Paris, founder; Benj. Peart, cooper; Rob^t Davis, inn-holder; Edw^d Hughes, potter; Rich^d Dansey, cooper; Hugh Lowden, shop-keeper; Owen Oneal, saddler; Rich^d Jueson, sawyer; Joseph Jueson, turner; Thomas Lindley, smith; John Milton, joiner; John Townshend, laborer; Nehemiah Allen, jr., cooper; Alex. Lindsey, sawyer; Tho. Chase, merch^t; Solomon Cook, smith; Tho. Denham, tallow-chandler; Philip Kearaty, shop-keeper; Rich^d Allen, shipwright; John Williams, jr., taylor; Susanannah Crapp, shop-keeper; W^m Boil, inn-holder; Thomas Ridge, felt-maker; Eliz. Carman, taylor; Samuel Johnson, painter; Thomas Mitchell, Daniel flower, carpenter; W^m Moore, joiner; Philip Kenyon, carpenter; Benj. Peters, shoemaker; Jeremiah Gatchel, wheelwright; John Harrison, carpenter; Sarah Murray, shop-keeper; W^m Herbert, shoemaker; Edm^d Davis, cooper; John Leech, shop-keeper; Henry Elfret, shipwright; W^m Rigby, cooper; John Richardson, cordwainer; W^m Rudd, baker; James Tucker, slaughterer; W^m Bissel, blacksmith; Simon Edgell, pewterer; W^m Branson, joiner; John Lancaster, taylor; David Shearing, taylor; Benj. Oram, collar-maker; George Budd, saddler; Edw^d Bilkington, white smith; Jeremiah Snow, rigger; Alex. Hall, sail-maker; W^m Jones, innholder; Joseph Palde, barber; John Annis, taylor; Thomas Bibb, tanner; Tho. Rakestraw, carter; Tho. Lacy, glazier; Geo. Shoemaker, carter; Michael Coil, shipwright; Samuel Hastings, shipwright; Andrew Yousham, cordwainer; Daniel Meggs, weaver; Herman Casdrop, shipwright; James Wood, shipwright; Samuel Mickle, merch^t; Geo. Mifflin, bolter; Matt. Hubbard, baker; Alex. foreman, turner; Joseph Smith, brewer; Jacob May, innholder; Robert Thompson, mariner; John Snowden, tanner; John Hilyard, cooper; Daniel Hood, cooper; John Price, shipwright; John Lloyd, blacksmith; Jeremiah Elfret, blacksmith; Benj. Mather, cordwainer; Anthony Ward, clockmaker; Isabella Clubb, shopkeeper; Evan Thomas, joiner; John Harper, tailor; Thomas Shoemaker, carter; Anthony Peel, shopkeeper; W^m Jeeson,

papers, but high charges for records, papers, and all sorts of conveyancing and fees was a leading trait of proprietary provincial governments, which sought to make the support of their friends, kinsfolk, and retainers a regular and permanent tax upon their provinces. The Municipal Council was liberal to the poor of the city, but was careful in avoiding the burthen of maintaining the poor of other places. Neither did it tolerate begging. David Williams, of Abing-

leather-dresser; Wm. Coates, brickmaker; Rich^d Chiner, blockmaker; Peter Renear, shipwright; Thos. Mountford, shopkeeper; Samuel Stretch, watchmaker; W^m Chancellar, sailmaker; W^m Hawkins, carpenter; Tho. Ashton, shipwright; John Howard, blacksmith; Thedlock Riners, shopkeep; Aaron Huliot, painter; Sam^l Davies, shipwright; Andrew Dahl, mariner; Joseph Richards, merch^t; John Samms, cordwainer; Joseph Humfrits, joiner; W^m Mason, turner; John Tomlinson, currier; Ralph Harper, carpenter; Ebenezer Large, currier; Thomas flower, cooper; Richard Walker, cordwainer; Tho. Elkington, sawyer; Wm. Farmer, slaughterer; John Breintnall, cordwainer; W^m Philpot, currier; Thomas Wells, shipwright; Stephen Atkinson, clothier; Henry Munday, saddler; Joseph Wood, carpenter; Eliz. Carter, baker; James Bayles, mariner; Anthony Moore, blacksmith; John Basset, mason; John Newbury, carpenter; John Mifflin, merch^t; Tho. Smallwood, shipwright; George Stannons, carter; Daniel Jones, taylor; John Bird, carpenter; Henry Kingston, slaughterer; Steph. Bayslie, blockmaker; George Wilson, shopkeep; Tho. Brown, shipwright; Abram Pride, brickmaker; Tho. Pascall, jr., John Coates, brickmaker; Joseph Lynn, shipwright; Maimalion Lalous, Henry Stevens, mariner; Edw^d Hunt, goldsmith; Timothy Green, brickmaker; John Griffith, brickmaker; Griffith Marling, brickmaker; John Bird, carpenter; Henry froggy, joiner; James Wilkins, joiner; Daniel Wilcox, ropemaker; W^m Brown, cooper; John Ashmead, blacksmith; John Hastings, shipwright; John Hart, bricklayer; Isaac Merriatt, carpenter; Joseph Harper, carpenter; Jane Bing, shopkeeper; Isaac Hollingham, carter; Armstrong Smith, shipwright; Peter Steel, brazier; Adam Lewis, carpenter; W^m Hudson, jr., tanner; W^m Harris, shipwright; Geo. Emlen, innholder; James Winstanley, brazier; Alex. Gordon, shopkeep; Rich^d Robinson, shopkeep; Hester Syenter, shopkeep; Thos. Tress, merch^t; Tho. Willard, shipwright; Moses Durell, shipwright; Sam^l Monchton, pharmacopoeia; Edw^d Scull, jr., joiner; W^m Tidmarsh, innholder; W^m Drason, mariner; Silvanus Smout, blacksmith; Tho. Taylor, mariner; Jno. Carter, brickmaker; W^m Dawardhouse, mariner; W^m Little, blacksmith; Edw^d Smout, barber; Bentley Cook, W^m Hill, porter; Grace Townsend, Mark Harrison, laborer; John Parsons, carter; Tho. Coates, shopkeep; Rob^t Parker, Tho. Barger, Sam^l Jacobs, mariner; Sam^l Robinson, plasterer; Mary Broadway, Hannah Scott, Thomas Case, Evan Williams, taylor; Lawrence Sadler, porter; Rob^t Midwinter, shoemaker; Toby Such, Peter Cooper, painter; John Lock, porter; Tho. Ellwood, laborer; Everhalt Ream, baker; Peter Luolie, painter; Thomas Paglan, flounder; Dan^l Jones, taylor; Tho. Walker, innholder; Tho. Cook, taylor; Oliver Whitehead, John Betinson, innholder; Benj. Duffield, W^m Thomas, cooper; John Winn, doctor; Israel Cox, Rich^d Tomlin, laborer; John Rile, cordwainer; Henry Hill, merch^t; Tho. Of all the trades and industries represented among the freemen of Philadelphia at this time, at least thirty per cent. were connected, more or less, directly with the commerce and navigation of the city, and about fifteen per cent. with the business of building.

There was not a middle name in all the four hundred and twenty-four. These entries are from minutes of Common Council. After May 27, 1717, such names were not put on record. Probably they were placed in separate record books. There must have been thousands of freemen admitted to the rights of citizens between 1717 and 1776.

ton, having had his stable, barn, and house burnt, prayed for leave to ask the charity of the people of Philadelphia, but his petition was "rejected as being of Ill Consequence" (i.e., establishing a bad precedent).

At a meeting of the City Council in August, 1717, various matters of municipal interest were transacted. The floor under the court-house was directed to be raised eight inches, and paved with brick, secured with posts to keep carts and horses out. Two aldermen were directed to continue their care of the bridge and causeway at the south end of the town. Overseers were appointed to superintend the work in repairing the two brick bridges,—one on Second Street, and the other on Walnut Street,—these crossed Dock Creek. And the grand jury in January made a presentment in relation to the nuisance of scolding women. A law was also passed directing that elections for coroners and assessors should be held at the same time as elections for members of Assembly, and by written ticket.

Sir William Keith landed at Philadelphia, May 31, 1717, and was at once proclaimed Governor in due form and with a good deal of ceremony. He had been received in great state and with much courtesy by Gookin, the Provincial Council, and the officers of the corporation. This was what Sir William liked. He was not young any longer, yet not so old as to be past the age of vanity. He was an adroit time-server, yet a shallow, flippant, insincere man in every regard. Franklin has given us the best description and the best character of him in his double capacity as quidnunc and busybody, and also as the misleader of the popular party. That is a rare picture, in the philosopher's autobiography, of the Governor, in his flowing wig and fine clothes, invading Keimer's dingy printing-office, effusively courting the young man's acquaintance, taking him off to taste some excellent Madeira at a tavern, vowing he should have a printing-office of his own and all the public business, and sending Franklin to Boston and to London on two separate fool's errands. His manner, said Ben, was "most affable, friendly, and familiar." It was his "known character to be liberal of promises which he never meant to keep." "I believed him one of the best men in the world." "No one who knew him had the smallest dependence on him." "Giving a letter of credit, when he had no credit to give." "It was a habit he had acquired. He wished to please everybody; and, having little to give, he gave expectations. He was otherwise an ingenious, sensible man, a pretty good writer, and a good Governor for the people, though not for his constituents, the proprietaries, whose instructions he sometimes disregarded. Several of our best laws were of his planning, and passed during his administration." It may be doubted, however, if Keith was really a "good Governor for the people." *Populus vult decipi. decipiatur* seems to have been his motto. But, do the people profit really by being

deceived? He courted the Assembly and cajoled them also, profiting by the pitiful pretence to civil treatment they had thrown out at his predecessor, Evans. "Though we are mean men and represent a poor colony, yet as we are the immediate grantees of one branch of the legislative authority of this province (which we would leave to our posterity as free as it was granted) we ought to have been, and do expect to be, more civilly treated by him that claims the other branch of the same authority and under the same royal grant, and has his support from us and the people we represent." Keith never forgot that while he represented and owed his position to the proprietary, it was the Assembly that provided his salary and voted the supplies for his administration. He was poor and he was mercenary. As Franklin said in the Historical Sketch of Pennsylvania, he had a particular eye to his own particular emolument. Logan opposed him and countermined his intrigues; and Logan was deprived of office by him and sent home in disgrace, only, however, to overwhelm him in the end. When it was too late Keith attempted to regain favor with the proprietaries by betraying his allies, the Assembly. It did not save him, but it resulted in a mutual mistrust, coldness and disgust at parting, after a nine years' administration, during which, singular to say, there had not been a single flagrant breach between the Assembly and the Governor.

Keith had a happy address, his suave and courteous manners were all in his favor, and as soon as he met the Assembly they voted him a supply of five hundred pounds, with fifty pounds added for house-rent, taxing the public a penny in the pound and four shillings per head. The new Governor had secured all this by talking of economy and relieving the burthens of the people, and by refusing to listen to the complaints of ex-Governor Gookin. He spoke of the difficulties connected with an excessive influx of foreigners, appreciated the embarrassments of the public on the subject, and had written home for instructions. He went half way with the people in the troubles about oaths and affirmations, and was disposed to remove all the difficulties which were such a stumbling-block to the Quaker conscience, by restoring the laws as they were first framed under the original charter. He approved the amendments in the act relating to work-houses, which was essential both to the peace and the pauper system of the province. This act provided that a work-house and prison should be erected within three years in Philadelphia, at the charge of the city and county, to be controlled by the poor overseers and the city and county justices. He also favored the new and more comprehensive arrangements perfected for the management of the several ferries, and for enforcing reciprocity with conterminous provinces in the premises. At the first Assembly under Keith there was passed also an important act extending the liberties of women in business, and

another promoting the administration of justice. The adroit manner in which he obtained from the Assembly the creation of that Court of Chancery which had been denied to his predecessors has already been spoken of. He also promoted a general reconstruction of the courts, with a Quarter Sessions of four annual terms, a biennial Supreme Court sitting in Philadelphia, and a Court of Common Pleas under the Governor's commission. He fostered the establishment at Horsham, in Philadelphia County, of a settlement for the manufacture of the surplus grain received in the city, and the place was made easily accessible by laying out convenient roads to it.

It was Governor Keith who first introduced the people of Pennsylvania to the pleasures and benefits of an irredeemable paper currency. There had been great and long-standing complaint about the deficiency of a circulating medium, for the use of wampum had ceased, and foreign coin had never become plenty. The course of exchange ran heavily against the province, and those who possessed money made enormous profits by the purchase and sale of bills. The merchants of England did not ship bank-notes or coin to the province. They paid for the produce which they bought there with English goods, and settled the balances by shipments of sugar, rum, etc., from Barbadoes and other places in the West Indies, and by negroes and indentured servants. Yet there must have been more hard money in Philadelphia than in New England, for Franklin, a paper-money man, notes in his autobiography how his fellow workmen in Boston were surprised when he returned to his brother's place in 1724 from Philadelphia. "One of them asking what kind of money we had there," he says, "I produced a handful of silver, and spread it before them, which was a kind of *raree-show* they had not been used to, paper being the money of Boston." The peltries, grain, flour, ships, cooper-stuff, and lumber of Philadelphia were always good for hard money with a good mercantile system. But the people were not satisfied. It is likely that wages and small debts were paid almost entirely in the way of barter instead of money, and this, by the losses it occasioned, produced discontent. At any rate, the drift of facts is to show that while capitalists and men of wealth opposed a change in the currency, the farmers, laborers, and small tradespeople favored it. They contended that a deficiency of currency made trade decay and increased the rate of interest, and that the remedy was to keep money in the province by having a money of their own. In the language of petitions sent to the Assembly at this time, the friends of paper money contended that they were sensibly "aggrieved in their estates and dealings, to the great loss and growing ruin of themselves, and the evident decay of this province in general, for want of a medium to buy and sell with," and they therefore prayed a paper currency. The people of Chester County, on the other hand, asked to have the value

of the current money of the province raised, the exportation of money prohibited, and produce made a legal tender, so as to obviate the necessity for paper money. They did not want a regular State issue, but nevertheless they wanted an inconvertible paper money, as if that were a blessing.¹

Keith, in consenting to and promoting an experimental loan in 1722, had been encouraged by the popularity of a similar measure matured by Governor Burnett, of New Jersey. Pennsylvania was the last of the middle colonies to embark in the paper-money manufacture; but once embarked, she plunged rapidly and deeply in. A small loan of only fifteen thousand pounds was issued in 1722, to be redeemed within eight years. In 1723 thirty thousand pounds was issued. In 1740 the issue had reached the amount of eighty thousand pounds. Benjamin Franklin, who had encouraged and, indeed, almost brought to pass this utterance of irredeemable currency, by his writings and his personal influence,² became alarmed and wrote, "I now think there are limits beyond which the quantity may be hurtful." He was right. In 1775 Pennsylvania had one hundred and sixty thousand pounds currency out, or four hundred and twenty thousand dollars. In 1783 the State's irredeemable currency had been increased by various issues until it reached four million three hundred and twenty-five thousand dollars, a sum simply ruinous to all values.

The general plan of these loans was good and simple. It was as safe and as logical as any system without bottom could be. The theory was tersely stated by David Hume in a letter to the Abbé Morellet: "In our colony of Pennsylvania the land itself, which is the chief commodity, is coined and passed into circulation." The phrase had been borrowed by Hume from Franklin.³ The *modus operandi* of the

¹ Not only Pennsylvania of that day believed that limited circulation and non-exportability are good attributes of money; the fallacy has come down to our own day, and been entertained by two leading Philadelphians. Hon. W. D. Kelley said in the House of Representatives in 1870, "Beyond the sea, in foreign lands, the greenback is fortunately not money; but when have we had such a long and unbroken career of prosperity in business as since we adopted this non-exportable currency?" And Henry C. Carey wrote, in 1875, to Hon. M. W. Fields, saying, "Does or does not our duty to ourselves and the world at large demand that we maintain permanently a non-exportable currency? . . . The affirmative of this question is in harmony with the practice and experience of leading nations, and in harmony with the teachings of sound economic science."

² See the next chapter.

³ His tract, "A Modest Enquiry into the Nature and Necessity of a Paper Currency," contained the following: "For as bills issued upon money security are money, so bills issued upon land are in effect *coined land*." Professor Walker has noted that this was the theory also of law in his Louisiana bubble, and of the French assignats, quoting in regard to the latter the *môt* of Gouverneur Morris, who, when Short wrote to him, "There is a plan for paper money now before the Assembly. Some insist on calling it *papier terre*, and the idea was near passing," replied, "Apropos of this currency, this *papier terre*, I could tell them of a country where there is a *papier terre*, now *mort et enterré*." The land-banking systems of the West in more recent times have all been identical in principle with this system of colonial Pennsylvania. The fallacy is obvious: land is the best of securities, but it is a *statical*, not *dynamical*

Pennsylvania loan system—"the loan-office," it came to be called—was excellent. There was nothing fictitious about it. No bills were loaned but upon good security; interest was required, and the interest and principal were required to be paid back in yearly instalments. As the principal came in it was lent out again; but finally as the term of a loan expired,

the uses of an increasing country; that there never was a measure more steadily or more faithfully pursued for forty years together than the loan-office in Pennsylvania." In 1763 the whole paper-money system of the colonies, including that of Pennsylvania, was outlawed by act of Parliament, when Franklin wrote a pamphlet, protesting against the act.¹

¹ The issues were £15,000 in 1722, £30,000 in 1723, £30,000 in 1729, and in 1739 enough to make a total currency of £80,000 to remain in circulation for sixteen years. This last act perfected the loan-office system, and is the one by which its operations can best be judged. The money was called "proclamation-money." It was emitted to borrowers directly from the loan-office, there being a branch in every county. The notes or bills, in denominations of from one to twenty shillings, were printed and emitted under direction of five persons, who were "trustees of the loan-office," and who gave bond. They were only to lend on real security or plate, of double the value. The interest was put at five per cent., and one-sixteenth of the principal was to be repaid each year. This principal, during the first ten years, was lent out again (the interest being applied to the public service), but new borrowers could only get the money for the rest of the time the loan had to run, and their annual payments of principal were proportionately increased.

In the "Historical Review of Pennsylvania," by Franklin and Ralph, published in 1759 to influence Parliament in the contest between the majority of the Provincials and the proprietary government,² it is clearly shown, and the letters of Logan corroborate the fact, that the proprietary government was at first bitterly hostile to any and every emission of paper money, only assenting to it finally when made participants of some of the peculiar favors the system could bestow. In the language of the tract referred to, "Discovered a repugnance to this measure, till they found themselves considered in it. Like the snail with his horns, they had no sensations for the province but what reached them through the nerves of power and profit." The consideration, in fact, was the continued payment of quit-

rents in sterling money, no matter what the depreciation of provincial currency; a consideration which the proprietary had a right to demand, and could in equity also do so, since they had nothing to do either with the emission of the currency or its depreciation.³

security; and the prime quality demanded in a currency is its capacity to circulate, a dynamical, not statical force. A redeemable bank-note can be put into land, gold, or any other commodities, and these again can be exchanged for it; it has therefore the value of all, besides its value as a medium of exchange, a tool, a convenience. A note which can only be put in land and must stay there, inert, for convertible purposes as the land itself, has but one value.

¹ See next chapter. This outlawing of colonial money had much to do with prejudicing the people of the colonies against the rule of Parliament.

² Franklin's Works, iii. 107, "An Historical Review, etc." See next chapter.

³ This depreciation got to be so great that it reached the ratio of 190.1, the value of a Pennsylvania pound currency being only \$2.71½. To conclude this matter, so far as it relates to the Philadelphia of the

Ten Shillings

His Indentured Bill of Ten Shillings current Money of America, according to the Act of Parliament, made in the Sixth Year of the late Queen Anne, for Ascertaining the Rates of Foreign Coins in the Plantations, due from the Province of Pennsylvania, to the Possessor thereof, shall be in Value equal

to Money, and shall be accepted accordingly by the Provincial Treasurer, County Treasurers and the Trustees for the General Loan-Office of the Province of Pennsylvania, in all Publick Payments, and for any Fund at any Time in any of the said Treasuries and Loan-Office.

Dated in Philadelphia the Second Day of April, in the Year of Our Lord, One Thousand Seven Hundred and Twenty Three, by Order of the Governor and General Assembly.

Ten Shillings

Anthony Morris
Recorder

PROVINCIAL CURRENCY.

the notes as they came in were canceled and burnt, and all accounts squared up. The friends of the system were many. "I will venture to say that there never was a better or a wiser measure," wrote Governor Pownall, "never one better calculated to serve

Keith, besides giving the province a paper currency, secured the confident establishment of Benjamin Franklin at the heart of the growing town, and it is around Franklin as a centre that the greater part of the public affairs of Philadelphia will be found to revolve. This will be demonstrated in a chapter to succeed the present one.

In 1717, and for many years periodically thereafter, pirates or else privateers on the coast were sources of alarm in Philadelphia. Logan, in the year named, said the pirates were fifteen hundred strong, and made many captures of vessels and seamen. In February, 1718, John Collison, Hance Dollar, John Renolds, Benjamin Hutchins, and John Bell appeared before Governor and Council and made voluntary surrender as pirates, claiming to come in, however, under the late royal amnesty. In July, of the same year, Richard Appleton and a crew ran away with a pirate vessel and brought it as a prize into Philadelphia with much applause.¹

period concerning which we write, Logan notes that as early as 1724 the premium on specie was fifteen per cent. The *Gazette* of 1726 (Watson) notes the arrival of counterfeit colonial bills from Ireland. In 1729 Logan says, "I dare not speak one word against it. The popular phrensy will never stop till their credit will be as bad as they are in New England, where an ounce of silver is worth twenty shillings of their paper. They already talk of making more, and no man dares appear to stem the fury of the popular rage." Logan thinks the king should arrest the delusion by proclamation. Watson had seen an account current of the years 1730-31, by Andrew Hamilton, one of the trustees of the General Loan Office, "showing the operation in those days, when no banks existed, of borrowing money upon mortgages, deeds, and other securities. The account begins with a detail of securities received from the previous trustees, to wit:

"61 mortgages on the £15,000 account, yet due.....	£930
228 " " £30,000 " "	8,438
335 " " several " "	19,212
264 " " 2d £30,000 " "	26,000

"In 1730-31 the new trustees lent out—

"On 39 mortgages.....	£2546
" 77	5481
" a pledge of plate.....	24"

Hazard, in the additions to Watson, says that paper money was also issued by individuals. In May, 1746, Joseph Gray gave notice that Franklin had printed for him £27 10s. in notes of hand of 2d., 3d., and 6d., "out of sheer necessity for want of pence for running change. Whoever takes them shall have them exchanged on demand with the best money I have." In 1749 the Assembly was petitioned for an issue of twenty thousand pounds in small bills, and a committee appointed to bring in a bill, but there was no further action. In connection with this currency matter we produce, from Hazard's Register, a price current taken from the *Philadelphia Gazette* of Nov. 27, 1735, the provincial currency reduced to dollars and cents: Corn-meal, \$1.40 per hundred; white biscuit flour, \$2.40 (\$4.75 per barrel); middling do., \$1.73 per hundred; brown, \$1.47; ship do., \$1.60; muscovado sugar, \$4.27 per hundred; gunpowder, \$26.67; tobacco, \$1.87; loaf sugar (wholesale), 22 cents per pound; cotton, 13 cents per pound; indigo, \$1.33 do.; rum, 29 cents per gallon; molasses, 20 cents; pork, \$4.67 per barrel; beef, \$4 per barrel; wheat, 49 cents per bushel; corn, 20; flaxseed, 63, etc.; Madeira wine, \$58.67 per pipe. Either these prices were sterling, or the depreciation of sterling still did not keep pace with the plethora of products.

¹ The vessel carried ten mounted great guns, two swivels, three patereroes, four chambers, thirty muskets, five blunderbusses, five pistols, six old patereroes, four old chambers, ten organ-barrels, seven cutlasses, fifty-three hand-grenades, two hundred great shot, two barrels powder, four kegs "patridge," "one black flag, one red flag, two ensignes, two pendants, one Jack, and eight sloppers." To conclude this pirate business, Logan writes to the Governor of New York in October to notify

Small and remote provincial cities, in remote and provincial times, do not make much history. Their annals trickle along through lowly, hidden ways, like the brook that still flows but cannot be discovered, for that the grass through which it percolates hides it from sight and makes it inaudible. Take this year, 1718, for an example. William Penn is still proprietary, though it has been long since he and consciousness of human interests have parted company, and now he is on the eve of receiving the last summons, which will give him rest in the quiet burial-place at Jordans'. But his affairs do not suffer, for Hannah Penn, brave heart, clear eye, firm hand, controls all. The Lieutenant-Governor, Sir William Keith, is just coming in; Jonathan Dickinson, Esq., is mayor; Robert Assheton, Esq., recorder. The aldermen are Richard Hill, William Carter, Abraham Bickley, William Hudson, Joseph Redman, Thomas Masters; the common councilmen are Richard Moore, Samuel Carpenter, Charles Read, Joseph Carpenter, Thomas Griffith, Owen Roberts, Nehemiah Allen, Thomas Bradford, Peter Stretch, Henry Badcock, John Jones, Daniel Radley, Thomas Wharton, George Claypool, James Parrock, William Fishbourne, John Warder. Each of these men had a history; it could be unearthed, and it would be far more interesting than that of the city represented by them, but still it would not be the city's history.

The Common Council of the city met Jan. 29, 1718, after a recess of three months and a half. "Edward Roberts, George Fitzwalter, and Evan Owen were now Qualified Common Councilmen and took their place at y^e Board. Ordered that William Hudson & William Fishbourn, Adjust the Accounts with the Clerk of y^e market ag^t y^e next Council. Upon Reading y^e Peticon for Granting fferrys in this city,

him that a vessel had been sent out against them, because "we are in manifest danger here, unless the king's ships take some notice of us. They probably think a proprietary government no part of their charge." The pirates appear to have been under command at this time of the famous Teach, or Blackbeard, an outlaw who infested the commerce of the coast from Cape May to Cape Henry. Keith issued a warrant and a proclamation against him, neither being effective. There was great local interest in pirates at this time. Kyd was a sort of hero, and Bradford, the Quaker printer, in New York, in 1724, published a "History of the Pirates," which is said to be the original of the "Pirates' Own Book" of more recent times. Franklin claims to have made and published a song on the capture of Blackbeard. The latter freebooter used to be very familiar with the taverns on the water-front at Philadelphia, and he and his crew kept many a revel at Marcus Hook, at the house of a Swede woman. Teach was killed within the North Carolina sounds, and other pirates seem to have been captured about the same time. They had friends, and support also, on shore. Isaac Norris' son-in-law, Harrison, moving from Maryland, was captured between Apopkinmy and Newcastle and carried off. The grand jury in Philadelphia, in 1718, presented a lot of pirates, but no bill could be found. These men, John Williams, Joseph Cooper, Michael Grace, William Asheton, George Gardner, Francis Royer, and Henry Burton, are supposed to have captured and carried off from the Delaware a sloop of twenty-two guns. One of the party, Cooper, was afterwards captain of a pirate vessel, and blew himself up in the Bay of Honduras. After 1720, in which year Captain Low took a rich prize off the capes of the Delaware, the pirates seem to have been mostly driven to the Gulf of Mexico and Caribbean Sea, where, however, the commerce of Philadelphia still paid them toll.

The Mayor, Recorder, & Alderman Hill are Desired to Wait on y^e Assembly with a Peticon that a Bill may be brought in for Vesting the power of Granting the s'd fferry in y^e Corporacon of this City.¹

"Whereas, William Davis, of the County of Chester, & one Peter Devene, have Obtained the Gov^rs Lycence to ask the Charity of y^e Inhabitants of this City by occasion of Some Misfortunes they have ffain under, And the Charge of this city occasioned by the Repairs of the Wharfs, Maintenance of the Poor, & other Incidents Laying Hard on the Inhabitants, It is Ordered that the Mayor, Recorder, & Alderman Hill, Do wait on the Governour and request him that he would be pleased to give the Magistrates of this City a Hearing in ffavor of y^e Inhabitants before he Grants any pson Such a lycence for y^e ffuture." Upon the Peticon of Simon Edgill, that there is a vacancy in the office of sealing weights and measures and asking to be appointed to it himself, Master Edgill is referred to the next Council. Sarah Smith's fine of £10 for having a bastard child, and ffancis Cole's fine of £5 for keeping a public-house without a license, are both abated one-half.

The next meeting of Common Council was on February 26th, when a fine of fifty pounds, laid on Nicholas Williams for beating his father, is remitted, and Peter Stretch is paid £8 18s. for work done by him on the town clock. On March 6th, Aldermen Masters Bickley and Redman are ordered to expedite matters at the market wharf, of which they are overseers, and to get more money, if needed, besides that thirty pounds

they have; Masters Redman, Bradford, and Claypool to inspect and appraise William Branson's work under the court-house. William Pawlet has had no pay for several years for summoning and attending the Common Council, and petitions to have his salary fixed, and his salary is fixed at eight pounds per annum "for his Sumoning of the Comon Council, Opening & Shutting of the Gates of the Court House, & keeping the same clean & the pavement clear of Horses." It is further "Ordered that no vendue or publick Sale of Goods be made under the Court House by any pson, Unless a Consideracon be paid to the Corporacon for the Same."

At the next meeting, May 13, 1718, Branson's *quantum meruit* is set at £32 10s. Thomas Redman is appointed inspector of water-courses, his pay being one penny per foot from the persons bordered by the stream; Pawlet is allowed five pounds for his past services; and, the tailors and cordwainers having petitioned for some regulations in regard to their trade-rights, the recorder was requested to inspect the books, and report a proper method of incorporating particular bodies within this corporation.² Three-fourths of Richard Keys' fine for keeping an unlicensed tavern is remitted, and the recorder ordered to draw a new ordinance for better regulating carters, cartmen, and draymen, and settling their wages.³

At Common Council's meeting July 14th, Benjamin Morgan and Edward Church's pump in the middle of Front Street, opposite Ewer's Alley, which they pray may be allowed to stand, is sternly condemned as being now, as it always has been, a public and common nuisance, but they can continue it until February, and no longer, to give them time to sink a new well. The vendue-master, John Leech, is required to pay ten pounds a year, in quarterly payments, for use of the court-house in selling goods, and Alderman Carter is ordered to collect three pounds per annum rent for each of the stalls under the court-house stairs, the payment of such rent securing the refusal of the stall to the lessee, but no arrears. Thomas Carvell is nine shillings behindhand, and is bidden pay up on demand, or the beadle is ordered to "Pluck up his stall, he being only Tenant at Will." A paving ordinance was read on September 20th. October 7th was election day, and

¹ Not granted, but some of the public ferries were put under new arrangements. Armstrong Smith prayed that he might be granted the right of keeping two ferries in the Delaware, one to Cooper's, in West Jersey, the other to Gloucester; and John Walker wanted to establish a ferry from the middle of the city to West Jersey. These ferries to Cooper's and Gloucester were erected by the Assembly for a term of years, and because West Jersey put a duty on shallops, boats, and canoes coming from Pennsylvania, the Assembly proposed to retaliate. What else was done in this body? They met, and addressed the Governor on the alarm caused by the importation of so many foreigners; they agreed that their pay should be six shillings apiece per diem, and the Speaker's ten shillings; two bridges were ordered over the Poquessing and Cobb's Creeks; persons about to marry were ordered to put up a publication notice at some meeting-house thirty days beforehand, "and produce three evidences, at least, that they see it up three days of worship, with the fair publication side outwards, and the marriage to be performed by some justice in the same county;" the butchers petitioned against opening the market to meat from West Jersey; the Quakers petitioned for the right of affirmation, as they are still doing to-day in England; Andrew Bradford wanted a monopoly of the lamp-black manufacture for twenty years, he having "at considerable expense" found out for himself the right method of its manufacture; the several counties were ordered to erect suitable work-houses and yards, that in Philadelphia to be completed within three years; a law was passed to regulate the relief of the poor, requiring paupers to be lettered and wear a red P on their sleeves, indicating what town they lived in; other acts defusing the rights of *feme-sole* and married women as traders, regulating the punishment of crimes and misdemeanors, putting in force in the province the statute of James I., chap. xii., against witchcraft were passed, and then the old Assembly adjourned, the new one met, and there was no more legislative business during the year 1718. The members of the Assembly who were elected and met Oct. 14, 1718, were, for Philadelphia City: Israel Pemberton, Isaac Norris; for the county, *Speaker*, Matthias Holston, Robert Jones, Edward Farmer, Richard Hill, William Fishbourn, Clement Plumsted, Morris Morris, and Jonathan Dickinson.

² The complaint was that notwithstanding tradesmen took out their freedom, strangers came in, settled and practiced their trades without being freemen. The trades were therefore authorized to get themselves incorporated after the manner of the English guilds, and have an ordinance prepared by an expert "Consonal Agreeable to y^e laws of England and this Governmen^t, and for a Publick Good."

³ Transportation of goods, persons, and news is, perhaps, the measure of civilization, modified by local circumstances in some degree. Jonathan Dickinson this year writes: "We have a settled post from Virginia and Maryland unto us, which goes through all our northern colonies, whereby all advices from Boston, in New England, to Williamsburg, in Virginia, is completed in four weeks from the latter end of March to the beginning of December, and in the winter season the double of that time." William Penn died July 30th, and Keith gave the news to Council November 30th.

Jonathan Dickinson re-elected mayor, and Thomas Griffith and William fishbourn, aldermen; Israel Pemberton, John Carpenter, John Cadwalader, Joseph Buckley, Thomas Griffith, and Thomas Tresse, common councilmen. "Alderman Hudson, Alderman Redman, Benjamin Vinning, Edward Roberts, and Samuel Carpenter were Sent on a Message to y^e Govern^r to Acquaint him of their Choice of the Mayor and to Know when the Corporacon Should Wait on him to present the Mayor to be Qualified, and the Gov^r Appointed to Morrow morning at Tenn o Clock."

The new Common Council met Nov. 24, 1718, but there is no minute of Penn's death. Griffith and Pemberton qualify, and carters are forbid to cut up the streets, paved or graveled by individual enterprise, by carrying too heavy loads. Alderman Carter complains that tenants do not pay their stall-rents; the old fine of three shillings for neglect to attend by aldermen and councilmen is revived, and Bickley is ordered to be paid £50 for his fire-engine. At the meeting on Christmas-day the Common Council decline to permit Robert Wood to beg, though he has the Governor's brief for it; and on December 29th, Thomas Redman's plan for new market-stalls (contrived to punish tenants who sublet their stalls for more rent than they pay) is accepted.

Keith announced the death of Penn to Provincial Council on November 3d, and to Assembly on December 17th, in not unfitting phrase. Watson and the Logan papers both mention that he solemnized, with a military procession, the death of the great man of peace. William Penn, Jr., who claimed but never secured the succession, appears to have thanked Keith for this absurd and inappropriate display, but the most grateful testimonial came from the Indians in Pennsylvania, who, when they learned of the death of Onas, sent his widow a letter of condolence, with a present, a garment for their deceased friend, in which to journey safely through the wilderness to which they conceived him to have departed.¹

We have given in full, as a specimen, the annals of one year, not an exceptionally dull one. Such details must be subjected to condensation by hydraulic pressure and the residuum very lightly skimmed, if we would get from them the texture of history, so far as narrative of chronological progress and public event is concerned. Yet it is out of these faint, almost imponderable and impalpable fragments that the true history and mirror of any time must be composed. The pavements, the carters, the pumps, the market people, the ferries,—all these come up with regular frequency; there is little change, yet that is of growth; the present body of municipal ordinances in Philadelphia have been one hundred and eighty

years in forming. The mere fact of this perpetual motion of little change and amendment, however, is evidence of life and growth, and that is nearly all we can get from it.² We do find, however, in April, 1719, that an ordinance has been passed for paving the streets, and that the business of saddlers, cordwainers, and curriers was so important, or the price of leather so high, that an attempt was made to prevent tanners from exporting their products.³

This year, also, Dec. 22, 1719, the first newspaper came out in Philadelphia,—*The American Weekly Mercury*, "Printed by Andrew Bradford, and sold by him and John Copson." The first advertisement in this paper—in the second number—was of a runaway negro, a bright mulatto, Johnny, who ran away

This Day Run away from *John M^r Comb, Junier*, an Indian Woman, about 17 Years of Age, Pitted in the face, of a middle Stature and Indifferent fatt having on hera Drugat, Wastcoat . and Kersey Petticoat, of a Light Collour. If any Person or Persons, shall bring the said Girl, to her said Master, shall be Rewarded for their Trouble to their Content

American weekly mercury May 24 1720

A Servant Maids Time for Four Years to be sold by *John Copson,*

Ditto Jan. 2 1721.

A Very likely Negro Woman to be sold, aged about 28 Years, fit for Country or City Business, She can Card, Spin, Knit and Milk; and any other Country Work Whoever has a Mind for the said Negro may repair to Andrew Bradford in Philadelphia.

A Young Negro Woman to be sold by Samuel Kirk in the Second Street, Philadelphia,

To be Sold, a very likely Negro Woman fit for all Manner of House Work, as Washing, Starching, Ironing, &c, Enquire of Andrew Bradford,

Ditto Oct. 6 1791

Ditto. Dec. 24. 1723

from his master, Philip Ludwell, of Green Spring, Va.; coachman; five pounds reward. The second advertisement was that of John Copson, one of the proprietors of the paper, who had a negro boy for sale in High Street. By the price current it appears that flour is 28s. in Boston, 14s. to 15s. in New York,

² Except wages—evidence of man's condition and his betterment—they are always interesting. We find Pawlet, the beadle, getting better pay than he had been at first allowed, and June, 1719, the carters, draymen, and porters complaining, are allowed increased rates of compensation: 7½d. for each half-cord of wood hauled; pipe of wine, 1 shilling; hhd. of rum, sugar, or molasses, 10d. (lesser casks in proportion); to porters, for each pipe of wine, 8d.; each hhd. of rum, sugar, or molasses, 6d.; each 100 bushels of salt, 6s. 3d., etc., but carters were forbid to engross fire-wood.

³ Jonathan Dickinson wrote of manufactures this year that iron promised well; labor was well paid; "many who have come over under covenants for four years are now masters of great estates;" Philadelphia was furnishing the best bricks on the continent, with plenty of limestone, leading to solid building; "we have been upon regulating the pavements of our streets,—the footway with bricks, and the cartway with stone,—and this, with buildings, have made bricks so scarce that the inhabitants would go to the kilns and there strive for them at 28 per mill.; that is and will be the price here."

¹ Janney, *Life of Penn*, pp. 533–34.

9s. 6d. in Philadelphia, showing a truly congested state of transportation.

With a newspaper local news becomes possible. We hear about the river front,—state of the harbor, and whether free from ice or not; about arrivals and departures of vessels, the cargoes they fetch and carry away; about thieves, highwaymen, and sales of property; the newspaper brings us right down to modern times, at once enables the past to talk to us in the language of to-day.¹

The Second Street road was this year joined to the Moyamensing road, and extended to the Delaware opposite Gloucester, and the first attempt was made at quarantine, the Provincial Council being notified by the Governor that Patrick Baird, chirurgion, of Philadelphia, was appointed health officer, and required to board all incoming vessels and ascertain the condition of their bills of health; this being in consequence of the great increase of immigration. The troublesome matter of the market-stalls and of the Second Street bridge over the dock were also settled upon a satisfactory basis, and the wharves letted out by the year.²

¹ Feb. 23, 1720, river free of ice. Arr "Sea Flower," sloop, Lewes, Del., 700 bush. corn, — bbls beef and pork. Arrest.—Thursday, Mr. Bradford's two servants, who some time ago robbed him of £20 or £30 in cash, a watch and two spoons, were taken by him near Salem, and committed to jail in that place by Squire Rolf. Highway Robbery.—Ten days ago one Bradshaw, of Duck Creek, Kent Co., was riding on the road between Philadelphia and Darby, and was met by four highwaymen, two mounted, two on foot. One of them rid up to him and clapt a pistol to his brest and bid him to deliver his money or he was a dead man. The other three having surrounded him, and he seeing no way to escape, told them he had but two pistols, and he hoped they would spare him something to bear his expense on his journey. They bade him not to prate, but to deliver his money, or, damn him, they would shoot him immediately. The poor fellow was forced to comply. For sale.—Good long tobacco pipes sold at 4s per gross per single gross, and 3s for a large quantity, by Richard Warder, tobacco pipemaker, living under the same roof with Philip Sing, goldsmith, near the market place, where also all who have any occasion may have their foul pipes burnt for 8s per gross. Lottery.—New brick house, east side Third St., cor. Arch St., 15 ft. front, 26 ft deep, large sash windows, and stories 9 ft. in the clear, lot 100 feet; also 80 ft. of Rachel Whitsoncraft's lot, divided into 16 foot lots; 350 tickets at 20s each; John Read and Henry Frogley have given £500 bonds to the mayor to see a fair drawing. Convicted, in October, Edward and Martha Hunt, of Counterfeiting Spanish silver coins; Edward sentenced to be hung, Martha fined £500. (Hunt was hung. He had been a Preston transported rebel, and made an entirely modern speech on the gallows, declaring his innocence and protesting he was a victim,—“May God forgive them that has a hand in taking away my life any manner of way, and that my blood be not required at their hands, for they know not what they do.”) Any reporter in Philadelphia would feel himself at home in the presence of such a thoroughly modern shest. He would inquire for it as soon as he entered the coffee-house (on Front St.), but he would have been much more likely to find it, and to go hunt for it, at Robert Mills' Star and Garter Inn, or the Fountain Tavern, in Front St., or the White Horse, in Market St. This old journal gives us an inkling of the severity of the admiralty courts of the day, urged on, it is likely, by the prevalence of piracy. A case of mutiny tried before Judge Asheton resulting in conviction, the four culprits were ordered to stand in the pillory, with their ears nailed to it, in the market-place, for two hours each on two successive market days, on each day to have twenty-one lashes well laid on their bare backs, at eight several places in the city.

² The mayor, William Fiehbourne, took Walnut and Chestnut Streets at six pounds per annum, Masters and Redman took High Street at six pounds, the leases being for seven years. With regard to the market-

The Assembly, in February, 1721, passed the law regulating party walls in Philadelphia, which is in force at the present day. The first regulators under the law were George Claypoole, Thomas Redman, Samuel Powell, and James Poole. The arch at Front and Mulberry Streets was pulled down and the rubbish carted away in April, 1721, and the same month the City Council leased to Ralph Asheton, for twenty-one years, at forty shillings per annum, the square between Sassafras and Vine and Sixth and Seventh Streets,—a test by which to measure the enhancement of values. Keith, wearying of the Assembly, perhaps, tried to make the City Council feel the weight of his authority, but the quiet burghers let him know they knew what they were at better than he did, and suggested to him to mind his own business. The rebuff was the more effective from being so mildly delivered. Roger Mompesson, judge of the admiralty, on the other hand, when two persons were convicted before him of “denying the King,” put them in the pillory under the court-house for one hour on two market days, each bearing the label “I stand here for speaking contemptuously against my sovereign Lord, King George,” one of them moreover paying a fine of twenty marks, the other being whipped, with forty lashes, at the cart-tail. Copson, the publisher, at this time opened an insurance office in High Street, “to prevent the necessity of sending to London,” and he guaranteed his patrons the most responsible underwriters in the province.³

Beer appears to have been liable to adulteration even at this early day, for we find the Assembly, while providing that every cask should be gauged before sale, anxious also to forbid the use of any foreign substance for sophisticating the good malt liquor. It appears by this act that among the things so used were molasses, coarse sugar, melada, honey, foreign grains, Guinea pepper, etc.

The City Council was anxious to get entire control of the public ferries, and the Assembly, without con-

PILLORY.

stalls, Alderman Redman agreed to build thirty stalls for four hundred pounds, heightening the arches and pillars. The bridge, as wide as the street, was to cost one hundred and fifty-five pounds.

³ The “solid men” of Philadelphia of this day included John Cadwalader, Henry Hodge, Edward Roberts, Andrew Bradford, John Copson, Robert Ellis, Charles Reid, David Breintnall, Richard Clymar, John Hyatt, Thomas Tresse, Oliver Galterry, William Bowell, George Calvert, John Brooks, Benjamin Paschall, Thomas Nickson, William Branson, Anthony Morris, and William Bantofee. The names of these are all signed to an agreement to take Lyons dollars at 5s., English crowns at 7s. 6d., half-crowns at 3s. 9d., English shillings at 18d., English sixpence at 9d. in proclamation money, showing a premium of fifty per cent. on sterling at this time. The value of the Pennsylvania pound currency must therefore at this time have been \$3.33.

ceding this at once, did yield the Schuylkill ferry to the corporation, and set a new scale of ferry toll-rates, the key to which was :

1 person.....	1 penny.
1 horse.....	1 "
1 coach.....	1 shilling.
1 loaded cart.....	1 "
1 unloaded cart.....	6 pence.
1 head of cattle.....	3 halfpence.

The corporation contracted with Aquila Rose to keep the new Schuylkill ferry, giving him a twenty-one years' lease, provided he improved the approaches to the ferry with a causeway, a house, and a boat and ferry house.¹

Butchers were forbidden to kill animals in their stalls or in the streets, and it was made a finable offense for butchers or other persons to smoke in the market-house and stalls. It was already against the law, by act of Assembly, to smoke in the streets. Palatines at this time were imported in lots, and their services, for five years, were advertised at ten pounds per head. The manner of the advertisement makes it certain that the condition of these servants, until sold, was very similar to that of slaves or convicts. The negroes were perhaps worse off, but their benighted condition appears to have awakened compassion, for a person at this time offers in the *Mercury* his gratuitous services "to teach his poor brethren, the Male Negroes, to read the Holy Scriptures, &c., in a very uncommon, expeditious, and delightful manner."²

STONE PRISON, CORNER OF HIGH AND THIRD STS.
[From an old drawing in the Philadelphia Library.]

The Free Society of Traders, from which so much had been looked for and which yielded so little fruit,

¹ Aquila Rose was an early literary celebrity of Philadelphia, the friend of the Muses and of James Logan. Franklin relates in his autobiography that when he went to pay his first visit to Keimer he found that worthy just setting up an elegy on Aquila Rose. He was a poet himself, native of England, came to Philadelphia, and died in August, 1723, aged twenty-eight years. His son, Joseph Rose, Franklin's apprentice, collected his verses and published them in 1740.

² This person, undoubtedly a Quaker, urged that his services should be adopted by falling into verse:

"The great Jehovah from above,
Whose Christian name is LIGHT AND LOVE,
In all His works will take delight,
And wash poor Hagar's BLACKMOORS white.
Let none condemn this undertaking
By silent thought or noisy speaking;
They're fools whose bolts soon shot upon
The mark they've looked but little on."

came to an end in March, 1723, an act of Assembly then having put its property into the hands of trustees for sale to pay its debts. The trustees were Charles Read, Job Goodson, Evan Owen, George Fitzwalter, and Joseph Pigeon. These soon disposed of the property. The municipal corporation also sold the old city prison for seventy-five pounds, the new stone jail and work-house, southwest corner High and Third Streets, being completed. Two prisoners attempted to break this jail soon after it was occupied, but failed.

The financial situation of Philadelphia at this time was not wholesome. Perhaps to some of the men in affairs to-day the following exhibit may appear trivial; it is still the fact that it gave the Common Council great concern, the more so that it appears to have been difficult to get at the figures, and only by repeated endeavors was the committee appointed to settle the public accounts of the city induced to report.

As is apt to be the case, this deficit led to heroic financiering, and the floating debt became a real one. The city treasurer was ordered to pay over to the treasurer of the city and county the avails from the sale of the old city prison; the mayor was ordered to pay off and take up the bonds given by ex-Mayor Fishbourn for the money lent for building the market-stalls; and the mayor was ordered to complete a loan of £300 granted by the Assembly to the city from the money in the hands of the loan-office, and another of the same amount, money granted for building roads and bridges. A committee was appointed to see to the erection of the new structures, and they were authorized to draw at once for one-third of the £300. Debts were then paid to the amount of £282 8s. 9d. permanent obligations, and £60 19s. 2d. floating debt, and so a bonded interest-bearing debt of £600 was created.

In the Assembly of 1725-26 some acts were passed showing the growth of Philadelphia in municipal quality; as, for example, one providing for inspecting and branding flour to prevent the export

of that which was not merchantable; one to provide for a powder-house on Pegg's property, north of the city, and *entailing* the office of keeper upon William Chancellor, and his heirs and assigns, upon condition of his erecting a proper structure. For keeping powder he was to collect 12 pence per barrel for the first six months, and 6 pence for each month thereafter. It was in this year also that we have the first intimation of a public conveyance for hire for the use of the citizens and strangers. It was advertised in the *Mercury* that "the four-wheeled chaise belonging to David Evans is now intended to be continually kept in order by Thomas Skelton, near the Three Tons, in Chestnut Street." From Philadelphia to Germantown, four persons, 12s. 6d.; Frankford, 10s.; Gray's Ferry, in the morning, 10s.; in the afternoon, 7s. 6d.

Keith left his place reluctantly, and his successor, Maj. Patrick Gordon, was qualified as Lieutenant-Governor June 22, 1726. Keith probably had some followers, but it is likely the greater part of the community beheld his withdrawal with a sense of relief. Beyond reinstating James Logan, Gordon made no changes, and announced a conservative and conciliatory policy. He stated that the home government were not content with the currency issues, but that gold and silver were not now at such a premium as had ruled a few months before. At the same time he thought that the inflation of the currency had stimulated industry to new enterprises, such as hemp- and silk-growing. Of the latter he seems to have had the most unbounded hopes, the cause of which probably is that Benjamin Franklin had begun to think much of silk-culture at this time. The province and city certainly were prosperous. The Assembly, in an address to the Governor, said, "There has been more goods imported and more ships built in this place on British account than was ever known of at any time before."¹

Gordon, frank, bluff soldier, kept the loyal anniversaries, and the people celebrated them with him; as, for instance, when the birthday of the Prince of Wales was made a festival at the Governor's house, with drinking of health, salutes of cannon from the decorated shipping, the Governor's house illuminated, and even a ball given, said to have been the first on record in Philadelphia. But there were riots, too, at a later date, in one of which the pillory and stocks in

the market-place were burned down by the mob, compelling the Governor to issue a proclamation.

New Castle and Kent Counties (Delaware) now had a currency of their own, uncurrent in Philadelphia unless by consent, and the following merchants are found advertising in the *Mercury* that they will take bills of these counties: James Logan, William Allen, William Atwood, White & Taylor, Israel Pemberton, James Baily, John Derper, Catherine Smith, Anthony Morris, Michael Downes, Joseph Barger, Philip Doz, William Masters, George Mifflin, Theodore Chase, Job Goodson, Thomas Peters, Matthew Birchfield, Evan Owen, Richard Preston, William Branson, Andrew Robeson, John Cadwallader, Francis Harding, Richard Parker, John Leech, Henry Hodge, Benjamin Paschall, Simon Edgell, Thomas Masters, Clement Plumsted, Thomas Lawrence, Samuel Preston, Isaac Norris, Jr., Sarah Redman, Nathaniel Owen, Alexander Woodrop, Samson Cary, Robert Ellis, Joseph Turner, Samuel Hasell, George Claypoole, Charles Read, Joseph England, Rice Peters, William Moss, Mary Calvers, John Reeve, Casper Wister, Richard Robinson, Nathaniel Edgecomb, Edward Roberts, Boulah Coates, Ralph Sandiford, William Corker, James Tuthill, Martha Aspdin, William Till, Thomas Griffiths, Edward Farmer.

In March, 1727, occurred a great storm and flood, and the country was swept by such a raging sickness that the Assembly could not meet until the regular time for session had gone by. There was a conference, however, to enable the Governor to explain that the bills of the province would need to be called in, in consequence of the "horrid attempt of some of the wickedest of men to adulterate the bills of credit" of the province.² The bills were called in and counterfeiting made a capital crime. At the same time a memorial was prepared with a view to conciliate the hostility of the Lords Commissioners of Trade and Plantations to the paper-money scheme. This memorial represented everything as *couleur de rose* in connection with the Pennsylvania scheme of finance. The lords probably were not convinced, but experience had taught them the futility of opposing paper-money issues in the colonies.

Stringent measures were adopted for the effective inspection of beef and pork for exportation; and the Governor and Assembly showed themselves in a complete panic in regard to the influx of Palatines and other foreigners, the redemptioners now including Swiss, Scotch, English, and Irish, as well as Germans. If the fear of the authorities had prevailed at this time, the bone and marrow of the population of Central Pennsylvania to-day would have been kept out of the province. The Common Council appears to

² This attempt was apparently successful, so far at least as the spurious notes gaining circulation, for we find in the proceedings of Common Council, 6th Feb. 1727-28, a petition of John Hawkins, asking to be released of a fine of one hundred pounds "set upon him by a Court of Record of this City for Counterfeiting a Bill of Credit of this Province."

have been angry with Samuel Keimer, the printer, for attempting to get up a lottery; but it was more busy about the flagstaff on Society Hill, the Governor having presented the corporation with a new flag, made by William Chancellor, sail-maker, at a cost of £13 10s., and the celebrating the birthday of the son of the Prince of Wales. This—the prince was George III.—occurred on May 31st. It was Sunday, but the event was not neglected. There was a reunion at Governor Gordon's house, where the health of the king was drunk amid salvos of artillery. Next day the festival was renewed. The Governor kept open house to the gentry, and there was an entertainment and ball at night.

Old George I. died June 11th, and George II. was proclaimed in the market-place in Philadelphia, August 31st. The new king's birthday was celebrated in October, when Chancellor's (the sail-maker) house was availed of for a ship-owners' entertainment, with twenty-one pieces of cannon firing salutes in the garden; a ball at the Governor's following, and next day a feast by Mayor Charles Read, and a dinner by the grand jury on Wednesday. What the members of the Society of Friends said about these things is not put upon record.

At this time the Assembly sat in the house of John Eyer, paying him ten pounds per annum rent. We discover that the members already knew how to practice the device now known as a "dead-lock," absenting themselves so as to prevent a quorum when distasteful business was forced upon them. The controversy was as trivial as its cause,—the vagaries of Sir William Keith,—and no room need be made for it here, though it led to a war of pamphlets, and there were some constitutional questions involved. Keith, a member elect of the Assembly, absented himself and went to England. He did not return.

The first session of Assembly in 1729 was held at the house of Capt. Anthony, and was given chiefly to a consideration of the paper-money question. In April there was excitement in the city in consequence of the arrival in the Delaware of a vessel containing emigrants down with a malignant disease, probably ship-fever. It was the ship "Dorothy," John Bedford master; she was boarded by Health Officers Dr. Thomas Graeme and Lloyd Zachary, under direction of Governor and Council and of Mayor Thomas Lawrence and Recorder Andrew Hamilton; forbidden to come within a mile of the city or to land goods or passengers until the sheriff selected some safe place on shore for the sick. The spot fixed on was the Blue House Tavern, corner of Tenth and South Streets, and here quarantine was duly and safely performed, while the ship was effectually disinfected.

Governor Gordon, on returning from his successful visit to and conference with the Indians at Conestoga, was accorded a really flattering and handsome reception by the citizens of Philadelphia. "He was met by Richard Hill and numerous citizens at a distance

from the city and welcomed by a handsome collation served up in the woods. He was received at the boundary of the city by Thomas Lawrence, the mayor, and a number of ladies and gentlemen in coaches, and escorted to his mansion by a cavalcade of two hundred, 'the largest ever met in this province.'" It is quite possible this demonstration may have had some political significance. The Assembly was in session at the time; the Governor known to be opposed to a new issue of paper money; the majority of the Assembly, on the other hand, in favor of a very large issue, fifty thousand pounds. A compromise was effected by the Governor consenting to thirty thousand pounds, but not before much disorder, many "delegations" coming in from the country to compel the Assembly to grant the increased currency demanded. The riot act had to be proclaimed, and some of the bolder "lobbyists" were arraigned for contempt of the Assembly and trying to intimidate it. Samuel Mickle, George Claypoole, George Coates, and Jonathan Kempster were taken into custody and brought before the bar of the house, and the two latter were reprimanded by the Speaker and compelled to ask pardon on their knees. The Governor, in signing the bill, said that "so great and so indecent a noise has been made in some parts of this province that, to prevent the insults intended by some misled people spirited up to mischief, we were obliged to put a late act of Parliament in force amongst us."¹

The passage of the paper-money bill, however, put the Assembly in a liberal mood. It contained a grant of two thousand pounds for the building of a State-House, and the dolorous petition of the overseers of the poor of Philadelphia for relief on account of the destitutes thrown upon their charge through the great immigration opened the way to a loan of one thousand pounds to the mayor and commonalty for the building of an almshouse. The Common Council took possession of this money Oct. 12, 1730, and ordered a plan to be prepared. The Assembly also passed an act, the object of which was to prevent the immigration or importation of poor and impotent persons, with regulations very similar to those which are in force at the present time. Other acts were passed, requiring hawkers to give bond that the goods they sold were as represented; forbidding lotteries under a penalty of one hundred pounds; forbidding the holding of vendues at night, or in the streets of Philadelphia at any time, and giving the Governor power to appoint a vendue-master for Philadelphia. Patrick Baird was the first appointee. Edward Carter was allowed ten pounds for hoisting the flag on Society

¹ "The affairs of that year (1728) and the next, when the whole country was maddening about paper money, gave us a vast deal of trouble, and it was then thought that nothing but putting the English Act against riots in force here would have prevented the utmost disorders. This was most happily and seasonably done by Andrew Hamilton's means; but two days before two hundred men were, by an agreement, to come down out of the country and attack the opponents of a new emission of paper money, in which those of the town were to join."

Hill on Sundays and holidays, and the treasurer of the province was directed to get a new flag. At this time the Common Council ordered that the heirs of Joshua Carpenter should give up Potter's field,—its site is the inclosure now known as Washington Square. Jacob Shoemaker got the new lease. A number of new stalls were ordered to be erected in the market.

Punishments at this time were very severe, but the law was not equally administered. Glasgow, an Indian, convicted of larceny, was made to stand an hour in the pillory and then take twenty lashes at the cart's tail in six places in the city. A ship's captain, proven to have killed a passenger by barbarous torture and keel-hauling, is tried in Admiralty Court and acquitted. James Prouse and James Mitchell, convicted of burglary, are sentenced to be hung. Wednesday, Jan. 14, 1730, they are led out for execution. One is but nineteen; the judges have recommended to mercy, but the Governor's heart is steeled by remembrance of the frequency of crime and the increase of vagrants from Europe. An example is necessary. At one o'clock P.M. the bell tolls, a great crowd gathers at the prison; the irons are taken off the unhappy lads. Prouse cries hysterically; Mitchell, always calm, tries to comfort him in a tender, soothing way. "*Do not cry, Jemmy; 'twill soon be over, and then we shall both be easy.*" Seated on their coffins in a cart, they lead the procession to the gallows, Mitchell, always sustaining his weaker companion, bearing himself like a man. The tree is reached; they are asked to confess and speak to the people. Prouse mutters some remarks, but Mitchell only says, with serene face, "*What would you have me say? I am innocent of the fact.*" Told that his remark reflected on the jury, he repeats,—"*I am innocent, and it will appear so before God,*" and sits down. They are ordered to their feet again; the ropes are thrown over the beam, the sheriff begins to read. It is their death-warrant—but, why those words, *recommended to me for pity and mercy?* It is the reprieve! Mitchell's nervous tension yields to sudden collapse; he falls in a dead faint and scarcely may be recovered; but after a while reviving, falls to crying,—"*I have been a great sinner; guilty of almost every crime, but never of theft. God bless the Governor!*" And so they return again to prison, the weak man quite revived, the strong man still all a shiver with the nearness of the touch of death. Something dramatic in that scene, given, much abridged, from the *Pennsylvania Gazette* of Jan. 20, 1730, supposed to be from Franklin's pen. In the same number of the paper is an account of a duel. Two young Hibernians, Saturday last, on Society Hill, met at 9 A.M. and fought a duel before an array of spectators. Cause of quarrel not known, nor was it difficult to part them, so the whole scene is looked upon to be only a piece of theatrical representation. The same day one Sturgis, upon some difficulty with his wife, determined to drown himself in the river, she going with him, kind soul, to see it faithfully per-

formed, and indeed stood by silent and unconcerned during the whole transaction. He jumped in near Carpenter's wharf, but was timely taken out again, and so both went home disappointed.

In April this year the most serious fire since its foundation visited the city, breaking out in a store near Fishbourne's wharf, below Chestnut Street. It consumed all the stores on the wharf and some houses up King Street, during which it burnt the fine houses of Jonathan Dickinson and two others. Loss, five thousand pounds, heavy for the period. The engines were inadequate, and there was much thieving complained of in connection with this fire, a new proof of the immorality which was spreading. In fact, Philadelphia was now growing to be a city; 171 vessels cleared, 161 entered during the year, 622 votes cast, 227 deaths.¹

Another evidence that Philadelphia had become a city was the fact that William Fishbourne, ex-mayor, a man of many great trusts, and now trustee of the Loan Office, was this year declared a defaulter, some two thousand pounds of the public funds in his hands disappearing. He alleged robbery, but the Assembly did not believe, or, at least, would not relieve him. It required him to give security for the lost money, and made him ineligible to any office of trust or profit.

The City Council, March 3, 1731, decided to buy for the almshouse site the lot of Aldran Allen, near Society Hill, price two hundred pounds. This was a green meadow, the square now bounded by Third, Fourth, Spruce, and Pine Streets. The building seems to have been commenced without delay, and to have been completed by next year. We have no account of its appearance. The front was towards the east, entered by a stile from Third Street, the great gate being on Spruce Street. It was used for

¹ The merchants and others agreeing to take New Castle money at par this year were Andrew Hamilton, Clem. Plumsted, Sam. Hasell, Pat. Graeme, Arent Hassert, George McCall, Henry Hodge, Thomas Bourne, Mark Joyce, John Hyatt, Benj. Shoemaker, John Buley, Nathan Pryor, Blakston Ingedee, William Williams, Samuel Baker, Jonathan Palmer, Thomas Marriott, John Watson, Sam. Preston, I. Paxson, Thos. Biles, Simon Butler, Tim. Smith, Niel Grand, John Bell.

sick and insane, as well as paupers. There was a piazza all around the building.

The trustees of the State-House fund were Andrew Hamilton, the Speaker of the Assembly, Thomas Lawrence, and Dr. John Kearsley. Oct. 15, 1730, they bought, through William Allen, a lot on the south side of Chestnut Street, between Fifth and Sixth Streets, and some other adjoining lots. In February and June, 1732, more lots were bought and the building of the State-House was begun apparently in the summer of 1732. It seems that Kearsley and Hamilton were at cross-purposes in regard to the building. The matter was brought before the Assembly, and, after a full discussion, Hamilton's plans were fully approved and the execution of the work put in his charge. This building must thus be looked upon as entirely Hamilton's work, as old Christ Church is almost entirely Dr. John Kearsley's.

Andrew Bradford was at this time postmaster. In the *Weekly Mercury* of July 20, 1732, he explains that since Governor Spottswood, of Virginia, had become Postmaster-General he had actively sought to extend postal connections southward. Williamsburg was already connected, Edenton shortly would be, and next Charleston. To help this arrangement a distributing-office had been established at Newport, six miles below the falls of Rappahannock, Va. "Hues and cries (for runaways) may be dispersed at the stage-offices at the price of one penny-weight silver at each stage or office where dispersed." Bradford's mail arrangements were as follows: mail from New England, New York, etc., is received in Philadelphia each Wednesday; on Thursday morning it is forwarded to New Castle, arriving at eleven; departs at once to Susquehanna, reaching there at night and laying over until midnight Sunday, when it is forwarded to Joppa, getting there at 6 A.M.; Patapsco Ferry at noon; Annapolis, Monday night at 6 P.M.; lays over six hours, and at midnight starts for Marlborough, arriving at 5 A.M. Tuesday. It is expected in Williamsburg, Thursday, 6 P.M., and to be back in Philadelphia by three o'clock Wednesday. Travelers did not proceed as fast as the mail, but they had greater excuse to rest leisurely in their inns, for the justices of Quarter Sessions regulated ordinary rates, and did not scale them high. Wine, per quart, was 2 shillings; rum, 2 pence per gill; rum punch, with double refined sugar, 1 shilling 4 pence per quart; flip, 8 pence per quart; rum punch, single refined sugar, 1 shilling per quart; arrack, one quart, made into punch, 3 shillings; beer, per quart, 3 pence; best beer, 5 pence; oats, per bushel, 3 shillings 4 pence; cider, per quart, 3 pence; English hay for a horse, for a night, 8 pence; common hay, 5 pence.

In this year, 1732, the smallpox was so severe in Philadelphia that it was difficult to keep the Assembly in session. A deputation of Shawanese Indians

visiting the city, one of the tribe, Quassenungh, was taken down with the pestilence. He was well nursed, and recovered, but the speaker of the delegation, Opakethewa, who stayed with him, took the disease and died. He was given a ceremonious funeral by the authorities, and after he was buried Quassenungh had a relapse, died, and was buried with pomp and solemnity, the ships firing salutes, and two yards of black cloth being sent to the youth's father. A bridge was built by the Assembly this year over Cobb's Creek. The Common Council decided that none but freemen of the city should be eligible to election as common councilmen, and the Board also ordered an ordinance to be drawn to prevent the great nuisance of negro slave gatherings on Sunday, "Gaming, Cursing, Swearing, and Committing many other Disorders," and also to prevent children and white servants from forming crowds on that day, playing games, and making noise in the streets. Palatine immigrants, when they landed, were marched in line to the court-house, where they laid down their guns, met the Governor, subscribed the oaths, saluted the Governor with three volleys, the same to the mayor and sheriff, and so back to the ship.

In August, this year, Hon. Thomas Penn, one of the sons of the proprietary, came out to Philadelphia, receiving much honor and a procession of seven hundred horsemen, speech of welcome by Speaker Hamilton, addresses, reception, and a collation by Common Council. Keimer, in his Barbadoes paper, *The Caribbean*, laughs at the youth, and says he was frightened at the stalwart reception accorded him. The Assembly also gave him a banquet, the chiefs of the Five Nations a pow-wow, the fire-engines played for him, the freeholders feasted him, and the churchwardens and vestry gave him a notable dinner at David Evans' Crown Tavern. On the king's birthday Mr. Penn gave a return banquet, with many toasts, salvos from fifty cannon, and a ball at the Governor's house in the evening.

In 1733-34 a regular stage-line was established to New York, two stage-wagons, conducted by Solomon Smith and James Moore, running back and forth between Burlington and Amboy once a week. The poor-rates seemed to press heavily upon the corporation, leading to complaint of mismanagement at the almshouses and some changes in the system of overseeing, a superintendent being provided for. Public wood-corders were also appointed,—Richard Plummer and Peter Calahoon for High Street wharf, John Joyner for Mulberry Street, and Jeremiah Willis for Chestnut Street and Walnut Street wharves and Blue Anchor landing.

One cause of the high poor-rates was the severe winter of 1732-33. There was fifteen inches of ice in the Schuylkill, and when it broke up in February it caused great damage. Gray's Ferry was injured to the amount of one hundred pounds, two men were drowned at Andrew Robinson's, on Wissahickon, and

all the ferries were blocked. Men sleighed down the Delaware on the ice from Burlington, and it was common to cross to New Jersey in that way. This severe winter was succeeded by a hot, oppressive summer, in which many died from sunstroke.

John Penn, William Penn's oldest living son, with his brother-in-law, Thomas Frame, and the latter's wife, formerly Margaret Penn, together with their family, came to Philadelphia in September. They did not see Wait, the counterfeiter, standing patient in the pillory, nor the whale-cow and calf sporting in the Delaware, yet they saw a goodly sight. Men and women turned out to meet and welcome them, the mayor, recorder, corporation, and all. There was a cavalcade and coach parade, flags flying, and guns firing on Society Hill and from the ships in the river. There were addresses from all the official bodies, and the Common Council gave a banquet which cost £40 12s. 2d. Capt. Norris, with the English frigate "Tartar Pink," was in the harbor at the time, the captain's wife being with him, and the merchants gave the city's distinguished guests a banquet, in addition to the numerous private entertainments. The royal healths were drunk amid salutes of one hundred and forty guns. Possibly it may have been this redundancy of feasting which brought down Michael Welfare, one of the hermits of Conestoga, upon the city, in his linen pilgrim's garb, with his tall staff and long venerable beard, to stand in the market-place and announce the judgments of an offended Deity against the iniquitous place. He railed for a quarter of an hour vehemently, surrounded by a gaping crowd, then returned to his Patmos above the Wissahickon, probably expecting the earthquake to follow at his heels.

At this period population had begun to cross the city's restricted boundaries in more than one direction. There were many settlements in the Northern Liberties. Petitions were numerous to the Provincial Council for the regulation of the high roads to Germantown and Frankford. The lands of Daniel Pegg and William Coates were in part divided into town-lots and built upon, and further improvements were made on the highway from Society Hill towards Gloucester.

In 1735–36 we find further legislation intended to lighten the increasing burthen of keeping the poor and preventing abuses growing out of misconduct or neglect on the part of managers and overseers. In this latter year Anthony Benezet was naturalized, together with Abraham Zimmerman, Christian Weber, Nicholas Keyser, Martin Bitting, Conrad Keer, Conrad Kuster, Jacob Duke, Anthony Zadouski, Hans Pingeman, Andreas Keaver, and Lodowick Pitting. In January the west end of the State-House was ordered to "be wainscotted of a convenient height on three sides, and that the end be neatly wainscotted and finished the whole height for the use of the Assembly." The room thus designated as the chamber of the Legislature is Independence Hall.

John Penn made but a brief stay in the province. He looked after his property and some special industries, such as the manufacture of potash. In September he entertained the General Assembly at Shewbert's London Coffee-House, feasting the city corporation next day, and a short while afterwards set out for New Castle, where he took passage in the London packet, Capt. Budden, wafted eastward by light verses from local bards. His brother, Thomas Penn, remained in the province.

The Schuylkill fisheries had already required to be protected against the reckless and destructive methods of fishermen, their weirs and racks, and a judicious law on this subject had such a salutary effect that the Governor declined to consent to its repeal or modification. Under the old unchecked system the shad were actually hunted, by men on horseback and on foot, into the weirs, and the destruction was inexcusably great. In 1738 the enforcement of this law led to riots in Philadelphia County and on Mingo and Pickering Creeks.

Governor Gordon died Aug. 5, 1736, and was succeeded by James Logan in his capacity as president of Council. Maj. Gordon was exceptionally fortunate in being able to get along fairly well with the Assembly and people. He and his wife were buried in Christ Church, but there is nothing to mark the tomb.

When the new Assembly met, after Logan's accession, it was found necessary to petition the king to interpose to prevent unpleasant consequences pending the settlement of the disputed boundary with Maryland. The legislative body first occupied the State-House in October, 1735. In January, 1736, Province

THE STATE-HOUSE IN 1744.

Hall, the adjoining building, was completed, and the public officers were compelled to move in, with their papers and records, some of them taking it a great hardship, as hitherto people had gone to them and left documents with them at their own domiciles. The property on which the State-House stood had been held in the names of Harrison and Allen, and they were now required to convey it to John Kinsey, Joseph Kirkbride, Caleb Copeland, and Thomas Edwards, in trust for the representatives of the people and the public uses. This trusteeship continued until the Revolution. The lots on the southwest corner of

Chestnut and Fifth Streets and the southeast corner of Chestnut and Sixth Streets, were appropriated for two public buildings,—one for the use of the county, the other of the city of Philadelphia, for courts and other public purposes. The accounts of the commissioners for building the State-House were audited in 1738. Hamilton had expended £4043 16s. 11d. on account of the State-House, and was allowed for commissions, services, etc., £402 3s. 9½d. There were still owing small bills amounting to £220 17s. 6d., making the whole of Hamilton's outlay £4666 17s. 11d. Among the credits was £17 "for an old house sold Caleb Ransted." Lawrence and Kearsley had each received their share of the first instalment of £2000 voted by the State for the conducting of the building, being £666 13s. 4d. each of that money. Lawrence had paid £399 19s. 3d., and Kearsley £550. Both of these gentlemen had money in their hands and were allowed a small commission.

There was a great treaty made this year with the chiefs of the Six Nations. The council was held in the Quaker meeting-house, corner of Second and Market Streets, in September and October, under the appropriate auspices of James Logan. One hundred of the chiefs were present, and Logan entertained them for three days at Stenton before the council. At the meeting-house the chiefs sat in the body of the house, the galleries crowded with spectators. The Seneca chief, Kanickhungo, was the principal speaker, and the object of the conference was the continuance of peace and friendship. Many presents were exchanged, and the conference gathered solemnity from the certainty in the minds of all that an Indian war was not far distant.

The commerce of Philadelphia at this time continued to increase. The arrivals between March, 1735, and March, 1736, were two hundred and twelve vessels, clearances two hundred and fifteen vessels, and the ports traded to included London, Antigua, Barbadoes, Bristol, Bermuda, Cadiz, Jamaica, Ireland, Lisbon, Fayal, Newfoundland, St. Kitt's, Turk's Island, Cape Faro, Curacao, Cowes, Dover, Falmouth, Genoa, Gibraltar, Guernsey, Monserrat, St. Eustatia, Tortugas, and Yrica.

The Common Council endeavored to derive a greater income from its stalls outside the court-house and to regulate the conduct of its markets better. It sought again to get control of the ferries, and the proprietary consented to vest in the corporation the ferry-right across the Delaware, foot of High Street, but required the land at Schuylkill ferry to be paid for.

An instance of rude and ungallant justice is afforded at this time in the punishment of Frances Hamilton, a woman caught picking pockets in the market. She was exposed at the top of the court-house steps, her hands bound to the rails and her face turned towards the whipping-post and pillory; after being kept thus for two hours, so that all might know her, she was taken down and publicly whipped.

On Dec. 7, 1736, the Union Fire Company of Philadelphia was established, the organization of which will be found fully treated elsewhere. It originated partly in a suggestion of Benjamin Franklin, and was in undoubted response to the popular need. The winter of 1736-37 was very severe, making the danger greater from fires. The newspapers contain accounts of many persons frozen to death and great injury done by floods when the ice broke in the Schuylkill. One fire during this weather occurred in the house where a strange guest was lodging, an alleged Eastern prince and Christian, Sheik Sidi or Shedid Alhagar, who came with his suite from Europe, taking Barbadoes on his route. James Logan conversed with him, furnishing up his Arabic and Syriac. The sheik was begging, and counted most upon the Friends. He was rather an adventurer, but not an impostor, as there is contemporary Eastern mention of him by travelers not likely to be deceived. His visit was contemporary with rather an alarming comet, but no attempt was made to connect the two.

In 1738 we find the grand jury presenting streets as impassable, as a preliminary to compel them to be paved. This was the case with parts of Front Street, Sassafras, and High Streets, etc., and in connection with this paving was begun the system of underground drainage by arched culverts which makes all the subsoil of Philadelphia so dry to-day.

James Logan's presidency terminated June 1, 1738, when he was succeeded by Lieutenant-Governor George Thomas. The latter came in upon the edge of troublesome times, nor did he find the Assembly complaisant. He had an early collision with them upon the subject of increasing the paper-money issue, but yielded his judgment to theirs in time. In the summer of 1739 came news of difficulty with Spain about Campeachy logwood and Tortugas salt, and in August Governor Thomas issued his letters of marque to the first privateer which ever fitted out at and sailed from Philadelphia, the sloop "George," ten guns and ten swivels, William Axon, commander. Volunteers were invited to rendezvous at the Crooked Billet and sign articles. The "George" sailed in November, returning the next July with some cocoa and goods. The Governor was eager to put the province in a state of defense, but the Quaker influence frustrated him. He abounded in other suggestions, to which the House listened attentively, but no more. The House settled with Andrew Hamilton, then Speaker, for the completion of the State-House, and at the end of that session the old worthy withdrew from public life in a patriotic and stirring address.

Sanitary measures occupied the immediate public attention of Philadelphia at this time, and an unsuccessful attempt was made to compel the removal of the slaughter-houses, tan-yards, lime-pits, and skinner's yards, the offal of which polluted the dock, on the margin of which they were placed. The trades triumphed for a while, and made no little jubilee over

their success in frustrating "such a daring attempt on the liberties of the tradesmen of Philadelphia." It is amusing to encounter the same class of arguments precisely which are to-day heard under similar circumstances. The screen of abuses has been in use long enough to be well-nigh worn out now, one should think.¹

In 1740 the controversy between the Governor and Assembly on the public defenses grew angry. They fell out also about the proper plan of raising money in Philadelphia, the mode of levying taxes having caused discontent. There was an issue between the Assembly and the corporation upon the question of giving the levy-power to assessors and commissioners; the mayor and Council appealed to the Governor, and he sided with them. In fact, the new bill did impair some of the powers of the corporation under the charter, as it was meant to do, and the Governor stated the case. A constitutional question was raised on his authority to assign reasons for opposing a bill, and so a new ground of controversy arose. The Assembly, in fact, suspected the Governor of deliberate, preconceived intention to overturn the charter and subvert the liberties of the province. As Israel Pemberton said, "they knew what the Governor was before he came over," and were prepared for him.

April 14, 1740, war with Spain was proclaimed at the court-house; the Governor and corporation were present; salute of cannon upon Society Hill; liquor free to all, loud health-drinking to the royal family, and bonfires at night. The Governor at once issued proclamation authorizing a levy of troops for the expedition against Cuba, the following being the recruiting officers named for Philadelphia City and County: Capt. Palmer, Thomas Lawrence, Samuel Love, at Perkiomen; Marcus Huling, Manatawny; Owen Evan, Limerick; Alexander Woodrop, and James Hamilton. It was expected to find plenty of recruits among the continental foreigners in the province, but they did not respond. Many flattering inducements were thrown out, and when these failed the Governor countenanced the enlistment of foreigners, a practice very injurious and leading to serious trouble and vehement remonstrance. When the

Governor called for supplies the Assembly retaliated upon him, and thus the endless irritation was kept up.

1741 was an unhappy year for Philadelphia,—discontent, wars, rumors of wars, pestilence, famine and distress among the poor, dissensions among those in power and place. The currency was disordered, the home government and the city people differing about the rates to be paid for foreign coins.² There were large fires, the Governor's mills, on the Cohocksink, and "Hamilton's buildings," on the river front, being burnt. The severe weather of the winter caused so much distress among the poor that the regular resources were exhausted, and the Common Council had to make an additional appropriation and appoint a committee to solicit subscriptions for relief.³ There were riots (growing out of the scarcity of small change), so that the Common Council had to establish a rallying signal for the citizens to rendezvous at central points for the suppression of outbreaks, and order a sort of curfew to compel negroes to go home early and cease their riotous assemblages. There was a serious epidemic outbreak of yellow fever, the cause of which was either West Indies importation or the bad condition of the dock. The Governor and Assembly had a bitter quarrel about it, and the result was a heavy increase of mortality. There were seven hundred and eighty-five burials during the year, an increase of five hundred and five over the preceding year. The disease was called the Palatine fever, and

² Many merchants advertised their willingness to take English guineas at 34s.; French guineas, 33s. 6d.; moldores, 43s. 6d.; Arabian chequins, 13s. 6d.

³ Upper Delaware Ward, William Till, Thomas Bourne; Lower Delaware, John White, Richard Sowell; High Street, Nathaniel Allen and William Cooper; Chestnut, Joshua Maddox, Robert Strettle; Walnut, Samuel Mickle, Daniel Radley; Dock, Samuel Powell, Jr., Joseph Shippen; North, Benjamin Shoemaker, Richard Parker; South, George House, James Bainbridge; Middle, John Warder, Hugh Roberts; Mulberry, Septimus Robinson, William Parsons. They raised in three days £204 14s. 1d. But there was a good deal of money in the community. There is extant an enumeration of taxables made this year, and for the city we have:

¹ Franklin had his fling at them, of course; but, as his way was, anonymously. Speaking of the tanners' advocate at the bar of the Assembly, he said,—

"The youth that appeared for them said much about the sweetness and cleanliness of their trade, and said that he could smell no stink.

"That their trade was sweet, and affirmed that it was untrue to say otherwise.

"That what some people called a stink from the pits was a sweet smell.

"That the tanners were as healthy as other men; adding, Are we not healthy men?

"The weight of these and other reasons, and the behavior and manner of their speaker, was very extraordinary and amazing, and drew the eyes of all that were present. He assumed a military air and strut, placed himself at the front of the tanners, putting one leg foremost; he drew his handkerchief, rolled it up in his hand, gave it a few elegant flirts and tosses, and, having gained a proper posture, he looked on the spectators with an air of grandeur, self-sufficiency, and contempt."

two hundred and six of these immigrants fell victims to it. The quarantine arrangements appear to have been defective. Dr. Graeme's bill for twenty years' services was rejected, and he neglected his duties in boarding entering vessels. He was superseded, and the Assembly elected Dr. Zachary in his stead,—another cause for quarreling.

The military and naval spirit rose high, however. Seven companies were recruited for Cuban service, a part raised in Philadelphia, and the little privateer "George" covered herself with glory. Her commander, Lieut. John Sibbald, beat off a superior force of Spaniards, and on his return was presented with a sword. The success of the "George" led to the dispatch of another privateer, the ship "Dursley Galley," Capt. Neate, twenty-two six-pounders and eight swivels, which had a severe contest off Jamaica with Spanish privateers, winning the battle after severe loss.

The pestilence and quarantine troubles of 1741 led to the establishment of a pest-house and quarantine station, the first motion for which came from the Governor, on petition of the German immigrants. The House appointed a committee to select a site, and this committee—Joseph Harvey, Thomas Tatnall, Joseph Trotter, James Morris, and Oswald Peel—chose a low island on the southwest side of the Schuylkill, near its mouth,—a double island, bounded west by Minqua's Kill, and at this time called Fisher's Island, from the owner. It was named Province Island, and contained three hundred and forty-two acres, with some buildings. It cost, with the negroes belonging to it, £1700, and was held by the committee named, in trust for the purposes designated, some of the buildings being used for hospital purposes, the others leased to a tenant. Six acres next to the Delaware were reserved for the new hospital to be erected. The Governor or any two justices of the peace could cause the removal to the island of any one imported into the province who was ill of an infectious disease, to be nursed and attended there at the expense of the owners of the vessel on which he was passenger. He could not leave without a permit, and there was a fine for harboring him if he escaped.

There was now a sharp drawing of party lines in the province and in Philadelphia. On the one side the Quakers, the country party, the majority in the Assembly, on the other the Governor's, or gentlemen's party. Both sides courted the Germans, grown strong and influential enough to hold the balance of power. The elections in Philadelphia for city and county were held at the court-house on High Street, and in October, 1742, both sides were excited and eager for the contest. Inspectors were usually chosen on election morning by a majority of citizens present. On this occasion the Governor's friends, expecting trouble, proposed overnight to choose equal numbers from each party. This was rejected by the country party, with whom the Germans sided.

In voting, the citizens went up the narrow outside steps of the court-house to the balcony, where their votes were taken in at the window. It was alleged that the country party had been in the habit of holding control of these steps, and thus, in some measure, regulating those who passed up and down. On this election day, early in the morning, a party of about seventy sailors, mostly strangers, from the vessels in the stream, and especially the ships "Hanover" and "Bath," marched noisily through the streets. The mayor and recorder spoke to them. They said they only meant a harmless lark, but that they had as much right to be at the polls as the alien Germans. When the polls were opened Recorder William Allen was defeated for inspector by Isaac Norris, and the sheriff announced the fact from the balcony, speaking, as was the custom, through his speaking-trumpet. The sailors at once began a sally with their clubs, but retired when the mayor read a proclamation against disorder. As soon as the voting began, however, they returned and took possession of the stairs. The country party at once fell on the sailors, and a general battle ensued with fists, sticks, stones, clubs, and whatever missile or weapon came to hand. There were the usual casualties of such a "free fight," the result of which was the sailors were driven to their vessels, fifty of them being captured, including Cpts. Mitchell and Redmond, and committed to prison. After that the candidates of the country party were re-elected. Among those beaten badly were Anthony Morris, Sr., George Shed, Thomas Lloyd, William Fishbourn, Joseph Wharton, William Hudson, and Israel Pemberton, Sr. The members elected from Philadelphia County were Thomas Leech, Robert Jones, Isaac Norris, Edward Warner, Owen Evans, James Morris, Joseph Trotter, and John Kinsey, Speaker; for the city, Israel Pemberton and Oswald Peale, burgesses. A good deal of "investigating" was done, but nothing came of it.

There was a remarkable conference with the Indians this year at the Quaker meeting-house, but this has already been described in a preceding chapter. The privateer "George," Capt. Sibbald, with a consort, the "Joseph and Mary," continued her notable career on the sea, making profitable captures and performing daring deeds, but not preventing the Spanish from capturing seventeen vessels, bound to or from Philadelphia, close to the capes. On a second cruise the "George" and consort made many valuable prizes, their plunder being worth nearly one hundred thousand pounds. This success led to imitation. In 1743 the "George" and her tender were sold and the "Wilmington," a ship of three hundred tons, fitted out with a strong battery and a crew of one hundred and fifty men under Sibbald. Capt. Dowell commanded a schooner consort, and the two cruised on the Spanish Main, taking many prizes. Besides these other privateers were fitted out, "Le Trembleur" (the Quaker), Capt. Sears, fourteen guns, and the ship

"Tartar," thirty-six guns, Capt. Mackey. The latter capsized and sunk in the Delaware while going out, with her crew and many leading citizens on board, filling many houses with mourning.

At this time, during 1742-44, the municipality was active in paving and improving the streets, the system of taxing for such objects having become general. The *Gazette* describes a scene in the streets, during Quaker meeting, when Benjamin Lay attempted to bear a testimony against the vanity of tea-drinking by publicly smashing his late wife's china service. He had no sooner begun the work of destruction, however, than the crowd set upon him, overturned him, and broke or carried off the china he had refused to sell. In February, 1743, Tom Bell, a notorious swindler, known throughout the colonies, was arrested for representing himself to be Governor Livingston's son. He escaped, however, and indeed it was said of him that neither could bars or bolts hold him, nor was there a disguise which he would not successfully assume,—Bell, Livingston, Burnet, Rowland, Fairfax, Wentworth, parson, rustic, lawyer, merchant, doctor, sailor; everywhere he lived by his wits, and all the community were his gulls.

The Governor, in 1743, confessed himself starved out. There was no legislative work done, but the Governor had received no pay, and he sued for peace. A bargain was struck,—Thomas signed six bills, and he received fifteen hundred pounds "back pay." A war with France was daily looked for now, and all understood the need for harmony and wakefulness. Further progress was made in completing the State-House and court-houses, and the plan was now pretty well worked out, the building being finished in 1744. Some wharves of importance, such as Powell's and Nixon's, were built about this time, the corporation encouraging such work by giving a lease of twenty-five years to every one building an approved pier.

On 11th June, 1744, war against France was formally proclaimed at the court-house by the Governor, mayor, and corporation. The Governor, by proclamation, ordered every one capable of bearing arms to provide himself with firelock, bayonet, cartouche-box, and powder and ball enough to defend the province and annoy the enemy. When the Assembly met all talk took a material guise, and the Governor put many puzzling questions to a legislative body in which the Quakers were a majority. He recounted the insolence of a French privateer, the captain of which sent a message from the capes to the effect that he knew Philadelphia too well to be afraid they would send to pursue him, and announcing that he meant to stay there two weeks longer. The Assembly, however, said nothing, and the Corporation Council petitioned¹ the king to consider and relieve the defenseless con-

dition of the city, exposed to attack from its position on the seaboard, and undefended in consequence of the religious scruples of the inhabitants. The people, however, were not so peaceful as the Assembly. The streets were picturesque with war scenes. Troops were recruiting for several expeditions, and the privateersmen beat up the town for volunteers. Before the end of 1744 four vessels were added to the fleet of letters of marque. Futile attempts had been made to raise the "Tartar," but Capt. Christopher Clymer took command of the "Marlborough," 230 tons, 18 guns, 24 swivels; Capt. William Clymer, the barque (snow) "Cruiser," 200 tons, 14 guns, 14 swivels; Capt. Alexander Kattur, the snow "Warren," 220 tons, 16 guns, 18 swivels; and Capt. John Dougall reinstated the old sloop "George" among war vessels. The "Wilmington" took five vessels in September; the "Trembleur" secured four thousand pounds sterling aboard one French schooner. But Philadelphia commerce suffered in an equivalent degree. The American privateers sought for prizes in the West Indies; the French and Spanish privateers cruised off the Capes of the Delaware and Chesapeake; neither, pursuing fat merchantmen, had any particular desire to encounter the other.

Mordecai Lloyd was this year candidate for sheriff; openly soliciting votes, for the first time in the history of the city, his opponent, Nicholas Scull, the surveyor, addressed the freeholders in a card, saying, "Though it has not till this time been customary to request your votes in print, yet, that method being now introduced, I think myself obliged in this public manner to return to you my hearty thanks for the favors I have already received, and to acquaint you that I intend again to stand a candidate for the sheriff's office, and request your interest at the next election to favor your real friend." Being elected, Scull returned thanks in print also. The state of civic morals was not pleasant to think on, if a presentment made by the grand jury this year, and said to be in Franklin's handwriting, conveys a truthful picture. Unlawful bake-shops, cooper-shops, etc., are presented. Complaint is made of the vast number of tipling houses in the city, "many of which they think are little better than nurseries of vice and debauchery and tend very much to increase the number of our poor. They are likewise of opinion that the profane language, horrid oaths, and imprecations, grown of late so common in our streets, so shocking to the ears of the sober inhabitants, and tending to destroy in the minds of our youth all sense of fear of God and the religion of an oath, owes its increase in a great measure to those disorderly houses." The report claims that there are more than one hundred houses licensed, which, with the retailers, make the houses that sell strong drink near a tenth part of the city, and adds: "The jury observed with concern in the course of the evidence that a neighborhood in which some of these disorderly houses are is so generally thought to be

¹ From this petition we learn that, in 1744, Philadelphia was supposed to have at least fifteen hundred houses and thirteen thousand people.

vitiated as to obtain among the common people the shocking name of Helltown." Among the presentments made is "Samuel Hasell as magistrate, who not only refused to take notice of a complaint made to him against a person guilty of prophane swearing, but (at another time) set an evil example by swearing himself."

In 1745 came news of the capture of Louisbourg; source of much rejoicing, many bonfires, drinkings of the health of Governor Shirley, "immortal Gen. Pepperell" and Admiral Warren, with illuminations. The equanimity of the Assembly, however, was not much disturbed; they had been asked, and refused, to take part in the expedition; they declined to vote supplies. Vote, however, they did four thousand pounds to John Pole and John Mifflin, trustees, to be laid out for the purchase of bread, meat, wheat, flour, and other grain, for the king's service, as the Governor shall think best. Franklin says the Governor construed "other grain" liberally, as the casuistic Assembly intended, and bought "black grain"—gunpowder. The people took a closer interest in the affairs of the privateers,—those of the city, and those of the enemy, off the capes. The latter were troublesome, and tried to keep the former from coming out. Capt. Dowell, in the "New George," encountered the "Louis Joseph," of St. Maloes, Capt. François Piednoir, eighteen guns, frigate rigged. It was an obstinate fight, an hour long, Capt. Dowell losing two officers and fifteen men killed and fifteen wounded, and glad to draw the fight. A fortnight later the "Louis Joseph" met Capt. Kattur's "Warren" and his tender, the "Old George," fought them five hours, and, refusing to surrender, was taken by boarding, Capt. Piednoir falling, sword in hand, in a cutlass combat with Capt. Dougall, of the "Old George." The prize was valuable.

Capt. Bourne now commanded "Le Trembleur," Capt. Lister the "Wilmington," and Capt. Evans the "New George." "Le Trembleur," east of Bermuda, in June, cruising for the "Pandour" and "New George," her consorts, comes within pistol-shot of a ship and brigantine, when they hoist Spanish colors, showing themselves to be a thirty-eight gun frigate and a twelve-gun brig. "Le Trembleur" cripples the brig with a broadside, then gives the frigate a running fight, until the captain can manœuvre her out of danger. In November the "Warren" and "Old George" fall in with and engage a twenty-eight-gun Frenchman, but the battle is marred by the explosion of a gun aboard the "Warren," compelling her to escape. The "Cruiser," Capt. W. Clymer, in May captured two ships, one of them worth thirty thousand pounds.

It was in 1745 that the second market-house in Philadelphia was established, to accommodate the already populous southern part of the city, the inhabitants of which found it a hardship to go beyond Dock Creek all the way to High Street to procure their marketing. They accordingly petitioned for a

new market-house on Second Street, south of Pine, where the market was established and the street widened to accommodate it. The stalls, sixteen in number, were built by Edward Shippen and Joseph Wharton, at their own cost, they to receive the rents until they were repaid the principal and interest of the advanced money. Mr. Shippen was at this time mayor. On retiring from office he gave a dinner at the Golden Fleece Tavern. Alderman Abraham Taylor, elected his successor, refused to serve, and was fined thirty pounds. Alderman Joseph Turner, elected *vice* Taylor, also declined and was similarly fined, whereupon Alderman James Hamilton was chosen and qualified.

There was an echo in the new hall of Assembly at this time which prevented members' speeches from being heard. The superintendent was ordered to break it. As an evidence of the growth of the Northern Liberties, we find the inhabitants protesting against Miss Elizabeth Chancellor's petition to have renewed to her the lease granted to her father, now deceased, for keeping the powder-house. The remonstrants said that many good tenements would soon be begun, with wharves and stores, contributing much to the additional beauty and advantage of the city and neighborhood, and the employment of laborers and artificers, if that obstacle were removed, and this would also expedite the erecting of a new market-house in the place laid out for that purpose, "to the great conveniency of the neighboring inhabitants, now grown numerous, and of the country people, who would supply it with provisions."

The Assembly now secured a new issue of five thousand pounds paper money by offering to contribute so much to the use of government if it would be received in that medium. The Governor protested, but yielded. Four companies of volunteers were raised for the army, under Capts. John Shannon, John Deimer, William Trent, and Samuel Perry. Recruiting was also done in Philadelphia for Gen. Dalziel's regiment of foot for West Indies service and for Governor Shirley's Massachusetts regiment of foot. Thus about five hundred men were enlisted at one and the same time in Philadelphia for the military service in addition to the naval recruits. Each enlisted man had to be a Protestant, able and willing to take the oaths. He received a dollar on enlisting, and three pistoles for his family before marching. Tavern-keepers demanded twelve-pence per diem for a soldier's keep and board.

A new election law was passed in 1746, with the end of preventing riot and disorder. It provided for a primary election for inspectors. Another act was passed for suppressing cursing and swearing, with penalties of fine and imprisonment. Mayor Hamilton, at the end of his official term, remembering perhaps the difficulty of getting a successor to Mayor Shippen, after his costly entertainment, determined to establish a new and better precedent. Instead of

giving a banquet, he gave, in lieu thereof, "a sum of money equal at least to the sum usually expended on such occasions, to be laid out in something permanently useful to the city," to which use he proposed "the sum of one hundred and fifty pounds towards erecting an Exchange or some other public building." The money was put out at interest, and the example thus set was followed by many successive mayors.

In the spring and summer of 1746 an epidemic disease of great malignity raged through New England, New York, New Jersey, and Pennsylvania. Dr. John Kearsley called it the *angina maligna*, or putrid sore throat, and the traits of the disease as described are similar to those of diphtheria. The doctors could do

prize in the French ship "Judith," which did not yield without a sharp fight. Capt. Clymer also retook a French prize and drove a Spanish privateer ashore at Porto Rico. On his return the "Marlborough" was sold, and Capt. Clymer raised a company of foot soldiers and marched them to take part in the conquest of Canada. In April, off the Havana, the "Cruiser," Capt. William Clymer, was attacked by two xebèques of twelve guns each, a complement three to one of his guns and men fit for service. The fight lasted four hours, and when Clymer was carried captive in triumph into Havana the enemy had thirty killed and sixty wounded. The men were confined aboard a prison-ship, and Clymer cast into a dungeon

OLD MARKET-HOUSE, SECOND AND PINE STREETS.

nothing with it, the more especially as they essayed to treat it with phlebotomy and the mercurials, and it almost depopulated some villages. Its epidemic character was due in the first instance to atmospheric causes.

The harvest of the privateers had grown light as the French and Spanish commercial marine withdrew from the ocean, and it was found that the larger letters of marque did not earn their expenses. The "Wilmington" returned to trade without surrendering her commission, and while making a voyage with a cargo to London captured a well-loaded barque, which she sent as a prize into Philadelphia. The "Marlborough," Capt. Clymer, in March, captured a rich

and afterwards sent to Spain. This was the only Philadelphia privateer captured during the war. Capt. Katur, in the "Warren," captured a French sloop of twelve guns off San Antonio in February, and cut out a schooner with a cargo of sugar in Basse-Terre in June. "Le Trembleur" took a Spanish schooner with a ballast of pieces of eight and silver bullion. Some other captures were made by the above vessels and by the "Pandour" and "New George."

In 1747 the French and Spaniards took their turn at retaliating. Two French frigates on the coast, after capturing many merchantmen, chased the "Pandour" and "New George" so hotly that they could only get away by throwing overboard their swivels.

By the end of May twelve Philadelphia merchant vessels had been captured. The "Warren" was fitted out by subscription to cruise between the Navesink and the Virginia capes as a *guard à costa*. She found no enemy, but "Le Trembleur" barely escaped capture off Hispaniola, and more Philadelphia merchantmen were taken. In the mean time French pilots, bringing in prisoners for exchange, had learned the navigation of the Delaware, and on July 12th a sloop, bearing English colors, appeared off Cape May. The pilot who went off to her found himself prisoner to a French sloop of ten guns, manned chiefly by Spaniards. The pilot-boat, with a privateersman crew, ascended the river four miles above Bombay Hook, landed at Listen's plantation in New Castle County, rifled the house and carried off four negroes. Thence they went to Hart's plantation, plundering the house, captured a pilot-boat, and next took the ship "Mary," of London, bound up, with a valuable cargo. The sloop and her prize then departed, taking another prize before reaching St. Augustine.

When the express bringing the news of these depredations reached Philadelphia a painful excitement was caused. Neither the Council nor the Assembly were in session, nor did consultation with the members make it probable they would sanction the money cost of extraordinary measures, even in such an emergency. When the Assembly did meet, in August, the plea for defensive measures was answered by, the danger is past, the Delaware is long, our principles will not let us consent to fortifications and ships-of-war. Before the month was out another French privateer entered the Delaware, and ten days later two more stood inside the capes and made three captures. It was not until these vessels left that any of the Philadelphia privateers could be got ready for sea.

Meantime, Governor Thomas, having fallen into bad health, resigned his office and went back to England, Anthony Palmer, president of Council, acting in his stead. President Palmer could get no hearing either from the old Assembly or from that elected in October, 1747, in regard to the defenses. The latter body, indeed, when it adjourned October 15th, did so to meet May 16, 1748, as if determined to avoid the annoyance of frequent appeals for military aid. The president called an extra session in January, but was able to accomplish nothing. The Quaker majority was resolved to contribute no aid to war. Their principle of non-resistance was like the books of the Sibyl,—they saw their tenure of it must be broken in a very few years, and it was proportionately precious to them. But, in fact, this headstrongness in the mort of peril to the city, when temporizing was the best policy, simply precipitated the overthrow of the Quaker policy and the Quaker régime. In the next chapter will be shown how much Franklin was able to accomplish by his able pamphlet of "Plain Truth." It is enough to say here that this opportune publication

had the effect to crystallize public opinion in the determination to adopt a policy of public defense. Those of Franklin's way of thinking struck promptly while the iron was hot. On Saturday, Nov. 21, 1747, a number of inhabitants met in Walton's school-room, and resolved to form an association for military purposes. A committee was appointed to draft a plan of an association, which was submitted to a subsequent assemblage, which met at Roberts' Coffee-House, in Front Street. The next day the articles were ready for signing "at the new building." In three days five hundred signatures were obtained, and the work of volunteering still went on, not only in the city, but throughout the province. On November 26th the Common Council took up the matter with a memorial and petition to the proprietary government to send over cannon, arms, and ammunition for the equipment of a battery. The Provincial Council met the same day, approving the action of the citizens and encouraging the purposes of the association, and the merchants of the city applied to the English Board of Trade to have a ship-of-war appointed on the New York station which might be ordered to come sometimes within the bay of Delaware.

All this marks the definitive and final break-up of the Quaker non-resistance policy in Philadelphia. Several times afterwards its friends rallied, but their prestige was gone, and they were never able to resume their ancient control of affairs. The epoch of William Penn's empire ceases with Nov. 21, 1747.

Franklin and the party of defense were determined to give their defeated opponents no time to recover. They at once projected a lottery to raise the three thousand pounds necessary for the erection of a battery. The price of tickets was forty shillings each. There were two thousand eight hundred and forty-two prizes and seven thousand one hundred and fifty-eight blanks. William Allen, Joshua Maddox, William Masters, Samuel McCall, Sr., Edward Shippen, Thomas Leech, Charles Willing, John Kearsley, William Clymer, Sr., Thomas Lawrence, Jr., William Coleman, and Thomas Hopkinson were managers. They, together with William Wallace, John Stamper, Samuel Hazzard, Philip Syng, John Mifflin, James Coultas, William Branson, Rees Meredith, Thomas Lloyd, and Benjamin Franklin, or a majority of them, were to have authority to appropriate the proceeds for the benefit and advantage of the province. The Common Council, to encourage this lottery, took two thousand tickets, and the note of the treasurer of the corporation was given for them, on promise that he should be indemnified by the corporation in case of loss. The city drew some prizes in the lottery, which were handed over to swell the sum of the association's fund. The co-operation of the fire companies was also asked and secured. "Plain Truth" led to a good many other pamphlets, pro and con; the bench took up the matter in their charges, and in the pulpit Rev. Gilbert Tennent preached three long sermons on the text

"The Lord is a man of war," which were afterwards published, and led to a new crop of pamphlets.

On December 6th six hundred of the associators met at the State-House, marching thence to the court-house, where they agreed to the division of the city into companies, according to wards and townships, President Palmer assuring them of the countenance and support of the government. In the beginning of January the associators met again, and elected the following officers:

Captains.—Charles Willing, Thomas Bond, John Inglis, James Polegreen, Peacock Bigger, Thomas Bourne, William Cuzzins, Septimus Robinson, James Coultas, John Ross, Richard Nixon.

Lieutenants.—Atwood Shute, Richard Farmer, Lynford Lardner, William Bradford, Joseph Redman, Robert Owen, George Spafford, William Clemm, George Gray, Jr., Richard Swan, Richard Renshaw.

Ensigns.—James Claypoole, Plunkett Fleeson, T. Lawrence, Jr., William Bingham, Joseph Wood, Peter Etter, Abraham Mason, William Rush, Abraham Jones, Philip Benezet, Francis Garrigues.

The officers being chosen, the companies marched to the State-House, where the president and Council were sitting. The officers then elected Abraham Taylor as colonel, Thomas Lawrence lieutenant-colonel, and Samuel McCall major. Then they marched through the town, and returned to the State-House, where they were drawn up in three divisions, and fired three volleys. Each company then marched off under the lead of its captain, some of them exceeding one hundred men in number. The companies of Philadelphia County chose the following officers:

Captains.—John Hughes, Samuel Shaw, Henry Pawling, Thomas York, Jacob Hall, Edward Jones, Abraham Dehaven, Christopher Robbins, John Hall.

Lieutenants.—Matthias Holstein, Isaac Ashton, Robert Dunn, Jacob Leech, Joseph Levis, Griffith Griffiths, William Coats, Roger North, Peter Knight, Joshua Thomas.

Ensigns.—Frederick Holstein, John Roberts, Hugh Hamilton, John Barge, William Finney, James Richey, John Pauling, Benjamin Davis, Philip Wynn-coop.

Edward Jones was chosen colonel; Thomas York, lieutenant-colonel; and Samuel Shaw, major; Jacob Leech became captain of York's company; John Barge, lieutenant; and Jacob Naglee, ensign.

In April nearly one thousand associators were under arms. They were reviewed by the president and Council in the field. Col. Taylor made them a speech before dismissal, telling them that several country companies had offered to come to their assistance when needed; as there was no provision for such case or for their subsistence, he proposed that every householder of the city associators should entertain freely three or four of his country brethren until the threat-

ened danger passed, and that their horses be provided for gratis. The proposition was accepted with enthusiasm.

The first care of the associators, after organization, was the construction of proper batteries. The sites of these were selected by the lottery managers. There was a distressing scarcity of cannon. The old pieces lying about the wharves were overhauled, and seventy of different sizes pronounced fit for service in an emergency. Application was made to Governors Shirley, of Massachusetts, and Clinton, of New York, for the loan of some pieces. The latter lent eighteen pieces, eighteen-pounders, with carriages, which were brought overland from New York. The first battery was erected on Anthony Atwood's wharf, under Society Hill, between Pine and Cedar Streets, near the present Lombard Street. There was a timber and plank breastwork, eight or ten feet thick, filled in with earth

THE ASSOCIATION BATTERY.

and rammed down. The joining work was done gratuitously by the city carpenters, and the battery, begun Monday morning, was completed by Tuesday evening, with its armament of thirteen guns mounted. The grand battery was situated below the city and beyond the Swedes' Church, on ground afterwards occupied by the United States Navy Yard. In June the associators mounted guard there every night, and no boat or vessel was suffered to pass between 8 o'clock P.M. and 4 A.M. In case of any alarm at night, well-disposed persons were desired to "place candles in the lower windows and doors for the more convenient marching of the militia and well-affected persons who may join them." The managers of the lottery sent to England for the cannon for this battery. The pieces were received and mounted at the end of August. The battery was named "the Association," and the associators were saluted by it. There were twenty-seven cannon in it, and a gunner was hired at ten pounds a year.

The proprietaries responded to the request of the corporation for cannon from them, sending over thirteen pieces in November, 1750, which were mounted on the association battery. The *Gazette* said, "That battery now has upwards of fifty cannon, 18, 24, and 32-pounders. One of them, a new 32-pounder, was presented by the Schuylkill Fishing Company." The interest shown in the association was naturally shared

by the women, who prepared some beautiful flags and devices, with mottoes, for the volunteers. They also prepared the colors for the officers, half-pikes, spoons, halberds, drums, etc.¹

The foreign privateers in Delaware Bay had reaped such a harvest in 1747 that it was natural to expect they would return next year. The captured "Clinton," anyhow, was bound to come back, and return she did, in May, capturing the "Phoenix," a small schooner, bound to Bermudas, not far south of Cape Henlopen. The "Clinton" was now a French privateer, with fourteen guns and sixteen swivels, and a crew of one hundred and seventy-five men. The "Phoenix" was sent back to Delaware Bay and captured the brigantine "Tinker," but her captain got away with the "Phoenix" and sent the alarm to Philadelphia. The president of Council called the Assembly together, and demanded measures to restore the commerce of the port. The Assembly, however, had no measures to propose, but hoped that a ship-of-war might soon be found on the station. In fact, the "Otter" sloop-of-war, Capt. Ballet, arrived the next day, having been sent by the admiralty with orders to protect the trade of Philadelphia. The news was very gratifying; the Provincial Council gave Capt. Ballet and his officers a handsome entertainment at Roberts' Coffee-House, and the Corporation Council added a pipe of wine, eight loaves of sugar, and twenty

gallons of rum to his sea stores. The "Otter," however, came not for a cruise, but to heave down and careen; Capt. Ballet had been killed in a sea-fight. During this process several Philadelphia vessels were taken by the active enemy, and a Spanish brigantine, the "St. Michael," Don Vincent De Lopez, commander, ascended the Delaware as high as Elsenburgh. A large Jamaican was lying at New Castle, and Capt. Lopez determined to try to capture her. He was under English colors; no suspicion had arisen, but George Proctor, an American prisoner on board, escaped, swam ashore to Salem and gave the alarm. The New Castle battery and the Jamaica ship opened fire, and the Spaniard, hoisting his true colors, cheering and firing a gun, sailed down the river again. This was a piece of genuine bravado, the effects of which upon the unwarlike community were increased by the privateer captain's declaration that he meant to rob, burn, and destroy wherever he could, and that, with his consorts, he would soon visit Philadelphia. As Capt. Ballet could not get the "Otter" ready to drive off the enemy, the association batteries were manned and put in a state of defense. A company of artillery was formed, under command of the old privateersman, Capt. John Sibbald, to work the guns of the batteries, and a guard was set for the protection of the powder-house. A day was set for the meeting of the Assembly, and two "intelligence boats" were commissioned to cruise in the bay and report every suspicious circumstance.

The Assembly met and adjourned forthwith without any attempt at defensive measures, but, on the contrary, with such an answer to the Governor as could not fail to cause exasperation. On June 17th the captain of a small sloop, captured in the bay by a Spanish privateer, reported in the city that, besides his captor, there were in sight when his vessel was taken a fleet of two ships, three brigantines, and a sloop, one of the ships, very large, mounting thirty guns. Capt. Ballet, of the "Otter," consulted the Council as to whether it would be prudent for him and the convoy of merchantmen, waiting for his escort, to go to sea under such circumstances. In fact, he did not go for some weeks, and then it was discovered that the supposed hostile fleet was an English frigate and consorts.

The preliminary peace at Aix la-Chapelle was signed on April 19, 1748, and the news arrived in Philadelphia August 24th. The cessation of arms was immediate, the privateers were sold to take on commercial cargoes, and officers and crews returned to peaceful occupations. The bold rover, Capt. Obadiah Bourne, established himself at the corner of Market and Water Streets, thence called Bourne's corner, and dispensed punch and ale beneath his memorial sign, Le Trembleur. The war was over.

In September, 1747, the Corporation Council for the first time voted a salary to the mayor,—one hundred pounds per annum,—but even then it was diffi-

¹ DEVICES AND MOTTOES FOR THE ASSOCIATOR REGIMENTS.

I. A lion erect, a naked scimitar in one paw, the other holding the Pennsylvania escutcheon. Motto, *Pro Patria*.

II. Three arms wearing linen, ruffled, plain, and chequed. The hands joined by grasping each other's wrist, denoting the union of all ranks. Motto, *Unita virtus habet*.

III. An eagle, emblem of victory, descending from the skies. Motto, *A Deo Victoria*.

IV. Liberty seated on a cube, holding a spear, the cap of freedom on its point. Motto, *Inestimabilis*.

V. Armed arm, the hand grasping a naked falchion. Motto, *Deus adjuvat forte*.

VI. An elephant, emblem of the warrior always on his guard, as that creature is said never to lie down, and hath his arms always ready. Motto, *Semper paratus*.

VII. A city walled about. Motto, *Salus patriæ, summa lex*.

VIII. A soldier with his piece recovered, ready to present. Motto, *Sic pacem querimus*.

IX. A coronet and plume of feathers. Motto, *In God we trust*.

X. A man with a drawn sword. Motto, *Pro aris et focis*.

XI. Three of the associators marching with their muskets shouldered and dressed in different clothes, intimating unanimity of the different sorts of people in the association. Motto, *Via unita fortior*.

XII. A musket and sword crossing each other. Motto, *Pro rege and grege*.

XIII. Representation of a glory, in the midst of which is written *Jehovah Nissi*; in English, "The Lord our Banner."

XIV. A castle, at the gate of which a soldier stands sentinel. Motto, *Cavendo tutus*.

XV. David, as he advanced against Goliath and slung the stone. Motto, *In nomine domine*.

XVI. A lion rampant, one paw holding up a scimitar, another on a sheaf of wheat. Motto, *Domine protege alimentum*.

XVII. A sleeping lion. Motto, *Rouse me if you dare*.

XVIII. Hope represented by a woman standing clothed in blue, holding one hand on an anchor. Motto, *Spero per deum vincere*.

XIX. The Duke of Cumberland, General. Motto, *Pro Deo et Georgio Rege*.

XX. A soldier on horseback. Motto, *Pro libertate patriæ*.

cult to get the right man to serve. When Alderman Anthony Morris was elected he could not be found so that notice might be served upon him, and it became so evident at last that his absence was intentional that a new election was had, and William Atwood chosen in his stead.

This year was attended with another outbreak of the yellow fever, and the inhabitants seem to have traced it to the condition of the swamps of Dock Creek, between Budd's buildings and Society Hill. The Common Council, in October, long after the outbreak of the fever, appointed Samuel Powell, John Stamper, Samuel Rhoades, Edward Warner, Benjamin Franklin, and William Logan to consider a plan for the removal of the nuisance.¹ Secretary Peters, writing to the proprietaries, September 4th, stated that the fever was not so bad as in 1741, but sufficiently dangerous still. "Mrs. Kearsley, Young Joseph Turner, Mr. Jesse McCall, Mr. Andrew Hamilton, and Mr. Curry were all attacked Sunday or Monday, and they all died and were buried within the week except Mr. Curry, who is since dead. Mr. Allen was seized with the fever on Monday morning, and is in a fair way of recovery." Secretary Peters is clearly of opinion that the distemper was due to the filthy condition of Dock Creek. The Penns did not accept this view of the case, but the Provincial Council was driven by the public danger to act boldly. A captain from Barbadoes attempted to defy the city's quarantine regulations, when he was promptly arrested and cast into jail, and all intercourse forbidden with his ship and crew. In December the Provincial Council called for a solemn fast on Jan. 7, 1748, "on account of the mortal sickness in the summer past," and because "there is just reason to fear that, unless we humble ourselves before the Lord and amend our ways, we may be chastised with yet heavier judgments."

The lottery for the use of the association was so successful, that in 1748, after the news of peace, another was had to raise nine thousand three hundred and seventy-five "pieces of eight" for the public use. A systematic arrangement about wood-corders was made this year, Owen Roberts and John Pickle, for a rent of fifty pounds per annum, securing a four years' lease of the public wharves at the end of Vine Street, Penny-Pot Landing, the wharves at foot of Sassafra, Mulberry, High, Chestnut, and Walnut Streets, and the public wharves at the end of Dock Street, and the public wharf at the end of Spruce Street, adjoining Samuel Powell's, they to have the fees, profits, fines, and penalties imposed by the ordinances for cording wood, etc., and to keep the wharves in good repair. A private subscription provided for clearing out Dock Creek, walling it, and extending some of the sewers leading to it further inland, but want of co-operation,

especially on the part of the proprietary, prevented this voluntary plan from being fully carried out.

On Nov. 23, 1748, James Hamilton, son of Andrew Hamilton, having been appointed Lieutenant-Governor, was proclaimed; the City Council congratulated him, and his accession was welcomed with a public dinner. His administration began auspiciously. There was a complaint from the county of the too free licensing of public-houses, and a suggestion that it would be better for the county justices to have the power to grant such licenses than that it should reside in the Governor. The trustees of Province Island were ordered to expend one thousand pounds in the erection of pest-houses on that island, for the reception of strangers coming into the province. The superintendents of the State-House were ordered to build a structure on the south side of the building for the staircase and bell; and also, in August, to find a place for entertaining visiting Indians. A petition was received and a law passed against the entailing of lands. Another petition, received at the October meeting of the Assembly, protested against the overcrowding of immigrant vessels, and the consequent mortality and suffering, the introduction of epidemic diseases, etc. In fact, the ships "Francis" and "Elizabeth" had arrived in September from Rotterdam with Palatines, many of whom were down with eruptive fever. The sick had to be accommodated in tents and temporary shelter on Province Island, and there can be no doubt that the evil complained of was a very serious one.

Much trivial municipal business was transacted in the course of this year by the Municipal and Provincial Councils, but little of which is of a nature to need repeating here. The mayor's salary was repealed, upon the ground that "the business of the mayoralty had *grown more profitable*;" a census of the city was taken, the details of which have already been given, and an attempt was made to repair the inefficiency of the city watch. The Common Council was of opinion that the only effectual remedy for the evil was to obtain an act of Assembly for raising money by tax for supporting a regular and stated watch, as was done in Europe. Meantime some temporary improvements were made, and citizens agreed to put lamps at their doors and windows to aid the watch and relieve the unlighted streets. These seem to have been really unsafe at this time, in consequence, perhaps, of the number of disbanded soldiers and sailors, and the large and miscellaneous immigration. Highway robberies appear to have been very common in the neighborhood of the city in the fall and winter of 1749. Two highwaymen, Fielding and Johnson, arrested for some of these offenses, made some daring attempts at escape. They sawed off their irons, and planned to seize the jailer and force their way out. They were frustrated, when they turned back, unlocked the cell-doors, and held the gaol against all comers during the night, but were next day overpowered, taken to court,

¹ Such a plan was reported in February, 1748, but thought too costly to be then undertaken.

and sentenced to death. They were hung on the Commons.

The grand jury presented, in 1750, not only the night-watch and their bad regulations, but "the extreme dirtyness of the streets, not only for want of pavement in some places, but through the disorderly practice of throwing out all manner of dirt and filth without any care taken to remove the same, whereby the streets that have been regulated at a public expense are rendered exceedingly deep and miry in wet weather." The mayor issued his proclamation against these practices, which must have been very filthy—water-courses filled up two or three feet with dirt, hatters casting felts, tails, and offals into the kennels, shoemakers their ends and scraps, etc. The proclamation, however, did not cure the evil, and it was resolved to petition the Assembly.

That body passed an act to regulate the importation of immigrants, allowing each passenger six feet in length and one foot six inches in breadth of space, in the vessel in which he came, and compelling sufficient food and drink to be carried for all.

In 1749 Parliament passed the notable act to suppress iron manufactories in the colonies. This act required a return of existing mills to be made, and we learn from it that on June 24, 1750, Stephen Paschall was operating a steel-furnace at the northwest corner of Walnut and Eighth Streets, built in 1747, at which blistered steel was made; William Branson had a steel-furnace in the city (site not returned); and John Hall a plating, tilt-hammer forge at Byberry, in Philadelphia County.

On Dec. 21, 1750, there was a meeting at Widow Pratt's tavern of those who had or intended to put lamps in their doors, and the result was an agreement among the subscribers to pay a man three shillings nine pence per month for lighting these lamps regularly every night.

At the election in October this year the vote was as follows:

Assembly.			
Isaac Norris.....	1799	Evan Morgan.....	1236
Edward Warner.....	1790	John Smith.....	1230
Owen Evans.....	1760	Thomas Leech.....	562
Joseph Trotter.....	1474	John Naglee.....	284

CHAPTER XIV.

BENJAMIN FRANKLIN AND PHILADELPHIA.

FROM 1723 to 1776, Benjamin Franklin, printer, was the largest man in Philadelphia and Pennsylvania. He was not the best man by long odds; he was only

the greatest man when we eliminate some moral traits of the first importance to the perfect man, but in which he was deficient to a degree approaching littleness; he was not a great genius, for his leading excellence was a certain calm and luminous mediocrity, in the centre of which sat Common Sense, enthroned as the Supreme Being—we cannot apply the term divinity to such clay images—of the entire equable structure, and of that common sense "Poor Richard" was himself the incarnation. But he was the largest man in the province and the city,—the man who originated the most measures, wielded the greatest influence, and, as even those who do not like Franklin cannot help admitting, accomplished the most good. Franklin was really a much greater man than his indiscriminate admirers can make him out, or than the casual student of his career may be able to discover; for it was his foible to conceal his connection with the springs of action, as he was apparently indifferent to the authorship of his best writings, and equally was it his foible, by sedulous seizing of the opportunity, to seem to accomplish great ends by small means. Great ends, however, he did accomplish, often after long waiting, and he possessed, in a remarkably perfect degree, that sublime quality of patience which is itself, if not genius, at least its nearest of kin and best substitute.

Franklin's autobiography and the leading facts of his long and useful life are so commonly known that there is no need to dwell upon them here; yet it is not so generally known how completely and at all points he touched the public and private life of Philadelphia, and was the political, literary, scientific, and industrial mainspring of the city and the province during upwards of fifty years. After the outbreak of the Revolution, and until the formation of the Federal Constitution, his intelligent and devoted service was given to the cause of the Republic of the States, an arena to which we will not follow him, but where better, more needed, and more opportune service was never rendered. It is the Franklin of Philadelphia, however, whom we are called upon to portray in this place.

Benjamin Franklin was born in Boston, Mass., on the 6th of January, old style (the 11th of January, new style), 1706, in a house on Milk Street, nearly opposite to the Old South Church, and on the site now (1884) occupied by the *Boston Post* newspaper. The house in which Franklin was born remained standing until December, 1810, when it was destroyed by fire.¹

¹ Its appearance at the period of the philosopher's birth is thus minutely described in "Shurtleiff's Description of Boston":

"Its front upon the street was rudely clapboarded, and the sides and rear were protected from the inclemencies of a New England climate by large rough shingles. In height the house was about three stories; in front the second story and attic projected somewhat into the street, over the principal story on the ground-floor. On the lower floor of the main house there was one room only. This, which probably served the Franklins as a parlor and sitting-room, and also for the family eating-room,

Notwithstanding Franklin was born in New England, he was only half a Yankee. His mother, his father's second wife, was Abiah Folger, daughter of Peter Folger, "one of the first settlers of New England, of whom honorable mention is made by Cotton

FRANKLIN'S BIRTHPLACE.

Mather in his ecclesiastical history of that country, entitled 'Magnalia Christi Americana,' as 'a godly and learned Englishman,' if I remember the words rightly."¹ This was the New England strain in Franklin's blood. His father was a true-born Englishman, of the old Northamptonshire yeomanry stock who had lived in the same village, Ecton, on a freehold of thirty acres, for at least three hundred

was about twenty feet square, and had two windows on the street, and it had also one on the passage-way, so as to give the inmates a good view of Washington Street. In the centre of the southerly side of the room was one of those noted large fireplaces, situated in a most capacious chimney. On the left of this was a spacious closet. On the ground-floor, connected with the sitting-room through the entry, was the kitchen. The second story originally contained but one chamber, and in this the windows, door, fireplace, and closet were similar in number and position to those in the parlor beneath it. The attic was also originally one unplastered room, and had a window in front on the street and two common attic windows, one on each side of the roof, near the back part of it."

¹ Folger came from Norwich, England, with his father, in 1635, at the age of eighteen, and they settled at Martha's Vineyard, where John, the father, died, leaving Meribell, his widow, who survived him three years. In 1644, Peter married Mary Morrell, one of the family of the celebrated Hugh Peters, and in 1663 he went to Nantucket, one of the first settlers of that island. Peter Folger was a man of integrity and reading, a land surveyor, whose word was accepted as final in all cases of disputed boundary and title; a student of the Indian tongues, much valued as an interpreter; a catechist of the savages also, greatly esteemed by the missionary, Rev. Thomas Mayhew. Peter Folger died in 1690, father of two sons and seven daughters. He published a volume of devout poetry, "A Looking-glass for the Times, or the Former Spirit of New England revived in this generation," a plea for liberty of conscience and against persecution, which he looks upon as the cause of war and all the other calamities distressing the people.

years, the eldest son always pursuing the trade of the smith.

Benjamin, who made some search into parish registers while visiting England in 1758, learned that he himself was the youngest son of the youngest son for five generations back. His grandfather had four sons,—Thomas, John, Benjamin, and Josiah. Thomas, bred a smith, passed the bar and became a man of consequence in the county; John was a wool-dyer; Benjamin, a dyer of silk, and, in his way, something of a poet. Josiah Franklin married young, and came to New England with wife and three children in 1685, a non-conformist seeking freedom of worship, a dyer by trade like his brothers. He changed his business when he came to Boston to that of tallow-chandler and soap-boiler, and he was the father of seventeen children, nine by his second wife, to whom he was married in 1690. Benjamin was the fifteenth child and youngest son. The boy was meant for the church, or, rather, the non-conformist pulpit; showed himself precocious, was sent to a grammar school, and in a year got head of his class. But his father had too many children to think of sending one of them to college. Benjamin was put at a writing and ciphering school, and at ten years old was taken to learn soap-boiling,—that is to say, to help make the soap-kettle and the family pot boil by cutting wicks, filling moulds, minding shop, and running errands.

The trade suited the youth so ill he proposed going to sea, but the father forbade. He was a stout, strong man, this father, of sound, solid sense, could draw well, and knew a little music; had a good, resonant voice, played and sung to the violin, and was skilled with tools. He was a good adviser to friends, managed his own affairs discreetly, was noteworthy for his solid, sturdy understanding and his prudential tact. Such a man, while not apt to yield to a boy's whims,—and he knew that Benjamin was notional,—would still find out if he were really unfitted for a trade. Accordingly, he took the boy around with him to see different sorts of work done, in order to detect if he had any especial aptitude, ending, when he found out the boy's taste for reading, by binding him apprentice to his eldest son, James Franklin, the printer. James had learned his trade in England, and came out to Boston in March, 1717, with a press and new fonts of type. At first he did only job work, but in 1719 a new postmaster was appointed, who established a second newspaper, *The Boston Gazette*, and James Franklin was employed to print it. In August, 1721, the *Gazette* having passed to another printer, Franklin began to publish *The New England Courant* at his own risk, which was the fourth newspaper printed in America. It was a weekly, a foolscap half-sheet, sometimes enlarged to a whole sheet; the contributors forming a sort of club, furnished the articles, essays or letters, there being little news and few advertisements.

The story of Benjamin's verses and how he hawked

them about the streets; of his brother's harshness; of the youth's anonymous contributions to the paper; of the paper's suppression and its reissue in Benjamin's name; of the latter's escape to Philadelphia, of the voyage, the three rolls, the interview with Bradford, Keimer, and Keith, are too familiar to need to be retold here. The printer was but seventeen and a half years old when he came to Philadelphia. He was but twenty when he returned from London, an accomplished printer and a man of the world. This was in 1726. Franklin had already printed a deistic work; he confesses to have practiced some libertinage;

mentalist,—he had said, long years before, that he would rather find a recipe for Parmesan cheese in his readings of Italian travels than the most venerable of inscriptions of the antique world,—and he nursed no illusions now. He resolutely allied himself with the party of action. He became chairman of the Pennsylvania Committee of Safety. Congress appointed him postmaster-general, with a salary of one thousand dollars, and practically unlimited power and discretion. He was at the head of the commission for Indian Affairs in the Middle Department. He was a commissioner to the army of Boston, chief of the important Committee of Secret Correspondence, and commissioner to Canada. He was one of the five to draw up the Declaration of Independence, and was president of the Pennsylvania Constitutional Convention. Finally, Oct. 26, 1776, he sailed for France aboard the sloop-of-war "Reprisal," with almost unlimited discretionary power, as agent for the colonies, reaching Paris December 21st. He did not return again to Philadelphia until Sept. 14, 1785, when he was seventy-nine years old. He lived to be eighty-four, dying April 17, 1790.

Jared Sparks describes him as "well formed and strongly built, in his latter years inclining to corpulency. His stature was five feet nine or ten inches; his eyes were gray, and his complexion light. Affable in his deportment, unobtrusive, easy, and winning in his manners, he rendered himself agreeable to persons of every rank in life. With his intimate friends he conversed freely, but with strangers and in mixed company he was reserved and sometimes taciturn. His great fund of knowledge and experience in human affairs contributed to give a peculiar charm to his conversation, enriched as it was by original reflections and enlivened by a vein of pleasantry, and by anecdotes and ingenious apologies, in the

FRANKLIN AT THE AGE OF TWENTY.

he was as unlikely a man to get advancement in a staid Quaker community as could be imagined. In 1730 he had a printing establishment and newspaper and stationer's shop of his own, was married, and was already pressing upon public opinion with a powerful leverage.

We will return to this part of his career again. When Franklin returned to Philadelphia on May 5, 1775, after his fruitless negotiations in England, the die of revolution was already cast. The day after his arrival the Assembly of Pennsylvania elected him delegate to the second Continental Congress, and so he began his national career. He was never a senti-

happy recollection and use of which he was unsurpassed."

Benjamin Franklin arrived in Philadelphia in October, 1723, and forthwith applied to Andrew Bradford, the printer, son of William Bradford, for employment. There was a sort of propriety in this step, both of coming to Philadelphia and applying to Bradford, of which Franklin was probably not aware. For he was the ostensible proprietor of his brother's *New England Courant*, which was then under the ban of official censure, and it was Bradford's paper, the *American Weekly Mercury*, which had raised its voice in manly defense of the per-

secuted printer and in rebuke of his persecutors.¹

It is proper now to inquire, before setting forth what Franklin did, what sort of a field to work in he found in Philadelphia, what was the state of printing, science, letters, and the liberal arts at that time. The Quakers were not learned, as a sect,—the social rank from which their earliest members were chiefly recruited would have made this impossible,—nor were they inclined, by their tenets and the precepts and practices of their faith, to the cultivation of literature and the liberal arts. They were naturally almost entirely excluded from the professions. A Quaker would hardly take a degree in medicine without doing violence to his conscience. He could not pass the bar nor practice in the courts of England. But the Quakers were not illiterate, nor were letters neglected in the colony of Friends on the banks of the Delaware. Penn himself, as has been sufficiently shown, was a man of as much reading as penetration. Barclay was both scholar and logician. Story was a scholar. Logan was profoundly read, a man who would have excelled at Oxford and Cambridge and shone in a German university. George Keith was a scholar. It is probable that in the Philadelphia of 1723 there was a larger proportion of persons with some knowledge of Latin, and a much larger proportion of good Latinists, than there are in the Philadelphia of 1883. In the decorative part of polite learning the early inhabitants of the city perhaps did not shine, but in its solid endowments they were not remiss. It is certain they did not undervalue learning and knowledge, nor neglect the means to secure them. They endowed schools at the outset, and in the very beginning took their stand for the liberty of the press as a thing as important as liberty of conscience. Enoch Flower was teaching school in 1683, Bradford's press was at work in 1686.

Bradford's was the first printing-press in the middle colonies, and the second in the British colonies. It is a subject of pride to Pennsylvanians and Philadelphians that, while the printing-press was not set up in Massachusetts until eighteen years after its first settlement, in New York seventy-three years, in Virginia more than a hundred years, and that the Governor of Virginia, fifty years after the planting of the colony, hoped that the press would not be set up for a hundred years more, because it favored sedi-

tion and libels upon the church and the king, in Philadelphia Bradford's press was at work within four years after the foundation. We have already, in a preceding chapter, spoken of Bradford and the reasonable doubts for including him among the "Welcome's" passengers, or the first colonists. To this it may be added that while there is little probability of his having, as conjectured, dwelt or practiced his art between 1682 and 1685, either in Kensington or New Castle, there is a possibility of his having done so in Burlington, N. J., in that interval. That town was an older settlement and more considerable place than Philadelphia, and it shared with Salem and Amboy the honor and the importance of being the residence and seat of a royal Governor. Anyhow, Bradford was in London "6th month, 1685," as we know from Fox's letter, just about to sail for Philadelphia. He must have arrived in the latter town early in the autumn of that year, for he printed his almanac for 1686,—*Kalendarium Pennsylvaniense* or *America's Messenger, an Almanac*, edited by Samuel Atkins, the first work ever printed in Philadelphia.² In April, 1692, filled with a sense of unjust treatment at the hands of Philadelphia Friends, Bradford secured a release from his obligation to do their printing for them, intending to return to England. In March, 1693, the Council of New York passed a resolution to the effect that if a printer would come to that province to print the acts of Assembly and other public documents, he should be paid a salary of forty pounds a year, "and have the benefit of his printing besides what serves the public." Eighteen days later Bradford's presses were set up in New York.³

² One copy of this very rare work is in the possession of the Pennsylvania Historical Society.

³ Some of the work done by him in Philadelphia, according to Mr. Westcott, consists of the following (in addition to a tract, title not given, said by H. Stevens, of London, to be in the library of the Friends, London, dated 1686): (1) *The Kalendarium*, etc., 1685; (2) An epistle from John Burnyeat to Friends in Philadelphia, etc., 1686; (3) An Almanac, calculated for the meridian of Burlington, by Daniel Leeds, student of agriculture, etc., 1687; (4) Almanac for 1688, by Daniel Leeds, 1688; (5) Almanac for 1688, by Edward Eakin, 1688; (6) Broadside in relation to keeping Fairs at the Centre; (7) *The Temple of Wisdom*, for the Little World, in two parts, etc. (a book, the first ever printed in Philadelphia, a compilation, apparently by Leeds, the almanac-maker, containing, among other things, extracts from Burton's *Anatomic*, George Withers, Francis Quarlls, and Lord Bacon), 1688; (8) Broadside proposals for printing a large Bible. ("Proposals for the Printing of a Large Bible, by William Bradford. These are to give notice, that it is proposed for a large house Bible to be printed by way of subscriptions (a method usual in England for the printing of large volumes, because printing is very chargeable); therefore, to all that are willing to forward so good (and great) a work as the printing of the Holy Bible, are offered these proposals, viz.: 1. That it shall be printed in a fair character, on good paper, and well bound. 2. That it shall contain the Old and New Testaments, with the Apocraphy, and all to have useful marginal notes. 3. That it shall be allowed (to them that subscribe) for twenty shillings per Bible (a price which one of the same volume in England would cost). 4. That the pay shall be half silver money, and half country produce at money price, one-half down now, and the other half on the delivery of the Bibles. 5. That those who do subscribe for six shall have the seventh gratis, and have them delivered one month before any above that number shall be sold to others. 6. To those which do not subscribe, the said Bibles will not be allowed under 26s. apiece. 7. Those who are minded to have the Com-

¹ *Mercury*, Feb. 26, 1723: "My Lord Coke observes, that to punish first, and then inquire, the law abhors; but here Mr. Franklin has a severe sentence passed upon him, even to the taking away part of his livelihood, without being called to make an answer. An indifferent person would judge by this vote against *Courants*, that the Assembly of Massachusetts Bay are made up of oppressors and bigots, who make religion the only engine of destruction to the people, and the rather because the first letter in the *Courant*, of the 14th of January, which the Assembly censures, so naturally represents and exposes the hypocritical pretenders to religion. . . . Thus much we could not forbear saying, out of compassion to the distressed people of the province, who must now resign all pretences to sense and reason, and submit to the tyranny of priestcraft and hypocrisy."

From 1693 to 1699 there is no evidence of a printer being in Philadelphia, but on the contrary evidence that there was none, since Daniel Leeds, the almanac-maker, a strong Keithian, had to go to New York to get a brace of pamphlets printed that he himself had written upon the points of the controversy.¹ Meantime, in spite of Gabriel Thomas, learning and the learned professions were not unrepresented in Philadelphia. We have already, in a preceding chapter, said something of the earliest doctors and lawyers. With Penn came over Dr. Thomas Wynne, of Flintshire, Wales; Dr. Griffith Owen, of Wales; Dr. Nicholas More and Dr. John Goodson, both of London. Dr. Edward Jones, of Bala, Merionethshire, Dr. Wynne's son-

mon Prayer, shall have the whole bound up for 22s., and those that do not subscribe, 28s. and 6d. per Book. 8. That encouragement is given by Peoples subscribing and paying down one-half, the said work will be put forward with what expedition may be. 9. That the subscribers may enter their subscriptions and time of Payment at *Pheneas Pemberton's* and *Robert Hall's*, in the County of Bucks; at *Malen Stacy's* Mill, at the Falls; at *Thomas Budd's* House, in Burlington; at *John Hastings's*, in the County of Chester; at *Edward Blake's*, in New Castle; at *Thomas V. Wood-rooff's*, in Salem; and at *William Bradford's*, in Philadelphia, printer and undertaker of the said work, at which places the subscribers shall have a receipt for so much of their subscriptions as paid, and an obligation for the delivery of the number of Bibles (so printed and bound as aforesaid) as the respective subscribers shall deposit one-half for. Also, this may further give notice that *Samuel Richardson* and *Samuel Carpenter*, of Philadelphia, are appointed to take care and be assistant in the laying out of the subscription money, and to see that it be employed to the use intended, and consequently that the whole work be expedited. Which is promised by WILLIAM BRADFORD. Philadelphia, the 14th of the 1st month, 1688." This offer was seven years before Cotton Mather's Bible.) (9) Frame of Government of Pennsylvania, 1689; (10) A Tract by Gershom Bulkley, 1689; (11) Presbyterian and Independent Visible Churches in New England. By George Keith; (12) The People's Right to Election; or, Alteration of Government in Connecticut. Arranged in a Letter by Gershom Bulkley, Esq., of his Majesty's Justices of the Peace of the County of Hartford, 1689; (13) Blood Will Out, or an Example of Truth by Plain Evidence of the Holy Scriptures, viz.: Pardon Tillinghast, B. Keesch, and Cotton Mather, and a few words of a letter to Cotton Mather. By George Keith, 1690; (14) A Confession of Faith, by George Keith, etc.; (15) A General Epistle to Friends, by George Whitehead, 1691; (16) Reasons and Causes of the Late Separation, by George Keith, 1691; (17) Anti-Christ and Sadducee, 1691; (18) Presbyterian and Independent Churches in North America brought to the Text, by George Keith, 1692; (19) A Refutation of the Three Opposers of Justice, etc., etc., together with thirteen or fourteen more pamphlets for and against Keith's heresies; (20) A Short Description of Pennsylvania; or, A Relation of What Things are Known, Enjoyed, and like to be Discovered in the said Province, etc., by Richard Frame, 1692; (21) The Christian Faith of the People called Quakers in Rhode Island vindicated from the Calumnies of C. Ludowick and Cotton Mather, 1692; (22) A Confession of Faith in the most Necessary Things of Christian Doctrine, Faith, and Practice, according to the Testimony of Holy Scriptures. Given Forth from the Yearly Meeting at Burlington, the 7th of 7th mo., 1692, by the despised Christian People called Quakers. Published by William Bradford, Philadelphia, 1693; (23) Spirit of the Hat, by James Claypoole, 1693; (24) A Paraphractical Exposition in a Letter from a Gentleman in Philadelphia to his Friend in Boston, concerning a certain person who compared himself to Mordecai, 1693 (a poetical attack on Samuel Jennings against the practice of slaveholding given forth by the appointment of the meeting held at Philip James' house, in Philadelphia, says Wharton). Morgan Edwards, in his "Materials for a History of the Baptists," enumerates nine or ten other tracts or pamphlets which were published at this time in relation to the Keithian controversy, the most of which it is fair to presume were published by Bradford.

¹ One of these tracts was called "News of a Trumpet Sounding in the Wilderness," etc., 1697; the other "A Trumpet Sounded Out of the Wilderness in America," etc., 1699.

in-law, was a first purchaser, and came over about the same time; Dr. John Le Pierre, who died in 1729, is also thought to have come with Penn. He bore the character of an alchemist. Dr. Wynne settled in the lower counties, and died in 1691; Dr. Nicholas More, president of the Society of Free Traders and founder of the Manor of Moreland, does not seem to have been in practice, nor was Dr. Goodson, who was one of Penn's commissioners of property and held other political places of trust; but Dr. Edward Jones was an active physician. There were four other physicians or "chirurgeons" among the first purchasers,—Drs. Charles Marshall, of Bristol; William Russell, of London; Robert Dimsdale, of Middlesex; and Hugh Chamberlain, of London; but there is no evidence of their having emigrated.

Of the early lawyers of Philadelphia, apart from their political associations, little is known. Charles Pickering, prosecuted in 1683 for coining or counterfeiting Spanish money, was one; he died in 1695. Patrick Robinson, clerk of the Provincial Court, and register of wills, was an attorney; he died in 1701. In 1685, by order of Council, Samuel Hersant was appointed prosecuting attorney, and held his office fifteen months, until elected sheriff of Philadelphia. David Lloyd became attorney-general of the province in 1686. John Moore was king's attorney in 1700. Of other attorneys we know little more than the names of John White (1685), and that Penn's cousin, William Assheton, clerk of Councils and City Council, and subsequently judge, was in Philadelphia as early as 1700.

In his inaugural address of 1872, John William Wallace discourses eloquently of the early and substantial efforts made in Philadelphia to found schools and provide the means of education to all. The encomium is not undeserved. The school was provided for when there was scarcely a single house built along the river front. We have already spoken of Enoch Flowers' and George Keith's schools, the former set in motion by Council regulation, Dec. 10, 1683, the latter provided for soon after. Flowers' terms, as has already been noted, were four shillings to eight shillings the quarter, according to grade, and both in his school and the grammar school ("a school of arts and sciences," say the Council minutes) they whose parents were too poor to pay the fees were not deprived of the means of getting knowledge. In 1698, when Gabriel Thomas wrote, Flowers' and Keith's schools were not the only ones in the province, for he expressly says that in Philadelphia "are several good schools of learning for youth, in order to the attainment of arts and sciences, as also reading, writing, etc." Says Thomas I. Wharton,² "Hardly had the emigrants sheltered themselves in their huts—the forest trees were still standing at their doors—when they

² "Notes on the Provincial Literature of Pennsylvania," by Thomas I. Wharton.

established schools and a printing-press, to teach and to be enlightened, literally *inter silvas quaerera verum*." The grammar school was founded in 1689, and formally and liberally chartered in 1701. Keith's salary was fifty pounds per annum, with dwelling-house, school-house, and all the profits of the school besides, a guarantee up to one hundred and twenty pounds per annum for two years. At the end of that time he was succeeded by Thomas Makin, also clerk of Assembly, some of whose uncouth hexameters have been quoted already, and more may be found, if the reader wishes to see them, in the appendix to the second volume of Proud's "History of Pennsylvania," where also a translation in Proud's manner may be seen.¹

Makin was not the earliest Philadelphia poet. In the list of publications by Bradford, in a foot-note just above, it will be seen that there was a satire published in 1693, of which Joshua Francis Fisher, in his admirable paper on "Early Poets and Poetry in Pennsylvania," says that it was the earliest rythmical production of our province which was committed to print; at least of which we have any notice, . . . a small quarto of eight pages. It is to be regretted that neither the name of the author nor of the printer is attached. The piece is of extreme rarity, and all the criticism I am able to furnish is 'that it was a bitter attack upon Samuel Jennings, and that the lines are destitute of the spirit, and almost without the form, of poetry.'

Two poems were published by Bradford in 1692 and (as is conjectured) in 1696, which establish the fact of the existence of Rittenhouse's paper-mill on the Wissahickon, in Roxborough township, as early at least as 1690.² In this mill Bradford had a considerable interest, and probably instigated its establishment. When it was carried away by the floods in 1700, William Penn interested himself greatly in promoting its reconstruction. The first of the poems referred to was that of Richard Frame, "A Short Description of Pennsylvania; or, A Relation What things are known, enjoyed and like to be discovered in the said Province."³ The other poem was that of the Hon. (or Judge) John Holmes, a city magistrate, who was on the bench when Bradford was tried for publishing Keith's pamphlet. It was entitled "A True Relation of the Flourishing State of Pennsylvania."⁴ Mr. Westcott has quoted several passages from this poem. All that is necessary to

give here is his reference to the Rittenhouse paper-mill:

"Here dwelt a Printer, and I find
That he can both print books and bind;
He wants not paper, ink, nor skill,
He's owner of a paper-mill;
The paper-mill is here, hard-by,
And makes good paper frequently."

This was indeed the fact; the paper was far better than Holmes' poetry.

FAC-SIMILE OF TITLE-PAGE OF FRAME'S POEM.
[In Ridgway Library, Philadelphia.]

Of the other publications by Bradford which have been named, his "Burnyeat's Epistle" was the circular of a traveling Quaker minister after the order of George Fox, an Englishman, of whom Fox himself wrote that "he traveled and preached the Gospel in Ireland, Scotland, Barbadoes, Virginia, Maryland, New Jersey, and up and down New England, and had many disputes with priests and professors that opposed the truth. But the Lord gave him dominion over all, and to stop the mouths of gainsayers, and he turned many to the Lord and was a peacemaker." He appears to have been Fox's companion in his journey to America from Barbadoes, through Virginia and Maryland, into New Jersey. The epistle printed by Bradford, one of twenty-three uttered by this very Quaker St. Paul, was brief, four pages in small quarto. Bradford's almanacs, edited by Leeds, rude as they were, were the forerunners of "Poor Richard." They mingled in their miscellany the times of holding courts and fairs with moral maxims,

¹ Makin's Latin poems, his "Descriptio Pennsylvaniae," and his "Encomium Pennsylvaniae," were found among other MSS. in the papers of James Logan.

² This was forty years in advance of the first mill of the kind in New England, at Milton, Mass. (See Horatio Gates Jones' paper on the Rittenhouse paper-mill.)

³ The only copy of this poem known to be in existence is in the Ridgway Library of Philadelphia.

⁴ Holmes came from England in 1686, and was a constituent member of the Philadelphia Baptist congregation. He married the widow of Dr. (and Chief Justice) Nicholas More, and afterwards settled in Salem, N. J., dying about 1701.

religious homilies, and practical, pithy rules of husbandry. The calendar was by no means a Quaker one, but gave all the fasts and festivals of the established church and even of the Catholic Church; but this was perhaps needful, for men were very much used in these times to make bargains and set engagements by "Lady day," "Michaelmas," "Innocents," etc. The printer's first real volume, the "Temple of Wisdom," was a duodecimo of some size, and a work most creditable to Bradford. The printer, indeed, was a man of estimable character. Franklin describes him as being cunning and not very nice in his self-seeking; but he was perhaps less so than Franklin. In his letter to the Burlington Half-Yearly Meeting, February, 1688, in which he first opens up his Bible scheme, he speaks of having laid out nearly all his capital in the purchase of the materials for his art, and as being content to get a livelihood for himself and family while printing anything "serviceable to truth." Such was the character of this book, the "Temple of Wisdom," for which no great sale could be expected, for Bacon's "Essays" and Quarles' "Emblems" are not of the books that sell well. "Poor Richard" was a much more profitable venture, and it is doubtful if Franklin ever read Bacon's "Essays," much less thought of printing them. He had, however, much shrewd mother-wit which was highly characteristic, as he showed in his examination before the Governor and Council when interrogated about printing the charter, and he had perhaps a spice of malice in his disposition. It seems highly probable that he either wrote himself, or procured the writing of the above-mentioned satire on Samuel Jennings, who was one of the justices of the peace that delivered him and his printing-office into the custody of the sheriff for printing George Keith's first pamphlet.

The next printer in Philadelphia was Reynier or Reynier Jansen, who succeeded Bradford, but, as has been said, after an interval of some years. Not much is known of Jansen. It has been conjectured he was Bradford's apprentice, and succeeded to some of his old type, but we should rather look to the Germantown colony for his starting-point, and, if there were any original connection between him and Bradford, expect to trace it through the latter's relations with Rittenhouse. At any rate, the earliest publication of which anything is known bearing Jansen's imprint is in 1699, and he may have come over to the province with Penn and Logan in that year. He seems to have been a Dutchman. Dying in 1706, he left a will which refers to a son of his, Liberius, in Amsterdam, and to two married daughters. The first book published by him was called "God's Protecting Providence Man's Surest Help and Defence," etc., a long title. The book, by Jonathan Dickinson, was a narrative of the sufferings of some shipwrecked people, Friends and others, cast away upon the coast of Florida in 1696, and exposed to many dangers and hardships, but finally rescued by the Governor of St.

Augustine and sent to Philadelphia. Dickinson, his wife, and six months' old infant were among the sufferers. Jansen also printed a number of tracts, as "Truth Rescued from Forgery and Falsehood" (an answer to "The Case Decided"), 1699; "A Seasonable Account of the Christian and Dying Words of Some Young Men, by Thomas Trafford," 1700; "Satan's Harbinger Encountered," etc., by C. P. (Caleb Pusey), 1700; "Jesus the Crucified Man the Eternal Son of God, by William Davis," 1700; "Jacob Taylor's Almanac," 1702; "A Letter from a Clergyman in the Country," etc., 1702; "Proteus Ecclesiasticus," "George Keith Once More," "The Bomb Searched," and several more controversial pamphlets by Keith, Pusey, and others, between 1702 and 1706.

Jansen's printing-office, after his death, seems to have been taken by Jacob Taylor, the almanac-maker, but his work is of no consequence, and there is no proof of his having been even a practical printer. In May, 1712, the Assembly determined to print the laws, and sent for Taylor and "the other printers in town," to confer with them on the subject. The price set was one hundred pounds for five hundred copies, and the printers could not be induced to underbid one another. In 1713 the project, abandoned for a time, was resumed, and in November of that year we find Andrew Bradford, son of William, a competitor with Taylor for the job. This was his first appearance, and his type was vastly superior to that of Jansen and Taylor, so that the latter disappears from the scene as a printer, though "Taylor's Almanac" continued to be published. In July, 1714, we find Andrew Bradford asking the Assembly for relief. He had printed the laws, but the English Council of State, board of trade, and king had repealed them and prevented his sales. The House paid him thirty pounds for fifty bound copies of the work, and he also printed sixty copies of the laws of that year for £34 7s. 6d., a similar contract being made with him in 1718. Bradford also printed the usual number of tracts and pamphlets to be expected from a printer in his position, including an essay on hemp culture, a tract in Welsh, by Elias Pugh ("Ammerch in Cymri"), Lord Molesworth's "Independent Whig," Taylor's, Jacob Leeds', John Hughes', and John Jerman's Almanacs, etc. Franklin calls him illiterate, and says his office was badly equipped, but we must not forget that Franklin and he were rival printers.

In 1722, Samuel Keimer came to Philadelphia and established himself, either bringing type of his own or succeeding to those used by Taylor and Jansen. Franklin makes him the subject of as many jokes in his autobiography as he appears to have of pranks during their intercourse, and Keimer was no doubt half an oddity and half an adventurer. Yet it is not unlikely, after all, that Keimer, with his living to make, and scant means for it, thought far less of the "main chance" and far more of the way to work himself up than Franklin did. He was a braggart and a

pretender. Joseph, successor to Jacob Taylor, in a severe attack upon him in the *Mercury*, in 1726, ridicules his charlatanism and boasting, saying, "Thy constant care and labor is to be thought a finished philosopher and universal scholar, never forgetting to talk of the Greek and Hebrew and other oriental tongues, as if they were as natural to thee as hooting to an owl." He was a bad business man, and not over-scrupulous about either debts or business relations, but he was at least genuine in his enthusiasms, and Franklin had none. He was a London printer, and he used to promise his readers "to present to the world, for its entertainment, an account of his sufferings under the character of 'the white negro.'" He left his wife; he had probably suffered some of the slavery of a debtors' prison; he was an early dissenter, a preacher among the "French prophets," and had always two or three plans of his own for bettering the world, Franklin's plans of the sort being generally for the simple bettering himself. When he arrived in Philadelphia, in February, 1722, he at once inserted an advertisement in the *Mercury*, a part of which has already been quoted, to the effect that there had lately arrived in the city a person who tendered his free services to "teach his poor brethren, the male negroes," to read the Scriptures, in "a very uncommon, expeditious, and delightful manner," without any cost to their masters. All serious persons, of no matter what denomination, were asked to call and advise with him at his lodgings, "at the dwelling-house of John Read, carpenter, in High St., Philadelphia, every morning till eight of the clock, except on the Seventh Day." This shows that Keimer worked at his trade during the day. The advertisement ends in a canto of Keimer's poetry:

"The Great Jehovah from above,
Whose Christian name is Light and Love,
In all His works will take delight,
And wash poor Hagar's Blackmoors white.
Let none condemn this undertaking
By silent thoughts or noisy speaking;
They're fools whose bolts soon shot upon
The mark they've looked but little on."

And we know, from Taylor's satire, that Keimer did not give up this plan of his for several years, whether he was ever able to put it into execution or not. He was always poor, always the subject of ridicule, as a man must be who thinks of other concerns before his own. As he himself said, he had been the butt of slander for twenty years, three times ruined as a master-printer, nine times in prison, once for six years at a time, "and often reduced to the most wretched circumstances, hunted as a partridge upon the mountains, and persecuted with the most devilish lies the devil himself could invent or malice utter."¹ Perhaps, after all, this man's chief crimes were that he was unpractical and did not succeed,—did not "get

on" in life. It is characteristic of him that, when Franklin first called to see him, he was composing and "setting up" at the same time an "Elegy upon Aquila Rose." Among the things printed by Keimer were a tract by Thomas Woolston, a treatise, "The Curiosities of Common Water, or the Advantages thereof in Preventing and Curing many Distempers. Written by John Smith, C.M. To which are added some rules on Preserving," "A Parable, etc.," 1723 (a tract of Keimer's, which induced the Friends to give notice that he was not of their sect), and "The Craftsman. A Sermon, etc., by the late Samuel Burgess." In 1725 he published "Taylor's Almanac," interpolating some irrelevancies of his own, which led to Taylor's satire upon him, and to an advertisement by Adam Goforth, in the *Mercury*, to the effect that it was a lying and libelous almanac, and its publisher a man whose "religion consisteth only in the beard, and his sham keeping of the seventh day Sabbath, following Christ only for loaves and fishes." Sooth to say, he did not get sufficient of these to compensate him for any sort of sacrifice, much less that of conscience and principle.

What Joshua Francis Fisher says of the early poets of Philadelphia will apply to early authors of all kinds. There were none in the first twenty years of the colony, the struggle with nature being too imperious and exacting for any to have leisure for any sort of elegant recreation whatsoever. "But the second generation, relieved from the toils of settlement in the forest, reposing under liberal establishments and laws framed by the enlightened wisdom of the founder and his companions, and reaping plenty from rich and beautiful fields, cleared by the labor of their fathers, first turned their eyes to Heaven in thankfulness, and then to Parnassus for inspiration to celebrate the beauty and delights of their happy country. Although it cannot be denied that the tuneful inhabitants of that sacred hill rarely descended into the green valleys of our province, or that '*erubuit sylvas habitare Thalia*,' still their smiles were not altogether withheld from their mystic votaries, and this was quite encouragement enough." The early poets of the eighteenth century in Philadelphia, Mr. Fisher notes, did not print much, and he fancies that what they printed was not their best. James Logan, for instance, wrote Latin verses and Greek odes, while the only poetry of his in print is an English version of the Distiches of Cato, made for his daughter. Mr. Fisher adds that we must look for the works of these earliest writers "in the almanacs, a strange place to seek for poetry. But at that early day they were the only publications to which rhymes could obtain admittance, and certainly never since have almanacs been embellished with better verses. They are for the most part greatly deficient in poetic graces, but some of them may certainly with justice be commended for sprightliness and grace. The want of a periodical sheet was felt by those modest geniuses,

¹ M. Laboulaye conjectures Keimer to have been a Camisard, or Protestant of the Cevennes.

who, not confident of the intrinsic merit of their pieces, would have been happy to trust to the generosity of the public an unfathered offspring which might not obtain favor for an acknowledged author. The invitations of the editors of our two earliest newspapers were eagerly accepted by a score of nameless sons of Apollo. Scarcely a week passed that some new attempt at rhyming was not made, or, to speak more appropriately, that our ancestors did not hear some young Orpheus beginning to take lessons on the lyre. These first strains certainly were not always melodious. The first poetry of Pennsylvania may generally be characterized as inelegant, unharmonious, and spiritless; yet there were several brilliant exceptions, which surprise us by their sweetness and vivacity, and were beyond a doubt the productions of cultivated and refined minds. There are many verses which would not discredit any English author of the last century, and still may be read with pleasure; and although, perhaps, they have not enough of originality or brilliancy to deserve a reproduction in an age overstocked with all the lighter kinds of literature, may certainly be noticed with satisfaction and referred to with pride."

Of the satire upon Samuel Jennings mention has been made already. In 1707 there was another satirist, William Rakestraw, who assailed the proprietary both in prose and verse, and who was judicially punished for what Logan styled his "scurrilous libels and rhymes." Aquila Rose was the first poet of Philadelphia who gained anything like reputation. He came from England young and very poor, found employment in Bradford's office, took a wife, got a lease of the High Street ferry, became clerk of Assembly, and died June 24, 1723, aged only twenty-eight years. Franklin speaks of the high esteem in which he was held, and three elegies that have come down to us were occasioned by his death. One of these, as has been said, was by Keimer, one by Elias Bockate, of London, and the third is anonymous, an "Elegy on the sight of Myris' tomb," not a bad attempt, by the way, at a strain in which even Milton was stilted and artificial, and only Shelley and Tennyson, among moderns, have excelled. Mr. Fisher does not seem to have been aware that Joseph Rose, Aquila's son and Franklin's apprentice, collected his father's verses and printed them in a slim pamphlet of fifty-six pages, in 1740, with the following preface: "The good reception the poetical manuscript writings of my deceased father, Aquila Rose, have met with in this province, from men of wit and taste, with a desire of some of these to see them printed, induced me to collect what I could." Mr. Rose adds that many of the best poems had been "lent out" and could not be recovered. In an introductory poem we learn of Rose that,—

"Albion his birth, his learning Albion gave;
To manhood grown, he crossed the stormy wave;
More arts, and Nature's wondrous ways to find,
Illuminate and fortify his mind," etc.

"And now a greater task he takes in hand,
Which none but true proprietors understand.
What pity 'tis they seldom live to taste
The fruits of those pure spirits that they waste!
For works so hard and tedious, was it known
A poet e'en did poetry disown?
Or for a distant livelihood give o'er
Those instant pleasures that he felt before?
Yet so Aquila did,—the rustic toil,
To make firm landings on a muddy soil,
Erect a ferry over Schuylkill's stream,
A benefit to thousands—death to him!

* * * * *

He saw his causeways firm above the waves,
And nigh the deeps unless a storm outbraves;
When gusts unusual, strong with wind and rain,
Swell'd Schuylkill's waters o'er the humble plain,
Sent hurrying all the moveables afloat,
And drove afar the needful 'st thing, the boat,
'Twas then that wading thro' the chilling flood,
A cold ill humor mingled with his blood.

* * * * *

Physicians try their skill, his head relieved,
And his lost appetite to strength retrieved;
But all was flatt'ry—so the lamp decays,
And near its exit gives an ardent blaze."

Which reads as if it might have been composed by the attending physician. Rose's poems, says Duyckinck, "display skill and ease in versification." A specimen, quoted in "Duyckinck's Cyclopædia," "To his Companion at Sea," is a graceful reminiscence of Horace. A copy of verses written by him in 1720, in the shape of a carrier's address for New Year's day, shows the antiquity of that now obsolete custom.¹

¹ These verses seem worth preserving here for the local references:

"Full fifty times have rould their changes on,
And all the year's transactions now are done;
Full fifty times I've trod, with eager haste,
To bring you weekly news of all things past.
Some grateful thing is due for such a task,
Tho' modesty itself forbids to ask;
A silver thought, express'd in ill-shap'd ore,
Is all I wish; nor would I ask for more.
To grace our work, swift Mercury stands in view;
I've been a *Living Mercury* still to you.
Tho' ships and tiresome posts advices bring,
Till we impress it, 'tis no current thing.
Copson may write, but Bradford's art alone
Distributes news to all th' expecting town.
How far remov'd is this our western shore
From those dear lands our fathers knew before;
Yet our bold ships the raging ocean dare,
And bring us constant news of actions there.
Quick to your hands the fresh advices come,
From England, Sweden, France, and ancient Rome.
What Spain intends against the barbarous Moors,
Or Russian armies on the Swedish shores.
What awful hand pestiferous judgments bears,
And lays the sad Marseillas in death and tears.
From George alone what peace and plenty spring,
The greatest statesman and the greatest king.
Long may he live, to us a blessing giv'n,
Till he shall change his crown for that of heav'n.
The happy day, *Dear Sir*, appears ag'in,
When human nature lodg'd a God within.
The angel now was heard among the swains;
A God rescends from all the distant plains;
O'erjoyed they haste, and left their decy care,
Found the blest Child, and knew the God was there.

The elegy to Rose, under the name of Myris, has a certain pleasing warmth:

"With pleasure we behold, O Delaware!
Thy woody banks become the Muses' care;
Thy docile youth were with her beauty fired,
And folly, vice, and ignorance retired;
And had but Myris lived, we hoped to see
A new Arcadia to arise in thee."

Keimer's elegy was coarse and extravagant, like the man, but it contains some really valuable illustrations of manners and customs, to which reference may be made hereafter. Of Rose's character, says Keimer,—

"He loved plain Truth, but hated formal Cant,
In those who Truth and Honesty did want.
A curious Artist at his Business, he
Could Think, and Speak, Compose, Correct so free,
To make a Dead Man Speak or Blind to see."

Keimer wrote other verses, but they are not worth quoting.¹

Yet whilst, with gen'rous breath, you hail the day,
And, like the shepherds, sacred homage pay,
Let gen'rous thought some kindly grace infuse,
To him that brings, with careful speed, your News."

It is evident from the above that Copson, the publisher, was also the man who gathered the news, edited, and "made up" the *Mercury*; Bradford was only the printer.

¹ Excepting the parts in his "*Sorrowful Lamentations of Samuel Keimer, Printer of the Barbadoes Gazette* (May 4, 1734), which refer to Philadelphia. This lamentation begins:

"What a pity it is that some modern bravadoes,
Who dub themselves gentlemen here in Barbadoes,
Should time after time run in debt to their printer,
And care not to pay him in Summer or Winter."

He adds, as a contrast, that,—

"In Penn's wooden country, type feels no disaster,
Their printer is rich and is made their Post Master;
His father, a printer, is paid for his work,
And wallows in plenty just now in New York,
Tho' quite past his labor, and old as my grannum,
The Government pays him pounds sixty per annum.
* * * * *

Keimer's elegy shows that all the literary characters of Philadelphia of the day were gathered around Rose's grave at his funeral, including Governor Keith, James Logan, Thomas Chalkley, the Quaker minister and writer, and all the circle of wits, scholars, and writers shortly afterwards united by Franklin in the club of the Junto.

Andrew Bradford's *American Weekly Mercury* began to be printed Dec. 22, 1719. It was on a pot half-sheet (fifteen by twelve and a half inches), about a page of ordinary letter-paper, in other words, and bore the imprint: "Philadelphia: Printed by Andrew Bradford, and sold by him and John Copson." In 1721 Copson's name was dropped, and the imprint altered to "Philadelphia: Printed and sold by Andrew Bradford, at the Bible in Second Street, and also by William Bradford, in New York, where advertisements are taken in." William Bradford's *New York Gazette* was not begun until 1725. In Mr. Westcott's words, "The *Mercury* sometimes appeared on a whole sheet of pot, in type of various sizes, as small pica, pica, and English. It appeared weekly, generally on Tuesday; but the day of publication was varied. Price ten shillings per annum. Editorial matter seldom appeared, and so little notice was taken of passing events in the city, with which at that time everybody was supposed to be acquainted, that little information with regard to local affairs is to be found in the paper. It was principally made up of extracts from foreign journals several months old, with a few badly-printed advertisements. Two cuts,

E'en type at Jamaica, our island's reproach,
Is able to ride in her chariot or coach;
But alas your poor typo prints no figures like Nullo,
Curs'd, cheated, abused by each pitiful fellow,
Tho' Working like slave, with zeal and true courage,
He can scarce get as yet ev'n salt to his porridge."

The AMERICAN Weekly Mercury,

December 22, 1719.

From the NORTH.

HAMBURGH August, 29. All Our Letters from Sweden, are full of the Dismal Ravages committed by the Muscovites there, Those Semi Christians have burnt the fine Towns of Nykopping, Nordkopping, North Telle, South Telle, Orvall, Ofshammer, Oregrund, Forstenar, Ortela, &c. with all the Castles and Gentlemens Seats near them & ruined all the

Stock, has brought the Company in such an immense Sum in Specie, that it is no Wonder they should be able to pay off the King's Debt of twelve hundred Millions, seeing they are Gainers by the particular Subscription, so less than four hundred and fifty Millions at one Blow in ready Money; and tis now said they will still have Leave to advance and enlarge their Subscription for fifty Millions more, and so on to fifty more, if they please, in which Case they may easily pay twelve hundred Millions; and it is said already from Paris, that they have eighteen hundred Millions in Cash

coarsely engraved and intended as ornaments, were placed at the head, one on each side of the title; that on the left was a small figure of Mercury, represented on foot, with extended wings and bearing his caduceus. The other was the representation of a postman riding at full speed. These cuts were sometimes shifted, and, for the sake of variety, Mercury and the postman exchanged places."¹

The *Mercury* did publish an occasional bill of mortality, says Mr. Wharton, and some of its advertisements were characteristic of the times and manners. This was the only newspaper in Philadelphia until Keimer began his rival sheet, *The Universal Instructor in All Arts and Sciences, and Pennsylvania Gazette*, which Franklin utilized as the germ of his *Gazette*.

If we could determine exactly when Aquila Rose died we would know when Franklin came to Philadelphia, for Keimer's elegy was palpably put in type immediately after the funeral. But one authority says June, another August, and we cannot decide between them, though June is the preferred date. He himself, in his autobiography, says he reached New York in October on his way to Philadelphia; but he was not accurate as to dates. He was recommended by William Bradford to seek work with his son Andrew, in place of his principal hand, Aquila Rose, then just dead,—so recently dead that the place, William Bradford thought, was not yet filled. Franklin indeed found the place filled when he reached Philadelphia, but this did not prevent him from getting work and good wages from both Bradford and Keimer, so that when he returned to Boston in April, 1724, besides his traveling expenses, he had good new clothes, a watch, and five pounds sterling silver in his pocket.

Franklin began at once his career of influence in Philadelphia. He relates how gracious Governor Keith was to him, though not yet eighteen years old, making him take wine with him and often inviting him to dinner. As he himself says, as soon as he got lodgings at Mr. Read's, "I began now to have some acquaintance among the young people of the town, that were lovers of reading, with whom I spent my evenings very pleasantly, and gained money by my industry and frugality." The young men of his acquaintance whose names he gives were Charles Osborne, Joseph Watson, and James Ralph, "all lovers of reading." The first two were clerks to Charles Brockden, a leading conveyancer; Ralph was a merchant's clerk. Osborne he sincerely admired and loved; he admired Ralph's talent. "I think I never knew a prettier talker," yet contrives to belittle his character. Ralph probably was somewhat of a Bohemian, and borrowed Franklin's money; but Franklin was his debtor, for all that, for Ralph wrote for him that "Historical Sketch of Pennsylvania" which did so much to give him prominence with the British gov-

ernment, and eventually led to his becoming American agent in France for the United States. Ralph went to England with Franklin in 1724, and became a professional *littérateur* of London in the very darkest days of Grub Street, when Samuel Johnson had often to write himself *impransus*, and Goldsmith was more than once in pawn to his landlady. Yet Ralph contrived to make his way, after a fashion, though Pope put him in the "Dunciad," along with many better and many worse men, and now he is chiefly known through the waspish little poet's couplet:

"Silence, ye wolves, while Ralph to Cynthia howls,
Making night hideous,—answer him, ye owls!"

But Ralph had some energy and did some creditable work. Between 1730 and 1745 he printed several plays, some of which were acted at Drury Lane,—*"The Fashionable Lady," "Fall of the Earl of Essex," "The Lawyer's Feast,"* and *"The Astrologer."* These yielding no profit, he turned to satire, to pamphlets, to political libel; he was one of Bub Doddington's scribblers; he was one of Frederick, Prince of Wales', "literary bureau," and he forced Pelham at last to purchase his silence or hire him to support the New Castle administration. Then he turned to epic verse and satire, and finally to history, which he wrote, as Fox said, with "acuteness and diligence," while Hallam, not given to excessive praise, says his history of William, Anne, and George I. was the best that had been produced. Ralph died at Chiswick in 1762, his attainments in the latter part of his life being of no mean order, and this is no small compliment to a man who rose from the counter of a Philadelphia country store, and made his way through all the slaternly miseries of the hack-writer's life in London.

Franklin and Ralph sailed together for London in 1724 to seek their fortunes, the former relying upon the false and illusory credentials given him by Governor Keith, and which he found to be utterly worthless on reaching London. This was a good sort of discipline for Franklin, who could live anywhere and anyhow. It made a good printer of him, and cleansed off all his New England rusticity. When he came back, in 1726, to Philadelphia he was quite competent to fill the part set for him in the province. That part was a great and distinguished one. Penn had founded a Quaker commonwealth. Franklin undertook to divest it of its sectarian garments, to modernize it, to give it a place in contemporary politics,—history, science, and art. He made war on the proprietary government and pulled it down; he laughed and ridiculed the Quakers into a minority; he united Quakers, churchmen, and German and Irish settlers in opposition to British pretensions and in sympathy with American ideas and principles. And, without enthusiasm, without ideality, without morality, or great command over or respect from men, he made Pennsylvania the foremost American colony at the outbreak of the Revolution by being himself the best public business man who ever lived.

¹ Westcott's History of Philadelphia, chap. lxxvii.

Franklin's autobiography always fascinates; it is one of the most charming narratives ever written, but it is the worst possible book in which to study him in his relations to public affairs. In the first place, he prefers to give his interior, individual history, rather than his exterior, public history, for which we owe him unending thanks; in the second place, it was always his idiosyncrasy to conceal the amount of pressure he himself exerted personally upon the springs of action, and to let such things seem to come about by chance—he feared to let his influence be known, lest he should so impair it; and, in the third place, he is not entirely frank at any time, and when he seems to be most ingenuous is the time to suspect him of being most *rusé*. The end was what he concerned himself about, and he did not care to betray his means, for he might want to employ them again to secure a similar end. So he often made it seem as if things came about by simple means or by pure accident, when he himself had worked up to them through long stages of preparation and by setting a hundred snares and gins. This was the philosopher's nature to act thus, and people suspected his sincerity very often. In the latter part of his life they used to call him "old lightning rod," and probably respected his talents much more than his character. In the earlier part of his life the Quakers, especially, both hated and feared him, and showed it by attacking him politically whenever he gave them a chance, which was not often, for he did not care much for popular favors, and had so little of the demagogue in his composition that he was suspected and accused of being both an aristocrat and a Tory. He was far from being either, for his patriotism was sound to the core, if not very exalted in kind, and a purer democrat in thought and mode of action never lived.

Franklin returned to Philadelphia from London, Oct. 11, 1726. In the spring of 1727 he was again at work for Keimer. Before the year was out he had printed currency notes for New Jersey, and became acquainted with the leading men of that province in so doing, and had agreed with Meredith, Keimer's apprentice, to set up a rival job office. In the winter of 1726–27, also, he had founded the "Junto," became a Freemason, and learned how to act upon the little community in which he lived for the accomplishment of his purposes, personal and political. The difficulties in his way in doing this were enhanced by the fact that he was a tradesman, a mechanic, and the lines were much more distinctly drawn then than now between "gentlemen" and artisans, even in Philadelphia and New England, especially in all matters of social intercourse and correspondence. But Franklin, never ceasing to be a tradesman and mechanic, but rather glorying in it, in fact, still made all classes own his superiority and bend to his influence. His mind was as active and busy as his hands, he had an insatiate curiosity, and he loved influence because he had a natural benevolence of character over and above his

self-seeking. These traits betrayed themselves very early, but are much more noticeable in his correspondence than in his autobiography. His letters illustrate fully his kindly disposition, especially to his family and friends, his whimsical, semi-humorous benevolence as fully as his memoirs do, and they bring us much closer to the philosopher in other regards.

FRANKLIN'S PRESS.

He wrote to his father, mother, sisters, nieces, nephews, cousins, to antiquaries, philosophers, and public men the civilized world over. He was a born reporter, because, a news-gatherer upon instinct, he not only heard everything which was passing, but was bound to investigate it. He had, besides, something of the *guidnunc* and the "old granny" about him, although frequently disclaiming such qualities.

A glance at his correspondence is full of suggestions of character. The first letter in Sparks' collection is one written in London offering Sir Hans Sloane a purse made of asbestos, which, as he notes, is provincially denominated "salamander cotton." The next is to his favorite sister, Jane, telling her that, hearing she was grown a beauty, he was minded to send her a tea-table for a present; but knowing her purpose to become a notable housewife, he would substitute a spinning-wheel for the ornamental piece. He writes to her again, when Mrs. Mecom, giving an account of the great mortality from smallpox in the family of George Claypoole, his neighbor, who, he notes, was a descendant of Cromwell. Eight had died, the cause being, he thinks, the imprudent use of mercury to extirpate the itch, the smallpox attacking them while their systems were debilitated by the mercurial poison. He regrets to hear that sister Holmes has a cancer of the heart, a disease thought to be incurable, but there is here in town a kind of shell, "made of some wood cut at a proper time by some man of great skill (as they say), which has done wonders in that disease among us, being worn for some

time on the breast. I am not apt to be superstitiously fond of believing such things, but the instances are so well attested as sufficiently to convince the most incredulous." This he will procure for her if he can, and it will do no harm to try it. His father (says another letter, anno 1738) has been writing to him about his religious belief, or rather his want of it, his mother grieving that one of her sons is an Arminian, another an Arian, and that he has become a Freemason. He would like to please his father by changing his opinions if he could, but a man cannot help his thoughts any more than his looks, and it is his idea that opinions should be judged by their influences and effects. He thinks that vital religion has always suffered when orthodoxy is more regarded than virtue, and he really does not know very well what an Arminian or Arian really is. "As to the Freemasons, I know no way of giving my mother a better account of them than she seems to have at present, since it is not allowed that women should be admitted into that secret society." If she will suspend her judgment, however, until she is better informed, she will probably learn that they are a very harmless sort of people. Another letter to Mrs. Mecom about apprentices, showing that Franklin knew the gauge of boys exactly, and had taken their measure. "I have frequently observed," he says, "that if their shoes were bad, they would say nothing of a new pair till Sunday morning, just as the bell rung, when, if you asked them why they did not get ready, the answer was prepared,—'I have no shoes;' and so of other things, hats and the like; or, if they knew of anything that wanted mending, it was a secret till Sunday morning, and sometimes I believe they would rather tear a little than be without the excuse. As to going on petty errands, no boys love it, but all must do it." He writes to his father of remedies for stone and gravel, and of his friend Bartram's discovery of "the famous Chinese ginseng;" to his brother John about the expedition to Cape Breton, in which he anticipates Professor Tyndall's prayer-gauge. Taking strong places, he says, is a particular trade, but some seem to think forts are as easy taken as snuff. "Father Moody's prayers look tolerably modest. You have a fast and prayer day for that purpose, in which I compute five hundred thousand petitions were offered to the same effect in New England, which, added to the petitions of every family morning and evening, multiplied by the number of days since January 25th, make forty-five millions of prayers, which, set against the prayers of a few priests in the garrison to the Virgin Mary, give a vast balance in your favor. If you do not succeed, I fear I shall have but an indifferent opinion of Presbyterian prayers in such cases as long as I live. Indeed, in attacking strong places, I should have more dependence on *works* than on *faith*, for, like the kingdom of heaven, they are to be taken by force and violence."

In another letter we find him advising a cousin in some matrimonial trouble, humorously, but wisely; he writes to Cadwallader Colden about defenses against the French and Indians, about a book of Osborne's, about Kalm the botanist, his own desires for greater ease and leisure, about colleges and schools, and classical culture, about electricity, the Abbé Nollet, Dalibard, Beccaria, trade with the Indians, union of the colonies, etc.; with James Logan he corresponds about the fortifications on the Delaware, about the Swedes and Kalm, etc.; with his mother, about domestic affairs and Philadelphia incidents, such as the yellow fever in 1749. He sends her a moidore, "which please accept towards chaise hire, that you may ride warm to meetings this winter. Pray tell us what kind of a sickness you have had in Boston this summer. Besides the measles and flux, which have carried off many children, we have lost some grown persons by what we call the *yellow fever*."¹ He corresponded with Revs. Samuel Johnson and William Smith on education in general, and on particular schemes for Philadelphia; with Jared Eliot, on meteorology and agriculture as well as general ethics; with George Whitefield, on religious and theological subjects; with Peter Collinson, on scientific and American subjects; he notes the fact, as observable to-day as it was then, that English laborers show less industry in new countries in proportion as labor is better paid, but German laborers "retain the habitual industry and frugality they bring with them, and, receiving higher wages, an accumulation arises which makes them rich." This difference he attributes to the effect of the British poor laws, but says man is naturally lazy. This he thinks is the cause of the failure to civilize the American Indians, who do not value the products of civilization enough to toil for them. Franklin, however, did not like the German immigrants, because they were not readily naturalized and did not care to acquire English speech and manners. "They import many books from Germany, and of the six printing-houses in the province, two are entirely German, two half German half English, and but two entirely English." Franklin himself owned one of the half German half English offices.

Franklin corresponded with Governors Shirley and Thomas Pownall on public and political questions; he was writing to George Washington as early as 1756. When he undertook his first mission to England, in 1757, his circle of correspondents naturally widened in every direction. He wrote to family and friends and authorities at home about the greatest variety of topics; his European friends and corre-

¹ The correspondence with Logan, and the notes of the latter to Peter Collinson and others, will illustrate what was said above about the differences in social rank which stood in the way of Franklin in extending his influence. He always addresses Logan "Sir," in the most respectful and distant way. Logan, writing to Collinson, speaks of "our most ingenious printer and postmaster, Benjamin Franklin, who has the clearest understanding, with as extreme modesty, as any man I know here."

spondents included such men as William Strahan, Lord Kames, David Hume (to whom he wrote about history, philosophy, and literature), Baskerville, the printer (on typography), Galloway, Bartram, Dubourg, Benezet, etc. His letter to Joseph Priestly after the outbreak of the war is very significant: "Britain, at the expense of three millions, has killed one hundred and fifty Yankees this campaign, which is twenty thousand pounds a head; during the same time sixty thousand children have been born in America." In another letter, probably to David Hartley, he gives the key-note of the separation: "But you will goad and provoke us. You despise us too much; and you are insensible of the Italian adage, that there is no little enemy."

Such is the character of Franklin's correspondence throughout. Intensely practical, each letter has some point of its own, conveys some piece of valuable information, condenses some result of careful observation, makes some pregnant inquiry, and is enlivened by an epigram, a sarcasm, a bit of humor, or a touch of kindly affection. Sentiment the philosopher had none; he seemed to be incapable of getting very angry; his sole complaint against Arthur Lee was that Lee was captious, suspicious, and quarrelsome; but he was a dangerous man to assail, because he was armed at all points, and welcomed the attack like the skillful chess-player, who is confident, as soon as his pieces are deployed, that his opponent will be annihilated. In many of his little schemes of morality and utility his ideas did not seem to rise above a very low scale, and they had a sort of wooden dullness which is vastly unpleasant. "Honesty is the best policy" was his favorite maxim, as if there were nothing of decorum and beauty for its own sake. So he got nothing out of his electrical experiments and discoveries but the lightning-rod; he drew up his rules for "moral perfection" as one might set types in a composing-stick; his inventions were a stove, an artificial arm and hand, an easy-chair, a swimming-pad, etc.; in war matters he was so absurd as to propose going back to bows and arrows, and he wished to have the copper coins of the country stamped with maxims out of "Poor Richard's Almanac," with the view to promote public frugality and honesty. If he had been a poet he would have anticipated Tupper's "Proverbial Philosophy."

But this was one of the reasons why he was so influential and useful to Philadelphia from the time he became a citizen there. His mind was intensely active, he seldom thought much above the level of the crowd, he thought and expressed himself with wondrous clearness and plainness, and he was always planning some new thing which would advance Philadelphia's interests, and Franklin's along with them. Such, for example, was his "Junto," or "club for mutual improvement," into which, as he said, he "formed most of his ingenious acquaintance." The club met on Friday evenings. The rules, drawn up

by Franklin, required "that every member in his turn should produce one or more queries on any point of morals, politics, or natural philosophy, to be discussed by the company," with an essay from each once in three weeks. But the rules of the club really had a practical end in view, as the following, selected from among the "previous questions, to be answered at every meeting," show plainly enough:

"(1) Have you met with anything in the author you last read remarkable or suitable to be communicated to the Junto, particularly in history, morality, poetry, physic, travels, mechanic arts, or other parts of knowledge?

"(2) What new story have you lately heard agreeable for telling in conversation?

"(3) Hath any citizen in your knowledge failed in his business lately, and what have you heard of the cause?

"(4) Have you lately heard of any citizen's thriving well, and by what means?

"(5) Have you lately heard how any present rich man, here or elsewhere, got his estate?

"(10) Whom do you know that are shortly going voyages or journeys, if one should have occasion to send by them?

"(12) Hath any deserving stranger arrived in town since last meeting that you have heard of? and what have you heard or observed of his character or merits? And whether, think you, it lies in the power of the Junto to oblige him or encourage him as he deserves?

"(13) Do you know of any deserving young beginner lately set up whom it lies in the power of the Junto any way to encourage?

"(14) Have you lately observed any defect in the laws of your country of which it would be proper to move the Legislature for an amendment, or do you know of any beneficial law that is wanting?

"(15) Have you lately observed any encroachment on the just liberties of the people?

"(16) Hath anybody attacked your reputation lately, and what can the Junto do towards securing it?

"(17) Is there any man whose friendship you want, and which the Junto, or any of them, can procure for you?

"(18) Have you lately heard any member's character attacked, and how have you defended it?

"(19) Hath any man injured you from whom it is in the power of the Junto to procure redress?" etc.

Here was a secret association, of people from the several ranks of society, which was at once an intelligence office and a star chamber, a business protective union and an inquisition, a gossip club and a propagator of political opinion, a whispering gallery and a *vehmegericht*. It is easy to conceive how many advantages a skillful and plausible man like Franklin could secure to his business through such an association, in addition to the stores of useful knowledge about men and things he would be able to accumulate through it.

The Junto, founded in 1727, became forty years later the basis of the American Philosophical Society, of which Franklin was the first president, an association which has probably contributed more than any other to the advancement of science and the diffusion of knowledge in the United States. The Junto was not a very solemn club at first. It had a song or two of its own, it celebrated itself in an anniversary banquet, and it used to have a good many picnic meetings in rural places, "for bodily exercise." The membership was never very large. Franklin mentions only eleven persons, and Roberts Vaux has added about a dozen more names to the list,—all persons of great

respectability, few of any special prominence.¹ From the literary standpoint, besides Franklin, George Webb and Breintnal have come down to us most pleasantly. The latter, besides his verses, wrote good prose, and continued the series of essays styled "The Busy Body," begun by Franklin in the *Mercury*, and Webb says of him,—

"For choice of diction I should Breintnal choose,
For just conceptions and a ready muse—"

Webb himself described his companions and their characters and pursuits in a pleasing poem called "Bachelor's Hall." Webb was an Oxford scholar, a redemptioner, bought by Keimer for a four-years' term, his exile the fruit of a boy's London frolic. It is not known what became of him, but his "Bachelor's Hall" shows the wit and the man of culture. Franklin makes no mention of Henry Brooke, a young gentleman of much talent and good education, a baronet's younger son, and the author of a squib called "A Discourse on Jests," addressed to Franklin's friend, Robert Grace. But Webb refers to Brooke in tones of exalted panegyric:

"In Brooke's capacious breast the muses sit,
Enrobed with sense polite and poignant wit;
His lines run smoothly through the currents strong;
He forms with ease, with judgment sings the song.
Oh, would he oft'ner write; so should the town,
Or mend their tastes, or lay the muses down;
For, after manna, who would garbage eat,
That hath a spark of sense or grain of wit?"

The Junto was influential from the start, prosperous, popular, and profitable to Franklin and his associates. The philosopher had just gone into business for himself, with Meredith for partner, and their object was to break up Keimer, and divide the job work of the town with Bradford. All was fish, therefore, which came to his net, and, as he says of his Junto friends, "every one exerted themselves in recommending business to us. Breintnal, particularly,

¹ The names given by Franklin are Thomas Godfrey, Nicholas Scull, William Parsons, William Maugridge, Hugh Meredith, Stephen Potts, George Webb, Robert Grace, and William Coleman. Mr Vaux's list of additional names includes Hugh Robert, Philip Syng, Enoch Flower, Joseph Wharton, William Griffith, Luke Morris, Joseph Turner, Joseph Shippen, Joseph Trotter, Samuel Jervis, and Samuel Rhoads. It will be noticed that neither Osborne nor Watson, Franklin's early companions, with Ralph, in literature, are named. It is not known what were the fortunes of Watson. Osborne went to the West Indies and became a rich lawyer. It is noteworthy also that no professional men of consequence were members. Breintnal was a conveyancer's clerk, a sort of a poet; Godfrey, a self-taught mathematician, who, encouraged by James Logan, invented the well-known nautical instrument called Hadley's quadrant; Nicholas Scull was a leading surveyor and map-maker, afterwards surveyor-general; William Parsons was a literary shoemaker, who advanced from a mathematical smattering and studies in astrology to become surveyor-general; "William Maugridge, joiner, but a most exquisite mechanic, and a solid, sensible man;" Hugh Meredith, Stephen Potts, and George Webb were printers, associated with Franklin; "Robert Grace, a young gentleman of some fortune, generous, lively, and witty, a lover of punning and of his friends;" William Coleman, a merchant's clerk, afterwards provincial judge, a man whom Franklin sincerely loved, and to whom he gave a very high character for "the coolest, clearest head, the best heart, and the exactest morals of almost any man I ever met with."

procured us from the Quakers the printing of forty sheets of their history, the rest being to be done by Keimer." Next year, remembering how well the paper-money printing job at Burlington had paid Keimer, and having got rid of his partner, Meredith, Franklin started the paper-money subject in the Junto. There was only fifteen thousand pounds of that sort of currency in the province; thinking people and men of property opposed its increase, but the popular cry was for more, and Franklin started a discussion of the subject in the Junto. Having gathered all the views and opinions he could in regard to the matter, he embodied them in his anonymous pamphlet on "The Nature and Necessity of a Paper Currency." It was a piece of special pleading, full of fallacies, but it accomplished its purpose; the addition to the currency was voted, and as Franklin says, "My friends there, who considered I had been of some service, thought fit to reward me by employing me in printing the money; a very profitable job, and a great help to me." He also got the printing of the paper money issued at this time by the New Castle Legislature, and the laws and votes also of the Delaware Legislature."²

The Junto seems to have been the first society of a literary or philosophical character in Philadelphia, but it was so instantly successful, prosperous, and influential that it had imitators forthwith, besides the five or six subjuntos formed by its members at different times, and known as "the Vine," "the Union," "the Band," etc. The Carpenters' Company, founded in 1724, was indeed older, but that was, at first at any rate, strictly in the nature of a trade-guild, and the social feature was accidental. Its trade-union character was very strongly marked. The "Bachelors' Club," occupying "Bachelor's Hall," on the Delaware, north of Gunner's Run, was extant in 1728, but we have no evidence of its earlier existence. Watson mentions Robert Charles, William Masters, John Sober, Patrick Graeme, and Isaac Norris as members of the club. They lived well and feasted much. The club existed until 1745, when the building was bought by Isaac Norris, and served for picnics and tea-parties until it was burned, in 1776.

In 1729 some of the Welsh citizens of Philadelphia formed themselves into the "Society of Ancient Britons," meeting on St. David's day, March 1st, at the Queen's Head Tavern, kept by Robert Davis, in King Street. From thence they walked in procession, with leeks in their hats, to Christ Church, where a sermon was preached to them in the original Cymric by Dr.

² Franklin's profit was greater from this note printing, because he had taught himself to do the ornamental and copper-work part, the vignettes, press-plates, etc. In fact, he did all his own work and made his own tools. It was about this time, also, says Watson, that Franklin introduced the cultivation of the osier, or basket willow, in the Delaware lowlands; but it must have been years later when he first encouraged the use of gypsum as a fertilizer of grass-lands and broad-leaved plants. This he did in a characteristic way by writing the plaster's credentials in a clover-field.

Weyman. After the sermon the society returned to the tavern and dined with ceremonious form, the chief notables of the province being present. This society celebrated St. David's day in this way for many years. The English this same year formed a St. George's Society in Philadelphia, holding their first meeting at the Tun Tavern, Water Street, April 23d. They met annually afterwards, and had a dinner on either the king's birthday, or St. George's day, or some equivalent occasion.

There are some burlesque allusions in the *Pennsylvania Gazette* in December, 1730, which point to the existence of the Masonic order at that time in Philadelphia, but the first public notice of a Grand Lodge is found in 1732 in the same journal, when the election of William Allen as Grand Master was announced. The meeting-place then was at the Tun Tavern, on King (now Water) Street, at the corner of Tun Alley, the landlord being Ralph Basnet. The lodge of 1730 received its authority under Col. Daniel Coxe, of New Jersey, who, by the Duke of Norfolk, Grand Master of the Grand Lodge of England, was constituted Provincial Grand Master of the Provinces of New York, New Jersey, and Pennsylvania by deputation June 5, 1730. The lodge which met at the Tun is believed to have been called "the Hoop." The Masons were not in very good odor in these early days, an-unfortunate burlesque initiation having resulted in a tragedy. Some young men not Masons at all attempted to play their pranks upon a foolish apprentice, they representing that they were Masons and this a regular initiation, in the course of which he was burned to death. No Masons had anything to do with this, but the odium of the homicide still attached to them, and it was probably the talk about this affair which caused Franklin's mother to be so solicitous in regard to his connection with the order.

In 1732 a club was formed calling itself the "Colony in Schuylkill," a fishing club. This ancient and venerable society, which still exists, assumed to itself from the first, and in the most lordly way, the power of eminent domain and uncontrolled legislation over the fields and waters within its own jurisdiction. It was *imperium in imperio*, a republic of Andorra in the heart of Penn's kingdom. It had its governor, assembly, council, sheriff, coroner, and its citizens, and there were all the forms of a real government in this well-contrived sportsman's club. In 1732, Thomas Stretch was governor; Enoch Flower, Charles Jones, Isaac Snowden, John Howard, Joseph Stiles, members of assembly; James Coultas, sheriff; Joseph Stiles, secretary and treasurer; William Hopkins, coroner; William Warner, baron. The baron was the owner of the estate on which the club was permitted to erect their fish-house, his rent being the first perch caught at the opening of the season. This was taken to the baron's mansion (which was upon the Eggesfield estate, now part of Fairmount Park). In 1732 the members of the Colony in Schuylkill

were John Leacock, Thomas Tilbury, Caleb Cash, Philip Syng, William Plumstead, Peter Reave, William Ball, Daniel Williams, Isaac Garrigues, Isaac Stretch, Hugh Roberts, Samuel Neave, Joseph Wharton, Joseph Stretch, Cadwalader Evans, James Logan, William Parr, Samuel Garrigues, Samuel Barge.¹ Franklin, like Horace Greeley, had no time to go fishing, but he did not belong to the same social stratum as the members of the Colony in Schuylkill.

EMBLEM OF THE SCHUYLKILL CLUB.

The society was frolicsome, but not extravagant, and its expenses were regulated by moderation, the most formal ceremony being the election dinner, where substantial joints and rounds were flanked and supported by dishes of game and fish in profusion, and washed down with libations of punch, Madeira, etc., followed by pipes and tobacco. In 1747 the colony erected a court-house on Baron Warner's estate, at a cost of £16 7s. 6d.

The Society of Fort St. David's was a rival fishing company, founded about the same time as that of the Colony in Schuylkill, its members being Welshmen, of the order of Ancient Britons. Their "fort" was on a broad, high rock at the Falls of the Schuylkill, on the east bank, a rude timber shanty, but roomy and convenient. The Schuylkill was famous for its blue catfish, upon which the St. Davidians made war.

In 1743, when the Junto members had grown to be solid men, and Franklin began to turn from money-getting to science, he drew up and issued from the club the circular which led immediately to the birth of the American Philosophical Society. The title of this circular was "A Proposal for Promoting Useful Knowledge among the British Plantations in America." He suggested the existing title and proposed an association of *virtuosi* in the several colonies who should maintain regular intercourse with one another by correspondence, Philadelphia to be the home and centre of the society, with seven resident members,

¹ In 1743 the following new members were added: Luke Morris, James Wharton, Robert Greenway, John Jones, Jacob Lewis, Isaac Walter, William Fisher, Samuel Mifflin, George Gray, Joshua Howell, Joseph Redman, Edward Pennington, James Saunders, Samuel Shoemaker, Thomas Wharton, Jr., Thomas Wharton, Jacob Cooper, Henry Harrison, Samuel Wharton, Henry Elwes, Joseph Shoemaker, and John Lawrence.

besides officers, meeting once a month or oftener, for the interchange of observations and communications. The society, which went into full operation in 1744, had the following original members: Dr. Thomas Bond, as physician; John Bartram, botanist; Thomas Godfrey, mathematician; Samuel Rhoads, mechanician; William Parsons, geographer; Dr. Phineas Bond, general natural philosopher; Thomas Hopkinson, president; William Coleman, treasurer; and Benjamin Franklin, secretary. The out-of-town members were — Alexander, of New York; Chief Justice Morris, of New Jersey; Secretary Horne, of the same colony; John Cox, of Trenton; and Mr. Martyn, of the same place.

It will be noticed that the doctors were prominent in this organization. The profession had grown greatly in dignity and importance with the growth of the city. For twenty years or so after the beginning of the century there do not seem to have been many recruits added to the list, already given, of the old practitioners. Dr. Griffith Owen survived till 1717, his son succeeding him. Dr. John La Pierre died in 1720. About 1717, Drs. John Kearsley and Thomas Graeme arrived, the latter coming with Governor Keith. In 1720, Dr. Patrick Baird was health officer at quarantine. In 1722, Dr. Charles Sober had his house and office in Chestnut Street, and Dr. Nicholas Gandouet his on Third Street. There was a Dr. John Winn in the city in 1717. In 1726, Dr. Lloyd Zachary, a native of Boston, returned from England to practice in Philadelphia, where he had studied physic under Dr. Kearsley. Dr. Thomas Bond was a native of Maryland, who came to Philadelphia in 1734, acquiring a great reputation. Dr. Thomas Cadwalader, a grandson of Dr. Thomas Wynne, was in practice before 1740, in Philadelphia, contemporary with Dr. William Shippen. These gentlemen and their successors will form the subject of a subsequent chapter in these volumes, and we will not further encroach upon it here. The history of the bar and that of the medical profession in Philadelphia are so full, so replete with interest, incident, and anecdote, that they must be treated separately and in their entirety if we would do justice to them.

The sober turn of mind of the Friends, the influence of scholars like Pastorius and Logan, and the eager curiosity of their learned correspondents in Europe for information in regard to every sort of natural object in America would have the effect to direct the thoughts of Philadelphians very early to scientific subjects, and it is very obvious that Franklin first learned to ponder upon such things in consequence of the atmosphere which environed him and the tone of discussion he heard about him. Logan was a careful and skillful observer, and his papers were always welcomed by European academies. He probably first directed the mind of John Bartram seriously to botany as the pursuit of a lifetime. Webb, in his "Bachelor's Hall" poem, claims that

there was a botanic garden attached to the grounds of that retreat:

"Close to the dome a garden shall be joined,
A fit employment for a studious mind;
In our vast woods whatever simples grow,
Whose virtues none, or none but Indians, know,
Within the confines of this garden brought,
To rise with added lustre shall be taught;
Then culled with judgment, each shall yield its juice,
Saliferous balsam to the sick man's use;
A longer date of life mankind shall boast,
And Death shall mourn her ancient sceptre lost."

If this garden really existed outside the poet's fancy, it was the earliest botanic garden in America. Logan, in 1729, wrote to England for a copy of "Parkinson's Herbal." He wanted to present it to John Bartram, who, he said, was a person worthier of a heavier purse than fortune had yet allowed him, and had "a genius perfectly well turned for botany." Bartram bought his piece of ground at Gray's Ferry in 1728, and his house, built by his own hands, was completed in 1731. A subscription was started in 1742 to enable Bartram to travel in search of botani-

JOHN BARTRAM'S HOUSE.

cal specimens. It was proposed to raise enough for him to continue his travels for three years, he being described as a person who "has had a propensity to Botanicks from his infancy," and "an accurate observer," "of great industry and temperance, and of unquestionable veracity." The result of these travels was two very delightful books by the earliest of American botanists,—for Bartram was born in Philadelphia in 1699,—while the specimens he collected and sent to Europe attracted Kalm and many other naturalists to this country. He was a close and accurate observer, and his mind was a storehouse of knowledge of nature. "I believe," wrote Franklin, introducing Bartram to Jared Eliot in 1775, "you will find him to be at least twenty folio pages, large paper, well filled, on the subjects of botany, fossils, husbandry, and the first creation." His character was strong and simple; he was a natural Quaker, not orthodox in the nicety of tenets. On the outside of his house, over the front window of his study, was a stone with the inscription, carved by his own hand:

"'Tis God alone, Almighty God,
The Holy One, by me adored.

JOHN BARTRAM, 1770;"

and Hester St. John quotes, as an inscription over the door of his greenhouse,—

"Slave to no sect, who takes no private road,
But looks through nature up to nature's God."

Bartram was the genuine man of science, simple and single-hearted in the absorption of his one pursuit,—supplying materials to science rather than working out results for his own profit or glory. Franklin was a man of science of quite another school, and who never forgot himself in his experiments, which, after all, were rather occasional and amateurish. The formation of the Junto naturally led him and his associates to cultivate a taste for experiment and natural science. In 1740 a course of philosophical lectures and experiments was given by a Mr. Greenwood in the chamber adjoining the library in the State-House. In 1744, Dr. Spence, a Scotchman, delivered a course of lectures and experiments in the library. These included an exhibition of the common electrical phenomena known at the period. In 1746, Peter Collinson, of London, presented the Philadelphia Library with some electrical apparatus, and Franklin now began experimenting on his own account, occasionally noting some of his observations in letters to Collinson and other European correspondents. Thomas Hopkinson, Ebenezer Kinnersey, and Philip Syng were his associates in these experiments, and in 1748 they gave a public exhibition—*ad captandum vulgus*—of the powers of the new force, in Franklin's own words, setting spirits afire on the other side the river. "A turkey is to be killed for our dinner by the electrical shock, and roasted by the electrical jack before a fire kindled by the electrified bottle, when the health of all the famous electricians in England, Holland, France, and Germany is to be drank in electrified bumpers, under the discharge of guns from the electrical battery." This is rather puerile, as was Franklin's kite, but it led to the discovery of positive and negative electricity, and to the identity of terrestrial with induced or excited electricity.

It will be noticed that bumpers and health-drinking constituted a large part of Franklin's open-air exhibition. Men like John Bartram were free from the drinking habits of the day, but Franklin, temperate as he was himself, did not set himself against the universal health-drinking of that time. A contemporary record, the "Journal of William Black (1744), Secretary of the Commissioners appointed by Governor Gooch, of Virginia, to unite with those from the colonies of Pennsylvania and Maryland, to treat with the Iroquois or Six Nations of Indians, in reference to the lands west of the Allegheny Mountains" (published in the *Pennsylvania Magazine*, Nos. 2, 3, 4, 5), illustrates how large a part "the social glass" played in all affairs at that time. Drinking was a part of

the necessary hospitality of the period. Mr. Black was secretary to Col. Thomas Lee and William Beverley, of the commission, and went with them to Philadelphia. They reached Chester on Sunday, May 26th, went to church and Quaker meeting, and in the afternoon rode to Philadelphia on horseback, accompanied by the sheriff, coroner, and some gentlemen of the town. They were met at the Schuylkill by Secretary Peters, Robert Strettell, Andrew Hamilton, and several other gentlemen of Philadelphia, "who Receiv'd us very kindly and Welcom'd us into their Province with a Bowl of fine Lemon Punch big enough to have swimm'd half a dozen of young Geese; after pouring four or five Glasses of this down our throats we cross'd the River." They took a glass of wine with the Governor before going to their lodgings and another glass with their host before retiring. Next morning they saw the ill-starred "Tartar" frigate launched, and then had a few glasses of wine at Andrew Hamilton's and other houses. After dining at Strettell's, Mr. Black went to the "Governor's Clubb, which is a Select Number of Gentlemen that meet every Night at a certain Tavern, where they pass away a few Hours in the Pleasures of Conversation and a Cheerful Glass; about 9 Of the clock, we had a very Genteel Supper, and afterwards several sorts of Wine and fine Lemon Punch set out on the Table, of which every one might take of what he best lik'd and what Quantity he Pleas'd." Next day the party dined at the Governor's. "After Dinner the Table was immediately furnish'd with as great a plenty of the Choicest Wines as it was before with the best of Victuals; the Glass went briskly round, sometimes with sparkling Champaign, and sometimes Rich Madeira, Claret, or whatever the Drinker pleas'd." After this they went to a lecture by Spence, referred to above, in which the lecturer "proceeded to show that Fire is Diffus'd through all space, and may be produced from all Bodies, Sparks of Fire Emitted from the Face and Hands of a Boy Suspended Horizontally, by only rubbing a Glass Tube at his feet." Next day, after inspecting the privateers, Black went to spend the evening with a Richmond man whom he had not seen for some time, and who kept bachelor's hall. The secretary admits having some difficulty in finding his way to his lodgings that night. Thursday was given to riding about and sight-seeing. There was a billiard-table and bowling-green at the Centre House (Penn Square); thence they went to the coffee-house and the club. The commissioners left early, but the frank journalist confesses, "for my part, I staid as long as any of my company did, and on the first motion to be gone I was ready; but I do assure you it was the Pleasures of Conversation, more than that of the Glass, that Induc'd me." On Friday, Black visited the market. "The days of Market are Tuesday and Friday, when you may be Supply'd with every Necessary for the Support of Life thro'ut the whole year, both Extraordinary Good and reasonably cheap; it is allow'd

by Foreigners to be the best of its bigness in the known World, and undoubtedly the largest in America. I got to this place by 7, and had no small satisfaction in seeing the pretty Creatures, the young ladies, traversing the place from stall to stall, where they cou'd make the best market, some with their maid behind them with a Basket to carry home the Purchase. Others, that were designed to buy but trifles, as a little fresh Butter, a Dish of Green Peas, or the like, had Good Nature and Humility enough to be their own Porters."

Black dined at the Three Tun Tavern, in Water Street, with Secretary Peters, and, after a few glasses of good Maderia, rode out to Stenton to call on James Logan, with whom they took tea, or, as he called it, "the Fashionable Warm Water." Thence they went with Mr. Strettell to his country house at Germantown. Strettell, he says, was "one of the Friends, but seem'd not much Affected to their underhand way of Dealing and Cloak of Religion." He did not drink much, being "of a Crazy Constitution," but attached the Virginian to him by keeping "Good horses, tho' I believe that was rather Natural than forc'd for his Health." On Saturday, after attending to business, Black dined at the club with the Beef-steak Club, "a certain number of Gentlemen that Meet at this House every Saturday to Eat Beef-Steaks." He went that night by appointment to join a private party, some young men. "I found them all there, and in humour to be very merry. Some of the Company Drunk Punch, others wine, According as their Inclinations led them. . . . To conclude, we parted about 12 O'clock at Night. Two of the company was so Civil that they would see me to my Lodgings, where they wisht me Good-Night."

Sunday Mr. Black went to Christ Church, "a very Stately Building, but is not yet Finished. The Painting of the Altar Piece will, when done, be very Grand; two Rows of Corinthian Pillars and Arches turn'd from the one to the other Supports the Roof and the Galleries; the Peughs and Boxes were not all done, so that everything seem'd half finished. I was not a little surpris'd to see such a number of Fine Women in one Church, as I never heard Philadelphia noted Extraordinary that way; but I must say, since I have been in America, I have not seen so fine a collection at one time and Place." They dined, commissioners and secretary, at Andrew Hamilton's (Bush Hill), at a quarter past one o'clock; eighteen dishes and a nice collection. In the afternoon Black went to hear Gilbert Tennent preach at the New Light Presbyterian Church. "We found him delivering his Doctrine with a very Good Grace; Split his Text as Judiciously, turn'd up the Whites of his Eyes as Theologically, Cuff'd his Cushion as Orthodoxly, and twist'd his Band as Primitively as his Master Whitefield cou'd have done, had he been there himself." Without hearing Tennent out the party withdrew to Quaker meeting, "where we found one of the Traveling

Friends, Labouring under the Spirit very Powerfully; had he been a little more Calm, and not hurried himself so on, as if he had not half time to say what he had in his mind, We, as well as the Rest of his Brethren, wou'd have received more Instruction, but one sentence came so fast treading on the heels of another, that I was in great Pains of his Choaking; however, we had Patience to hear him out, and after a little pause he gave us a Short Prayer, and then Struck hands with two Elderly Friends on his Right and Left, and we broke up."

Honest Black was very much shocked at meeting one night a drunken woman on the street; he made many acquaintances; heard some good singing by ladies; half fell in love with a charming Jewess; drank tea ("warm water") with many agreeable ladies; entirely fell in love with Miss Molly Stamper (afterwards wife of William Bingham. She was just fifteen when she made her conquest of Black), whom he escorted to her home, and who promised to meet him again at her Hebrew friend's. Next morning he found himself making music on his fiddle and on his flute, and comparing the beautiful morning to Miss Molly Stamper, "fresh dews hanging on her pouting lips," and he passed what seems to have been a delicious evening in her society. On Saturday, June 9th, the commissioners engaged a tavern and gave a dinner to their hosts. "A very Grand Table, having upwards of Fifteen Dishes on it at once, which was succeeded by a very fine collation; among the many Dishes that made our Dinner was a large Turtle, sent as a present to Governor Thomas, from a Gentleman of his acquaintance living in Providence; after taking away the Cloath, we had the Table Replenished with all the sorts of Wine the Tavern cou'd afford, and that in great Abundance." They sat down at two and rose between three and four P.M.

News of the English king's declaration of war against France was received, and on Monday Black and the commissioners and their levee, at four in the afternoon, "waited on his Honour the Governor, in order to attend to the Declaration of Warr, a few minutes after we got to the Governor's came the Mayor, Council, and the Corporation, and then began the Procession, First the Constables with their Staffs, and the Sheriffs and the Coroner with their white Wands ushered the Way, then his Honour the Governor, with the Mayor on his Right, and the Recorder of the City on his Left hand, following them were Colonels Lee and Beverley, and the Gentlemen of their Levee, next was the Council, and after them the City Corporation, and then the Rear Composed of Town Gentlemen &c., in this Order two and two, we went with Solemn Pace to the Market Place, where Secretary Peters Proclaim'd War against the French King and all his subjects, under a Discharge of the Privateers Guns, who had haul'd out in the Stream for the Purpose, then two Drums belonging to Dalziel's Regiment in Antigua (then in Philadelphia

with a Captain Recruiting) Beat the Point of Warr, and then the Ceremony Concluded with God Save the King, and three loud Huzzas!" It will be observed how entirely apart the gentry and tradesmen were during all these fine doings.

Franklin, of course, saw all of Spence's experiments, but he was still a tradesman, making his way, taking care not only to be industrious and frugal, as he says, but to seem so. "I dressed plainer, and was seen at no places of idle diversion." In this way, while his credit increased, poor old Keimer was driven out of town. He had already got control of Keimer's newspaper, and he and Meredith began publishing the *Pennsylvania Gazette* on Sept. 25, 1729. A year later he married, and his wife helped to attend Franklin's book-shop. In 1731, Franklin set to work to establish the Philadelphia Library, one of the best and most durable of his works. The members of the Junto felt the need of books, and, as each had a few, they brought them to their club-room for convenience of exchange. Franklin, on this basis, determined to start a public subscription library. "I drew a sketch of the plan and rules that would be necessary, and got a skillful conveyancer, Mr. Charles Brockden, to put the whole in form of articles of agreement to be subscribed, by which each subscriber engaged to pay a certain sum down for the first purchase of the books and an annual contribution for increasing them. So few were the readers at that time in Philadelphia, and the majority of us so poor, that I was not able with great industry to find more than fifty persons, mostly young tradesmen, willing to pay down for this purpose forty shillings each, and ten shillings per annum. With this little fund we began. The books were imported. The library was opened one day in the week for lending them to the subscribers on their promissory notes to pay double the value if not duly returned. The institution soon manifested its utility, was imitated in other towns, and in other provinces."

In 1732, Franklin first published his "Poor Richard's Almanac." The advertisement of the first number appeared in the *Pennsylvania Gazette*, Dec. 19, 1732, as follows: "Just published, for 1733, An Almanac, containing the Lunations, Eclipses, Planets'

Motions and Aspects, Weather, Sun and Moon's Rising and Setting, High Water, etc.; besides many pleasant and witty verses, Jests, and Sayings; Author's Motive of Writing; Prediction of the Death of his Friend, Mr. Titan Leeds; Moon no Cuckold; Bachelor's Folly; Parson's Wine and Baker's Pud-

Poor Richard, 1733.

Wherein is contained

The Lunations, Eclipses, Judgment of the Weather, Spring Tides, Planets Motions & mutual Aspects, Sun and Moon's Rising and Setting, Length of Days, Time of High Water, Tides, Courts, and observable Days.

Fitted to the Latitude of Forty Degrees, and a Meridian of Five Hours West from London, but may without sensible Error, serve all the adjacent Places, even from Newfoundland to South Carolina.

By *RICHARD SAUNDERS*, Philom.

PHILADELPHIA:

Printed and sold by *B. FRANKLIN*, at the New-Printing-Office near the Market

ding; Short Visits; Kings and Bears; New Fashions; Game for Kisses; Katharine's Love; Different Sentiments; Signs of a Tempest; Death of a Fisherman; Conjugal Debate; Men and Melons; The Prodigal; Breakfast in Bed; Oyster Lawsuit, etc. By Richard Saunders, Philomat. Printed and sold by B. Franklin." Almanacs were popular at this

time in Philadelphia. Franklin says the annual sales of "Poor Richard" were ten thousand copies, and Sparks tells us that three editions had to be printed before the demand could be appeased. There were published at this time in the city, besides Franklin's, Jerman's Almanac, Birket's, Poor Will's, Felix Leeds', and Titan Leeds' Almanacs. Titan Leeds' was the rival concern. It printed some good verses, was popular, and Franklin, in imitation of Swift's and Arbuthnot's trick upon Partridge, made his, Saunders, cast Leeds' horoscope and predict his death during 1733. Whether seriously or not, Leeds pretended to resent this treatment bitterly in the preface of his almanac for 1734 and 1735. Franklin continued his almanac till 1758, was proud of it, and looked upon it as a valid social force among the poorer classes, as perhaps it was. "In Pennsylvania," he says, "as it discouraged useless expense in foreign superfluities, some thought it had its share of influence in producing that growing plenty of money which was observable for several years after its publication." This is, of course, absurd, since the fewer the purchases by the people the more money would be hoarded. The abundance of circulation was the result of an inflated currency, which no one cared to keep for fear it would depreciate in his hands.

Franklin's industry was amazing, aside from the fact that exact method and system enabled him to effect the greatest economies of time. In 1734, when his private business was most engrossing, and his office, his newspaper, his bookstore, his almanac, his public and private contracts were all making demands on his time, and when he was writing pamphlets and sermons, feeling the public pulse and active in the affairs of the library and the Junto and the lodge, we yet find him studying and acquiring a reading knowledge of French, Italian, Spanish, and Latin, studying them together. He was then twenty-eight years old, an age when the acquisition of new languages is difficult, unless a habit has been formed already for that class of studies.

In 1736, Franklin entered public life so far as to become clerk of Assembly, a salaried office. He had already made money; he represents his circumstances as being easy enough to permit him the recreation of a holiday visit to his New England kinsman; and his new place added to his income besides, as he does not hesitate to admit, giving him "a better opportunity of keeping up an interest among the members, which secured me the business of printing the votes, laws, paper money, and other occasional jobs for the public, that, on the whole, were very profitable." In 1737, Postmaster-General Spotswood, of Virginia, removed the Philadelphia deputy, Andrew Bradford, and appointed Franklin in his place. This appointment gave many new opportunities to so sagacious a man as Franklin. The salary, he says, was small, but "it facilitated the correspondence that improved my newspaper, increased the number de-

manded, as well as the advertisements to be inserted, so that it came to afford me a considerable income."

He now, he says, began to turn his attention to public affairs, "beginning, however, with small matters." The first thing he sought to amend was the city watch, which was managed by constables and the hired substitutes of householders. The amendment he proposed, and which eventually was adopted, was a regular paid watch. This reform he agitated through the Junto and its affiliated clubs. The next reform was in favor of regular fire companies, and his agitation of this subject through the club resulted in the establishment of the Union Fire Company on a Boston model. In 1739 he began his intimacy with Whitefield, and took an active part in promoting the construction of the independent meeting-house for Whitefield to preach in. He wished, he says, to have

Whitefield

a perfectly free pulpit, already conscious, perhaps, that he needed to fortify himself in every way against the hostility he was sure to encounter from the two establishments in Philadelphia, the Quakers and the Church of England. At the same time Franklin became the only publisher of Whitefield's sermons, which were very popular and had a great run.

Franklin's business was now, he says (1739-41), very profitable, and he sought to extend it in every direction by setting up such of his workmen as he could trust in the various colonies, advancing them stock, plant, and capital, and taking a share of the profits. As labor bears a much larger proportion in the printing business than capital, this sort of investment was very productive to Franklin; at the same time not disadvantageous to the young printers, who always had the option at the end of six years of buying out their partner and going in business for themselves. In 1741, Franklin began the publication of the first literary periodical in America, the *General Magazine*, which, however, was discontinued after six monthly numbers had been issued. It was pretty much

upon the model of Cave's *Gentleman's Magazine*. In 1744 he wrote out his views about an academy for Philadelphia, which, when crystallized further, resulted in the Philadelphia Academy, the nucleus of the present university. Franklin had wished Rev. Richard Peters, secretary of the province, to undertake the school, but he having other views, Franklin kept his plans in abeyance until 1749, when he published his well-known "Proposals Relating to the Education of Youth in Pennsylvania," and became a trustee of the nascent institution, his associates being James Logan, Francis Hopkinson, Richard Peters, Jacob Duché, Charles Willing, Philip Syng, and others. Franklin, as Dr. Peters says, was "the life of the whole," and he exercised all his adroitness, successfully, too, to secure house-room for the new academy in the building put up for Mr. Whitefield. Franklin tried to secure Rev. Samuel Johnson, then in New York founding King's College, for principal, but failing in this, Rev. William Smith's services were obtained. Charles Thomson, Secretary of Congress, was for six years tutor in this academy.

In 1744, the war with Spain having begun, and that with France impending, Franklin took advantage of the great danger of Philadelphia from privateers to make his fatal assault upon the peace policy of the Quakers. This was in the shape of his pamphlet, "Plain Truth," which was so worded and so timed as to have, as he says, "a sudden and surprising effect." It is to be noted that when Secretary Black, whose journal has been quoted above, arrived in Philadelphia, he found the city full of military fervor, and all the talk was about the privateers, the association, and the drill. "The Dutch," wrote Franklin to Logan, "are in as hearty as the English." "Plain Truth" was translated into German, and a German company was the first one fully recruited. The Governor and Council took Franklin into their confidence, and consulted with him about everything. Good reason, for the association numbered eighty companies, ten thousand subscribers, and Franklin, while declining a commission, and the command of a regiment, for which he did not think he was fitted, controlled the whole body. He was not only the leader of the revolt, but the engineer of the entire machine. He even manœuvred to entangle the leaders of the religious denominations with the movement, and wrote for Secretary Peters the fast-day proclamation which was issued. As to the Quakers, he took high ground with them from the start, for he knew they would never forgive him, and his only effort was to detach from their influence as many moderate men, like James Logan, as he could reach. He was warned he would lose his place as clerk of Assembly, but said he would not resign in anticipation of it, and when the Assembly met he was too strong to be displaced. In fact, a good many young Quakers had caught the war spirit,—enough, in the end, to accomplish Franklin's leading object, the total

submission of the policy of non-resistance as the controlling policy of the province of Pennsylvania,—thus effecting in a short time what every Governor of the province since Fletcher's time had struggled for in vain.

In 1750, Franklin, having taken a partner upon whom he could devolve the active part of his printing and publishing business, devoted himself more closely to affairs and to his studies in philosophy. He bought Spence's apparatus, but, as he says, "the public, now considering me as a man of leisure, laid hold of me for their purposes, every part of our civil government, and almost at the same time, imposing some new duty upon me. The Governor put me into the commission of the peace [he served two terms as judge of Common Pleas], the corporation chose me one of the Common Council, and soon after alderman, and the citizens at large elected me a Burgess to represent them in the Assembly.¹ This latter station was the more agreeable to me, as I grew at length tired with sitting there to hear the debates, in which, as clerk, I could take no part, . . . and I conceived my becoming a member would enlarge my power of doing good. I would not, however, insinuate that my ambition was not flattered by all these promotions; it certainly was, for, considering my low beginning, they were great things to me."

Franklin was ten successive years member of Assembly, his son succeeding him as clerk, and he ultimately becoming Speaker. He was sent, not long after his election, as commissioner to Carlisle to treat with the Indians, his associate on the commission being the Speaker, Isaac Norris. In 1751, Dr. Thomas Bond projected the plan of a general hospital in Philadelphia, and asked Franklin to support his benevolent scheme. This support Franklin gave,—he says the people would not have touched it otherwise,—and secured further a large contribution from the Assembly, but in what seems by his own account to have been a rather tricky way. The first board of managers of this hospital comprised Joshua Crosby, Benjamin Franklin, Thomas Bond, Samuel Hazard, Richard Peters, Israel Pemberton, Jr., Samuel Rhoads, Hugh Roberts, Joseph Morris, John Smith, Evan Morgan, and Charles Norris. Franklin continued a manager and was also secretary of the board until he went to England in 1757. About this time also he did much in the direction of inducing the people to submit to a tax for the purpose of having the streets

¹ Franklin was elected to the Common Council on Oct. 4, 1748; he qualified November 16th; was appointed on the committee to prepare an address of welcome to Governor James Hamilton; at once brought the subject up of a reform in the night-watch, and was made one of a committee to draw up a petition to the Assembly for a remedy; secured appropriations for the new academy building and for support of teachers; on Oct. 1, 1751, was elected alderman, with John Mifflin, and served on several committees. He was appointed justice of the peace for Philadelphia County (under the name of Benjamin Franklin) at a Council meeting held June 30, 1749; and again commissioned in May, 1752.

generally paved, and also for getting them lighted at night. In 1753 he, conjointly with William Hunter, was made postmaster-general of America.

In 1754, Franklin attended the General Colonial Convention at Albany and proposed his well-known "Plan of Union," which was adopted. On his return, in 1755, finding Governor Morris all the time embroiled with the Assembly, Franklin became conspicuous in the lead of the controversy with the proprietary government, which led to his being sent

government. At this time also he was a trustee and one of the chief promoters of a sort of missionary scheme for teaching and otherwise relieving poor Germans in the province, his fellow-trustees being James Hamilton, William Allen, Richard Peters, Conrad Weiser, and William Smith. He was also elected a member of the Royal Society and voted the Copley gold medal.

With Franklin's agency in England this narrative has nothing to do. His mission terminated success-

In ASSEMBLY *Sept. 24 1756*

THIS is to certify, that *Benjamin Franklin* has attended as a Member of Assembly for the ~~City~~ *City of Philadelphia,* — *108 Days, at Six Shillings per Diem,* for which there is due to him the Sum of *Thirty two Pounds, Eight Shillings*

Signed, by Order of the House,

Paul Norris Speaker

To

The Treasurer of the County of Philad.^a for the time being

Rec^d of W^r Leech Thirty Pounds
\$30. 4. 10 *Four Shillings & ten pence of the*

B. Franklin

B. Franklin

to England as agent for the province. That same year Braddock's expedition occurred, receiving important and indeed indispensable aid from Franklin, who looked after the transportation and forage. In the defensive measures undertaken after Braddock's defeat Franklin was conspicuously active and energetic. He took a commission, raised a force, and marched to the frontier to construct a line of forts to check Indian inroads; he procured the passage of a militia law, and a general tax for the public defense, and incurred the deepest enmity of the proprietary

fully, and he returned to Philadelphia Nov. 1, 1762, an LL.D. of St. Andrew's and Edinburgh, and D.C.L., *honoris causa*, of Oxford. Honors had been showered on him, and he was the most conspicuous man in America. The Assembly awarded him a vote of thanks; he made a tour through the Middle and Eastern Colonies, and then returned to public business in Philadelphia. In December, 1763, he took a prominent part in a tragical affair which has tarnished the annals of Pennsylvania. This was the Paxton massacre. The Indian outrages on the border

and in the western counties had excited a feeling of bitter hostility to the whole race, and there were many lawless men among the settlers in those wilds, people who were used to take the law in their own hands, and were extremely restive under the Quaker policy of non-resistance. They wanted the Indians either destroyed or driven off, and one Indian was as bad as another in their sight. The Moravian Indian communities and the few Indian reservations under charge of the provincial government irritated them continually. These feelings were most intense among the hot-blooded Irish settlers in Lancaster County and near by, who had already feuds among themselves and with their German neighbors. The "boys" (as they called themselves) of Paxton or Paxtang township were of this fiery Limerick temperament. Not far from them was the Conestoga manor, whereon was gathered, under the protection of the province, the feeble remnant of the once formidable Conestoga or Susquehannock tribe of Indians. The Six Nations acknowledged them as of their kindred; they were protected and the possession of their manor guaranteed to them by treaty. They were peaceable, inoffensive, loving and trusting the whites, though it is possible one or two of them may have been thieves. There were but twenty left, seven men, five women, eight boys and girls. The senior, Shehaes, was very old; he had been one of the Conestogoes treating with Penn in 1701; he was a good, kindly old man, very feeble, cared for with filial devotion by his daughter Peggy; John was another good old man, who was supported by his son Harry; George and Will Soc were youths, brothers; John Smith was a Cayuga, husband of Peggy, and they had one child three years old. Besides these, there was old Betty and her son Peter, and Sally, or Wyanjoy, who was bringing up an adopted child. On Wednesday, Dec. 14, 1763, the Paxton boys, numbering fifty-seven men, mounted and armed, came to Conestoga after riding all night. They surrounded the Indian huts and attacked them at daybreak. Only six persons were found, and these, including the old chief, were murdered in cold blood in their beds. The fourteen who were absent were taken by the neighbors and lodged in Lancaster jail for safety. The Governor issued a proclamation ordering the offenders to be arrested. In defiance the Paxton boys marched to Lancaster, broke into the jail, and murdered every one of the fourteen, not a hand being raised to defend them.

A great feeling of indignation sprung up, there were new proclamations, and Franklin published a strong and manly pamphlet, "A Narrative of the Late Massacre in Lancaster County of a Number of Indians," etc. But, on the other hand, the Western counties not only defended the murderers, but resented the feeling against them. A war of extermination was threatened, and the friendly Indians throughout the province, including the Moravians, to

the number of one hundred and forty, fled to Philadelphia for protection, and were sent for safety on Province Island, in the Delaware. The Paxton boys, largely recruited, and in great force, started to march to Philadelphia, to slay these Indians too, and the Governor and Assembly resolved to repel them. The unhappy refugees were brought into the city and lodged in the barracks. There was no regular militia, but Franklin, at the Governor's request, formed an association, on the plan of the old one, organized nine companies, and soon had one thousand citizens under arms and the city in a very good state of defense, cannon in the market-place, and old artillerymen ready to mow the rebels down if they dared come on. Come they did, as far as Germantown, and there halted, a numerous, and, it might be, formidable mob. When they paused the Governor and Council sent Franklin and three others out to meet them and turn them back. Their contemplated assault was adroitly converted into a protest, a memorial of grievances and a petition for relief, which had fifteen hundred signers. Two persons were delegated to present their case before the Governor and Assembly, and then the rioters returned to their homes. Franklin, and those who acted with him, had certainly saved Philadelphia from a serious mob, and probably from the disgrace of another Indian massacre within her gates, as it is likely the city mob would have joined the Paxton boys, with whom they sympathized.¹

¹ At this time Pontiac's conspiracy was just ripening, the Indians were in a very unsettled state, they were overrunning all Pennsylvania west of Carlisle and Shippensburg, Bouquet's and Armstrong's expeditions were in the field, and the alarmed people were excusable in not wishing to leave a kindred race to the ruthless enemy gathered in their rear. The Paxton and Donegal people were not capable of making nice distinctions any more than our frontiersmen of the present day. Still, the massacres were inexcusable, nor is there any excuse for the provincial government in leaving the Conestoga remnant so defenseless. The march of the Paxton boys on Philadelphia was full of incidents, and many traditions still hang around it. It was on Jan. 3, 1764, that news came of a company being formed, two hundred men strong, in Lebanon, Paxton, and Hanover, with encouragement from the farmers, to march to Philadelphia and kill the Indians on Province Island. The Moravian Indians, one hundred and twenty-seven in number, begged to be sent, with their two ministers, to England. This not being possible, they asked to be sent to Sir William Johnson, in New York. A company of Highlanders about to march thither offered them escort. Governor Franklin gave them right of way through New Jersey, but Governor Colden, of New York, refused to receive them. They had got as far as Amboy and were marched back under charge of a company of regulars, Capt. Schlosser, whom Gen. Gage ordered to defend them. To do this more effectually they were brought to the Northern Liberty barracks. Meantime, alarming news came from Lancaster, and it was said that fifteen hundred men were coming down, and if they did not suffice, five thousand would come.

The Council ordered Capt. Schlosser to fire on any body of armed men who approached the barracks, and the Assembly passed the English Riot Act of George I., extending it to Pennsylvania. February 4th the insurgents were reported approaching, some said seven hundred, some fifteen hundred. The Governor called a public meeting in the State-House in the afternoon. In spite of the rain, three thousand people were present. But the Germans were absent, and it was murmured they sympathized with the Paxton boys, and were ready to stamp out the Quakers and Moravians for their deceitful policy. The meeting, however, was energetic. The new riot act of Assembly was proclaimed, one

John Penn, one of the proprietaries, had come out in November, 1763, to govern the province in person, and he was soon in collision with the Assembly. The Paxton troubles, the supply bill, the subject of taxa-

hundred and fifty gentlemen were enrolled to aid the soldiers in defending the barracks that night, and it was arranged for the people to rally *en masse* and repair to the barracks or the court-house if the alarm-bells should sound. Cannon were sent to the barracks, a stockade thrown up there, and videttes sent out on the roads of approach. Next day was Sunday; defensive preparations were continued, a redoubt thrown up in the centre of the barracks parade-ground, and the gateways stockaded and loopholed. At eleven o'clock that night an express came in with news of the mob's approach. Another arrived at two o'clock, and the alarm-bells began to ring. The people rushed out to obey the summons, and by sunrise on Monday the whole town was under arms. The old association artillery company mustered again and took charge of two cannon at the court-house. Business was suspended, shops did not open, the ferries were dismantled, and couriers charging back and forth along the streets kept up the excitement. Even the Quakers forgot their principles. Rev. Mr. Muhlenberg, in his contemporary account, says, "It seemed almost incredible that sundry young and old Quakers formed companies and took up arms, particularly so to the boys on the streets, for a whole crowd of boys followed a distinguished Quaker and in astonishment cried out, 'Look here! a Quaker with a musket on his shoulder!'" A mounted company of butchers marching to the rescue were mistaken for the enemy, and only saved from being fired on by the coolness of a man who put his hat over the touch-hole of the cannon just as the excited gunner was about to apply the linstock.

The enemy meantime was halting at Germantown, about two hundred backwoodsmen, in match-coats and moccasins, with rifles, pistols, and tomahawks. They were civil, well-behaved, and claimed to be only the advance-guard of their army. Capt. Torbet Francis proposed to march at the head of his company and take them prisoners, but the more pacific plan of a visiting delegation prevailed, and the citizens were dismissed, excepting the companies of Capts. Francis, Wood, and Mifflin, which remained under arms all night at the market and the Quaker meeting-house. (This use of the meeting-house led the wits of the day to fire off their squibs, one of which, styled the "Battle of the Squirt," adjures the Quakers to

"Cock up your hats! look fierce and trim!
Nor wear the horizontal brim;
The house of prayer be made a den
Not of vile thieves, but armed men;
Tho' 'tis indeed a profanation
Which we must expiate with lustration;
But such the present time requires,
And such are all the Friends desires;
Fill bumpers, then, of rum or arrack!
We'll drink success to the new barrack!")

Tuesday morning the negotiators went to Germantown and conferred with the malcontents. They included, besides Franklin, Benjamin Chew, Joseph Galloway, Thomas Willing, Gilbert Tennent, Rev. Dr. Wrangel, Rev. Mr. Brycelius, Rev. Richard Peters, and Rev. William Sturgeon, of Christ Church, with several others. They returned with the rioters' manifesto and their promise to disband. The troops were dismissed, but next day there was a false alarm and everybody fled to arms again with the utmost alacrity. Thirty of them did come to town, and tried in vain to identify disturbers of the peace among the Indians. There was no further trouble.

The Quakers, however, found much ill-feeling had arisen against them. Israel Pemberton's life was in danger, it was thought, from the Irish, and he crossed to New Jersey. He was very friendly with the Indians, kept close intercourse with them, and the inhabitants dubbed him "King Wampum." The Paxton memorial was signed by Matthew Smith and James Gibson, and was thought to have been prepared for them in the city. The Paxton expedition was the occasion of a number of satires, squibs, and satirical prints, laughing at all concerned, and especially at the muster of the Philadelphia forces. One of these cuts had a hundred figures in it, and bristled with local allusions; another depicted Pemberton embracing an Indian squaw; a third hit at Franklin, representing the philosopher in his study, with these verses underneath:

tion, and the course of the Quakers were all causes of grievance for the popular party, of which Franklin was now the leader. In March, 1764, a committee of the Assembly, consisting of Franklin, Galloway, Rodman, Pearson, Douglass, Montgomery, and Toole, reported a series of resolutions concerning the proprietary government, and declaring that the only remedy for its defects was the substitution of a royal government over the province. These resolutions set forth the grievances of the province in elaborate detail, and they were unanimously adopted. The Assembly adjourned to the middle of May, and when it met again petitions for the change were presented containing three thousand five hundred names, including many Quakers. But the majority of the Friends, while owning the meanness and obstructiveness of the proprietary, enjoyed too many privileges under Penn's charter to wish to have it entirely subverted. They demanded a redress of grievances, but they wanted the old charter and the proprietary protection. Franklin did not. He was bent on the overthrow of the whole system, and he came out with a pamphlet, "Cool Thoughts on the Present State of Affairs." Hugh Williamson replied with a pamphlet on the proprietary side, and this was caustically handled in a third pamphlet. In the Assembly John Dickinson made a strong speech against the change of government, and Galloway replied effectively. The latter's speech was printed, with a preface by Franklin, which was both masterly and conclusive. The Assembly resolved to transmit the petitions for a change of government to England with a memorial of its own in favor of them. Isaac Norris, the Speaker, opposed to this sort of procedure, resigned, and Franklin was elected Speaker in his place, drew up the memorial, and forwarded it to the king's government.

These controversies entered into the next canvass for the election of members of the Assembly. The whole force of the proprietary and conservative Quaker influence was brought to bear against Franklin and Galloway, leaders of the popular party, and they were attacked with squib and caricature as well as with more substantial weapons. Franklin and Rhoads were defeated in Philadelphia City by Thomas Willing and George Bryan. Galloway, Evans, and Fleaseon were defeated in the county. The anti-proprietary majority was much reduced in the Assembly, but not obliterated. The petition for a change of

"Fight dog, fight bear, you're all my friends;
By you I shall attain my ends;
For I can never be content
Till I have got the government;
But if from this attempt I fall,
Then let the devil take you all!"

Another print also caricatured Franklin and made light of his intentions, while others viciously assailed Pemberton, as if he used his conscience and his Indian friendship equally to promote his fur trade. The poor Moravian Indians in the barracks were attacked by smallpox, and fifty-six of them died, and the survivors were finally sent to the Moravian brethren on the Wyalusing.

government was still prosecuted, though the proprietary party brought in a counter-petition with fifteen thousand names on it; large discretionary powers were voted to the London agent of the province, and Franklin was appointed to the agency, to assist Richard Jackson, in the face of a strong protest against the appointment, signed by Dickinson, Bryan, and others. Franklin replied to this protest in another of his inimitable pamphlets, and then, Nov. 7, 1764, left the city for England, escorted to Chester by a cavalcade of three hundred of his friends. The city corporation, Israel Pemberton, and other strong Quakers, agreed with Dickinson in opposing the bestowal of this agency upon Franklin. Pemberton was afraid that Franklin would secure the immediate overturn of the proprietary government by currying favor with the ministry and getting himself appointed Governor of the province.

It is evident that many people in Philadelphia were mistrustful of Franklin; but his friends and followers were numerous, and in the election that October he was only defeated by a majority of twenty-five votes in four thousand. Franklin, in concluding his farewell pamphlet, said, "I am now about to take leave, perhaps a last leave, of the country I love, and in which I have spent the greater part of my life. *Esto perpetua!* I wish every kind of prosperity to my friends, and I forgive my enemies." And, in fact, Franklin did not come back to this country any more, in one sense, for when he returned it was the United States, the proprietary government was broken, and the Declaration of Independence only a matter of weeks. The rest of Franklin's history belongs to the nation rather than to Philadelphia.¹

¹ His agency, of course, was constantly felt, in a hundred ways, in Pennsylvania and Philadelphia, and his reports on the resources of the province are most valuable and suggestive. The most direct instance of his interposition, however, was when Lord Hillsborough made his report against American paper currency, and Franklin answered him in a pamphlet. We have already outlined the history of the Pennsylvania paper currency, and but few words more are needed to complete it. The first move in favor of such a currency was made in 1721. The trustees of the first loan office were Samuel Carpenter, Jeremiah Langhorne, William Fishbourne, and Nathaniel Newlin, their salaries being fifty pounds per annum each. The form of the note or bill issued was as follows:

"THIS Indented Bill of ———, current money of *America*, according to the act of Parliament, made in the sixth year of the late Queen ANNE, for ascertaining the rates of foreign coins in the Plantations, due from the Province of Pennsylvania to the Possessor thereof, shall be in Value equal to money, and be accepted accordingly by the Provincial Treasurer, County Treasurer, and the Trustees for the General Loan Office for the Province of *Pennsylvania*, in all publick payments, and for any fund at any time in any of the said Treasuries and Loan Office. Dated at *Philadelphia*, the ——— day of ———, in the year of our LORD one thousand seven hundred and twenty-three, by order of the Governor and General Assembly."

The arms of Pennsylvania were stamped upon the middle of the left side.

In 1739 a committee of Assembly reported on the state of the currency that in 1723 there were emitted £45,000, of which in 1726 were burnt £6110 5s. In 1729 there were emitted £30,000, and the amount now in circulation was £68,889 15s. Enough notes were then issued to bring the circulation up to eighty thousand pounds. The committee

CHAPTER XV.

LOCAL HISTORY AND GROWTH, 1750 TO 1775.

If we take out from the local history of Philadelphia between 1750 and 1775 all that relates to Franklin and his interests and influences, and all that relates to the Revolutionary war and the events which led up to it, it might be conceived that not much remains. Nor is there so much to tell, if we further eliminate what more properly concerns the records of sects, societies, and denominations, and the progress of the arts, sciences, and professions during this period. These matters, being treated in separate groups, will naturally make but a fragmentary and occasional appearance in the chronicle of progress. Yet even the meagre skeleton of annals which remains for the subject of the present chapter is full of interest and events, and can by no means be dismissed in a few brief paragraphs. Mr. Westcott, indeed, has devoted many separate chapters to it.

When Governor Hamilton asked Franklin how he might avoid disagreement with the Assembly, the

reported a comparison of the prices of gold and silver per ounce in the colony, as follows:

	1700.	1710.	1720.	1730.	1738.	1739.
Gold.....	£5 10s.	£5 10s.	£5 10s.	£6 3s. 9d.	£6 3s. 9d.	£6 9s. 3d.
Silver.....	9s. 6d.	9s. 10½d.	7s. 6d.	8s. 1d.	8s. 9d.	8s. 6d.

In 1744 a sum of ten thousand pounds was emitted to replace old, torn, and ragged notes, without intending to augment the circulation. In 1746 five thousand pounds was emitted in bills of credit for the king's use, and later in that year five thousand pounds to replace worn-out bills.

From 1729 to 1767 all the bills and notes were printed by Franklin, either alone or in partnership with Hall.

From 1753 onward the Assembly was struggling with the Governor and the proprietary on the currency question, the former seeking to augment the quantity of notes. Even in the excitement of the Braddock campaign the assent of the Governor could only be obtained to an issue of ten thousand pounds, to be exchanged for old and torn notes. After Braddock's defeat, however, sixty thousand pounds were raised for the king's use, fifty-five thousand pounds of it emitted in bills of credit, dated Jan. 1, 1756, and redeemable by taxation; and in August, 1756, an issue of thirty thousand pounds was made, redeemable in ten years. In 1757 one hundred thousand pounds was issued in two installments for the support of government; in 1758 another issue was made to the same amount; in April, 1759, one hundred thousand pounds for the support of government; in June, same year, thirty-six thousand six hundred and fifty pounds to reimburse the colonial military agent. This act was canceled (but the notes were emitted), and the larger one would have been repealed by king and Council in 1760 but for the activity of Franklin. The notes out at this time were three hundred and eighty-five thousand pounds in amount.

Between 1760 and 1769 one hundred and seventy-five thousand pounds in notes were issued, and two hundred thousand pounds canceled or retired. In 1766 an association of merchants tried to issue twenty thousand pounds in five-pound promissory private interest-bearing notes, but they were prevented. In 1769 thirty thousand pounds were added to the currency in two issues, the first of which was so extensively counterfeited that, in 1773, Governor Richard Penn issued a proclamation, offering five hundred pounds reward for the detection of the offenders. The second issue was for the aid of the almshouse in Philadelphia. In March, 1771, fifteen thousand pounds were emitted for the defense of Philadelphia, a French war being feared; this money was used in paving the streets of the city. In 1772 an issue of twenty-five thousand pounds was made "for the support of the government"; in 1773 an issue of twelve thousand pounds for the lighthouse at Henlopen and buoys in the bay and river, and in October one hundred and fifty thousand pounds for the use of the loan office.

philosopher told him by avoiding discussion. But Hamilton replied that he delighted in disputation, and Franklin assured him his appetite was likely to be satisfied. So it happened, for Hamilton was embroiled with the Assembly from the beginning. He opened the year 1751 by reviving the old controversy about prerogative and the right of the Assembly to sit out of its set time without receiving permission from him, a point in regard to which the Assembly was ready to meet him more than half-way. In fact, they fired off such a volley of precedents at him in their report on the subject that he found it convenient to abandon the dispute. Not much else was done besides quarrel at this dull session. A petition from Philadelphia County complaining of the reckless use of fire-arms, in the way of salutes and jubilee on holidays and festivals, by the Germans and by servants and negroes, led to the passage of an act for the more effectual preventing accidents which may happen by fire, and for suppressing idleness, debauchery, etc. This was a sweeping statute, aimed not only at the reckless use of fire-arms, but at squibs, crackers, rockets, etc., at the firing of foul chimneys, at horse-races, shooting-matches, and other idle sports, and retailing liquor at the same, and against races and matches for plate, money, and the like. There was plenty of this sort of sport in Philadelphia, nevertheless, and races were had at the Centre regularly. It was at this Legislature that the first petition was presented for aid to the hospital projected by Dr. Thomas Bond, as outlined in the preceding chapter. The original petition was for a county insane asylum or hospital.¹

The charter was granted in May, 1751, and the first board of trustees elected in July following. The proprietaries were petitioned for a lot for the building, the one named being on Mulberry Street, south side, between Delaware Ninth and Tenth. This lot was refused, and another offered (what is now Franklin Square), which the trustees in turn declined, and Judge Kinsey's house, south side of Market Street above Fifth, was rented and fitted for the reception of patients. It was opened in February, 1752, with a number of patients, who were regularly attended and given their medicines free by Drs. Zachary, the two Bonds, Graeme, Moore, Cadwallader, and Redman. An apothecary was also appointed at fifteen pounds a year, and a dispensary set up for outdoor patients. In 1754 the managers bought a piece of ground on Pine Street from Eighth to Ninth, at a price of five hundred pounds. The remainder of the square, sixty feet deep on Spruce Street, belonged to

¹ The petitioners were William Plumsted, Luke Morris, Stephen Armitt, Samuel Rhoads, William Coleman, Edward Cathrall, Samuel Smith, Samuel Shoemaker, Samuel Hazard, Samuel Sansom, Amos Strettell, John Armitt, John Reynall, Charles Norris, William Griffiths, William Attwood, Anthony Morris, Thomas Graeme, William Branson, Israel Pemberton, Joshua Crosby, William Allen, Joshua Fisher, Nathaniel Allen, Reese Meredith, Joseph Richardson, Joseph Sims, Anthony Morris, Jr., Jonathan Evans, Joseph Shippen, John Inglis, John Mifflin, and George Spafford.

the proprietaries, who presented it to the institution, and the contributors afterwards bought other ground on the east and west, north and south of the hospital, so as to insure it a free circulation of air. A plan for the hospital was accepted, other contributions solicited and came in so liberally that the building was begun at once, nearly all the materials and labor being gratuitous. The corner-stone was laid May 28, 1755, by Joshua Crosby. It bears an inscription by Dr. Franklin.²

In December, 1756, the eastern wing was completed and fitted up for the reception of patients, who were then removed to it from the hired building in Market Street.

In this same year, 1751, when the hospital was begun, an attempt was made to get a bridge built over the Schuylkill, and commissioners were appointed to select a site. They, however (Benjamin Franklin was one), found no site so eligible as that of High Street ferry, leased to Capt. James Coultas. The latter got his lease renewed for seven years, was allowed six hundred and eighty pounds for his extraordinary expenses and improvements, and so the bridge project was postponed indefinitely.

Berks County was this year formed out of parts of Chester, Philadelphia, and Lancaster Counties, and the western line of Philadelphia County much restricted. Benjamin Franklin was regularly elected to the Assembly this year as the colleague of Hugh Roberts. He had sat in the previous Assembly, elected to fill a vacancy caused by the death of William Clymer. The Assembly did not do much besides order the superintendents to "provide a bell (for the State-House) of such weight and dimensions as they shall think suitable." The outcome of this order was the Independence bell.³

² "In the year of Christ
MDCCLV,

George the Second happily reigning,
(For he sought the happiness of his people),
Philadelphia flourishing,
(For its inhabitants were public-spirited),
This Building,
By the Bounty of the Government,
And of many private persons,
Was piously founded
For the Relief of the Sick and Miserable.
May the God of Mercies
Bless the Undertaking."

³ Isaac Norris, Thomas Leech, and Edward Warner, the superintendents, wrote, Nov. 1, 1751, to Robert Charles, of London, stating their order and authority, and applying to him to get them "a good bell of about two thousand pounds weight," the cost of which, they fancy, may be two hundred pounds or more, including charges. "Let the bell be cast by the best workmen, and examined carefully before it is shipped, with the following words well shaped in large letters around it, viz.: 'By order of the Assembly of the Province of Pennsylvania, for the State House in the City of Philadelphia, 1752.' And underneath: 'PROCLAIM LIBERTY THROUGH ALL THE LAND UNTO ALL THE INHABITANTS THEREOF.—Levit. xxv. 10.'"

March 10, 1753, Norris wrote again: "In that letter I gave information that our bell was generally liked and approved of, but in a few days after my writing, I had the mortification to hear that it was cracked by

In April, 1751, the *Pennsylvania Gazette* (Franklin & Hall) is found complaining of the treatment meted out to the colonies by the home government. After noticing the fact that Samuel Saunders, an English convict transported to the colonies, had been tried before the Supreme Court at Philadelphia, and, being convicted of manslaughter, was burned in the hand,

INDEPENDENCE BELL.

the *Gazette* has a strong editorial, denouncing the system of transporting convicts to the colonies, the result of which was a great frequency of robberies, murders, and other villanies. "These are some of thy favors, Britain!" the article says. "Thou art called the mother-country; but what good mother ever sent thieves and villains to accompany her chil-

a stroke of the clapper without any other violence, as it was hung up to try the sound; though this was not very agreeable to us, we concluded to send it back by Capt. Budden, but he could not take it back on board, upon which two ingenious workmen undertook to cast it here, and I am just now informed they have this day opened the mould and have got a good bell, which, I confess, pleases me very much, that we should venture upon and succeed in the greatest bell cast, for aught I know, in British America. The mould was finished in a very masterly manner, and the letters, I am told, are better than the old ones. When we broke up the old metal, our judges here generally agreed it was too high and brittle, and cast several little bells out of it to try the sound and strength, and fixed upon an ounce and a half of copper to one pound of the old bell, and in this proportion we now have it.

"April 14, 1753. A native of the Isle of Malta (— Pass) and a son of Charles Stow were the persons who undertook to cast our bell; they made the mould in a masterly manner and run the metal well; but upon trial, it seems they have added too much copper in the present bell, which is now hung up in its place; but they were so teased with the witticisms of the town that they had a new mould in great forwardness before Mesnard's arrival, and will very soon be ready to make a second essay." The second bell was cast and hung; it did not give great satisfaction, but was suffered to stay. It was hung the first week of June, 1753. The bill for "sundries" served at the bell-hanging included potatoes, beef, bacon, mustard and other condiments, cheese, punch, bread, and beer.

dren, to corrupt some with infectious vices and murder the rest? What father ever endeavored to spread the plague in his own family? We don't ask fish, but thou givest us serpents," etc. A correspondent of the *Gazette* shortly after suggested retaliation in the shape of a cargo of rattlesnakes distributed in the London parks and places of diversion.

The academy and free school were opened during this year,—Dr. Francis Allison, rector of the academy and master of the Latin school; David James Dove, master of the English school;¹ and Theophilus Grew, master of the mathematical school. Charles Thomson was one of the ushers. Dr. Dove, in August, issued proposals for opening a school for young ladies at the academy at five o'clock in the evening, to continue every night three hours, "in which will be carefully taught the English grammar, the true way of spelling and pronouncing properly, distinctly, and emphatically, together with fair writing, arithmetic, and accounts." In October a night-school was opened by William Milne, "in his room in Aldridge's Alley, at the sign of St. Andrew, opposite the shop of Nathan Trotter, blacksmith, in Second Street, between Market and Chestnut." He taught writing, spelling, arithmetic, navigation, mensuration, and geometry. The town had need of these schools. It was growing rapidly. The taxables this year numbered seven thousand one hundred in city and county, an increase of two thousand three hundred since 1740.

Northampton County was erected early in 1752, and Philadelphia, growing so rapidly as it did, sought an increased representation in the Legislature to offset the preponderance given to country interests by the increase of new counties. A variety of complaints from the city went up to the Legislature at this time, among others of the number of gambling-houses in the city, vitiating the morals of young people. The vendue-masters complained of unlicensed auctions in the Northern Liberties, and the bakers sought to be relieved from the assize of bread. The people of Philadelphia also petitioned to be relieved of the nuisance of dogs running at large, ownerless curs running out at travelers and horses, killing sheep, worrying cattle, and going mad; and the Assembly prescribed the usual remedy, a dog-tax. An act of Assembly was passed in March to prevent bribery and corruption at elections of sheriffs and coroners, the candidates, so the preamble states, making it "too frequently their practice to engage persons to vote for them by giving them strong drink and using other means inconsistent with the design of voting freely at elections, by means whereof many unguarded persons are unwarily drawn in to engage their votes, and rendered incapable of discharging their duty in that sober and weighty manner the oc-

¹ The satirists called Dr. Dove "Squire Lilliput," from a piece of land he owned near Gloucester Point. He wrote many squibs himself, taught the Germantown Grammar School, and in politics was accused of being somewhat of a Vicar of Bray.

casion requires." It was therefore enacted that if any candidate for sheriff or coroner should give to any voter, or allow others to do it for him, any gratuity, wages, gift, bribe, strong drink of any kind, treat entertainments, or any reward whatever, or should promise that the same should be done by themselves or others, the offender should be liable to a fine of £10, and the voter who took the bribe to a fine of £5."¹

In this year, 1752, the calendar was changed from the Julian to the Gregorian system of computation by act of Parliament, which ordained that after the last day of December, 1751, the year should cease to be counted as beginning on the 21st of March, but the 1st day of January should be taken to be the 1st day of the year of our Lord 1752, and so on, "and that all acts, deeds, writings, notes, and other instruments of what nature or kind soever, which should be made, executed, or signed upon or after the said 1st of January, 1752, should bear date according to the new method of supputation." This change did away with the double style of computation employed in the dates of events happening in January, February, and March. The rectification in the calendar was made by taking eleven days from it, calling the 3d of September the 14th, so that month, in 1752, had only nineteen days in it. The king's birthday was pushed forward from October 30th to November 9th, and was celebrated at Bush Hill, Governor Hamilton's seat, with an entertainment, the royal healths drunk under a discharge of cannon from the association battery and the ships in the Delaware. In the evening there was a great ball at the State-House, attended by a hundred ladies and more than that number of gentlemen. "Supper was served in the long gallery in the second story, the whole affair being one of the most brilliant that had yet occurred in the province."

¹ If there be any comfort in the reflection that our ancestors were not much better than our contemporaries in the matter of purity of elections, the evidence of the fact is abundant. Thus, in a note to Gregory B. Keen's very valuable series of articles in the *Pennsylvania Magazine*, called "The Descendants of Jöran Kyn" (vol. ii. p. 452), we find that Matthias, son of Hans Keen, was signer to a petition to Governor John Evans and Council, praying them to disallow a wrongful election of sheriff for the county of Philadelphia effected by the "Towne party," as it was called, over the "Country party." The document is "the humble Petition of severall freeholders of the County of Philadelphia, on behalfe of themselves and divers others." It represents that the election for representatives took the whole day. After it was over that of sheriff came on; there was a show of hands, and a candidate certainly and fairly elected. Then the country people went home, and the town party demanded a ballot, "knowing that then they were able to carry on their Clandestine Design (the Sheriff having long before withdrawn), and accordingly amongst themselves they hatch'd it, permitting Serv^{ts} and all that went for their Cause to have their Vote, and objecting against and denying others y^t had Competent Estates to have any. Besides, their method of Electing was contrary to the positive Agreem^t had, and the Practices used in such cases before on that day (viz^t) of nominating only one at a time, w^{ch} in this particular however was rejected, together wth severall more partiall and unfair Proceedings w^{ch} can readily be made appear." This petition was presented at a meeting of the Provincial Council, Oct. 4, 1705, by Peter Evans, the candidate of the "Country party," but Governor Evans commissioned his opponent, Benjamin Wright.

John Penn, the third son of Richard, arrived in the province in December, 1752, just in time to witness the annual fight between the Governor and the Assembly, which began in January, 1753, the subject being a paper-money bill. In March, this year, a schooner left the Delaware for Hudson's Bay, the first Arctic expedition ever sent out from America, the Northwest Passage being the object of search. This was the "Argo," Capt. Swaine, which failed to accomplish any discovery, but brought back some curiosities for the Philadelphia Library. The subscription for this expedition is said to have been originated by Franklin. The "Argo" repeated her voyage in 1754, but still did nothing.

Daniel Pellito was allowed ten pounds per annum for his salary as public whipper, and Charles Stow seven shillings sixpence per annum for supplying the Mayor's Court with candles and firewood. Such things are much more costly in our modern times.

In November, 1754, in the midst of the excitements, controversies, recruitings, and musterings growing out of the French war, the town was agitated by the news of a pestilence which had broken out and was spreading through the place. It was engendered about the unhealthy, crowded vessels which brought Palatines to the port, and was a sort of ship-fever, or typhus. The port physicians were requested to visit all the Palatine ships in the harbor and all the houses where Palatines lodged; the City Council also giving the matter their attention. Dr. Bond reported at the next meeting of the Provincial Council that two parties of Germans were sick and in a condition to spread the plague; one party being at Philip Burckhardt's, near the Dutch Reformed Church, the other at Frederick Burk's, Spring Garden. At David Sickel's, Race Street, three were sick; at Jacob Cost's, in Dirty Alley, twenty were down with the fever. At Ludwick Cale's, in Fifth Street, many were sick out of a company of twenty-four. The doctors traced several cases of illness to persons of the city who had been at work aboard the ships. One ship from Hamburg had made a healthy passage, but since reaching port her sailors and passengers were nearly all taken down with the fever. The disease could not be said to have originated among the Palatines, but they supplied it with victims. Two hundred and fifty-three of these strangers were buried in 1754. The condition of these poor immigrants was, indeed, wretched, and their petitions show them to have been outrageously treated and imposed on by the mercenary harpies who imported them. The Assembly passed in December an act for preventing the importation of Germans or other passengers or servants in too great numbers, but the Governor and Council objected to the stringency of some of the regulations, and the bill failed to become a law.

In the beginning of 1755 Philadelphia had many Indian visitors. First came a band of Cherokees, who had been taken prisoners by French Indians,

carried to Canada, escaped, and stopped in the city on their way homeward. Before they left there came a deputation of Mohawks, headed by King Hendrick. The latter had many conferences with the provincial authorities at the State-House, where both bands of Indians were lodged. The Indians were treated very civilly and received numerous presents. Hendrick was a lion for a while, and an enterprising Boniface, opening a new tavern shortly after on Mulberry (Arch) Street, near Fifth, called it after the popular chief, a name which it retained for many years.

Braddock commenced his march from Fort Cumberland towards Fort DuQuesne on June 12th, and Governor Morris appointed June 19th as a day of fasting and prayer for the success of the expedition. It was not long after the fatal July 9th when the news reached the excited city of Braddock's defeat and death and Dunbar's precipitous retreat. The Governor called the Assembly together at once. Dunbar was on his way to Philadelphia, and on August 1st the Governor notified the mayor and Common Council to make provision for the accommodation of two regiments and a hospital for the sick. The mayor and recorder responded that there was no law giving any such authority to the corporation, and they could not, therefore, do anything. The Assembly, when addressed on the subject, simply adopted the English statute for the billeting and maintenance of soldiers. They declined to establish a militia.

In the latter part of August, Dunbar's troops arrived and encamped between Pine and Cedar Streets, west of Fourth. Jacob Duché's house was taken as a hospital, at a cost of fifteen pounds for six months. Duncan Cameron's journal says, "The Philadelphians' hearts and houses were open to us in the most affectionate and tender manner; and I must not forget the tender compassion of their good housewives, for they, being informed that our living had been chiefly on flesh, the women of Market Street and Church Alley, as I was told, formed an association for regaling us with apple pies and rice puddings, which they generously effected, and their example was followed by a great many women in the city." Dunbar's command did not tarry long in the city. While they were in camp they took an active part in kindling bonfires and making illuminations in honor of Sir William Johnson's victory over the French at Lake George, while the officers gave a ball at the State-House in celebration of the same triumph.

These rejoicings, however, could not prevent the people from being terribly alarmed at the devastation and desolation of the border settlements by the French and their Indian allies. Great Cove, in Cumberland County, Gnadenhütten, Mahanoy, and Tulpehocken, each in its turn felt the weight of this savage warfare, had its houses burned and its people slaughtered. Fugitives from the border streamed in upon the eastern settlements, and brought their panic with them.

The Governor summoned the Assembly, and consulted with the mayor and corporation about the defenseless state of the province. A search was made for arms, and suspicions were aroused in regard to some Frenchmen, lately in the city, who had disappeared. The Assembly was willing to vote any amount of money, and provide for its redemption by tax, but insisted that the tax must include all property, that of the proprietary as well as the citizen; the Governor refused, the old quarrel was renewed. There was a deputation of Indians in town; it was vitally important to prevent further defection among them; liberal presents would, perhaps, win back the Delawares; but, no money, no presents. The proprietary in England, however, advanced five thousand pounds; this was accepted in lieu of a tax contribution, and sixty thousand pounds were voted. The Governor pressed for a militia law; the Assembly delayed and evaded, until at last the discontent of the people threatened to break forth in riot. Col. Moore, of Chester, wrote to the Governor that two thousand inhabitants of that county were making ready to march to Philadelphia to compel the Assembly "to agree to pass laws to defend the country and oppose the enemy." A similar movement was reported in Berks County. The sheriff and mayor of Philadelphia were notified to take measures to protect the peace. The mayor and Common Council themselves undertook to remonstrate with the Assembly in a solemn memorial. But, on the other hand, the Quakers of the strict sect took a positive stand against military organization. They were willing to contribute their means for defense, for cementing friendship with the Indians, and for sustaining their fellow-citizens in distress, but not to be taxed for purposes inconsistent with their peaceable testimony and destructive of their religious liberty. "They would be compelled to suffer rather than consent to pay taxes for such purposes. They therefore desired that no measures would be taken which might coerce them in a manner inconsistent with their peaceable principles." The address embodying these sentiments was signed by Anthony Morris, Jr., William Moode, Israel Pemberton, Thomas Brown, Thomas Lightfoot, John Pemberton, Mordecai Yarnall, Joshua Fisher, Samuel Samson, Isaac Greenleaf, John Smith, Anthony Benezet, Anthony Morris, Samuel Powell, John Churchman, William Brown, Isaac Jeans, Daniel Stanton, Edward Cathrell, and John Reynell.

The Assembly found itself forced to yield, however, to the clamor for a militia law; but it did so very ungraciously, and not until it had thrown out some of the petitions which had been laid before it as being "indecent, insolent, and improper to be presented to this House." The preamble to the act, moreover, was particular to assert and defend Quaker principles. However, the war party had the substantial part of the victory with them, a military organization was provided for, and the law was at once put in opera-

tion. Companies were formed in wards and townships before the end of December, and the following officers were chosen :

Locality.	Captain.	Lieutenant.	Ensign.
Middle Ward.....	John Sayres.	P. Fleeson.	A. Bankson.
Dock Ward.....	D. Roberdeau.	T. Willing.	J. Claypoole.

The old association and the persons opposed to the militia both determined to have no connection with the new association, under which those new companies were formed, and proceeded to form independent companies, the officers of which were commissioned by Governor Morris. Those of the city were as follows: *Independent Volunteers*, William Vander-spragle, captain; William Henry, Joseph Wood, lieutenants; John Blackwood, ensign. *Independent Artillery*, George Noarth, captain; Benjamin Loxley, John Goodwin, lieutenants. *Independent Foot Companies*, John Kidd, Charles Batho, captains; Walter Shee, Buckridge Sims, lieutenants; Joseph Stamper, Peter Turner, ensigns. *Association Battery*, Samuel Miffin, captain; Oswald Eve, lieutenant; William Moore, ensign. *Troop of Horse*, Edward Jones, captain; Lynford Lardner, lieutenant; John Taylor, cornet; George Adam Gaab, Leonard Melchar, quartermasters; with a company of grenadiers, the officers of which are not given.

While the excitement following the retreat of Braddock and the Indian outrages was at its height, Philadelphia received an accession to its population of a class of people against whom suspicion and hatred could not fail to arise in spite of their misfortunes. These were the unhappy Acadians, or "French neutrals," as they were called, forcibly removed from their happy Nova Scotia homes and distributed about among the different colonies. The first detachment of them arrived in the Delaware, about November 18th, in three vessels. They were sent to Governor Morris by Governor Lawrence upon the ground that their refusal to take the oath of allegiance to the British government made it impossible to leave them any longer in their own country. They came to Philadelphia at a very bad time. The feeling in the province against the French and Canadians was very strong, and it was actually feared these poor people would combine with the Irish Catholics to betray the province to the French. Governor Morris wrote to Gen. Shirley that he was positively at a loss what to do with them; he had put a guard aboard each vessel and issued provisions to them, but what else to do he knew not. The doctors re-

ported, he told the Assembly a day or two later, that it was dangerous to keep the neutrals aboard ship any longer, for fear of disease among them, so they were landed on Province Island, under guard from the sloop "Hannah," the sloop "Three Friends," and the sloop "Swan," four hundred and fifty-four persons in all, poor, miserable, suffering. Their wretched state soon attracted the attention of the benevolent Anthony Benezet, who visited them and reported to the Assembly that he found them in great want of blankets, shirts, stockings, and other necessities. The House agreed to meet any reasonable expense incurred by Benezet in providing for the wants of the neutrals.

Hon. William B. Reed, in a paper published by the Historical Society of Pennsylvania, has completed the history of the French neutrals in Philadelphia. In the notes to an English edition of Longfellow's "Evangeline," published in 1853, it was said, "They landed in a most deplorable condition at Philadelphia. The government of the colony, to relieve itself of the charge such a company of miserable wretches would require to maintain them, proposed to sell them with their own consent; but when this expedient for their support was offered for their consideration, the neutrals refused it with indignation, alleging that they were prisoners, and expected to be maintained as such, and not forced to labor." This paragraph excited Mr. Reed's indignation, and he set to work to present the actual facts in the case. Longfellow, it appears, discovered the note, which was derived from Judge Haliburton's ("Sam Slick") "History of Nova Scotia." The number of exiles who left that country in September, 1775, was 1923,—483 men, 337 women, and 1053 children. The number who came to Philadelphia has already been stated; it was said at the time to have been much greater. The feeling at the time of their arrival, and for a while after, was very bitter not only against the Indians and French, but also against all Catholics. The Protestant faith in America was fancied to be in danger, and all the people prayed, as a correspondent in the Shippen papers is represented as doing, "May God be pleased to give us success against all our copper-coloured cannibals and French savages, equally cruel and perfidious in their natures." The French, however, were maligned. In Jumonville's instructions, when he was attacked and slain by Washington in 1756, were the following words: "Le Sieur Donville employera tous ses Talents et tout son crédit à empêcher les Sauvages d'user d'aucun Cruauté sur ceux qui tomberont entre leurs mains. L'Honneur et l'Humanité doivent en cela nous servir de guide." This, too, at the time when the Governor and Provincial Council had publicly made an offer to pay one hundred and thirty dollars apiece for Indians' scalps! The contrast is a vivid one, and shows how little we know of the enemies on whom we make war.

In September, 1755, a few days before these exiles

arrived from Halifax, three Frenchmen had been arrested and imprisoned on suspicion of poisoning the wells. When the neutrals arrived, they were at first sent down the river again, and Governor Morris, besides writing to Governor Shirley, wrote to Governor Belcher, of New Jersey, on the subject, and the latter replied that he was truly surprised how any one could ever think of sending the French neutrals, "or rather Traitors and Rebels to the Crown of Great Britain," to "these Provinces, when we have already too great a number of foreigners for our own good and safety." The Governor thought they should have been transported directly to Old France, "and I entirely coincide with your honor that these people would readily join with the Irish Papists, etc., to the ruin and destruction of the King's Colonies." This shows the common feeling towards these unfortunates. The Assembly, however, in its Quaker instincts, was rather above these feelings, and there were Huguenot Quakers in Philadelphia whose hearts "leaped up" when they heard of Frenchmen in misfortune. Besides Benezet, there were the Lefevres and the De Normandies, who would not see the Acadians suffer. So prompt and generous was the first named, the almoner of every worthy charity and humanitarian cause of which he heard, that the Acadians, in their first memorial to the Assembly, said, "Blessed be God that it was our lot to be sent to Pennsylvania, where our wants have been relieved, and we have, in every respect, been treated with Christian benevolence and charity." Between November and March, in fact, one thousand pounds, public money, had been expended for their relief, in addition to the aid private charity afforded. In February the petition of Jean Baptiste Galerm, a leading man of the refugees, was laid before the Assembly. Galerm's memorial was simply a narrative of the undeserved hardships to which his people had been subjected. It was simple and manly. "Let me add," he said, towards the end of this address, "that notwithstanding the Suspicions and Fears which many here are possessed of on our Account, as tho' we were a dangerous People, who make little Scruple of breaking our Oaths, Time will manifest that we are not such a People. . . . Deprived of our Substance, banished from our native Country, and reduced to live by Charity in a Strange Land, and this for refusing to take an Oath, which we are firmly persuaded Christianity absolutely forbids us to violate, had we once taken it, and yet an Oath which we could not comply with without being exposed to plunge our Swords in the Breasts of our Friends and Relations. . . . And may the Almighty abundantly bless his Honour, the Governor, the honorable Assembly of the Province, and the good People of *Philadelphia*, whose Sympathy, Benevolence, and Christian Charity have been, and still are, greatly manifested and extended towards us, a poor, distressed, and afflicted People." It is greatly to be regretted that the list of names accompanying Galerm's peti-

tion has been lost. It would be of great value to-day. A bill was passed by the Assembly, and signed by the Governor, for "dispersing" the Acadians into the counties of Philadelphia, Bucks, Chester, and Lancaster. This was in March, 1756. The exiles were to be divided and distributed among the counties named, in order to give them "an opportunity of exercising their own labor and industry." Families were not to be disrupted, and they were to be supported at the public expense for twelve months, or until they secured homes. Among the commissioners named to execute this act were Jacob Duché, Thomas Say, Abraham de Normandie, Samuel Lefevre, and William Griffiths.

The neutrals certainly suffered both injustice and privations. Governor Morris, in resigning his office to his successor, gave them a parting shot in a letter to Sir Charles Hardy, Governor of New York, and Sir Charles answered by saying that he had heard there was "an ingenious Jesuit" in Philadelphia. Lord Loudoun, to whom Morris surrendered his commission, had Charles Le Blanc, Jean Baptiste Galerm, Philip Melançon, Paul Bujiauld, and Jean Landry arrested by the sheriff as suspicious and evil-minded persons, guilty of uttering menacing speeches against his majesty and his liege subjects. Loudoun put them aboard Capt. Talkingham's ship and sent them to England, advising Pitt to have them pressed into the navy.

The Acadians sent another petition to the Assembly in August, 1756, begging to be sent, or given leave to go to France, and protesting against the way they were treated. This petition was signed by Alexis Thibaudeau, Pierre Babin, Pierre Aucoin, Benoni Bourg, Paul Brigauld, Olivier Tibaudau, Jean Landry, Pierre Doucet, Jean Doucet, Baptist Babin, Maturin Landry, Simon Babin, Philip Melançon, Simon Le Blanc, and Stanilas Forrest. Another memorial to the same effect was sent to Governor Denny, on September 2d, with pretty much the same signers. In October, William Griffiths, one of the commissioners in charge of the neutrals, notified the Assembly that about fifty of them had lately had the small-pox, many dying. The overseers in several townships had refused to receive them, in consequence of which many who were willing to work "have neither bread nor meat to eat for many weeks together, and were necessitated, as your remonstrant is credibly informed, to pilfer and steal for the support of life." Griffiths himself had expended three hundred and fifty pounds for their maintenance. Another bill was introduced in the Assembly, and became a law, "for binding out and settling such of the Inhabitants of Nova Scotia as are under age, and for maintaining the aged, sick, and maimed at the charge of the Province."

This act led to a very pathetic protest from the neutrals, which, however, accomplished nothing. "Alas!" they said, "oh, sorrowful change for us! The very gentlemen who vouchsafed thus charitably

to relieve us and to preserve our lives will not now let us live, for they have brought us into a condition worse than death in depriving us of a part of ourselves by the act printed the 27th of January, 1757. Oh, merciful gentlemen! what crime have these innocent creatures been guilty of that you should thus separate them from those who, after God, are authors of their lives? Being deprived of that substance which God had granted us, permit us at least to live or die with our children and those of our deceased brethren. . . . Though we read that God has reduced His people under the hardest captivity, as in Egypt under Pharaoh, and in Babylon under Nebuchadnezzar, yet we do not read that those princes that thus oppressed them ever separated the children from the parents. If we are criminals, we are ready to submit to the punishment due to our crimes; but to separate innocent children who have committed no crime from their parents appears contrary to the precept of Jesus Christ, who tells us that the son shall not bear the iniquity of the father." This petition is signed by the same persons whose names were attached to the former memorials. It was futile. The Assembly, however, did not cease to spend money for the support of the neutrals, the appropriations for their relief up to 1761 aggregating upwards of seven thousand pounds. A good many of them remained pensioners till death, and then were buried at the public expense. John Hill, joiner, memorialized the Assembly, in 1766, that he had been employed from time to time "to make coffins for the French neutrals who have died in and about this city;" that he had made sixteen coffins since the last settlement, but was told by the commissioners that there were no funds to pay him with, and he therefore prays, etc. The neutrals, says Watson, for a long time occupied a row of frame huts on the north side of Pine Street, between Fifth and Sixth, on property owned either by Mr. Powel or Mr. Emlen. The neutral huts, as these houses were called, says Mr. Reed, are still remembered, but the neutrals have disappeared. Not even their names can be found in the earliest directories. So devoted was Benezet to them, and so tender his care, says his biographer, Mr. Vaux, that the unsophisticated neutrals themselves began to mistrust him. "It is impossible," they said, "that all this kindness can be disinterested; Mr. Benezet must intend to recompense himself by finally betraying us."

Meantime the troubles between the Assembly and people in relation to the militia enrollment had resulted in a war of pamphlets. The Quakers had again a majority in the Assembly after the October elections, but they were made the subject of severe attack. William Smith, provost of the college, had begun the assault by an article in the *London Evening Advertiser*, afterwards printed as a pamphlet under the title of "A Brief State of the Province of Pennsylvania," etc., in which, after an account of the colony and its resources, the author arraigns severely

the conduct of the ruling sect. The population, he said, was two hundred and twenty thousand,—one-third Germans, two-fifths Quakers, more than a fifth Presbyterians. The government, he said, was more of a pure republic even than it had been when the population was under ten thousand souls. Such a state of things could not continue without subverting the government. The Assembly had made itself independent of control by the proprietaries and Governor. The Germans were ruled by Christopher Saur, suspected of being a Popish emissary, and who led his people to vote with the Quakers against military organization. The author suggested the interposition of Parliament to compel all the inhabitants to take a test oath of allegiance and of support to military measures of defense, to prevent the Germans from voting until they were acquainted with the language, and to compel all documents and legal forms to be printed exclusively in English.

This pamphlet elicited many replies and articles on both sides of the controversy, so that all parties in turn found themselves the subject of attack, and much acrimonious feeling was engendered. Probably the Quakers fared worst of any, at least they were the most vigorously assailed. But the city was not suffering at this time, and its affairs were prosperous. The corner-stone of the hospital was laid, the chimes of Christ Church were put up and rang a merry peal of welcome on the arrival of Governors DeLancey and Shirley, in April, on their way to the conference with Braddock, at Alexandria, and a lottery was set afoot to raise nine thousand three hundred and seventy-five pieces of eight for the use of the college and academy, to purchase apparatus and endow a fund for the support of the charity schools, where "seventy poor boys are, under a master and assistant, taught to read, write, and cast accounts, and forty girls, under a mistress and assistant, are taught to read, knit, and sew, and also to write, under the charity master." The corporation purchased five hundred tickets in this lottery.

Nothing can more sharply and vividly mark the contrast between the times of which we are now writing and the early days of Pennsylvania than the fact that the newspapers of this province in January, 1756, publicly proclaimed a reward of seven hundred dollars (pieces of eight) "raised by subscription among the inhabitants of Philadelphia, and now offered with the approbation of his Honor the Governor," to the person or persons who should bring in "the heads of Shingas and Captain Jacobs, chiefs of the Delaware Indians." The Indian troubles on the frontier had increased; the Delawares were divided, some joining the French, some remaining lukewarm, a few only espousing the cause of the English. The Assembly took no part in these rewards; but the Governor, at the head of the war party, was too strong for them. The non-resistance policy was but a sentiment, the old friendships of Indians and Quak-

ers a tradition, but the murder and arson upon the border were terrible facts, of present and daily recurrence, and distance and rumor aggravated them and magnified them. In April a regular tariff for scalps was arranged. The Provincial Council and Provincial Commissioners recommended that war should be declared against the Delawares and the following bounties offered: for every male Indian prisoner over ten years old who may be brought into any of the government forts, \$150; for every female or male under ten years, \$130; for the scalp of every male Indian above ten years old, \$130; for the scalp of every Indian woman, 50 cents; soldiers in the pay of the province to receive one-half these bounties. But the rewards do not seem to have been productive of much murder. Only six Indian scalps were paid for during the troubles. The proprietaries discountenanced such measures. The Quakers, alarmed and grieved, saw their long-cherished policy overborne by a programme of barbarous murder for hire. In April Samuel Powell, Anthony Morris, John Reynell, Samuel Preston Moore, Israel Pemberton, and John Smith, for their society, presented an address to Governor Morris on the subject, in which they dwell upon the concern and pain of mind with which they have observed "the late sorrowful alteration in the state of this lately peaceful province;" they urge a further attempt at pacification, and at least an endeavor to separate the well-disposed Indians from those bent upon rapine; and they do not hesitate to insist that the ancient Quaker methods of dealing with the Indians were best.

War was declared, however. The Quakers, undaunted, formed "the Friendly Association for regaining and preserving peace with the Indians;" they raised a large sum of money, but came in collision at once with the government, which resented their private way of interference and their attempts to make treaties independent of the authorities. They were accordingly forbidden to send their presents and to attend the negotiations. This prohibition was partly in consequence of Israel Pemberton's indiscretions, he conferring apart with the Delawares and wielding an influence over them which they denied to the other English. There was, however, a speedy armistice with the Indians, continued from time to time until the conclusion of peace. The inhabitants who were not non-combatants meantime had been actively at work to strengthen the military power of the province, the city and county raising two regiments. Of the city regiment, Benjamin Franklin was colonel; William Masters, lieutenant-colonel; John Ross, major; and Richard Swan, adjutant. Of the county regiment, Jacob Duché was colonel; James Coultas, lieutenant-colonel; and Daniel Biles, major.

Col. Franklin reviewed his regiment, one thousand strong, on Society Hill in March. The separate companies marched to the ground from the houses of their captains, performing different evolutions *en route*.

There was an artillery company in the regiment comprising one hundred men, with four cannon, drawn by large and stately horses. After the review the regiment paraded past Franklin's house, giving him a salute of cannon and musketry. The county regiment was reviewed at Germantown in May by Col. Duché, assisted by Col. Franklin. On a subsequent day, when the city regiment had drawn up at the Coffee-House to drink success to the king's forces, Governor Morris forbade the usual artillery demonstration. It was almost the last act of his official life, and was near akin to spite. So at least the officers regarded it, for they retired to the Tun Tavern and drank bumpers to the toast, "A speedy arrival of a new Governor." When Governor Denny arrived they and the entire city accorded him an enthusiastic welcome. Many citizens went all the way to Trenton to meet him; the county regiment and grenadiers became his escort at the county line; the city regiment was drawn up to salute him on Second Street, and all the rest of the city military was on parade; there was an artillery salute in Market Street, echoed by one from the distant association battery and from a privateer in the stream, which had been baptized "the Denny," while the musketeers fired a *feu de joie*, the bells rang merrily, and there were bonfires all over town. Next day the corporation gave his honor a dinner, and on the succeeding Monday he was entertained in another banquet by the Assembly.

Governor Denny's popularity, however, departed as soon as people became acquainted with him. He was stubborn and captious, as well as ignorant, and the Assembly lost patience with him at once, and gave him to understand plainly that they would not be schooled by him. It was no time for a man in his delicate and difficult position to exhibit temper, for the people themselves were out of temper and impatient. Party feeling ran very high. Provost William Smith, of the college, lost favor everywhere because he was identified with the proprietary party, though striving to conceal or disguise it, and the pamphleteers and newspaper wits pursued him relentlessly.

The smallpox was so prevalent at this time as to be dangerous to all but the inoculated. Benjamin Franklin, in one of his letters, regrets that the neglect of this precaution had cost him the life of a favorite child, a boy of four years old. The visiting Indians were particularly exposed to this disease, and, in consequence of the change in their habits, to many other fatal seizures. In April, 1756, several Mohocks, in town to confer with the Governor, were attacked, and one died of a "peripneumony." The Governor and Council condoled with Scarroyady, the head chief, and, to wipe away the tears of the survivors, presented them with ten strouds, ten shirts, and a piece of handkerchiefs. Newcastle, a friendly chief, had sent his daughter on to Philadelphia in

advance of him, and Governor Morris ordered that, if she had not had the smallpox, she must be kept at Springettsbury, "the Proprietor's seat, near this city, and not let her come into y^e city. If she has had y^e smallpox you may bring her to M^r. Boyle's, in Chestnut St." Newcastle himself arrived in July, and was kept at Springettsbury, to avoid the smallpox. He went on a visit to Conrad Weiser, the interpreter, however, at Easton, there contracted the disease, and died. This required more presents of strouds, handkerchiefs, and wampum.

Governor Denny was under very stringent "instructions" from the proprietary and the home government, and he and the Assembly at once fell out about taxation and the supply bill, and about the construction of barracks for soldiers, which both Governor Morris and Lord Loudoun had tried to secure. Barracks were asked large enough to accommodate a thousand men. Previously soldiers in the town had been billeted at the different taverns. Governor Denny now claimed that there was not sufficient accommodation in the public-houses. The Assembly retorted that there were one hundred and seventeen inns in Philadelphia, certainly offering room enough for a single regiment,—forty-seven officers and five hundred men,—a hospital, store-house, and guard-house. But the tavern-keepers did not like to have troops billeted on them; many gave up their licenses sooner than submit to it, and the mayor and Common Council sent the Assembly a remonstrance in their behalf. The Governor notified the Assembly that the troops—Sixty-second Royal Americans, Col. Bouquet—were badly off; nothing had been done to relieve them, the weather was growing severe, and smallpox was increasing among them at such a rate that the town would soon be a hospital. Col. Bouquet, a foreigner by birth, was reluctant to resort to harsh measures, but if things remained as they were, the troops would have to be billeted upon private houses. The sheriff, indeed, received instructions to that effect. The Assembly protested hotly; the Governor retorted as hotly, "The king's troops must be quartered." The Assembly suggested that quartering troops in private

houses might lead to trouble, "particularly if the bought servants which have been so lately taken from the king's good subjects, and no satisfaction made to their owners, notwithstanding the Act of Parliament so expressly requires it, are now to be thrust into their houses and made their masters." The Governor suggested that the Philadelphians were ungrateful to the soldiers mustered in their defense; but he meant to do his duty, and he wanted sixty-two beds for one hundred and twenty-four men who were now lying upon straw, besides other quarters for the new recruits arriving in the city every day. This, however, was only a threat. The quarters were secured without invading private domiciles, but the Assembly was heartily incensed against the Executive.

The Quakers were placed between two fires at this time. Some were not willing to pay taxes for war expenses; but those who did not object to this still did not escape, for the ministry in England condemned the Assembly for passing any militia bill which exempted a class or sect from military service; this should have been made compulsory upon all, it was declared, and the English Secretary of State further suggested that in times of war non-combatants should not occupy seats in a legislative body. This caused the resignation of William Callender, James Pemberton, and Joshua Morris, representing Philadelphia City and County, besides seven other members, but it

Henry Bouquet

did not change the politics of the House. The war feeling, however, met less resistance. In September, Col. Armstrong captured Kittanning, killing Capt. Jacobs and forty Indians, and the Common Council voted him a piece of plate, a medal to each of his officers, money to each of his men, and a relief fund to the widows and orphans of those who had fallen,—all officially designated as being "the gift of the corporation of the city of Philadelphia."

Catholic residents of Philadelphia did not fare well either at this time. By Lord Loudoun's order, Governor Denny took a census of them. There were seventy-two men and seventy-eight women, all English or Irish, under the charge of Rev. Robert Harding, in or about Philadelphia, and one hundred and

seven men and one hundred and twenty-one women, all Germans, under charge of Rev. Theodore Schneider; in Philadelphia County, fifteen men and ten women. The whole number of Catholics in the province was six hundred and ninety-two men and six hundred and seventy-three women, cared for by four priests. In spite of these small numbers, they were mistrusted, and in Philadelphia some were arrested upon the convenient charge of "disaffection." Among these were Barnabas McGee, Joseph Rivers, Thomas McCormick, Rowley Kane, and Jane Dorsius, as well as Dr. Hugh Matthews.

Capt. Obadiah Bourne, well known for his career as commander of the privateer "Le Trembleur," got to sea in the latter part of December, 1756, in command of the "Spry," a schooner he had fitted out with twenty-two guns, twenty swivels, and one hundred and seventy men. Other vessels could not go to sea, however, for Lord Loudoun had laid an embargo on exports, with the view to supply the king's fleet with seamen and provisions. Trade was stagnated in consequence; in June, 1757, there were forty vessels with full cargoes detained in the harbor, the mills had stopped, and there was great loss on all perishable

THE BRITISH BARRACKS.

commodities. The Assembly remonstrated, but with no effect, and the embargo was not raised until after the fleet put to sea, in the end of June. The trouble about billeting soldiers finally led to the construction of barracks, which the Provincial Commissioners established on a large lot bought by them in the Northern Liberties, between Second and Third, and south of Green Street. The Governor objected to the site, and the colonel to the style of buildings erected, but the commissioners followed their own counsel, and put up the one-story shedding they had determined to erect. The province also at this time bought and fitted out a cruiser as an assistance in coastwise defense,—the frigate "Pennsylvania" she was styled, Capt. Sibbald, thirty-two guns. She went to sea in August, but met no enemy. The "Spry," however, took several prizes, but the other privateers fitted out this year—the "Britannia," twenty guns, Capt. Macpherson, and the schooner "Knowles," twelve guns, Capt. Turner—met with no success. Other privateers hailing from or fitting out at Philadelphia were the

sloop "Tyger," of New York, the "Blakeney," of Barbadoes, and the "Stanwix."

The year 1758 was one of organized victory under Pitt, and there was frequent rejoicing in loyal Philadelphia. Fort Du Quesne was abandoned by the French and taken possession of by Gen. Forbes. Peace was made with the Indians in a grand council at Easton. The victories were celebrated with fireworks in the city. The capture of Cape Breton was made the occasion for a grand display, from a "floating castle" in the Delaware, representing the battle, with allegorical tributes to Amherst, Boscawen, Hardy, Wolfe, Lawrence, King George and the King of Prussia, Pitt, and Whitmore. The blowing up of Fort Du Quesne was commemorated by Governor Denny by the appointment of a day of thanksgiving and prayer. When Forbes' regiment, the Seventeenth foot, arrived in Philadelphia the men were quartered in the barracks; the officers lodged at "the Three Crowns" (Mrs. Jones), Second Street, above Walnut; "Indian King" (John Biddle), Market Street, below Third (south side); "St. George" (Mr. Lukens), southwest corner of Second and Arch Streets; "Indian Queen" (John Nicholson), Market Street, above Fourth; "White Oak" (John Subler), Cherry Alley; "Hendrick, King of the Mohawks" (Mr. Bartholomew), Arch Street, near Fifth; "King's Arms" (William Whitbread), Second Street, above Market; "Fountain" (Mary Biddle), Market Street; "The Barracks" (John Pearson), Second Street. The first paving of the middle of the streets was begun at this time, with a fund of two thousand two hundred and fifty pounds, the proceeds of a lottery authorized by the Assembly for that purpose.

Philadelphians themselves had a share in the victories of the year, but of the disasters also. The "Britannia," after a long and fruitless cruise, came up with a well-manned French frigate of thirty-six guns, and a desperate battle ensued in which the "Britannia" was worsted, losing all her officers and seventy of her crew, her cannon, masts, and ammunition, and left to drift, a helpless and shattered hulk, to Jamaica. The officers of the "Stanwix" were arrested and the vessel detained for piracy. *Per contra*, the "King of Prussia," Capt. James Robeson, an armed merchant ship, carrying fourteen guns and bound to Philadelphia, was overhauled outside the capes by a French privateer of the same number of guns. The latter, sailing under English colors, secured the advantage of a surprise and the first broadside; but Robeson fought his ship most gallantly, and finally crippled the enemy, drove him off, and probably sunk him.

The war, however, was injurious to Philadelphia in many ways for which the "glory" did not compensate. Gen. Abercrombie, Lord Loudoun's successor, laid another embargo and enforced it with military severity, Gen. Otway's Thirty-fifth Regiment being stationed at the Wicaco battery and an armed sloop

of war (the "Charming Polly," Capt. Atkins) stationed in the river below. There was trouble about quartering the troops, the barracks not being able to accommodate all and the tavern-keepers unwilling to receive any. The City Council was forced to appropriate money to relieve the necessities of some of these soldiers. Admiral Boscawen demanded three hundred naval recruits, but the Assembly declined to provide them. The province's frigate was a heavy charge, and only supported by an impost on wine and spirits, which the importing merchants had to bear. Besides, when Gen. Forbes was in town, something like martial law was the rule. Christopher Saur, the Germantown printer and publisher of the German newspaper, was summoned before the general merely for having printed a paragraph stating that Tedyuscung and the Delaware Indians, who had arrived in the city, were still "attached to the interest of the English." Saur was mistrusted as a friend of the Quakers, and the paragraph was looked upon as a slur at the government, a species of "constructive treason." Saur maintained the innocence of his intentions, offered to make any correction required of him, and was dismissed with a "caution."

Brigadier Forbes only returned to Philadelphia early in 1759 to die. He was not more than forty-nine years old, but his health was worn out by many and severe campaigns. He was an officer of distinction and ability, had been quartermaster-general under Marlborough, and aide-de-camp to Gen. Campbell, Lord Stair, the Duke of Bedford, and Lord Ligonier. Sprung of the Forbes of Patincrief, Fifeshire; bred to physic, but buying early in life into the Scots Grays, in which he was promoted to the lieutenant-colonelcy and the command of the Seventeenth Infantry and the Southern army in America. He was buried with much ceremony March 14th, the procession starting from the slate-roof house, then occupied by Mrs. Howell, and the interment being made in the chancel of Christ Church. The military and all the officials of the province attended the funeral.

The Assembly resolved in March to raise two thousand seven hundred recruits in addition to those already enrolled in the province, voted one hundred thousand pounds in bills of credit (bribing Governor Denny to assent), and promised a bounty of five pounds for each recruit, with one pound to the recruiting officer. For volunteers "at the drum-head," sought at this time by Capt. Hays, of Col. George Williamson's Royal Regiment of Artillery, the pay was: 9 shillings 6 pence per week to each matross (sponger and rammer); 13s. 3d. for gunners; 16s. 6d. for bombardiers; 19s. 8d. each sergeant. The "Spry" sent in six prizes, two of which her owners had to restore, besides paying heavy damages; the "Britannia" took eighteen prizes in a single cruise, some of them of great value.

David Douglass, Hallam's partner, made an attempt to build a theatre in Philadelphia this year, and succeeded in rousing a strong and energetic religious opposition. The Friends, Presbyterians, Lutherans, and Baptists united in protest and in memorializing the Legislature. The Assembly passed a bill forbidding both the theatre and the lotteries; Governor Denny objected, but signed the bill, which, however, the king and Privy Council rejected in 1760. Douglass, meantime, went on boldly with his enterprise, and the Vernon Street, or Society Hill, Theatre was opened June 25th. The city, meantime, was growing so rapidly that it became necessary to extend the High Street market to Third Street, and Alderman Stamper, Henry Harrison, William Bingham, and William Rush were appointed a committee to see the improvement properly carried out. It was in consequence of this extension that High Street, from this time forth, came to be called Market Street, generally but not officially.

The year 1760 is not one of much importance in the annals of Philadelphia. The war had narrowed its area and was now chiefly confined to Canada, and privateering was dull and unproductive. A movement was inaugurated to improve the navigation of the Schuylkill, but as yet little was done beyond the preliminary surveys. A ferry at Arch Street was licensed by the Common Council, Samuel Austin securing the privilege, for which he paid an annual rent of thirty pounds; Francis Rawle's Jersey ferry brought thirty pounds; Schuylkill ferry, two hundred pounds. The rent of the market-stalls west of the court-house was ninety-three pounds; Potter's Field (as a meadow), ten pounds; public wharf and ground at the drawbridge, sixty pounds; new wharf at drawbridge, thirty pounds. Fire-engines were ordered to be put in good condition by the clerk of the market, and under the inspection of William Rush and Samuel Rhoads; William Sheed was made beadle, "during the present incapacity of Charles Stow," and the mayor was ordered to be paid a salary of one hundred pounds. During this year the building of the Germantown Academy was begun, and the cornerstone laid with appropriate ceremonies, the building being ready for use in September, 1761. This institution originated in a meeting held in December, 1759, at the house of Daniel Mackinet, when it was resolved to start a subscription for erecting a large and commodious building near the centre of the town for the use of an English and High Dutch school, with suitable dwelling-houses for the teachers. Christopher Meng, Christopher Saur, Baltus Reser, Daniel Mackinet, John Jones, and Charles Bensil were appointed to solicit and receive subscriptions. On Jan. 1, 1760, Richard Johnson was appointed treasurer, and Christopher Saur, Thomas Rosse, John Jones, Daniel Mackinet, Jacob Rizer, John Bowman, Thomas Livezey, David Deshler, George Absentz, Joseph Galloway, Charles Bensil, Jacob Naglee, and Benjamin

Engle were chosen trustees. They bought a lot from John and George Brighthurst, in Bensil's Lane, subsequently called School-House Lane, and the institution was named "Germantown Union School-House." The corner-stone was laid April 21, 1760. When the school was opened next year Hilarius Becker was made the German teacher, David James Dove the English teacher, and Thomas Pratt English usher.

THE GERMANTOWN ACADEMY.

On October 16th the school had sixty-one English and seventy German pupils. Greek, Latin, and the higher mathematics were taught here. The school was broken up after the occupation of Philadelphia by the British, and studies in it were not resumed for six or seven years. The school-house was eighty by forty feet, two stories high, with six school-rooms, and wings supplying two dwelling-houses for the use of the masters. The rudiments of good manners were taught along with those of learning, but it was expressly enjoined that youths of Quaker parentage should not be required to take off their hats in saluting the teachers.

In March, 1761, a lottery scheme was put forth to raise £1125 1s. 1½d., for the use of this school. Lotteries were very frequent at this time in Philadelphia. The whole community seems to have speculated in them, and they could not fail to be injurious to the public morals. Among the schemes was one for the erection of public baths and pleasure-grounds, against which the clergy and religious part of the community protested strenuously, saying, in a memorial handed to the Governor, that they had noted with concern the growing disposition among their fellow-citizens for "pleasure, luxury, gaming, and dissipation." The present scheme, they say, "so far as yet avowed by them, is a large subscription lottery for erecting public gardens and baths, or bagnios, among us. How destructive such places of rendezvous are to the morals of a people, what they usually terminate in, and how ill-suited they are to the circumstances of this young city, and the former character

of its inhabitants, we need not mention to your honor." The scheme, it was charged, covered the purpose to establish public gaming tables. This memorial was signed by Robert Jenney, William Smith, Jacob Duché, and William McClenachan, ministers of the Church of England; Robert Cross, William Tennent, Francis Allison, and Robert Ewing, Presbyterian ministers; Morgan Edwards and Ebenezer Kinnersley, Baptist ministers; John Frederick Handschuhe, Lutheran; the leading members of the Society of Friends, and many others. The Governor discountenanced the scheme.

Another lottery proposed at this time was for disposing of 46 acres of land on Petty's Island, the property of Alexander Alexander. Other lottery projects were: for 3000 pieces of eight to finish the new Episcopal Church of St. Paul's, Third Street, below Walnut; to raise £1350 for the use of St. James' Church, Lancaster; to raise 3000 pieces of eight to finish the steeple of the Second Presbyterian Church, Third and Arch Streets; to raise £500 to enlarge Trinity Church, Oxford; to raise £2812 10s. for paving the streets of Philadelphia; to raise 2250 pieces of eight for the Presbyterian Church, Lancaster; to raise £371 5s. for building a bridge over Octorara Creek; to raise £500 for the use of New Jersey; to raise £1200 to rebuild St. John's Church, Chester County; to raise £562 10s. for a company of rangers in Tulpehocken; to raise £450 for Presbyterian Church at Middletown; to raise £6000 for the New Jersey college; £1500 for new Presbyterian Church on the Brandywine; £3000 for new Presbyterian Church in Baltimore; to dispose of books, plate, jewelry, and land, lately belonging to David James Dove,—1773 prizes, 3227 blanks,—tickets two shillings each; to raise £1760 to pave Second Street, from Sassafra, or Race Street, to Samuel Noble's house, on Callowhill Street; £1500 for a church on Barren Hill, Whitmarsh township; £3000 to build a light-house at Cape Henlopen and improve the navigation of the Delaware; £800 for a bridge over Conestoga Creek; £600 for Presbyterian Church in Leacock township; £600 for Kent County lottery, etc. These lotteries and the presence of so many soldiers and sailors led to much immorality, dissipation, and ruffianism also. A Lieut. Brulaman, who had been an officer in the Royal American Regiment, took his gun, ran amuck on the public streets, and finally shot and killed Robert Scull in the Centre House Tavern, Market Street. He was convicted and executed. A gang of miscreants, in imitation of the London Mohocks of the period, caused much alarm in the forepart of 1762 by assaults at night made upon women on the streets, cutting their clothes with sharp instruments and stabbing them. The offenders were never caught, but a reward of fifty pounds, offered by the Governor, made the practice too dangerous to be persisted in.

The Society of Friends took advantage of the occasion to appeal to the Assembly, from their monthly

meeting, to do something to arrest the increase of immorality. Drunkenness, they said, had grown common, the Sabbath was profaned, gambling was practiced, while the performance of stage-plays was not prevented, and full license was given to all kinds of lotteries. The act in regard to lotteries which was already on the statute-book was not enforced, and the Assembly took up the matter earnestly, passing a law for the suppression of lotteries, declaring all such schemes, public or private, to be common nuisances and against the good of the province. The penalty for erecting a lottery was set at five hundred pounds, with twenty pounds fine for advertising or selling tickets. Of course, all schemes in actual operation were permitted to go on, nor was the attempt made to interfere with State lotteries held under the authority of Parliament, or to curtail the right of the province to authorize special lotteries. The managers of the lottery for paving the streets procured authority to go on with their scheme and pay the money received into the treasury. The amount was three thousand pounds, and the first public paving was done on Second Street, north from Market to Race. This street, says Watson, used to be very muddy, and one of the Whartons, getting mired there, between Chestnut and High Streets, was thrown from his horse and broke his leg. "Charles Thomson and others made a subscription forthwith and had that street paved, it being the first regularly paved street in the city."

In January, 1761, news reached Philadelphia of the death of George II., and soon after the accession of King George III. was proclaimed at the court-house, "to a multitude of people, loyal, enthusiastic and rejoicing, amid the ringing of bells, the report of artillery, and three volleys of small arms fired by the Royal Welsh Volunteers." The merchants had a feast at "the new ferry-house," with seven brass cannon to salute the toasts, and all the company singing "God save the king" in chorus. This king was George III., who fifteen years later was denounced in Philadelphia as the embodiment of all tyranny, and was effectually dethroned, so far as his American dominions were concerned,

"Sejanus ducitur unco,
Spectandus; gaudent omnes."

The Governor, Council, mayor, recorder, and City Councils dined at the Fountain Inn with solemn and dignified rejoicings. Civil officers were recommissioned, the proper alterations were made in the public prayers, and Philadelphia left nothing undone that would demonstrate her loyalty.

The Assembly took action in the matter of the Schuylkill improvements by passing a law in March to create a commission, consisting of Joseph Fox, John Hughes, Samuel Rhoads, John Potts, William Palmer, David Davis, Mordecai Moore, Henry Pawling, James Coultas, Jonathan Coates, Joseph Milard, William Bird, Francis Parvin, Benjamin Light-

foot, and Isaac Levant, for "clearing, scouring, and rendering the Schuylkill navigable." They were to receive and collect money, clear, scour, open, deepen, enlarge, and straighten the river, and remove all sorts of obstructions and impediments, natural and artificial. A law at the same time was passed to protect fish in the Delaware, Susquehanna, and Lehigh Rivers, forbidding the planting of weirs, racks, etc. Some attempt was made at the same time to protect navigation on the Delaware from losses from the ice. The House of Assembly having responded to a petition from Philadelphia against the importation of slaves by laying a duty of ten pounds per head on negroes and mulattoes brought from abroad, the slave-dealers in Philadelphia filed a protest. They represented that servants were a great need of the province, at this time particularly, since so many

of various ages, and both sexes,
To be sold on board said ship at Mr. Plumsted's wharf, by
WILLING and MORRIS,

And a part of them are intended to be sent in a few days to Dock Creek, there to be sold, by Mr. Thomas Mudock for cash on country produce,
Penn^a Jour. Aug 15 1765.

white servants had been enlisted in the military service, and the importation of Germans, English, and Irish had been so greatly reduced. The introduction of slaves, the petitioners said, would reduce the exorbitant prices of labor and make commodities cheaper. They had embarked in the trade to effect these objects, and it would be a hardship to them if the law should go into immediate effect. The signers to this memorial were John Bell, Humphrey Robinson, Reed & Petit, William Coxe, Charles Batho, Philip Kearney, Jr., James Chalmers, Joseph Wood, Willing, Morris & Co., Thomas Riche, David Franks, Hugh Donaldson, Benjamin Levy, Henry Harrison, John and Joseph Swift, John Nixon, Daniel Rundle, Francis & Relfe, Stocker & Fuller, Scott & McMichael, John Inglis, David McMurtrie, Samuel and Archibald McCall, and Joseph Marks. The law was passed, however, and the tax laid.

In May, 1762, the Assembly erected the southern suburbs of Philadelphia into a municipality under the name of the District of Southwark. The bounds commenced at the Delaware, Cedar Street; thence west to the Passyunk Road; along the latter to the Moyamensing Road; by Keeler's Lane to the Greenwich Road; from thence to the Delaware, and along the river to the place of beginning. The freeholders, on the third Saturday in April of each year, were to elect three surveyors and regulators, as well as three supervisors and three assessors. These officers, co-operating, were given powers equivalent to those of county commissioners; an overseer of the poor, an assessor, and inspector, with the same powers

as those of townships, were also to be chosen; but no tax was to be levied exceeding "three pence in the pound of clear value of the real and personal estates of freeholders and inhabitants." This act made it a finable offense for Southwark workers on the highway to levy "drink money" on passengers, a custom then prevailing, the workmen offering the passer a drink from his jug, and expecting a gratuity in return.

April 8, 1762, war was declared at the court-house against Spain, and there was some revival of privateering. Capt. James Taylor fitted out the brig "New Grace" with twelve six-pounders, and sailed early in May. Stephen Archibald manned the schooner "Hawk" with fourteen carriage-guns and sixteen swivels. Four days after the proclamation of war Thomas and James Penrose, merchants, laid the keel of a vessel to be built expressly for a warship; the keel was but ninety-five feet long, the vessel's beam thirty-two feet; she was launched in seventy-two days, named the "Hero," and put in command of John ap Owen, with a crew of two hundred men, and an armament of twenty-four nine-pounders. Peace was proclaimed too soon for these vessels and the other privateers to do much. The "Hawk" was capsized and lost twenty-five of her crew; the "New Grace" and the "Hero" took a few prizes; the "Tyger," none; the "Britannia" had a severe fight off Laguayra, in which she was worsted and beaten off, but brought three prizes into Philadelphia during the season.

The war led to another embargo, increased issues of paper money, and a considerable levy of soldiers for the provincial army. A battery to carry twenty cannon was also begun on Mud Island, near the mouth of the Schuylkill. The merchants of the city petitioned the Assembly to preserve the province's valuable Indian trade for them by removing some of the difficulties of transportation, which were now so great that the trade suffered materially. The suggestion was made of a water passage up the west branch of the Susquehanna, whence it was thought convenient portage could be made to a navigable branch of the Ohio. This petition was laid on the table,—the times were not yet ripe for engaging in internal improvement schemes.

In November, 1762, Dr. William Shippen, Jr., organized the first medical college in Philadelphia, opening a course of lectures on anatomy "for the advantage of the young gentlemen engaged in the study of physic in this and neighboring provinces, whose circumstances will not permit their going abroad for improvement to the anatomical schools of Europe." The managers of the Pennsylvania Hospital gave Dr. Shippen the use of Dr. Fothergill's anatomical casts and drawings. Tickets for the course were five pistoles; and "to gentlemen inclined to see the subject prepared for lectures, and learn the art of dissecting, five pistoles more." After the lectures on osteology

were finished, tickets for any single lecture were sold at five shillings each. The introductory lecture was delivered by Dr. Shippen at the State-House, and subsequently at his father's house, on Fourth Street. The location of this first medical college was on Fourth Street above Market. The premises had a back outlet upon an alley leading north from Market Street, by the side of the Sorrel Horse Tavern. Dr. Shippen's first class consisted of ten students.

In December the body of a negro, who had committed suicide by cutting his throat with a glass bottle, was handed over to Dr. Shippen after the verdict of the coroner's jury; and after that time his anatomical museum got the bodies of all suicides and criminals. There had been a clinical course in the hospital before this, and Dr. Thomas Cadwallader had attempted a course of medical lectures on Second Street above Walnut. Dr. Shippen's was the first regular course, however. He had been fully prepared for lecturing by attendance on Hunter's lectures in London, Smellies' on midwifery, and Dr. Leese's course in Rouen, besides being a student in Guy's Hospital. In 1765, Dr. Shippen began a course on midwifery to men and women both, establishing a lying-in hospital at the same time. The same year Dr. Thomas Morgan became professor of the Theory and Practice of Medicine at the college, when soon after Dr. Shippen was elected professor of Anatomy and Surgery. The dissecting was too new a thing not to excite prejudice in Philadelphia; in 1765, Dr. Shippen was obliged publicly to declare that he had never taken dead bodies, for purposes of dissection, from churchyards. Three years later he was again obliged to contradict public rumors of his having robbed the cemeteries. All his dissections, he said, were made upon suicides, and one or two bodies taken from Potter's field, "that had died of particular diseases." In 1770 there was much excitement in consequence of the supposed removal of dead bodies from the city burying-grounds for dissection in the anatomical theatre of the college. This led to what was called "the sailor's mob," in which Dr. Shippen's house was mobbed, and all his valuable collections came nigh being destroyed. He was forced to publish a card in Bradford's *Journal*, in which he declared "that I never have had, and that I never will have, directly or indirectly, any subject from the burying-ground of any Christian denomination whatsoever." It was very hard, however, for the doctor to free himself from these charges, which were made very specifically and circumstantially.

It had become fashionable in 1760-62 for the aldermen-elected mayor to refuse to serve, and sometimes two and three successive ones had to be elected. In 1762, Alderman Coxe was elected and refused, fined £40; Alderman Benezet elected and refused, fined £40; Alderman Harrison elected and consented to serve. Jonathan Humphreys was chosen tenant of Schuylkill Middle Ferry, at £200 per annum; Sam-

uel Garrigues allowed £25 per annum for taking care of the fire apparatus, and ten pistoles were given to Matthew Clarkson towards a ground-plot or map of Philadelphia. An act was passed this year vesting the State-House and other public buildings, with the lots belonging to them, in the hands of trustees, for the use of the freemen of the province and their representatives. The trustees were Isaac Norris, Thomas Leech, Joseph Fox, Samuel Rhoads, Joseph Gallo-way, John Baynton, and Edward Penington. The ground south of the State-House was to be a public green forever, and not to be built upon.

The preliminary treaty of peace of Fontainebleau was known of in Philadelphia Jan. 25, 1763, and proclamation was made next day at the court-house, the definitive treaty being proclaimed July 25th. The privateers at once returned to peaceful commerce, and business settled down into more quiet ways. The commissioners for paving streets had a budget of complaints to lay before the Assembly. Their labors had been greatly increased by having to dig away the old accumulations of rubbish and dirt thrown in the cart-way; narrow-tread wagons had a tendency to cut up even the best-paved thoroughfares; "steps and cellar-doors extended too far into the streets; windows and vaults were often left open, and were dangerous; casks, cases, grindstones, carriages, brick, limestone, lime-houses, etc., encumbered the streets, and were nuisances." Dock Creek, other petitions showed, was another nuisance, a receptacle for dead dogs and other carrion and filth, a source of putrefaction and disease. It was recommended that the creek be cleaned out, planked and walled, and made navigable, in order to promote the conveyance of lumber, firewood, etc. Distillers built their still-houses of inflammable stuff, and emptied their refuse into wells, to the injury of the public health; dead horses were hauled to the commons, and left there to poison the air. All these things led to the passage of general acts for the removal of nuisances, for regulating streets and alleys, wagoners, carters, and their vehicles, etc. The latter act required all cart- and wagon-wheels to have seven-inch felloes. There was also a general law passed for regulating the paving of streets. Owners of property where the cart-way had been paved were to pave the sidewalk with bricks or square flat stones; the gutters were to be twenty-two inches wide, and not exceeding four inches deep; pavements to have a rise of seven inches in ten feet from the gutter towards the houses; sound, dressed red-cedar posts, seven feet long, six inches thick, were to be set up at distances of ten or twelve feet along the curb of the footways; windows, cellar-doors, and porches were not to invade the footway more than four feet six inches, and the same to be the rule for stairs, stalls, show-boards, etc.; spouts that incommoded passers-by should be removed at once.

The City Councils at this time began also the repair and improvement of the public wharves and landings,

and the county commissioners built a bridge over Dock Creek at Front Street at a cost of four hundred pounds. The recorder's salary was raised to seventy-five pounds, and the first movement was made for erecting a market-house in High Street east of Second Street, where were only wooden stalls. This was given in charge to the mayor, Aldermen Mifflin and Willing, and Alexander Houston and John Lawrence; this end of the market being called "the Jersey market." In this year there were forty-two named townships in Philadelphia County, each one having an overseer of the poor. The Philadelphia Insurance Company ("Philadelphia Contributionship for the Insurance of Houses from Fire") set up mile-stones on the road from the court-house on Second Street to Trenton.

John Penn, one of the proprietors, son of Richard, and grandson of William Penn, arrived in Philadelphia Oct. 30, 1763, and assumed the duties of Governor. He was received with great demonstrations of respect, and many entertainments were given in his honor, the civic feast costing £203 17s. 0½d. On

John Penn

Nov. 15, 1763, there arrived in Philadelphia Charles Mason and Jeremiah Dixon, two Englishmen, surveyors, sent over by agreement between Lord Baltimore and Thomas and Richard Penn, made Aug. 4, 1763. They came to survey, complete, and establish a boundary between Maryland and Delaware and Pennsylvania (thence known as Mason and Dixon's line), which would put an end forever to the disputes and bloodshed which had stained the history of the border from the time of the first founding of William Penn's proprietary government. As J. H. B. Latrobe said, in his interesting lecture on Mason and Dixon's Line before the Historical Society of Pennsylvania, "Adjacent land-owners rarely take much interest in the

title, quality, or culture of their neighbor's fields; but they are generally sufficiently sensitive to the true location and maintenance of the division fences." Lord Baltimore was in dispute with Claiborne, Swedes, Dutch, and Quakers, about his eastern boundaries from 1634, when Leonard Calvert landed at St. Mary's, until 1760, when the boundary quarrel was finally settled with the Penns. The charter of Charles I. to Cæcilius, second Lord Baltimore, gave to the latter all the part of the Delaware peninsula lying under the fortieth degree of latitude, and west of that part of the eastern shore claimed by Virginia,—provided such lands were unoccupied. Claiborne was on Kent Island, but he was ousted as a squatter. De Vries had planted a colony at Swanendael, near Lewes, on the Horekill, in 1631, but the place was abandoned in April, 1633. When Calvert landed at St. Mary's, in 1634, the soil within the charter was held by no whites, except Claiborne and his followers. But Calvert settled on the western shore of the Chesapeake, and in 1638 the Swedes were on the Delaware, with an Indian title, forts, and guns. The Dutch conquered the Swedes; the English conquered the Dutch; Charles II. gave to the Duke of York whatever title belonged to De Vries and Godyn by reason of the purchase and settlement of Swanendael, and William Penn again bought the Duke of York's title.

In 1659, Governor Fendall, of Maryland, sent Col. Utie to the Dutch on the Delaware to inform them that "they were seated within his lordship's province without notice." In 1682, Governor Markham met Lord Baltimore at Upland to settle the boundary. Penn's agent refused to treat, however, as soon as the latitude of Upland was discovered. From this time until the final settlement the boundary question was always open, sometimes taking the shape of border warfare, sometimes in court, sometimes in Privy Council, sometimes in Chancery, sometimes in treaty. It exercised the lawyers, perplexed the statesmen, vexed the Privy Council, and drove the borderers to madness. The Lords of Trade and Plantations had it more than once before them; it furnished Murray, Lord Mansfield, with one of his most elaborate briefs, and called from Lord Chancellor Hardwicke one of his best-known decisions. The merits of the case are not worth discussing here; the settlement was satisfactory as well as final. It resulted from border troubles so serious as to compel both proprietary governments, May 10, 1732, to agree upon a dividing-line and exchange deeds defining it. This parchment boundary was legally defined by Lord Hardwicke in 1750, and finally explained and expressed in a deed made under the same chancellor's directions in 1760, July 4th. This deed, says Mr. Latrobe, "is a treatise in itself, and, whether for technical accuracy as a rare piece of conveyancing, legal learning, or historical interest, is not surpassed by any paper of its kind." It was to make the surveys under this deed, by agreement between Baltimore and the Penns in

August, 1763, that Mason and Dixon had come out. The surveys had begun in 1761, under John Lukens, John F. A. Priggs, Archibald McClean and five brothers, Archibald Emory, Jonathan Hall, John Watson, John Stapler, Thomas Garnett, and William Shankland. David Rittenhouse had also been employed by the Penns to make some calculations.

The lines to be surveyed were the boundaries of Pennsylvania, Maryland, and the lower counties, or Delaware. "The southern boundary of the present State of Delaware was to commence at a promontory on the Atlantic, then called Cape Henlopen, but which is some distance south of the cape bearing that name; thence it was to run due west to a point precisely halfway between the Atlantic Ocean and the Chesapeake Bay;" then northward till it struck the arc of a circle described from the court-house at New Castle as a centre, with a radius of twelve miles. "Striking this arc of a circle at the tangent-point, the straight line was to be continued north as a tangent-line until it reached a point fifteen miles south of the parallel of the most southern boundary of Philadelphia;" thence due west till the five degrees of longitude called for by Penn's charter were traversed. Mason and Dixon, styled "two mathematicians or surveyors," were sent over to complete the running of these lines. They were good, sound astronomers, who had been employed by the Royal Society to observe the transit of Venus at the Cape of Good Hope. They had excellent instruments, the best of the day.

Their first care was to ascertain precisely the most southern part of Philadelphia. They had to get as near to the Delaware as possible to be accurate. In company with the commissioners in charge of the survey (John Ridout, John Leeds, John Barclay, George Stewart, Daniel of St. Thomas Jenifer, James Hamilton, Richard Peters, Benjamin Chew, William Coleman, and John Ewing) the mayor, recorder, and two "regulators" (Alderman Rhoads and Mr. Jacob Lewis), the surveyors went to South or Cedar Street, and by hearing testimony and comparing old deeds, determined "that the north wall of a house, at this time occupied by Thomas Plumsted and Joseph Huddle, is the most southern part of the said city of Philadelphia." To determine its latitude Mason and Dixon had an observatory built for them by a carpenter, the first structure of the kind for scientific purposes ever built in America, five years older than Rittenhouse's observatory at Norriton. This must have been built near the house of Plumsted and Huddle, which, says Mr. Westcott, there is good reason to believe is the house still standing on the south side of South Street, between Penn and Front Streets, No. 30. The latitude of the north wall of this house was ascertained to be $39^{\circ} 43' 32''.18$. These surveys have been revised within the last forty years, and found very nearly accurate. The surveyors traced the line between Maryland and Pennsylvania to a point two hundred and forty-four miles west of the Delaware,

when they were stopped by the Indians under King Hendrick. They returned to Philadelphia in August, 1768, were paid off, and went back to England. Mason was elected member of the Philosophical Society in March, 1767, and Dixon in April, 1768. Mason returned to this country, and died near Philadelphia in 1787. The unfinished boundary line was run out by Alexander McClean and Joseph Neville in 1782.

In 1764 the guardians of the poor attempted to get the Assembly to enlarge the almshouse, which had not a capacity sufficient to accommodate the poor. While action was still wanting in this matter an association of citizens was formed to buy hemp, flax, and land for the sake of employing people needing work in the manufacture of coarse linen. A property was bought of William Brown on Penn Street near Pine, suitable buildings were erected, and more than one hundred persons were employed in spinning and weaving. This company continued to flourish until the revolutionary trouble culminated. The commissioners were so successful in removing the obstructions in the Schuylkill that one of them, James Coultas, took two flat-boats loaded with hay from the lower part of the big falls to the ferry wharf, adjoining Rev. William Smith's land, in twenty-one minutes. Coultas was a man of great public spirit, who took an active interest in roads, ferries, and streams. Another man of value to Philadelphia was Rev. William Smith, who arrived in England in June, 1764, with thirteen thousand pounds he had collected for the colleges in New York and Philadelphia. It was in this year (1764) that the first fish-market was located in the city, fish having been previously sold at the shambles east and west of the court-house, at Second and Market Streets. Not many were sold, however, except in cool weather, and, Watson says, sheepsheads were sold at 1s. 6d. apiece, first come first served, the same price for big fish and little. In April, 1764, the square lot between King and Front Streets, at the bridge, was fixed upon for a fish-market and the necessary buildings were erected accordingly.

With the year 1765 the question of taxation by Great Britain and the Stamp Act became matters of such controlling and absorbing interest in Philadelphia that they dwarfed everything else, and the local news, independent of political questions, is decidedly meagre. As the American Revolution properly began with the Stamp Act, and Philadelphia's part in the Revolution can but be treated as a collected whole, we have deferred all reference to these subjects to the chapter which succeeds this.

In the Assembly in 1765 a useful and necessary act was passed for the protection of immigrant passengers, who were the victims of many impositions and hardships. Dock Street, between Walnut and Third Streets, was authorized to be arched, graded, and converted into a market-place. Storm piers and a sort of breakwater were erected inside of Reedy

Island, at a cost of £3356 14s. 0½d., and the light-house at Cape Henlopen was finished, its maintenance being derived from a tax of sixpence per ton on vessels. Kaighn's Point, or Point Pleasant Ferry, was opened by Arthur Donaldson. The ferry-house on the west side was in Southwark, the Admiral Kepple, kept by Margaret Donaldson. The house on the Jersey side was advertised by Donaldson as a place of rural recreation for gentlemen and ladies to retire to and relax their minds from business. It was at this time that Bathtown, or Bath, had its beginning in the Northern Liberties, at a spring on a farm west of Second Street northward of the Cohocksink. John White, "living near the new Bath," advertised, in 1765, that he humbly proposed, with his wife's assistance, "to accommodate the ladies and gentlemen with breakfasting on the best tea, coffee, cream, etc., which articles may also be had in the afternoon." He also advertised a sort of Turkish bath, and hoped "to approve himself capable of conducting everything so as to answer many public advantages and the salutary purposes which the founder intended and now hopes to see effected." The founder was Dr. John Kearsley. White afterwards had a pump in the spring to take the water from the bottom, and one Johnson opened a coffee-house across the way from the spring. On Sunday, August 18th, there was such a flood of rain that all cellars in the lower part of the city were filled and boys swam across Market Street.

There is abundant incidental evidence about this time of the city's rapid growth, and of the fact that it was becoming more like a city. Thus, we find some manufactures beginning to spring up; the street commissioners are compelled to make arrangements for the regular carrying off and disposal of garbage and dirt; the wardens, in a petition for relief and permission to levy greater taxes, mention that they had put up three hundred and twenty street lamps; had one hundred and twenty public pumps under their care, besides fifty-four other pumps in the streets, lanes, and alleys not under their care; they employed eighteen watchmen, and more pumps and lamps were needed. The silversmiths apply for an assay office, in consequence of the large quantities of the precious metals which came into the province for manufacture and export; slack-water navigation was debated for the Schuylkill; the street pavements were extended in many directions on Market, Chestnut, Penn, Pine, and Vine Streets, and many merchants were willing to pay on their showy "jut"-windows two and three pounds tax, the preposterous rate being a shilling a light; chains were provided at the market-house to prevent vehicles from passing during market hours; the corporation began to improve its squares with curbing and gutters; some of the public wharves were extended, and the city's income from rents increased,—the sixty-six market stalls west of the court-house yielding one hundred and ninety-eight pounds,

and the forty-six east of it, one hundred and sixty-four pounds.

The inhabitants of the Northern Liberties wanted street regulators at this time and more of the forms of a municipal government, and a bill to that end passed the Assembly, but finally failed in consequence of a disagreement with the Governor about the amendments. The signers of the petition for this charter were Frederick Kuhl, Peter Thompson, Adam Stricker, Samuel Noble, Richard Mason, Elias Lewis Treichel, Bryan Wilkinson, John Williams, Samuel Pryor, John Stillwagen, Charles Lawrence, W. Masters, Thomas Boude, Levi Budd, John Livingston, Tabitha Meyer, Michael Hulings, Joseph Cowperthwait, Charles West, Jacob Shoemaker, Thomas Shoemaker, W. Shippen, Jeremiah Warder, William Fisher, John Coats, Peter Knight, Joshua Emlen, Moses Bartram, Isaac Bartram, Jacob Schreiner, Thomas Say, Martin Noll, James Taylor, Thomas Williams, Samuel Williams, William Woodrow, Henry Woodrow, John Browne, Samuel Ewan, John Britton, John Scattergood, Benjamin Spring, Thomas Saltar, Thomas Briton, John Saltar, William Ball, Arthur Thomas, George Leib, Christian Dierck, Richard Barker, William Bettie, Henry Naglee, citizens or land-holders in the district.

Commissioners were appointed to view a proposed new route and bed for the road from the city to Chester, the existing road being "very crooked and far about," and leading over fifteen steep and stony hills. The newer and more level way proposed was through Moyamensing, Passyunk, Kingsessing, Tinicum, and Ridley, into the old road near Crum Creek. A proposition was also entertained, but not perfected, for purchasing and making free the Middle Ferry over Schuylkill. Another proposition was made by Robert Smith, master-builder, to construct a bridge over the Schuylkill, in accordance with his plans and his improvements in the method of wooden spans between stone piers; but the undertaking seemed too great for the House to embark in it. There was a great dispute about the right place for a dam on Hollander's Creek, to prevent the waters of the Delaware from flooding the meadows in the Neck, such an improvement being considered necessary for the health of the inhabitants of Wicaco, Greenwich Island, Schuylkill Point, Passyunk, and Moyamensing. The decision was finally in favor of the point of junction of Hay's and Hollander's Creeks for the site of the dam.

A general act of Assembly, in fifty-one sections, relating to the city of Philadelphia, renewed, codified, arranged, and re-enacted many parts of old laws lapsed or about to do so, with new provisions added. The commission to pave and clean the streets, composed of Thomas Say, Henry Lisle, Thomas Tilbury, Henry Drinker, Samuel Bryan, and John Mifflin, was so ordered that two commissioners, to serve three years, should be annually elected. They were given power, in conjunction with the mayor, recorder, and

four aldermen, to decide what streets should be paved, what sewers built, and what direction should be given to water-courses. They had authority to employ scavengers and have the streets cleaned, and to assess the necessary taxes to enable them to discharge their duties. They were ordered to buy two lots on the Delaware for landing-places for hay, lumber, etc. This act also directed house-owners and tenants, sextons, porters, church-keepers, etc., to sweep the streets

RITTENHOUSE'S OBSERVATORY AT NORRITON.

and clean the pavements once a week (on Friday), unless ice or snow prevented. Carts and wagons were regulated, and various penalties denounced against several specified classes of nuisances.

The Assembly granted the Philosophical Society one hundred pounds towards the cost of building an observatory in the State-House yard, from which to observe the transit of Venus, June 3, 1769. The phenomenon was here successfully observed by Dr. John Ewing, Joseph Shippen, Dr. Hugh Williamson, Thomas Prior, Charles Thomson, and James Pearson; at Norriton by Dr. William Smith, David Rittenhouse, John Sellers, and John Lukens; and at Henlopen light-house by Owen Biddle. On December 7th, Governor John Penn was proclaimed at the courthouse, under a new commission from Thomas and Richard Penn, proprietaries, his office to last till Sept. 1, 1772. An enumeration of houses this year gave the following results:

Mulberry Ward.....	920	Upper Delaware Ward.....	234
North Ward.....	417	High Ward.....	166
Middle Ward.....	358	Chestnut Ward.....	112
South Ward.....	147	Walnut Ward.....	105
Lower Delaware Ward.....	120	Dock Ward.....	739

In all, 3318; Northern Liberties to Second Street Bridge, at Stacey's Run, 553; Southwark to the north side of Love Lane, 603. Grand total, 4474.

Rev. George Whitefield, who had been a regular annual visitor to Philadelphia, came as usual in the summer of 1770, and preached in the Presbyterian and Episcopal Churches. This was his last coming to the city, as he died in September at Newburyport. Among other noted visitors to Philadelphia about

this period were John Hancock, of Boston, and Sir William Draper, of the British administration, em-
paled in the celebrated letters of "Junius."

The volunteer fire companies began in 1770 to receive assistance from the corporation; the draw-bridge fell in and the corporation refused to repair it, as such repairs had been provided for by the Assembly in the shape of a special tax. The condition of poor debtors detained in the city prisons for debt appears to have been most wretched at this time. They were practically dependent upon charity, for there was no law to compel the creditors who imprisoned to support them, and the province only allowed prisoners twopence a day per capita. Without means of their own they literally perished from cold and want. In this year a jail-prisoner died of starvation, and in March, 1772, three more perished in the same way. The Assembly was appealed to in 1770, and a visiting committee, who inspected the jail, reported finding thirty-two men in confinement and twelve women, some criminally and some debtors. Many of the men were naked, and without shirts; they had no bedding, no covering but a single blanket (given through charity) for two persons. After trial, no public allowance was made to criminals. One man had been confined four years for jail-fees; another three years in default of surety for good behavior. The Assembly passed a law allowing threepence per diem for the support of criminals after conviction, and a law was also passed for alleviating the condition of prisoners for debt. To prevent outrages by gangs of robbers and plunderers, who went about with blackened faces, the penalty of death was denounced against such offenses. New regulations were adopted in regard to carters, draymen, and wagoners, who were required to register in the clerk's office of Quarter Sessions, have their vehicles numbered, and, of course, to have a scale of charges established for them. Commissioners were appointed—Joseph Fox, Jacob Lewis, Daniel Williams, of Philadelphia County; John Hannum, John Morton, and John Sellers, of Chester; and James Webb, Moses Branton, and James Gibbons, of Lancaster County—to lay out a new road from Philadelphia to Lancaster, by way of the Schuylkill Middle Ferry, the Ship Tavern in Chester County, and thence by the Gap road to the village of Strasburg, in Lancaster County, a public highway forever, sixty feet wide.

In consequence of the war-feeling and the stern non-importation policy of the several colonies many and various efforts were made to encourage and promote American manufactures. The American Philosophical Society now came forward with a memorial to the Assembly on silk culture, a subject in which Franklin had been deeply interested for many years, and about which he was at this time corresponding not only with members of the society and persons in other parts of the country, but gathering information all over Europe to transmit to the society. The society, after explaining the conditions under which

cocoons were spun, and the supposed facilities for feeding the silk-worms, proposed that public filatures should be established in Philadelphia and elsewhere, where the cocoons might be received and the silk reeled. They asked the Legislature to appropriate five hundred pounds for premiums for mulberry-trees, cocoons, etc., and produced samples of American silk, some wove, some knit into gloves. The Assembly declined to make the appropriation, and the society then started a subscription, asking two hundred and fifty pounds in forty-shillings subscriptions. There were, they said, sixty-four families who had already made a beginning in this industry, many of them raising ten thousand to twenty thousand silk-worms, and there were in the province one hundred thousand cocoons spoiling for want of reeling. The money was soon subscribed, and a "society for the cultivation of silk" organized, with the following persons for managers: Dr. Cadwalader Evans, Israel Pemberton, Benjamin Morgan, Moses Bartram, Dr. Francis Allison, Dr. William Smith, John Rhea, Samuel Rhoads, Thomas Fisher, Owen Biddle, Henry Drinker, Robert Strettel Jones, with Edward Penington treasurer. A filature was established on Seventh Street, between High and Mulberry Streets, a superintendent was procured from Georgia, and tuition and employment were promised to girls wishing to learn to reel silk. A premium of fifteen pounds was offered to the person bringing the greatest number of cocoons to the filature—not less than thirty thousand—before September 1st, and ten pounds for the next largest quantity,—not less than twenty thousand.

Only the second prize was awarded next year, to Joanna Entwain, of Bethlehem; but new premiums were offered,—twenty pounds for any number over fifty thousand, fifteen pounds for forty thousand, ten pounds for twenty thousand. Nicholas Garrison, of Race Street, advertised he would have mulberry-trees to sell next spring at twopence each, and John Kaighn, Second Street, near Christ Church, had silk-worm eggs for sale. The society prepared one hundred and fifty pounds of reeled silk, such as sold in England for twenty and twenty-five shillings per pound, exclusive of Parliamentary bounty; but it still sought aid from the Assembly, which the Assembly still did not grant. It was found in 1772 that the society lost money by paying too high a price for cocoons, many of them being in bad condition. The reeled silk of the filature sold in London for nineteen shillings twopence, when China silk brought £1 2s. 6d. The filature reeled silk for private owners at sixpence per ounce, and some of these sent it to London to be woven. The filature, however, made a popular success by weaving a dress-pattern of Pennsylvania silk, which was presented to the queen by Dr. Franklin on behalf of the society, and her majesty promised to wear it on the king's birthday. On this the Assembly voted the society one thousand pounds. Franklin's correspondence is full of this silk experiment,

and his wife sent her share of the reeled silk to him in London.

The Assembly had to come to the relief of other manufacturing adventures at this time besides the silk-growers. Experiments undertaken in haste, without experience and the aid of sufficient capital, were almost certain to end in failure. Their object being patriotic, of course they felt it to be the duty of the Assembly to give the people's money for their support. There were steel-works on Seventh Street, conducted by Whitehead Humphreys, who made good tools and received one hundred pounds; but John Clayton did not get aid for his thrashing-machine, nor Thomas Moore for his machine to raise water to any height. Messrs. Gousse Bonnin and G. A. Morris started, in 1770, to erect works for the manufacture of china, their factory being in Southwark, near Front and Prime Streets. Benjamin Randolph, at the sign of the Golden Eagle, Chestnut Street, manufactured wooden buttons, and proposed to buy hard woods, apple, holly, and laurel. James Popham, in January, 1770, proposed to manufacture wool, so as to make a profit for capital invested of over forty per cent. "A Hibernian" offered to organize a patriotic society for woollen manufactures, on the basis of a lottery privilege of one thousand pounds per annum, the weavers to be imported from Ireland. The Assembly did not spend money on any of these ventures, but it gave three hundred pounds to David Rittenhouse, as a testimonial of the high sense entertained "of his mathematical and mechanical genius in constructing his orrery," and also bought one of the machines from him at the price of four hundred pounds. David Rittenhouse was born April 8, 1732, on the farm of his father, Matthias Rittenhouse, in Montgomery County, near Germantown. His father was one of the original settlers of "Germanopolis." The name of the first paper-mill ever built in America stamps the fact of the family's turn for mechanical invention. Young Rittenhouse was not fitted for a farmer's life, nor was his health robust enough, but his mathematical turn already absorbed his faculties, and the fences, the plow-beam, the barn-doors, were soon covered with his figures. His father consented to let him learn the trade of clock and mathematical instrument-maker. There was already a trunk full of tools appropriate for the trade in the garret, the property once of some maternal relative. He built

and fitted himself a shop by the roadside, where he worked by day and studied by night, like Pascal, inventing over again for himself the processes of mathematics which only master minds have discovered. He conceived himself to have been the inventor of fluxions, until he read Newton's "Principia." What Newton and Leibnitz could only attain to in mature years, after long consultations with great minds and access to all the learning on the subject, this obscure youth grasped at the age of twenty-four, without books and without teachers. At the age of twenty-

David Rittenhouse

three he made his famous orrery, for presenting the motion of the heavenly bodies. This was bought and is still in the possession of Princeton College. A duplicate was made for the Philadelphia Academy and purchased by the Assembly. Rittenhouse observed the transit of Venus in June, 1769, for the American Philosophical Society, of which he was already a member, and in November observed the transit of Mercury, making reports on both phenomena. In 1770 he removed to Philadelphia. Later he was connected with the boundary commissions of New York

and New Jersey, Virginia and Pennsylvania, Pennsylvania and New York, and New York and Massachusetts. He delivered the annual oration before the Philosophical Society in 1775, and became its president, succeeding Dr. Franklin, in 1791. He was a member of the convention of July 15, 1776; member of the Pennsylvania Board of War, March 14, 1777; treasurer of the State from 1777 to 1789; director of the United States Mint, 1792 to 1795, when he resigned on account of ill-health, dying in Philadelphia, June 27, 1796. His body was buried in a tomb, prepared under his own orders, in the garden of his house, northwest corner of Seventh and Arch Streets. Many years afterward it was removed, and reinterred in the ground of the First Presbyterian Church, Pine Street west of Fourth. He was made member of the American Academy of Arts and Sciences, Boston, in 1782, and of the Royal Society of London, 1795. He was a man of sincere and honest mind, simple and plain in his ways, a profound and constant student, and a deep and original thinker. He had added to his knowledge of mathematics and astronomy an acquaintance with theology and metaphysics, and familiarity with French, Dutch, and German. He was a musician, wrote verses, and had read extensively in belles-lettres. His services to the Revolution were many and important.

Other inventors came forward for recognition,—Michael Washington, with cloth of his manufacture, meant to compete for the gold medal offered by Lancaster County; Christopher Colles, the engineer, with offers to put up mills and hydraulic engines; Michael Poree, surgeon dentist, maker and fitter of artificial teeth,—the pioneer in that manufacture,—found so much business in his line that he decided to settle in the country, dividing his time between New York and Philadelphia.

Still, the new manufacturers fared badly. Henry William Steigel, the glass-maker at Lancaster, failed; was confined for debt in Philadelphia jail, and it took an act of Assembly to release him; that body also voting him a relief of one hundred pounds. The china-works in Southwark failed also, the proprietors losing everything, and not being able to pay wages to their workmen, for whom—strangers and needy—they asked the charity of the public. Bonnin sold the real estate and property of the concern and went to England. Some attention was paid to potash manufactures at this time, and Humphreys got leave to set up a lottery of seven hundred pounds to aid him in his manufacture of steel.

In the two or three years succeeding this period, which were still to intervene before the outbreak of hostilities with the mother-country, the people of Philadelphia seem to have paid an increased attention to local improvements, to which they gave all the time they could spare from the excitements of political movement. Several acts were passed in 1771 to protect the fisheries on the Schuylkill, provide a close

time, and prevent the wanton destruction of the smaller fry. As there were fears of a war with Spain, attention was directed anew to finishing the fort on Mud Island, authorized in 1762. The fifteen thousand pounds then voted could not be recovered; eight thousand pounds had been spent for street paving, and seven thousand pounds given to the king for war purposes, and a new act was passed appropriating fifteen thousand pounds more in bills of credit. The commissioners in charge of the work were Joseph Galloway, Benjamin Chew, Thomas Cadwallader, Joseph Fox, Michael Hillegas, John Morton, and John Baynton. They bought a small island in the Delaware, the property of Joseph Galloway, and applied to Gen. Gage for an engineer. He chose Capt. Montresser. The people of the Northern Liberties petitioned the Assembly at this time for regulators to survey the streets, lay out gutters, sewers, etc., and regulate party walls. The act which was passed for this purpose restricted the operation to a tract north of the city to Gunner's Run, across to Frankford road, west to William Master's place on the Germantown road, and the Wissahickon road, thence south to the city limits. The poor laws of the city were amended so as to authorize the mayor or recorder of the city, the aldermen, and the justices of the peace of the county, to appoint overseers of the poor,—twelve for the city, four for the Northern Liberties, four for Southwark, and two for each other township. These overseers had power, upon the requisition of the managers of the almshouse, to levy taxes for the amount of money required by that establishment, and had plenary authority, besides, to procure subsistence for paupers, etc.

The law for regulating the night-watch and the lights of the city was re-enacted, Samuel Morton, Thomas Mifflin, Edward Duffield, Jacob Winey, Moore Furman, and Joshua Humphreys being appointed wardens (to be elected annually thereafter at the general elections) with power, in conjunction with the assessors, to levy taxes for city purposes, the assessors appointing the tax collectors. The wardens had direction of the maintenance and increase of the city lamps, the employment of watchmen, digging wells, fixing and repairing pumps, and purchasing private pumps for public use. There was much complaint at this time, and apparently it was just, of the insufficient number of public pumps, and the inadequate allowance to owners for private pumps. In fact, the city was outgrowing its water supplies.

Renewed efforts were made in 1771 to secure legislative aid for improving the navigation of the Schuylkill and Susquehanna, and the subject was referred to committees, and led to reports, but nothing further, except that additional surveys were ordered. The conditions of the main public roads caused solicitude, and in a broadside, published in December, 1771, called "An Address to the Merchants and Inhabitants of Pennsylvania," it was said that "Baltimore town,

in Maryland, has within a few years past carried off from this city almost the whole trade of Frederick, York, Bedford, and Cumberland Counties." This was in consequence of the care of communication by way of the Susquehanna, and the bad roads from this river to Philadelphia. The writer said the only remedy was a canal across the peninsula and a free turnpike road to Lancaster.

In April, 1771, there was a fatal fire at the house of Thomas Rogers, west side of Front Street, near Market, in which Mr. Rogers and Mrs. Baxter, an inmate of his house, were suffocated by the smoke; two girls, daughters of Capt. Campbell, and granddaughters of Mr. Rogers, were rescued by an active and daring sailor, after the roof had fallen in, but their injuries were so great they died shortly after. Several other houses were damaged by this fire, which was played upon by six engines, the entire force of the town.

In this year, John Penn having been suddenly called to England, Richard Penn came out to succeed him. Both these Penns married Americans, but Richard was very popular, John the reverse, and when John suddenly superseded Richard again in 1773, much feeling was shown. As Miss Sarah Eve said at the time, she would rather be Richard than John, for though the latter had the government, the former had the people with him. A part of this unpopularity grew out of the excise tax of 1771, of fourpence per gallon on all wine and spirits, the enactment of which led Philadelphians to petition the Assembly for more equitable representation. They had only two members in that body, while paying one-fourth the entire expenses of the province. The inspection and stamping of leather, and the costs of the fort on Mud Island, were also subjects of complaint.

The Tammany Society was started on May 1, 1772, when the sons of King Tammany met at the house of James Byrns to celebrate the memory of the noble chieftain.

The city wardens, in their new regulations, instituted this year, made James Delaplaine constable of the watch. There were seventeen "beats;" the watchmen cried the hour and the weather; they carried staves, and were on duty from 10 P.M. to 4 A.M. in summer, and 9 P.M. to 6 A.M. in winter. The Assembly this year resolved to provide the city a new jail, the old one, corner of Third and Market Streets, being confessedly and notoriously inefficient. The commissioners of the county were authorized to borrow money, buy a lot, build a jail, work-house, and house of correction, and sell the old jail, which was advertised as being sixty-six feet broad by two hundred and forty feet long. This old prison had been held by trustees for the use of city and county, but the new one was vested in the county commissioners, whom the act made a corporation and body politic.

The "assize of bread" was renewed in March, the

size of loaf being adjusted to the price of flour, each baker required to stamp his name and mark the quality of the flour on his loaves, and the clerk of the market to seize all bread which did not comply with these requisites. A dog-tax was this year laid in Philadelphia County, a shilling on each cur owned by a head of a family, two shillings for each additional dog. Single persons owning dogs had to pay five shillings each, and the avails of this dog-tax were to be applied to compensate owners of sheep killed by dogs. When a dog was caught killing sheep his owner forfeited a fine of five pounds unless he destroyed the animal at once. Chimney-sweeps in Philadelphia, Northern Liberties, and Southwark were put under strict regulations at this period, registered, licensed, numbered, and made to wear their numbers on their caps. The sweepers' fee was ninepence per chimney of one flue, fifteenpence for two flues.

When John Penn, as we have already noted above, returned to Philadelphia to supersede his brother Richard, on Aug. 30, 1773, the merchants presented the latter an address and invited him to dine with them. He had acted with prudence and manliness in difficult times, and the people would not neglect him. John Penn was present at the dinner,—Robert Morris, who presided, placing one on his right hand, the other on his left,—but the brothers did not speak. Richard had been "unexpectedly deprived" of his office, and he resented it.

The silk society was still active at this time, Franklin being its agent in London, and disposing of its reeled silk. The premium for the greatest number of cocoons (seventy-two thousand eight hundred) was awarded to Widow Stoner, of Lancaster, James Millhouse, of Chester, getting the second premium. One prize was given to Rebecca Parks, of Lancaster, for the best specimen of reeled silk. The net proceeds of silk sold in London were £210 10s. 5½d. In a letter to his wife, July 15, 1773, Franklin says, "The Silk Committee were so good as to make me a present of four pounds of raw silk. I have had it worked up, with some addition of the same kind of silk, into a French gray *ducape*, which is a fashionable color, either for old or young women. I, therefore, send it as a present to you and Sally, understanding that there is enough to make each of you a *negligée*. If you should rather incline to sell it, it is valued here at six shillings and sixpence a yard; but I hope you will wear it."

The American Philosophical Society, with a certain prescience of the coming struggle, turned its attention to the manufacture of paper, offering a premium of five pounds to the person in any family who should save the greatest quantity of rags and sell them before the 1st of May, 1777, smaller premiums for the next highest competitors. John Leacock, who owned a vineyard in Lower Merion, Philadelphia Co., set up a lottery for the encouragement of the vine, and the

glass-works at Kensington, and Manheim, Lancaster Co., did likewise. The citizens of Philadelphia petitioned the Assembly to instruct its provincial agents to ask king and Parliament to adopt measures preventing the importation of negroes into the colony. At the same time the city protested against the unequal assessment by which its inhabitants were compelled to bear undue burdens of taxation. The city and county had nearly paid the assessment of 1760, running through fifteen years, but other counties had failed to raise their proportions. The House, after having a committee to report on the subject, passed a bill declaring that improved lands should be rated at three-fifths of the annual value, and none at less than five pounds per hundred acres. At the January session of 1773, David Rittenhouse and Samuel Rhoads made a report on inland navigation and the divide between the Delaware and Susquehanna; they found a canal feasible, with water and fall enough in the intermediate streams, but would not decide upon the most expedient route.

The city front was extending so much, with so many long wharves jutting into the stream, that there were fears lest the port would become too small and navigation be impeded. Some of these wharves intruded on the channel so much that even small vessels had difficulty in working between them and Windmill Island. The city markets were found to be not large enough for the volume of country produce brought to them, but the Common Council declined to enlarge them. The Assembly, therefore, in which the country interest predominated, determined to look after the farmers' convenience. In March, 1772, a committee was appointed to consider the expediency of building another market-house in the city. This committee reported in favor of Market Street, near Third, and continuing westward, as the best site, and in 1773 a resolution was passed to the effect that in the opinion of the House the want of additional market-houses in Philadelphia "for the accommodation of the inhabitants bringing their produce to market for the supply of the said city is a public grievance," and a committee was ordered to confer with the corporation on the subject and report to the House.

The committee of the Assembly consisted of Henry Pawling, William Rodman, John Brown, Thomas Mifflin, Jonathan Roberts, and James Hockley. The Common Council, January 26th, "*Resolved, nem. con.*, That another market be built at the expense of the Board," and at a later meeting it was decided to place the new market in Market Street, between Third and Fourth. The Council, finding they had not money enough to pay the cost of the proposed improvement, resolved to call in, at the end of three months, seven hundred and fifty pounds which had been loaned to the managers of the almshouse. The latter asked for more time, intimating they had not expected the loan to be demanded. The Council re-

fused to present the managers with the money, but gave them a year to pay it in. The inhabitants in the neighborhood of where the new market was to be built remonstrated vigorously against the proposed structure as an incumbrance to the street and incommoding them, asking that another place should be fixed on. To this there were counter remonstrances, and apparently serious controversy; but the board decided not to alter its plans, but to go ahead with the work, without waiting for the question of municipal right to be determined by an amicable suit at law, as was requested by some of the petitioners. The erection of the market-house caused great excitement, and the residents on High Street took the law in their own hands "and accordingly they tore down the market as fast as it was erected, demolishing by night what was built by day." On June 22d the Council decided to bring damage-suits against those who had resorted to violence, but at the same time to direct the committee to desist from prosecuting the work until further directions had been given. On the 24th the board resolved to go on again, but on the 29th, in deference to an earnest address from the Society of Friends, the work was suspended, "and resolved to bring the actions for the trespasses already brought, and that the work already done shall be secured, as well as the materials, except such as are perishable, etc.—those to be sold; the rubbish in the street to be removed, so as to make the street on each side the piers passable."

A number of handbills and addresses on this subject and against the building of the market were issued over various signatures, the chief promoter of the opposition, apparently, being Owen Jones, provincial treasurer. The opposition became popular, the plea being that the corporation threatened to swallow up the people's liberties; but selfish and individual interests seem to have been at the bottom of the controversy. The Council, in place of building a new market, made some changes in the meal market to accommodate the country people, and determined to put up hay-scales forthwith at the slip on Vine Street and at the Blue Anchor. Twenty new stalls were also added to the new market on the southern bounds of the city.

Aside from their connection with the gathering storm of revolution, there were practically no local occurrences in Philadelphia in 1774 worth noting. Great and small events equally sympathized with and took their color from the one controlling excitement, which occupied the thoughts and guided the actions of every one. The Common Council were informed by the recorder that complaints had been made in Maryland against the sealed half-bushels made in Philadelphia as being over legal measure, a circumstance likely to be detrimental to trade unless looked into. A committee was appointed to confer with Nathaniel Allen, the officer appointed to size and seal the measures, and consult with Mr. Rittenhouse, and call

any others they may think proper to their assistance. The committee—Messrs. Rhoads, Clymer, Shippen, and Powell—were ordered also to procure a new standard half-bushel, of cast brass. This was done, and the measure left in charge of Mr. Allen. In August it was reported that hay-scales had been erected at the draw-bridge. Robert Lumsden was appointed keeper of the scales, his fees being two shillings per load.

A lot of ground had been bought on Sixth Street, extending from Walnut to Prune, and here, in 1774, the Walnut Street prison was erected. "It consisted

eases from being brought into the province; a keeper was to be appointed to the hospital on Province Island; vessels from beyond seas with more than forty passengers were not to be allowed to come nearer Philadelphia than Little Mud Island, near the mouth of the Schuylkill, until a sanitary inspection had been made by a quarantine officer and a physician. The sick were to be removed and nursed in the hospital, and the vessels cleansed, all at the expense of the consignee. Another inspection and examination was to be made when the vessel reached port.

The Assembly repealed the act forbidding the sale of books at auction, and in December passed an act to suppress the disorderly practice of firing guns, pistols, squibs, fireworks, etc., at Christmas times. Offenders were to be mulcted ten shillings; twenty shillings fine to the householder allowing such practice upon his premises. Thus a law against squibs preceded the great cannonade of the Revolution!

CHAPTER XVI.

PHILADELPHIA DURING THE REVOLUTION.

PART I.—FROM THE STAMP ACT TO THE DECLARATION OF INDEPENDENCE.

To write a complete history of Philadelphia during the war of American independence would be, in effect, to write the history of that revolution from its beginning until the adoption of the Constitution. Such an undertaking is far beyond the scope of the present work. The author will be content to exhibit the things which were done in Philadelphia during that contest, and which originated in Philadelphia, or with the people of the city. Even thus limited, the task is by no means slight. The events which must be treated are many and momentous, and the actors in them among the most considerable figures in the great struggle. Watson, who, as Mr. Westcott reminds us, had access to the papers of Charles Thomson, says, very forcibly, that "Philadelphia was the fulcrum which turned a long lever." It was the largest and most important city in the colonies; it was the central point of the colonies, moreover, and it numbered among its citizens many men whose opinions were controlling forces. Benjamin Franklin, John Dickinson, Joseph Reed, Charles Thomson, Thomas Mifflin, Joseph Galloway, and Robert Morris were men of influence and control,—powers throughout the colonies. Franklin and Dickinson had as much to do as any other two men who can be named in uniting the colonies and preparing them for resistance; and, after Washington, Franklin and Morris did more than any other two to make that resistance successful. Not to give such a history in its important bearings, therefore, would be to belittle the local annals which it is our duty to present faith-

OLD WALNUT STREET PRISON.

of a stone building, with a front on Walnut Street of one hundred and eighty-four feet, and thirty-two feet deep, with wings on the east and west extending ninety feet southward. In addition to this there was a stone building on Prune Street at the south end of the lot, which was originally designed for a work-house, but was afterwards used for the confinement of debtors. The lot was inclosed by a stone wall twenty feet high, connected with the buildings."¹

In January, Arthur Donaldson presented a petition to the Assembly, declaring that he had invented a machine for cleansing and deepening docks, but useful for purposes of general dredging. The American Philosophical Society had seen the machine at work, and approved it, and the Assembly appointed a committee to examine it. In December, Ebenezer Robinson sought to call attention to a pumping-machine of his for leaky vessels, but the Assembly had no time now to attend to such matters. David Rittenhouse was appointed to take charge of the State-House clock after March, 1775, when David Duffield would cease taking care of it, as he intended leaving the country.

Money still continued to be appropriated for the support of the French neutrals. In January, 1774, the Assembly passed an act to prevent infectious dis-

¹ Westcott.

fully and well; to go beyond that would force us to encroach upon the province of the general history of the country. The task is difficult, and becomes only more so in persisting, as we must do, to carry the local flavor along through every page, but it is perhaps not impossible.

Occasional writers make a grave mistake in thinking that the principle upon which the colonies united to resist the pretensions of Great Britain, resistance to taxation without representation, was a mere barren abstraction. The colonists were British subjects, and the principle for which they contended was, in fact, the very core of the British Constitution, the Englishman's birthright and his castle. The sagacious eye of the elder Pitt saw this at once, and he rushed to the support of the Americans, not as a leader of the opposition, but as a British statesman who saw the Constitution imperiled as it had been in the days of Strafford and in the days of James II. "No man," he said, "more than I respects the just authority of the House of Commons, no man would go further to defend it. But beyond the line of the Constitution, like every exercise of arbitrary power, it becomes illegal, threatening tyranny to the people, destruction to the state. Power without right is the most detestable object that can be offered to the human imagination; it is not only pernicious to those whom it subjects, but works its own destruction. *Res detestabilis et caduca.*" And he said, pursuing the same train of thought, "In a just cause of quarrel you may crush America to atoms; but in this crying injustice, I am one who will lift up my hands against it; in such a cause even your success would be hazardous." The reason he gives is a plain one,—*"It is my opinion that this kingdom has no right to lay a tax upon the colonies; at the same time I assert the authority of this kingdom over the colonies to be sovereign and supreme, in every circumstance of government and legislation whatever. . . . Taxation is no part of the governing or legislative power. Taxes are a voluntary gift and grant of the Commons alone."*

This was the point, therefore, upon which every one in the colonies, except the officials and the creatures of the British Cabinet and Board of Trade, could and did unite. It was the point where Galloway and Dickinson met Franklin and Reed, where Tories and patriots were equally firm and vehement in protest, and where they had the earnest and undivided support of the opposition in the British Parliament. This union for a valid principle of the Constitution was the one thing which made possible the Revolution which finally ensued. Without this union in the initial collision, the colonists would never have known their strength, nor would their purposes have dared to ripen into action. Franklin, Adams, the "Sons of Liberty," and many others, like Patrick Henry, Richard Henry Lee, and Samuel Chase, went much further, looking to the inevitable end with equal prescience and hope. But they did not carry

the majority with them, nor attempt to do so, until many other acts of aggression and outrage had taught the people to dream of liberty and hunger for it. When it came to challenging that imperial authority which Pitt declared to be "sovereign and supreme," conservatism halted long, and neither Dickinson nor Galloway would follow Franklin or had any sympathy with Adams. They were not republicans nor revolutionists, but British subjects in constitutional opposition to the ministry of King George.

It is not necessary to elaborate this point further. The colonists were and had been steadfast and loyal British subjects. As such, they had denied the right of king and ministry to tax, and in this the Constitution had been shown to be on their side.¹ But they had given to the king liberally, profusely, in every strait and war of the colony, money, provisions, men, clothing, stores. They had resisted oppressions and usurpations, for it was hatred of these things which had driven their ancestors and them to America; but they were not separatists; they never dreamed of contending for anything but the privileges of Britons. The Albany plan of union was a plan for consolidating and strengthening the British empire in America, not for dismembering it. The Americans had resisted, but never revolted against their Governors. They had not blenched in their loyalty to the mother-country when she was depriving them of their chartered civil and religious liberties, monopolizing their trade, destroying their industries, and threatening to subject them to "Poynings's Law," the infamous "Code of Drogheda," by which Irish Parliaments were denied the right to sit until they had first exhibited in detail to the king's viceroy all that they meant to do, and obtained royal license. No act of a Provincial Legislature could become a law until it had obtained sanction of the Royal Council; the English Church was the only one tolerated; the acts of trade forbade nearly all manufactures, nearly every form of domestic commerce; the colonies, like Ireland, resembled those larvæ of aphides which the ants keep close prisoners and only permit to feed in order that they may afford their masters nutritive delicacies not otherwise to be procured. But for all that the colonies were entirely loyal, and never conceived the plan of setting up independent governments or casting themselves under the protection of other powers unfriendly to the mother-country.² As William B. Reed says very cleverly in his life of

¹ Bancroft, v. 81: "It was now settled that no tax could be imposed on the inhabitants of a British plantation but by their own Assembly, or by an act of Parliament." (Opinion of Sir Philip Yorke and Sir Clement Wearg.)

² Bancroft (v. 77) thinks that the first spirit of resistance to British oppression originated in the Scotch-Irish immigration from Ulster, after the peace of Paris. But during the war in the South this element of the population supplied nearly all the Tories, and Galloway's name would indicate that he was of the same descent, though a Marylander by birth.

Joseph Reed, "There is no more curious chapter of our history than that which delineates the gradual (for it was very gradual) extinction of loyalty in the American colonies." There was no one cause but a dozen, yet perhaps Bancroft is right in holding that "American independence, like the great rivers of the country, had many sources; but the head-spring which colored all the streams was the Navigation Act;" or as Governor Bernard, of Massachusetts, put it, in more forcible because simpler language,— "The publication of orders for the strict execution of the Molasses Act has caused a greater alarm in this country than the taking of Fort William Henry did in 1757."

We have neither space nor need to show the fact of the existence of this loyalty and the causes of its decline through the acts of the British ministry. The evidence is abundant, and it has been collected and collated in many works of easy access. In none of the provinces was this good temper towards the throne and the mother-country exhibited more satisfactorily than in Pennsylvania and Philadelphia. In the times of King William and Queen Anne, of Governor Fletcher and Judge Quarry, the Quakers and the proprietary government were treated with suspicion; their loyalty to the home government was questioned, and all the influence of ministry and Parliament was given to the Church of England party in the colony. But the proprietary had become members of the church; the Society of Friends were loyal and conservative as well as non-resisting, and their affections for the British government had seemed to grow with their growth in business connections and wealth. The Germans usually voted with the Friends and the proprietary in all political contests, and the only opposition in the province—that which was in antagonism to the proprietary government—favored a more vigorous co-operation with ministerial measures, and hoped to secure the overthrow or modification of the proprietary government and charter by appealing directly to king and Parliament. Franklin, writing to Peter Collinson in 1753 (when Halifax's harsh measures for disturbing colonial government by the exercise of prerogative were already matured), expresses his dread lest so many German immigrants in the province should give the French an opportunity to make trouble, and adds, "I pray God to preserve long to Great Britain the English laws, manners, liberties, and religion. Notwithstanding the complaints, so frequent in your public papers, of the prevailing corruption and degeneracy of the people, I know you have a great deal of virtue still subsisting among you, and I hope the Constitution is not so near a dissolution as some seem to apprehend." In 1760 he wrote to Lord Kames that no one could rejoice more sincerely than he for the reduction of Canada, "and this not merely as I am a colonist, but as I am a Briton. I have long been of the opinion that *the foundations of the future grandeur and stability of the British empire lie in Amer-*

ica; and though, like other foundations, they are low and little now, they are, nevertheless, broad and strong enough to support the greatest political structure that human wisdom has ever erected." Joseph Galloway, all for prerogative, wrote to Franklin in 1765 that, "as you well know, the Assembly party are the only loyal part of the people here." Thomas Wharton and John Dickinson were also sincerely loyal. There was not much sympathy in Philadelphia with Patrick Henry or Samuel Adams.

After the conquest of Canada, as Frothingham, in his "Rise of the Republic," has noted, all the colonies rivaled one another in the fervor of their expressions of loyalty. "The liberty men vied with the party of the prerogative in pæans to the British constitution and flag. This enthusiasm sustains a remark of Franklin's, that the colonists loved the nation more than they loved each other." Lord Camden, in a conversation with Franklin, had remarked, "For all what you Americans say of your loyalty, I know you will one day throw off your dependence upon this country, and, notwithstanding your boasted affection for it, will set up for independence." The other answered, "No such idea is entertained in the minds of the Americans, and no such idea will ever enter their heads, unless you grossly abuse them." "Very true [replied Mr. Pratt,—my lord was then a commoner], that is one of the main causes I see will happen, and will produce the event."¹

Another similar outburst of loyalty followed the repeal of the Stamp Act. The Sons of Liberty dissolved their association and ceased their operations. Every clamor was hushed. As one of the newspapers of the day expressed it,— "Never were a people more in love with their king and the constitution by which he has solemnly engaged to govern them."

But this was not peace. It was only an armistice. The policy for taxing the colonies was part of an elaborate programme, and was not to be abandoned. It had been carefully worked out by the Board of Trade and the Cabinet. It was part of an attempt to mould the colonies into conformity to England. Bancroft has traced out and explained the system with perspicuity and at great length. "It embraced," says Frothingham, "an alteration of territorial boundaries, a remodeling of the local constitutions, an abridgment of popular power, and an introduction of the aristocratic or hereditary element." An American standing army was to be created, and an American civil service and judiciary, all subservient to the crown, but paid by taxation levied upon the colonies. "It included an execution of the Navigation Act, which had never been enforced, of laws of trade which had remained dead letters on the statute-book, the collection of a revenue, and the establishment of a standing army. The ministry of the Earl of Bute,

¹ Gordon's History of the American Revolution, I. 136. This conversation took place, Gordon says, "many months" before 1760,—i.e., between that and August, 1757.

based on prerogative and power, decided in favor of this policy, and successive administrations endeavored to carry it out in part or in whole."¹

Charles Townshend initiated this policy; its details were arranged by Jenkinson; George Granville put it in execution. The idea of a stamp tax for the colonies is said to have been promulgated first by Governor Keith and Joshua Gee, of Philadelphia, in 1739; the proposition being to raise troops to go against the Indians, and provide for their maintenance out of a stamp duty laid by act of Parliament. The proposition is like Keith, but the authenticity of the papers embodying it is not completely established. There seem to have been numerous premonitions in the colonies that a new system of government and taxation was about to be instituted. The feeling probably grew out of the more rigid enforcement of existing laws of trade and navigation, the execution of the Sugar Act, the resistance made by James Otis to the custom-house writs of assistance, and by Patrick Henry to the tithe proceedings in Virginia. Only one of the stories and reports in connection with all this needs to be cited here. It is related by Gordon, in his "History of the Revolution," that Whitefield, being at Portsmouth, N. H., April 2, 1764, sent for Dr. Langdon and Mr. Haven, the Congregational ministers of the town, and, upon their coming and being alone with him, said, "I can't in conscience leave the town without acquainting you with a secret. My heart bleeds for America. Oh, poor New England! There is a deep-laid plot against both your civil and religious liberties, and they will be lost. Your golden days are at an end. You have nothing but trouble before you. My information comes from the best authority in Great Britain. I was allowed to speak of the affair in general, but enjoined not to mention particulars. Your liberties will be lost." Doubtless Whitefield confided this "secret" to others besides Langdon, and his Philadelphia friends probably heard it more than once from his own lips.

The first authentic notice received in Philadelphia of the design of the British ministry to tax the colonies by means of a stamp duty came from Boston, about May 8 or 9, 1764. Samuel Adams had brought the subject up in town meeting in Boston. But the remonstrance of Rhode Island against the Sugar Act had been received before that, and the leading men in the different colonies had begun to correspond on the subject of the taxes proposed, so that it was fully understood before the declaratory resolutions were adopted. These were offered by Granville in the Commons on March 9, 1764, and, although it was announced that no immediate action would be taken on them, great excitement ensued in the colonies. The proposed taxation was denounced as putting the colonists on the footing of conquered slaves, and it was

suggested that if they were taxed without their consent they would "desire a change." This step, said Richard Henry Lee, "though intended to secure our dependence, may produce a fatal resentment and be subversive of that end." Dunk Halifax wrote, Aug. 11, 1764, an official letter from St. James, notifying Governor Penn that as Parliament, at its last session, "had come to a Resolution, by which it is declared that, towards defraying the necessary Expences of defending, protecting, and securing the British Colonies and Plantations in America, it may be proper to charge certain Stamp Duties in the said Colonies and Plantations, it is His Majesty's Pleasure, that You should transmit to me, without Delay, a list of all Instruments made use of in publick Transactions, Law Proceedings, Grants, Conveyances, Securities of Land or Money, within your Government, with proper and sufficient Descriptions of the same, in order that if Parliament should think proper to pursue the Intention of the aforesaid Resolution, they may thereby be enabled to carry it into Execution in the most effectual and least burthensome manner."

This was not action, but a prelude to action of the severest sort. Meantime there was action in other directions. Granville was determined to break up smuggling with the strong hand, and all captains, not only of revenue cutters, but of all armed vessels sent to America, were made revenue officers and compelled to take the usual custom-house oaths and respect custom-house regulations. The naval officers knew nothing of revenue laws, consequently many illegal and annoying seizures were made, for which no redress could be had but in England. "A trade had for many years been carried on," says Samuel Hazard,² "between the British and Spanish colonies, consisting of the manufactures of Great Britain, imported by the British colonies for their own consumption and bought with their own produce, for which they were paid by the Spaniards in gold and silver, sometimes in bullion and sometimes in coin, and with cochineal, etc., occasionally. This trade was not literally and strictly according to law, yet the advantage of it being obviously on the side of Great Britain and her colonies, it had been connived at. But the armed ships, under the new regulations, seized the vessels, and this beneficial traffic was suddenly almost destroyed." So with other countries. This illicit trade had kept the colonies supplied with specie, liquors, sugar, and tropical products generally, giving them a good market in return, and its sudden destruction was as injurious to Philadelphia as to Boston and Newport.

"On the 10th of March, 1764," continues Hazard, "the House of Commons agreed to a number of resolutions respecting the American trade. A bill was brought in, and passed into a law, laying heavy duties on the articles imported into the colonies from

¹ Frothingham, 161-62; Bancroft, vol. v., chs. v., vii., and ix.

² Register of Pennsylvania, vol. ii. p. 242, *et seq.*

the French and other islands in the West Indies, and ordering those duties to be paid in specie into the exchequer of Great Britain. . . . The Americans complained much of this new law and of the unexampled hardship of being deprived first of obtaining specie and next being ordered to pay the new duties in specie into the treasury at London, which, they said, must speedily drain them of all the specie they had. But what seemed more particularly hard upon them was a bill brought in at the same session and passed into a law, 'To restrain the currency of paper money in the colonies.' . . . In the spring of 1765 the American agents in London were informed by the administration that if the colonists would propose any other mode of raising the sum pretended to be raised by stamp duties their proposal would be accepted and the stamp duty laid aside. The agents said they were not authorized to give any answer, but that they were ordered to oppose the bill when it

should be brought into the House by petitions questioning the right claimed by Parliament of taxing the colonies. The bill laying a stamp duty in America passed in March, 1765."

In regard to the law restricting issues of paper money, it was founded on the report of the Board of Trade, made to the Commons by Lord Hillsbor-

ough. In March the Hibernia Fire Company resolved "from motives of economy, and to reduce the present high price of mutton and encourage the breweries of Pennsylvania, not to purchase any lamb this season, nor to drink any foreign beer." Other fire companies and many citizens copied this example, and Edward Broadfield, of Kensington, who had a patent way of his own of curing sturgeon, thought this a good occasion to recommend sturgeon as a good substitute for mutton.

On May 30th it was announced that John Hughes, a member of the Assembly and a partisan of Franklin's, was appointed distributor of stamps. This occasioned great ill feeling, extending also to Franklin, some of his enemies saying that he had even asked for the place himself. He did nominate Hughes. But no action was taken at once. People were divided in opinion as to what to do. They knew that Parliament had only passed the bill by a ministerial vote. They knew the strong opposition it had met, even from friends of the administration, like Alderman Beckford, and from the London merchants; the speech of Richard Jackson, the fiery reply of Isaac Barré to Charles Townshend, and the stalwart position of Conway. They looked for a repeal. In September intelligence came of a change in the ministry, and it was welcomed with frantic joy, as if it gave assurance of immediate repeal. The news was received on Sunday; its reception showed how great had been the tension of public feeling. On Monday the bells rang all day; loyal healths were drunk, bonfires kindled at night, and John Hughes, the stamp distributor, burnt in effigy. A mob surrounded his house, threatening violence, and causing him to load his gun for defense.¹ He wrote to Governor Penn, under date of September 17th, and to John Dickinson, October 3d, that he had not received either stamps, commission, bond, or anything else informing him of his appointment. When they reached New Castle he was afraid to take possession of them. October 5th a crowd surrounded his house as he was lying ill in bed, and obtained his written pledge not to attempt to perform the functions of his new office. In an explanatory letter he says the excitement was stirred up by the Presbyterians chiefly. The mob waited on him with muffled drums, and muffled church-bells ringing; the son of Chief Justice Allen was the leader; the committee who waited on Hughes to demand his resignation comprised James Tilghman, Robert Morris, Charles Thomson, Archibald McCall, John Cox, William Richards, and William Bradford. The Quakers, he writes, Baptists, and Church of England people were decently behaved,

BRITISH STAMP.

ough, Feb. 6, 1764, to which Franklin wrote and published a pamphlet in reply. In his examination in regard to the Stamp Act, and in several pamphlets and memoranda, he stated the entire American case in the clearest and most forcible manner, leaving nothing to be desired towards the completeness of the argument.

The Stamp Act was passed March 22, 1765. A copy of it was printed in the *Pennsylvania Gazette* on April 18th, but this must necessarily have been in advance of news of its passage. The people of Philadelphia began at once to show their determination to make it a nullity so far as revenue was concerned. An enforced frugality was the first step, and of this policy Franklin sounded the key-note. In his examination before the Commons the concluding questions and answers are these: "Q. What used to be the pride of the Americans? A. To indulge in the fashions and manufactures of Great Britain. Q. What is now their pride? A. To wear their old clothes over again, till they can make new ones." In the *Pennsylvania Gazette* of April 18th there was an article against expensive and ostentatious funerals, the writer saying that often £70 or £100 were squandered on such occasions. August 15th, when Alderman William Plumsted was buried at St. Peter's Church, the funeral, by his own wish, was conducted in the plainest way, no pall, no mourning worn by

¹ Hazard, without giving his authority, says that on April 14th, when it was known the Stamp Act would be passed, "the guns at Philadelphia were discovered to be all spiked up, and on looking at those of the barracks, they were found to be served in the same manner, to the great surprise and uneasiness of the inhabitants." (Register, ii. 243.) Westcott has nothing of this story.

but the Presbyterians, "proprietary minions," and "Dutch" were violent.

By the time the stamps arrived a course of action had been decided upon by the colonies. Virginia took the lead; James Otis, in Massachusetts, hit upon the plan of a general congress of the colonies, to meet in New York the second Tuesday in November. The Assembly met September 10th, and appointed Joseph Fox, John Dickinson, George Bryan, and John Morton to represent the province in the congress. The letter from the Speaker of the Massachusetts Assembly was read, the House resolved that in duty to their constituents they ought to remonstrate to the crown against the Stamp Act and other late acts of Parliament, by which heavy burdens have been laid on the colonies, and a committee of the Assembly—Amos Strettel, of Philadelphia County; Thomas Willing, of the city; Giles Knight, of Bucks; Isaac Pearson, of Chester; James Wright, of Lancaster; William Allen, of Cumberland; and John Ross, of Berks—were ordered to draw up a remonstrance. This was reported and adopted September 21st. It claimed that the Stamp Act deeply affected some of the most essential and valuable rights of the people of Pennsylvania as British subjects, and the House thought it a duty to themselves and their posterity to come to the resolutions unanimously adopted, to the effect that the Assemblies of the province had always contributed their quota to the aid of the king upon requisition, and would cheerfully do so in the future when called upon in a constitutional way; "that the inhabitants of this province are entitled to all liberties, rights, and privileges of His Majesty's subjects in Great Britain or elsewhere, and that the constitutional government in this province is founded on the natural rights of mankind and the noble principles of English liberty, and therefore is, or ought to be, perfectly free; that it is the inherent birthright and indubitable privilege of every British subject to be taxed only by his own consent or that of his legal representatives, in conjunction with His Majesty or his substitutes." The members of the Provincial Assembly are the only legal representatives of the inhabitants of the province, and any other taxation laid upon the people than by these representatives is unconstitutional and subversive of right and public liberty and destructive of public happiness. It was further resolved that there was danger to liberty to vest the final decision in suits growing out of the stamp duty in Courts of Admiralty, "contrary to Magna Charta, the great charter and fountain of English liberty, and destructive of one of their most darling and acknowledged rights,"—trial by jury; that the restraints on trade imposed by the late acts of Parliament would be attended with disaster to the province and the trade of the mother-country; "that this House think it their duty thus firmly to assert with modesty and decency their inherent rights, that their posterity may learn and know that it was not

with their consent and acquiescence that any taxes should be levied on them by any persons but their own representatives, and are desirous that these, their resolves, should remain on their minutes as a testimony of the zeal and ardent desire of the present House of Assembly to preserve their inestimable rights, which, as Englishmen, they have possessed ever since this province was settled, and to transmit them to their latest posterity."

On October 25th the merchants and traders of Philadelphia subscribed to a non-importation agreement, such as were then being signed all over the country. In this article the subscribers agreed that, in consequence of the late acts of Parliament and the injurious regulations accompanying them, and of the Stamp Act, etc., in justice to themselves and in hopes of benefit from their example (1) to countermand all orders for English goods until the Stamp Act should be repealed; (2) a few necessary articles, or shipped under peculiar circumstances, are excepted; (3) no goods received for sale on commission to be disposed of until the Stamp Act should be repealed, and this agreement to be binding on each and all, as a pledge of word of honor, "until May—st." A committee to carry the agreement into effect was appointed, consisting of Thomas Willing, Samuel Mifflin, Thomas Montgomery, Samuel Howell, Samuel Wharton, John Rhea, William Fisher, Joshua Fisher, Peter Chevalier, Benjamin Fuller, and Abel James. The retailers adopted similar resolutions, naming as their committee,—John Ord, Francis Wade, Joseph Deane, David Deshler, George Bartram, Andrew Doz, George Schlosser, James Hunter, Thomas Paschall, Thomas West, and Valentine Charles. To carry out these resolutions blanks were printed for the use of importers, and to be sent to England, as follows:

"PHILADELPHIA, Nov. 7, 1765.

"At a general meeting of the merchants and traders of this city it was thus duly unanimously resolved by them (and to strengthen their resolutions they entered into the most solemn engagements with each other) that they would not import any goods from Great Britain until the Stamp Act was repealed. — do, therefore, hereby countermand all order — have heretofore transmitted to you for the shipping of any goods, and — do expect and insist that you pay a strict and literal obedience to this injunction; for should they arrive, and the Stamp Act not be repealed, — shall not dare to dispose of any part of them without a forfeiture of — honor, nor indeed can — engage for their or — own safety."

The following is a list of the signers, many of whom afterwards sided with the Tories:

Thomas Willing, James Pemberton, Joseph Ffox, Joshua Fisher and Son, Alexander C. Smith, B. Fuller, Samuel Burge, Buckridge Sims, Thomas Bond, Jr., T. Morris, Jr., Amos Strettel, Joseph Swift, Thomas Montgomery, John Chew, Stamper and Bingham, Abraham Mitchell, John Bayard, John Gilson, Thomas Smith, Conyngham and Nesbitt, Carson, Barclay and Mitchell, Israel Morris, Jr., Benjamin Gibbs, Francis Jeyes, Robert Montgomery, Samuel Caldwell, John Ladd Howell, Samuel Purviance, Jr., John Ross, Benjamin Wyncoop, John Wykoff, James Harding, Peter Reeve, Samuel Hudson, Daniel Benezet, Sampson Levy, John and Peter Chevalier, David Deshler, David Sproat, William Richards, David Potts, Wills and Jackson, John and David Wray, Rupert Meredith, Joseph Richardson, Joshua Howell, Richard Parker, Samuel Morton, William Heysham, John Pierse, William Bradford, Thomas West, Ben-

jamin Rawle, James Harvey, Zachariah Hutchings, Philip Benezet, Tench Francis, Joseph Wood, Thomas Wharton, Jr., Benjamin Morgan, Charles Thomson, William Sitgreaves, Caleb Jones, John Hart, Tench Tilghman, William Henry, George and John Kidd, Peter Turner, Sr., Isaac and Joseph Paschall, Lydia and Elizabeth Hyde, William Symonds, John Test, Joseph Pennock, Jr., Robert Taggart, William Falconer, William Craig, Owen Biddle, Benjamin Hooton, Samuel Carruthers, Jacob Shoemaker, Jr., Bartram and Dundas, Robert Bass, Payton and Adcock, Nathaniel Tweedy, Richard and Peter Footman, Adam Hoops, Caleb Hewes, Samuel Fishier, Joseph Baker, Coxe and Firman, Robert Waln, George Robotham, Andrew Bankson, Hugh and George Roberts, Jeremiah Warder, Robert Tuckniss, John Cox, Theodore Gardner, Samuel Sanson, Jr., Thomas Bond, James Eddy, Philip Kearney, Richard Bache, Jonathan Evans, Anthony Stocker, Joseph Sims, Hugh McCollough, John Knowles, William Vanderspeijle, Philip Syng, Garret and George Meade, J. Bell, Magee and Sanderson, John Hughes, Reuben Haines, Owen Jones, Elizabeth Paschall, Benjamin Davis, Hudson Emlen, Richard Waln, Peter Thomson, William Pollard, Henry Keppelle, Jr.

When the Stamp Act was about to go into effect there was great uncertainty how people should act. In this emergency John Dickinson, whom Bancroft justly calls "the pure-minded and ingenuous patriot," issued an anonymous address¹ to his "Friends and countrymen," warning them that their conduct at this period would decide their future fortunes and those of their posterity, and whether Pennsylvanians were to be freemen or slaves. "May God grant," he wrote, "that every one of you may consider your situation with a seriousness and sensibility becoming the solemn occasion, and that you may receive this address with the same candid and tender affection for the public good by which it is dictated." He counsels, he enjoins it upon his countrymen as of the most imperative necessity to make the sternest and most uncompromising resistance to the Stamp Act, any compliance with which will "fix, will rivet perpetual chains upon your unhappy country. Think, oh! think," he adds, "of the endless miseries you must entail upon yourselves and your country by touching the pestilential cargoes that have been sent to you. Destruction lurks within them. To receive them is death. It is worse than death; it is SLAVERY."

These are not the words of a trimmer nor a waiter upon Providence. Yet it is the fact that Dickinson, whose bravery and patriotism none doubt, was not a man of action. Others ran past him and clutched the opportunity while he was still debating in his mind if it had arrived. His nature was judicial, not executive nor fitted for sharp and sudden emergencies.

It will be most fitting, in this place, to say a few words in regard to the most prominent leaders of the people of Philadelphia in this time of approach to the Revolutionary war; of their characters and circumstances we mean, their acts will not need comment. Besides Franklin, there were Joseph Gallo-way, John Dickinson, Charles Thomson, and Thomas Willing, who were in the front of affairs in connection with the stamp duty; later, on the threshold of battle, Joseph Reed, Thomas Mifflin, Robert Morris, and, in a lesser degree, George Clymer, Thomas McKean, Thomas Wharton, Jr., Francis Hopkinson, Benjamin Chew, etc. These men, directly or by marriage, were connected with the leading families of Philadelphia of all the sects. They were all men of ability and influence, differing greatly in character,

¹ Commonly attributed to Dickinson at the time and since. The proof that he was the author may be found in the letter of Charles Thomson to William Henry Drayton, of South Carolina, quoted from by William B. Reed in his "Life of President Reed," but first published (from the Sparks MSS. in Harvard Library) in the *Pennsylvania Magazine*, ii. 412. Mr. Thomson says, "It is generally known what an early part Mr. Dickinson took in the American disputes. His first piece was written in the year 1765, during the Stamp Act."

temperaments, and political opinions, but all honest and earnest men. We may not like Galloway; we may despise his principles and his acts, and we may be impatient at the hesitancy and halting of Dickinson, as at the attempts of Reed at compromise and reconciliation when independence was alone the question and there could be no other, but we have no right to impeach their motives, and we must accept them as representative men.

Joseph Galloway, who, from leading the opposition in the Assembly as Franklin's successor, became the defender of prerogative and a bitter Tory and refugee, a spy and a pensioner of George III., was a lawyer by profession, born in West River, Anne Arundel Co., Md., about 1730. His father, Peter, was a man of good fortune, Joseph himself well educated. He came to Philadelphia young and was soon a prominent lawyer, making money. The estate he left in Philadelphia in 1778, and which was confiscated, he claimed was worth forty thousand pounds. He married a daughter of Laurence Growden, long Speaker of Assembly and leading Quaker, through her acquiring the fine estate of Trevoise. This was not confiscated and is still held in the family, an original grant of 1681-82. Galloway entered the Assembly in 1757 and became at once a leader, continuing so until his defeat for the Second Continental Congress, a punishment for his lack of patriotism in the first. He was Speaker of Assembly from 1765 to 1774, and led the popular party, he and Franklin making common cause against Dickinson and the proprietary in 1764. He joined the British in 1776, was provost marshal of Philadelphia during Howe's command there, and when he went to England was one of the most active of the loyalists there, his knowledge of men and things in Philadelphia making him very serviceable. His dangerous activity made him well hated, but his abilities were admitted. John Adams says he was "sensible and learned, but a cold speaker," and Dr. Stiles says he "fell from a great height." Some of his former friends, when he escaped from Philadelphia, sent him a trunk containing a halter; Trumbull, in "McFingal," said he began by being "a flaming patriot," but that is unjust; he said he would sacrifice and dare as much for liberty as any man, but his was a Tory interpretation of liberty. Francis Hopkinson couples his name with Cunningham, keeper of the provost prison, in a common infamy; but that was not his sober judgment. Galloway printed many pamphlets after he went to England, and in them did not spare the ministry nor Howe and the army. He never returned to his native city; after the peace he studied and wrote books on the Revelations and other prophecies, and died in England in 1803. He was an associate of Thomas Wharton (the elder) and William Goddard in founding the *Philadelphia Chronicle*.

Charles Thomson (or Thompson) was in some respects one of the most interesting characters of the

Revolution. His life has never been written, because he deliberately destroyed the materials for it; he knew more of the inside history of the great struggle than any other man, but never opened his lips about it, burning his papers before his death and calmly insisting that his secrets should die with him. This self-repression cost him no pangs; it was natural to him; he habitually acted behind the scenes and by indirect methods, and he did this not from any spirit of intrigue or other unworthy motive, but because his nature seemed to demand it. He was the soul of truth and honor, frank, ingenuous, much beloved of his friends, serene, companionable, quiet, yet evidently

Chas Thomson

capable of emotions of the very strongest sort, so that he fainted from excitement in speaking upon the Boston Port Bill, and John Adams spoke of him as "the Sam Adams of Philadelphia." Perhaps it was this excitability and his consciousness of it which made Thomson always avoid the demonstrative part of the great work to which he had laid his hand, and which he did so thoroughly. This, and the untoward circumstances of his childhood, may suffice to explain the seeming anomaly in Charles Thomson's character. He was born in Ireland, whence, in 1740, being then eleven years old (born November, 1729, at Maghera, Derry), he, an elder brother, three sisters, and a sick father, crossed the ocean for the Delaware. His mother had died when Charles was very young, and the father died on the voyage and was buried at sea. The captain of the vessel seized the children's effects and put them ashore at New Castle, committing Charles to the care of a blacksmith, who proposed binding the boy to his trade. To defeat this Charles at once ran away, found a friend on the road, a lady, a stranger to him, was taken under her care and sent to school to Dr. Francis Allison, at Thunder Hill, Md. Then, and afterwards, the lad was a diligent student, and was made usher under Allison when the

latter became vice-principal of the Philadelphia College. Thomson lodged with David J. Dove, and may have taught in the latter's private school, and in the Germantown Academy also. To show the habitual caution of the man, he got a certificate of good character from Dove and his wife both before leaving their house. He taught in the Friends' School, in Fourth Street, below Chestnut, becoming principal.

RESIDENCE OF CHARLES THOMSON.

His first public service was as short-hand reporter for the Quakers in 1757, at the famous Indian Council that year, when Tedyuscung gave him the name which stuck to him, *emeritus*, through life,—Weag-conlau-mo-und,—the man who tells the truth. After this Thomson went into business and made money. Watson says he was interested in iron-works at Egg Harbor.

As soon as the suspicions of ministerial intention to tax America were awakened, Thomson began to correspond with leading men in the other colonies. He was intimate with Franklin, trusted in business circles, and must have revealed his qualities as a confidential agent very early. Jefferson and he corresponded as early as 1764; the New England patriots all knew him, and he was secretary of the New York (Stamp Act) Congress of 1765. He managed all the political leaders in Philadelphia as easily as puppets are moved by the hand pulling their wires. He was secretary of the First Continental Congress, perpetual secretary of Congress during and after the war (fourteen years in all), and confidential friend of every leader in the colonies throughout the struggle. The delicacy of his responsible and confidential relations to Congress were enhanced by the fact that he obviously had charge of the secret service of Congress, and that body required to have spies everywhere, domestic and foreign, and of every grade. Watson learned from him, incidentally, perhaps accidentally, that James Rivington, the Tory printer, in New York, was one of these agents, and Mrs. Logan reports that Patience Wright, the wax modeler, was another. The latter had the means to be very useful. She was intimate with Franklin, passed for a half-mad woman, went where she pleased, even to Wind-

sor Castle, without leave, where she used to burst in abruptly, calling the king "George" and the queen "Charlotte," and withal she was astute, shrewd, and full of resources. Thomson married, for his first wife, a daughter of Charles Mather, of Chester County. His two children by her died in infancy. In 1774 he married Hannah Harrison, daughter of a Maryland Quaker of fortune, and with her got the estate of Harriton, in Montgomery County, a large property for a man of Thomson's simple ways. His wife was a kinswoman of John Dickinson's, and a lineal descendant of Isaac Norris and Governor Thomas Lloyd. The wedding had just taken place when Thomson was called to act as secretary of Congress. After he was relieved from this place he steadily declined to take any other public position, gave twelve years' hard labor to the preparation of a translation of the Septuagint and Greek testaments, and survived until Aug. 16, 1824, his mind much decayed by age in his last quiet years.

John Dickinson's character is puzzling, because a mixed one; every character the elements of which are rich and the tone deliberative will appear contradictory to those who judge of men by the test of action alone. Dickinson was born in Talbot County, Md., Nov. 2, 1732. His father was Samuel Dickinson, of Dover, Del., where he was judge; his mother (a second marriage) was Mary Cadwalader; his tutor was Kilen, afterwards chancellor of Delaware; he studied law under John Moland, Philadelphia, and completed his studies by a three years' course in the Temple. He went into the Assembly in 1762, wrote his "Farmer's Letters" in 1767-68, was married in 1770 to Mary Norris, daughter of Isaac Norris, Jr., and Sarah, daughter of James Logan; was chairman of the Committee of Conference in 1774, member of the Committee of Safety in 1775, member of Congress 1774-76, colonel of State troops in 1776, delegate to Congress from Delaware in 1777, president of Delaware in 1780, president of Pennsylvania, 1782-85, member of the National Constitutional Convention, 1787, and of the Delaware Constitutional Convention in 1792. He died in Wilmington, Feb. 14, 1808, aged seventy-five years. "Truly he lives in my memory," said William T. Reed, "as a realization of my beautiful ideal of a gentleman." That was apparent to all, and it may have been the reason why John Adams did not like him, and wrote of him, "A certain great fortune and piddling genius, whose fame has been trumpeted loudly, has given a cast of folly to our whole doings." Dickinson had the misfortune to be *un homme incompris*; he was sensitive, proud, haughty, disappointed, too, perhaps, that he could not persuade the Revolution to move on as he would have had it do, and perhaps thought his pen and voice could make it do, like a gentleman's chaise and pair over a smooth lawn. He was too precise, courtly, and formal, perhaps, to suit his business-like colleagues, who could not conceive so much grace and polish to be compat-

ible with earnestness. He was in dead earnest for all that, though he certainly did not want any fighting, having a lawyer's dread of the truth of the maxim, "*Inter arma silent leges.*" He was ambitious, too, sought popularity, and writhed under the imputations of incivism which defeated him for Congress in 1776. He shows this in a letter to Charles Thomson, Aug. 17, 1776, in which, according to Watson, he speaks in raptures of his delight at having cast off his popularity, and says his friend "may recollect circumstances that are convincing that my resignation was voluntary, I might have said ardent." One does not write thus unless one is hard hit. But he never let any such things swerve him from what he thought the path of duty; he looked upon himself, he said, "as a trustee for my countrymen, to deliberate on questions important to their happiness," and, he added, "if the present day is too warm for me to be calmly judged, I can credit my country for justice some years hence."

To the great credit and well-known patriotism of the house of Willing & Morris, the country owed its extraction from those trying pecuniary embarrassments so familiar to the readers of our Revolutionary history. The character of Mr. Willing was in many respects not unlike that of Washington, and in the discretion of his conduct, the fidelity of his professions, and the great influence, both private and public, which belonged to him, the destined leader was certain to find the elements of an affinity by which they would be united in the closest manner. During a part of the war the headquarters of the general were in a house built on Mr. Willing's estate for his son-in-law, Col. Byrd, of Westover, in Virginia, and only separated from his own by the intervening grounds of his garden, which extended from Third to Fourth Street, and along Fourth several hundred feet from Spruce Street. Not only the best society in Philadelphia visited the Willing mansion, but all worthy strangers from the North or South, representatives of noted families, were entertained there.

Thomas Willing, the mercantile partner of Robert Morris, was descended from Joseph Willing, of

Gloucestershire, who married, about two hundred years ago, Ava Lowle, of that county, the heiress of a good estate, which had descended to her through several generations of Saxon ancestors, and whose arms¹ he seems to have assumed, on their marriage, in place of his own. Their son Thomas married Anne Harrison, a granddaughter in the paternal line of Thomas Harrison, a major-general in Cromwell's army, and in the maternal of Simon Mayne.

In 1720 the elder Thomas Willing visited America, and spent five years here. In 1728 he brought his son Charles over, and established him in commercial business in Philadelphia, himself returning home.

Charles Willing pursued in Philadelphia for a quarter of a century, with great success and with noble fidelity to its best principles, the profession of a merchant, in which he obtained the highest consideration by the scope, vigor, and forecast of his understanding, his great executive power, his unspotted integrity, and the amenity of his disposition and manners. Towards the close of his life he discharged, in 1748 and again in 1754, with vigilance, dignity, and impartiality, the important functions of the chief magistracy of the city in which, during his last term of office, he died, respected by the whole community, in November, 1754, at the early age of forty-four. His wife was Anne, granddaughter of Edward Shippen, a person, as will be seen in this narrative, of

Wm. Dickinson

commanding influence in Pennsylvania. His son was Thomas Willing, who was born Dec. 19, 1731 (O.S.). Mr. Willing was an excellent man in all the relations of private life, and in various stations of high public trust deserved and acquired the devoted affection of his family and friends and the universal respect of his fellow-citizens.

Mr. Willing had been carefully educated at Bath, in England, and although contemplating probably the career of a merchant, had been liberally trained in classical studies, and had pursued for some time a

¹ "Sable a hand, couped at the wrist, grasping three darts, one in pale and two in sallure argent."

Thos. Willing

regular course of legal reading as a student in the Temple. He returned to America, and on Feb. 28, 1761, was commissioned a justice of one of the courts of Philadelphia, and on Oct. 4, 1763, was elected by the Common Council mayor of the city. On Sept. 14, 1767, he was commissioned associate justice of the Supreme Court of Pennsylvania, and continued on the bench until the breaking out of the Revolutionary struggle. As a judge he was pure and intelligent, added to which, he possessed an amenity of manner which rendered him popular with the bar and attractive in society. Being possessed of a fortune, he became the head of the mercantile house of Willing & Morris, one of the largest in the country, and, after the breaking out of the Revolutionary war, were the agents of Congress in supplying naval and military stores. He was a representative to the General Assembly, a leader in the movement against the Stamp Act, chairman of a Revolutionary meeting in June, 1774; President of the Provincial Congress, and a delegate to the Continental Congress in 1775-76, in the place of Joseph Galloway (but voted against the Declaration of Independence, because, like John Dickinson and many other distinguished men of the day, he considered the act premature and unnecessary, and the colonies were not yet ready for independence).

At a critical period of the war, when there was great danger of the dissolution of the American army, for want of provisions to keep it together, a number of patriotic gentlemen in Philadelphia subscribed two hundred and sixty thousand pounds to procure the necessary supplies. Of this amount Thomas Willing subscribed five thousand pounds. Robert Morris and Mr. Willing, after the war, founded the Bank of North America, the first chartered in this country, and Mr. Willing was elected its first president. He was also president of the first "Bank of the United States." With these public duties he united the business of an active, enterprising, and successful merchant, in which pursuit, for sixty years, his life was rich in examples of the influence of probity, fidelity, and perseverance upon the stability of commercial establishments, and upon that which was his distinguished reward upon earth,—public consideration and esteem. He died Jan. 19, 1821, aged seventy-nine years and thirty days.

Robert Morris, the partner of Thomas Willing, was born in Liverpool, England, on the 20th of January, 1733-34 (O.S., or Jan. 31, 1734, N.S.). At

an early age he came to Philadelphia, and in 1748 was put in the counting-room of Charles Willing. In 1754 he formed a partnership with Thomas Willing, business importing,—a partnership lasting thirty-nine years, or until 1793. Morris was on the committee to demand the resignation of Stamp-Distributor Hughes, and was prominent in the non-importation movement. In 1766 he was made a port warden; in 1775 was vice-president of the Committee of Safety and delegate to the Second Congress, where he was made chairman of the Secret Committee. He did not vote for the Declaration of Independence,

Rob Morris.

and voted against Richard Henry Lee's preliminary resolutions, thinking the time had not yet arrived. He signed the instrument, however. The part he played in the Revolution was an indispensable one, and probably no other man in America had the means, the ability, and the will to do it so well. He was a delegate to the convention to form the Constitution, and, aristocrat as he was, wanted senators chosen for life. He was the first United States senator appointed from Pennsylvania, but declined the Secretaryship of the Treasury in favor of Hamilton. In 1797-98 he was ruined by commercial reverses and

unfortunate land speculations, and occupied a room in a debtor's prison for three years and a half. He died May 7, 1806, and was buried in Christ churchyard. He married Mary, youngest child of Thomas and Esther (Heulings) White, sister of Bishop White, of Sophia's Dairy, Md., on March 2, 1769, and they had seven children. Morris was a man who loved wealth, which he had a natural talent for getting, because he liked what it commanded, but he was of a philosophic temperament. In his will he wrote, a year or two before his death, "Here I have to express my regret at having lost a very large fortune acquired by honest industry, which I had long hoped and expected to enjoy with my family during my long life, and then to distribute it among those of them that should outlive me. Fate has determined otherwise, and we must submit to the decree, which I have endeavored to do with patience and fortitude."

THE MORRIS HOUSE.

Joseph Reed was the son of Andrew Reed, an Irish merchant doing business in Trenton, where Joseph was born, Aug. 27, 1741. He studied law, after graduating at Princeton, with Richard Stockton, and afterwards in London in the Middle Temple, returning to practice his profession in Philadelphia, and in 1770 going to London again to get his wife, a Miss De Berdt, daughter of a merchant there. In 1774 he entered political life, on occasion of the Boston Port Bill, and in 1775 was elected president of the Provincial Convention of Pennsylvania, soon after becoming Washington's military secretary, and in June, 1776, adjutant-general of the Continental army. In May, 1777, he was appointed brigadier-general, and in September of that year elected to Congress.

In 1778 he was elected President of Pennsylvania, was subsequently elected to Congress for another term, and died in Philadelphia in March, 1785, in his forty-third year. He was a man of great abilities and of sterling patriotism. His character in the latter particular was assailed by Gen. John Cadwalader in a famous contemporary pamphlet. The same charges were afterwards reiterated by anonymous writers. Bancroft adopted them, and William B. Reed in later years

defended his grandfather's patriotism. It has lately been proved that the Reed of whose treasonable practices Bancroft found evidence was not Joseph Reed, but a militia Col. Read.

Thomas McKean, afterwards chief justice and Governor of Pennsylvania, was born in Chester, 1734, and in 1765 was delegate to the Stamp Act Congress in New York. He was on the bench in 1765, and ordered business to proceed as usual without the use of stamped paper. He was a delegate to the Continental Congresses from 1774 to 1783, and signed the Declaration of Independence. He was elected Governor of Pennsylvania in 1779, serving nine years; retired from public life in 1808, and died in 1817.

Benjamin Chew was a leading lawyer, attorney-general, chief justice at the outbreak of the war, suspected and attainted of treason,—a man of wealth, ability, and great knowledge of the law.

Thomas Mifflin was of a prominent Philadelphia family, member of Assembly for many years, major-general in the Continental army, president of Council, and Governor of the State,—a man of winning energy and forceful popularity. George Clymer, a descendant of Samuel Carpenter, who built the "slate-roof house," was also son of a leading captain of privateers; had wealth and station, and was Commissioner of Indian Affairs in 1780 and vice-president of the Agricultural Society in 1793. Francis Hopkinson was the literary wit, the chief of the squib and pasquinade artillery in Philadelphia during the war. He was a favorite with Franklin, and his pen really did valuable service along the skirmish-line. His ballad, the "Battle of the Kegs," was as good a hit as André's "Cow Chase" on the other side. He planned and designed the great Federal Fourth of July procession in Philadelphia in 1788, and died May, 1790, being judge of the United States District Court.

The contrivances for evading the Stamp Act, as the day for its enforcement drew nigh, were numerous, ingenious, and sometimes amusing. The almanacs for 1766 came out in July, 1765. When the lethal 1st of November approached, the newspapers went into mourning in token of their dissolution, for they resolved to discontinue publication sooner than use stamped paper. The *Journal* of October 24th, in mentioning the execution of Henry Hurlburt for the murder of John Woolman, said, "He will never pay any taxes unjustly laid on this once happy land." Bradford followed this sort of thing up. On Thursday, October 31st, his *Journal* was black-lined from column to column, with skull, pickaxe, spade, and cross in lieu of the ordinary head, and this motto, "Expiring in hopes of a resurrection to life again." There was also a card announcing the suspension of the paper. In other parts of the sheet other mortuary symbols were printed, and an obituary notice was also given: "The last remains of the *Pennsylvania*

Journal, which departed this life the 31st October, 1765, of a stamp in her vitals, aged twenty-three years." This was No. 1195 of the *Journal*; the next appeared on November 14th, and was numbered 1197, which would have been the regular number if the publication had been continuous. The *Gazette* resumed regular publication November 21st. It only needed the brief experience of two or three weeks to prove that the Stamp Act was a dead letter, and could not be carried into effect. Legal business was suspended and the public offices were closed on November 1st, not to open again until the ensuing May. There was not much disorder, because the people made it plain that it would be dangerous to use the stamped paper or stamps under any circumstances. All that was captured was burned publicly. John Hughes was expelled from the fire company of which he was a member, and Joseph Galloway forced to deny, in a handbill, that he had tried to embarrass the anti-stamp movement. In the elections for Assembly this year much ill feeling was engendered. Hughes was defeated, but Galloway was elected and the anti-proprietary party beaten. Controversy ran high, and the usual crop of caricature and broadside was soon abroad.

As the winter advanced into 1766 the public dissatisfaction augmented and the determination deepened to prevent, if possible, the enforcement of the hated act. Stamps were burned wherever found, and captains of vessels arriving learned that it was not safe either to keep or carry them. In February the people very generally signed an agreement not to eat or suffer to be killed any lamb or sheep until Jan. 1, 1767, and not to deal with butchers violating the compact. Economy and frugality were enforced by examples in high and low, and steadfast efforts made to promote the market for home-manufactured goods. The stamp tax was repealed March 18, 1766, and the news reached Philadelphia May 20th. The assertion of the right of taxation, which was coupled with the repeal, tempered somewhat the joy of the occasion, but still there was much rejoicing. A copy of the act was read at the Coffee-House¹ in the presence of a

considerable crowd, and the cheering was lusty. A deputation was sent forthwith to board the brig "Minerva," which had brought the news to the city, and fetch Capt. Wise. A present was made to the crew, and the captain was escorted to the shore and Coffee-House, with colors flying, amid echoing huzzas. A bowl of foaming punch was brewed, and the captain and all drank bumpers to the sentiment, "Prosperity to America," and then the bearer of glad tidings was presented with a gold-laced cocked hat. At night the city was illuminated, wood given out for bonfires, and barrels of beer rolled out, that the fun might flow freely. Next day the mayor, John Lawrence, assisted by some aldermen, presided at a banquet of three hundred covers, at the State-House, where a great number of loyal toasts were drunk, not

forgetting one expressly to "the Virginia Assembly," and another to "Daniel Dulany, Esquier." A Pitt medal, struck in England, was distributed, the great commoner's portrait was seen everywhere, and it was impossible for any man to be more popular.

June 4th, the king's birthday, was made the occasion of a great special *fête*, when the people laid off their homespun, wore clothes of English goods, and met in jubilee picnic on the banks of the Schuylkill. A smack and a barge, mounted on trucks, decorated and manned by musicians and ship-carpenters, were drawn through the streets by horses to the place of rendezvous, firing salutes from swivels as they passed.

When the company united

at the grove a table was spread for four hundred and thirty persons, and there were toasts and more salutes.

Isaac

many years, until the City Tavern superseded it, the unofficial town business was chiefly transacted. This was built on a lot patented by William Penn to his daughter Letitia, and by her sold in 1701 to Charles Read, who built on it a quaint two-story house, with two-story gables above. Israel Pemberton bought the house and lot after Read's death, and John Pemberton inherited the property. On April 11, 1764, Bradford, in his *Journal*, notifies the subscribers to a coffee-house to meet at the court-house on Friday, 19th inst., to choose trustees. The trustees of the London Coffee-House in 1765 were George Okill, William Grant, William Fisher, and Joseph Richardson. They had collected three hundred and forty-eight pounds in subscriptions of twenty and thirty shillings each, paid Bradford's account of £20 6s. for opening the house, and had lent him in cash £259 6s. Bradford applied to Governor and Council for a license, "having been advised to keep a coffee-house for the benefit of merchants and traders, and as some people may be desirous at times to be furnished with other liquors besides coffee, your petitioner apprehends that it is necessary to have the government license." This

¹When mention is made of "the Coffee-House," the old place on the southwest corner of Front and Market Streets is meant, where for

At night the *fête* was kept up with fireworks, and altogether there was a pleasant, decorous, and successful celebration of the restoration of harmony.

But harmony between court and province did not prevent the heats of local faction from glowing. The opponents of Franklin, Hughes, and Galloway pursued them with every sort of weapon, and successfully, if we may infer the impression which such obviously poignant satire and home-thrusting jibes were likely to make. Bradford, it is probable, directed a good deal of this fire against Franklin and Galloway; it is certain he defeated Hughes by publishing, in a supplement to the *Journal*, that worthy's letters to the London commissioners of the stamp-office. These letters, with those of Hughes and Galloway to Franklin about the Stamp Act, were so galling that both of them denied the letters were genuine, and Hughes brought suit against Bradford for libel. The latter, however, showed that the letters were verbatim copies.

In May, 1767, Charles Townshend brought into Parliament his tax bill for the colonies, levying duties on paper, glass, painters' colors, lead, and tea. The bill became a law on June 29th, and all the old excitement was kindled anew, with still greater intensity. The Selectmen of Boston asked the corporation of Philadelphia to co-operate with them in the non-importation policy, determined upon in a meeting held October 28th, but the answer was a guarded and non-committal expression of sympathy, no more. Meantime, however, John Dickinson had begun in the *Chronicle* the publication of his "Letters of a

Farmer of Pennsylvania to the Inhabitants of the British Colonies," and nothing could have been more opportune and effective in instructing and consolidating public opinion. This was shown when, in February, 1768, the Assembly of Pennsylvania voted to instruct the London agents of the province to co-operate with the agents of other colonies "in any decent and respectful application to Parliament" for a repeal of the acts. On April 25th, moreover, the merchants of Philadelphia held a meeting, and adopted an address setting forth the grievances of the colonists. This paper, supposed to have been written by Dickinson, detailed succinctly the subjects of complaint. 1. The law against making steel, while Eng-

land herself was importing nearly all she consumed from Germany. 2. Against plating- and slitting-mills and iron manufactures, iron being the product of the country and its manufactured forms articles of prime necessity. 3. Against hat-making. 4. Against woolen manufactures. 5. Against the exclusion of American traders and vessels from foreign markets. 6. Against all exportations, except such as are made through England, instead of direct to the consuming countries. 7. The duty on Madeira wines. 8. The shipment of convicts and paupers to the colonies, etc., etc. The address concluded with the following words: "Let us never forget that our strength depends upon our union, and our liberty on our strength."

"United we conquer, divided we die."

There was another meeting at the State-House in August, at which an address similar to the above was

John Dickinson

was Bradford, the printer of the *Journal*, grandson of the first William Bradford, the printer, and nephew of Andrew Bradford, the printer. In 1741 he began publishing the *Journal*, and also sold books at the sign of the Bible, corner of Second Street and Black Horse Alley. He was captain in the Association Volunteers, and acted with the leading men of the city in combating the stamp tax. When the war broke out, in 1775, Bradford held the commission of major in the Philadelphia militia. He marched to Washington, and at Princeton was wounded and got his grade as colonel. He rendered many other important military and civil services during these times, and was in Fort Mifflin during its bombardment. He died in 1791. His son, by his wife Rachel, daughter of Thomas Budd, was Hon. William Bradford, the lawyer, a graduate of Princeton, attorney-general of Pennsylvania, justice of the Supreme Bench of that State, and Attorney-General of the United States under

Washington. When the British evacuated Philadelphia, in 1778, Col. Bradford returned and reopened his coffee-house, but he found that its popularity was gone, and he withdrew from its charge in 1780. Up to this time the London Coffee-House had been a central point for news and intercourse among leading men. Bradford's respectability and standing gave it the necessary prestige and insured its success. "Here," says Westcott ("Historic Mansions of Philadelphia"), "merchants did greatly congregate; captains repaired to the Coffee-House to make their reports and to discuss with consignees or consignors, as the case might be, the incidents of the last and the expectations of the coming voyage. Strangers resorted to the Coffee-House for news. Provincial dignitaries, officers under the crown and of the army and navy, frequented the establishment in the colonial days and gave way in turn to rebel militiamen,—Continental colonels and majors, and captains of

adopted, and resolutions were likewise passed in favor of non-importation of the articles subject to duty. Lord Hillsborough wrote to Governor Penn, asking his influence to prevent the Assembly from indorsing the address of the Massachusetts representatives (which was already on the minutes of the Assembly). Mr. Penn simply sent the letter to the Assembly. The latter immediately acted on a circular received from the Virginia Legislature, which affirmed the grievances complained of by Massachusetts, and recommended a union of the colonies. The Pennsylvania Assembly adopted resolutions in the spirit of this circular, and a committee was appointed to prepare petitions for transmission to king and Parliament. The Assembly further affirmed its right, under

popular at this time. The people of Boston gave him a vote of thanks in town-meeting. The Society of Fort St. David's, Philadelphia, elected him honorary member, and sent him the freedom of its guild in a box made of heart of oak, lettered in gold.¹ The people seemed to feel they had a grave struggle before them; they were grateful to all who helped their cause, and sympathized with all who struggled against tyranny. In April, 1769, the birthday of Pasquali Paoli, the Corsican patriot, was celebrated with a notable dinner at Byrne's tavern; there were numerous toasts, and there was much patriotism. Liberty and loyalty were generally coupled together, but the dominant sentiment was "liberty any how, loyalty if not incompatible with liberty."

The TIMES are
Dreadful,
Difmal
Doleful
Dolorous, and
DOLLAR-LESS.

THE

NUMB. 1195.

PENNSYLVANIA JOURNAL; AND WEEKLY ADVERTISER.

EXPIRING: In Hopes of a Resurrection to LIFE again.

I AM sorry to be obliged to acquaint my Readers, that as **THE STAMP ACT**, is fear'd to be obligatory upon us after the *First of November* ensuing, (the fatal To morrow) the Publisher of this Paper unable to

bear the Burthen, has thought it expedient to stop awhile, in order to deliberate, whether any Methods can be found to elude the Chains forged for us, and escape the insupportable Slavery, which it is hoped, from the last Representations now made against that Act, may be effected. Mean while, I must earnestly Request every Individual

of my Subscribers many of whom have been long behind Hand, that they would immediately Discharge their respective Arrears that I may be able, not only to support myself during the Interval, but be better prepared to proceed again with this Paper, whenever an opening for that Purpose appears, which I hope will be soon.

WILLIAM BRADFORD

the charter, to sit or adjourn when it pleased, in defiance of the Governor's power of prorogation, and its right also to correspond with other colonies, and petition king and Parliament for a redress of grievances. Dickinson's "Farmer's Letters" had made him very

the State and Continental flotillas and fleets. It was the headquarters of life and action, the pulsating heart of excitement, enterprise, and patriotism as the exigencies of the times might demand. In front of the building public auctions were held. Many a slave stood up there on bench or box, was exhibited to the bystanders, and, after strenuous efforts on the part of the auctioneer to obtain an exorbitant price, was knocked down to the highest bidder. Here frequently the sheriff was seen exposing to sale the real estate of some unfortunate debtor or putting up under proceedings in partition property, the proceeds of which were to be divided among anxious and expectant heirs. All Philadelphia ranged around this old building for a quarter of a century, and it was the scene of many excitements."

Philadelphia's citizens were now prepared for the practical enforcement of the non-importation policy, and they soon had occasion to test the constancy of their purposes. John Swift, collector of customs, seized some pipes of wine and stored them upon the charge that their consignee was trying to evade the revenue laws. The storehouse was broken into at night, the wine carried off and delivered to the owner, while the collector's house was stoned. The next day the owner, by advice of merchants, returned the wine to the government store, and some of the mob were afterwards tried and convicted in the mayor's court.

¹ A full and interesting description of this episode, too long to be extracted, may be found in Westcott's "History of Philadelphia," chap. cix.

But the ice had been broken. This was in April. In July a load of malt came to port from Yarmouth, consigned to Amos Strettel, who denied any knowledge of the goods when confronted by the committee of merchants. The latter, however, looked upon the importation as an infringement of the non-importation agreement, and called a meeting of citizens at the State-House, at which it was resolved to discourage every attempt to counteract or defeat the purpose of the agreement. The brewers attended in a body, and presented a pledge, signed by Haines & Twells, Isaac Howell, Anthony Morris, Jr., Francis Coade, Anthony C. Morris, Reinard Kreimer, Moore & Ches-

was understood his name should be published. Still, some individuals did try to evade the regulations. One man was caught trying to buy cheese of the mate of the "Speedwell." The Committee of Merchants waited upon him at once, and remonstrated with him so effectually that he felt constrained to give his cheese to the poor debtors in the jail, adding two dollars to enable them to buy bread to eat with it. Two or three more, caught in the same way, added beer to the bread and cheese, so that the prisoners had quite a feast of it.

In October the brig "Friends' Good Will" arrived in port from Hull. This vessel brought considerable merchandise, shipped by English traders without orders and at their own risk, upon speculation, consigned, however, to different persons in the city. The Committee of Merchants ordered the goods to be sent

back again across the ocean, and it was done. It would have been dangerous to attempt to resist or disobey such an order. This very same

OLD LONDON COFFEE-HOUSE, SOUTHWEST CORNER OF FRONT AND MARKET STREETS.

nutt, Valentine Stanley, and Woolman & Pusey, to the effect that they would not purchase the malt or brew it for any person whosoever. They also declared that no one ought to deal in it or with it, in any way, and any person who did do so was one "who had not a just sense of liberty, and is an enemy to his country." The result was, the cargo of malt had to be sent back to England.

In August the brig "Speedwell" came up the river from England, with dry-goods consigned to various merchants. They were on small orders, forwarded before the agreements were entered into, and the goods were stored for safe-keeping, new pledges being exacted not to withdraw them for sale until the obnoxious acts had been repealed. Any one violating the agreements was denounced as a public enemy, and it

month occurred the first case of tarring and feathering in Philadelphia,—an informer who lodged charges of smuggling against individuals. He was caught, ducked, placed in the public pillory, smeared with tar, adorned with feathers, and then paraded through the streets for two hours.

The general irritation was aggravated by the supercilious behavior of the king's representatives and officers, military, naval, and civil. They had always expressed contempt for the provincials as an inferior order of people; now they looked upon them as already rebels. Numerous contemporary accounts may be found, in Graydon and other journal-keepers of the day, of the extremes to which this sort of thing was carried. The captain of the royal armed schooner "Gaspee" (the same burned a year or two later by

the New Englanders) was noted for his brutality. He and his officers maltreated Davis Bevan, a citizen of Chester County, put him in irons, and otherwise abused him. Bevan, in return, sued them for ill treatment. The people were no longer in a frame of mind to submit to things which they would not have noticed five or six years before. They quarreled with the captain of a sloop-of-war for firing a salute on arriving in port. They accused the customs collector and naval officer of extorting illegal fees. The women took part in the quarrel also, and it was every day more and more noticeable that the spirit of union was diffusing itself among the colonies, each part and section espousing as its own the grievance of every other part.

By the beginning of 1770 the question of price threatened to disturb the non-importation agreement. Goods became scarce, of course, under such a system, but it was part of the agreement not to advance prices. The forestallers, however, disregarded this for the sake of profit. They combined and ran up tea from three shillings threepence to five shillings per pound. A writer threatened to give the names of such dealers, and a controversy sprang up. One outcome was to denounce the drinking of tea at all. The *Journal* estimated that the consumption of tea in Philadelphia exceeded two hundred pounds per day, the first cost of which, two shillings per pound, meant an annual tribute of £7300 to the East India Company. This, for all the colonies, with the three-penny duty added, aggregated £147,615 a year, which might be saved by abstention from the use of a pernicious herb. It was rumored, now that this discussion had arisen, that the dry-goods merchants meant to break through the agreement if the tax laws were not repealed at the current session of Parliament. This was denied; but it was not concealed that their case was hard, since their whole business was destroyed, while the West India traders still made profits. The dry-goods importers, however, declared they were not Esaus, to sell their birthright for a mess of pottage. Some of the agreements were in themselves unequal and discriminated, and this added to the irritations of a system of business disordered to the core. Parliament, with a view to disorganizing the opposition, and conceiving it was not the principle but the amount of taxation which the colonies were opposing, reduced the rates successively until there only remained the bare rate of threepence upon tea, maintained to enforce the principle of the imperial right to tax the colonies. New complications now arose, and there was a division of sentiment among the patriots, one party holding for unqualified resistance to the principle, the other looking to the practical fact that no prohibition by agreement lay against the importation of any but taxed articles. A discussion arose of which the newspapers of the day are full. There was also a question as to whether a merchant was bound to adhere to agreements which he had made at

option, or whether he could abandon them when it suited him, and he thought he had accomplished his objects. The selfish notion of some that by continuing non-importation American manufactures could be established was a factor in deciding men's positions on these points. Besides, merchants in other places had abandoned the agreements, and thus sectional rivalries and jealousies were at once awakened. The merchants of Newport, Rhode Island, were the first to yield. The Philadelphia merchants at once met in the State-House, and passed denunciatory resolutions and renewed their non-trading pledges, adding a pledge never to deal in the future with those who violated the existing agreement; it was still plain, however, that an opposition was organizing to the radically exclusive policy of the patriot.

A ship and a bark which brought malt from Ireland about this time were allowed to dispose of their cargoes, because Ireland was not England, and the brewers were at the last extremity for want of malt, and they had behaved so well in the case of the malt consigned to Mr. Strettel. On the other hand, five vessels from Rhode Island with cargoes were sent back whence they came, and the opponents of non-importation found the popular sentiment, that of those not in trade, too strong to venture to array themselves against it openly. Many, however, attempted to get around the agreement in underhand ways. Two shop-keepers on Second Street, William Wells and Thomas Cummings, were found to have clandestinely brought six hundred pounds of goods to the city from Baltimore. They were forced to send them back, but stubbornly refused to apologize or express regret to the committee. A ship from Glasgow, and Virginia, after lying in port two weeks under close watch of the committee, dropped down the river, it was supposed to give up her adventure. But part of the cargo was clandestinely put on barges and landed. The attempted evasion was detected, and the offenders, Messrs. Semple & Buchanan, were compelled to sign a humiliating confession and apology, admitting their deliberate fault "with shame and confusion," surrendering the goods, and pledging themselves to re-ship them to England by the first opportunity. This apology was printed on a broadside for general circulation, and another broadside was sent out with it, suggesting that the firm should not have been let off without coats of tar and feathers.

New York at this time receded from all non-importing agreements but those relating to tea, and the news of this led to another indignation meeting at the State-House, on July 14th. The calls for this meeting were filled with fierce expletives. Joseph Fox presided, and resolutions were passed denouncing the defection of New York as sordid and wanton, and tending to weaken the union of the colonies and strengthen the hands of the enemy. Non-intercourse with New York was also resolved upon, and it was determined to buy no goods there but "alkaline salt,

skins, furs, flax, and hemp" until the agreement was returned to. The newspapers took occasion to have their fling at the rival city, one squib being as follows: "A CARD.—The inhabitants of the city of Philadelphia present their compliments to the inhabitants of New York, and beg they will send their OLD LIBERTY POLE, as they imagine they can, by their *late conduct*, have no further use for it." In August the brig "Dolphin," Capt. Stevens, arrived from England, bringing no goods but such as were allowed by the agreement, six thousand pounds in specie, and a number of weavers as passengers. "Such," said the *Pennsylvania Journal*, "are the fruits of the agreement, that, instead of dry-goods, which drained the colonists of their cash and kept them as poor as beggars, they are now receiving from England what may well be termed the nerves and sinews of any country." In Rhode Island a modification of the agreements was obtained and intercourse with the other colonies was resumed.

A severe struggle, however, was now impending between patriotism and the instincts of trade. To the propping of the latter was given all the weight and advantages of government influence and favor, the support of the Tories, and the spirit of rivalry between competing communities. The example of New York had been disastrous, and many Philadelphians were unsettled at the thought of New York getting the monopoly of the trade in British goods. In September these men began to organize and address the merchants' committees, contending that the agreements were a failure and that it was folly and madness to deprive Pennsylvania of a trade enjoyed by all the adjacent colonies. It was proposed that the merchants should be asked to give their opinions on that subject in writing, and a memorial to that effect was signed by John Reynell, James & Drinker, Joseph Swift, Jeremiah Warder, Tench Francis, Hugh Donaldson, Thomas Fisher, Richard Parker, Walter and Bartles Shee, Philip Benezet, Randle Mitchell, John Drinker, William West, and Owen and Clement Biddle. The merchants' committee replied that they had no power to take the sentiments of citizens except at a general meeting. This answer was signed by John Gibson, Daniel Benezet, John Cox, Charles Thomson, Alexander Huston, J. M. Nesbitt, William Fisher, Samuel Howell, John Mifflin, and George Roberts. The discontented now held a meeting, on September 20th, at Davenport's tavern (the "Bunch of Grapes"), Third Street, below Mulberry. Here it was decided that the non-importation agreement, as it existed, should be altered, so as to open to importation all goods save tea and such as were still taxed; that this action should be taken without consulting the other colonies; that such action would only alter, not break, the agreement; but it was not decided when importations should be resumed. Some of the committee of merchants attended this meeting, hoping to defeat the plan, but their counter-propositions were lost by a vote of eighty-nine to forty-five.

When this result was known Messrs. William Fisher, John Gibson, John Maxwell Nesbitt, George Roberts, Thomas Mifflin, Daniel Benezet, John Cox, Jr., Samuel Howell, Alexander Huston, James Mease, and Charles Thomson left the committee, looking upon the non-importation agreement as already broken.

These proceedings caused great excitement and much resentment among the non-mercantile classes. Injurious handbills were posted up, calling upon the people to take the matter in hand themselves, and not leave the "grand question" of the freedom of America to be determined by a few men "whose support and importance must always be in proportion to the distresses of the country." It was not a matter to be decided by the vote of a few merchants. The consent of the tradesmen, farmers, and other freemen of the city and county ought first to be obtained. Counter handbills were scattered about in defense of the mercantile view of the matter. In these it was claimed that the agreements were already violated everywhere. In Maryland it was alleged that three times as much goods had been imported as were needed for home consumption; Eastern colonies had perfidiously imported, in the face of their pledges and solemn denials; "the Bostonians had reshipped trunks filled with rubbish, after gutting them of their British contents; and that the ports of Virginia, all southward of Carolina, Georgia, and Canada, were open. "The trade of the city and province is torn from it by neighboring provinces and strangers selling goods here at exorbitant prices. . . . What was done under cloak of patriotism turned out a lucrative scheme." There was an anti-importation meeting at the State-House on September 27th, Joseph Fox chairman, when resolutions were passed censuring the action of the meeting at Davenport's tavern, declaring that union was essential, that "it would have been for the reputation of this city to have consulted the other colonies before any breach had been made in the non-importation agreement," and recommending some sort of restoration of concord on the basis of a united resistance to the pretensions of Parliament. Messrs. Andrew Allen, Peter Chevalier, Benjamin Loxley, John Cadwalader, Daniel Roberdeau, James Pearson, William Masters, George Clymer, and John Shee, "with the members of the late committee who resigned," were appointed a committee to carry out the objects of the meeting. The grand jury, of which John Gibson was foreman, also formulated a creed of united resistance to tyranny, enforced by abstention from the importation of any but articles of necessity.

Smuggling, especially of the forbidden articles of trade, was constantly increasing, and the customs officers did not make many seizures, for informers met with no mercy from the mob. In September, in Southwark, John Keats, wrongly suspected of informing where smuggled goods had been landed, was beaten, pursued, and nearly murdered. Those who interfered to protect him, including Spence, the land-

lord, and Judge Benjamin Chew, were threatened. The customs officers depended for check upon smuggling more upon their revenue cutters down the bay than anything else, and the officers of these vessels did their work so rudely that many suits grew out of their conduct.

In 1773 the East India Company, finding that the colonies would take no tea on which the duty was charged, tried a new plan, and kindled a new flame from the smouldering embers of old excitements. An act of Parliament was passed authorizing that company to export their teas to America free of the duty enacted by the home government, and only charged with the three-penny colonial duty. It was intended to tempt the colonies by offering them tea far cheaper than it could be landed in London. The news of the passage of this act called for new measures of resistance in the colonies; "public meetings were held, associations were formed, and combinations entered into to prevent the landing and sale of the tea, the arrival of which was now looked for." The more insidious the attack, it was seen, the greater need to meet it with energy upon the very threshold. News of the initial shipments of tea reached Philadelphia 27th of September, was published in the *Chronicle*, and the publication was followed by a handbill, signed "Scaevolo," addressing the people on the subject. The tea commissioners, it was shown, were in the same position as the stamp distributors, and, like them, should be compelled to resign. Thomas Wharton, the elder, was one of these commissioners, a Quaker loyalist of wealth and influence, who had made himself obnoxious to the citizens by his course during the Stamp Act excitement. Goddard, in the *Chronicle*, said, he might make atonement now by promptly resigning.¹ In another broadside, the pro-

priety of burning the store-houses where the tea was to be laid away was plainly hinted. Many similar handbills belong to the ephemeral literature of the period, all betraying a high state of feeling.

A largely-attended public meeting was held at the State-House on October 18th, in which the stereotyped views on taxation were embodied in the resolutions, and a committee was provided for to wait on the tea commissioners and ask their resignation. Another committee was appointed at a subsequent meeting, and these two called upon the consignees, who all, sooner or later, resigned. A Boston customs officer, Ebenezer Richardson, who had come to Philadelphia, was at this time so strongly denounced in handbills and the press that he had to fly the city to escape being tarred and feathered.

The ship "Polly," with "the detested tea," had sailed from London on the 12th or 15th of September, and her arrival was looked for about the third week in November. Another long handbill was distributed, addressed more particularly to tradesmen, mechanics, and artisans, explaining the crisis to them and warning them, in self-defense, to meet the East India Company on the very threshold. "Be, therefore, my dear fellow-tradesmen," it said, "prudent, be watchful, be determined, to let no motive induce you to favor the accursed scheme. Reject every proposal but a repelling act; let not their baneful commodity enter

your city; treat every aider or abettor with ignominy, contempt, etc., and let your deportment prove to the

William Goddard

[From an original painting in the possession of his descendants at Providence, R. I.]

and associated himself with John Holt in publishing the *New York Gazette and Post-Boy*. In 1766 he removed to Philadelphia, where he issued, on Jan. 6, 1767, the first number of *The Pennsylvania Chronicle and Universal Advertiser*. It was published at ten shillings per annum, and had four columns to a page, instead of three, as had hitherto been the practice. For two out of three years it was printed in quarto form, and the fourth year it returned to folio, which was the original form in which it had been printed. Joseph Galloway and Thomas Wharton were secret partners of Goddard in this enterprise. But the partnership did not continue long. The partners quarreled and separated, and Goddard turned his batteries in the *Chronicle* upon Galloway, who was denounced through the columns of the paper which he had helped to establish. In 1770, Benjamin Towne was admitted to the firm, and, becoming dissatisfied, the paper suspended publication in February, 1773.

¹ William Goddard was the son of Giles Goddard, physician and postmaster at New London, Conn., and was born in 1740. Having served his apprenticeship with James Parker, a printer in New York, he removed to Providence, R. I., and on Oct. 20, 1762, established the first printing-press in that town, where he commenced the *Gazette and Country Journal*. Not meeting with sufficient encouragement, he went to New York

world that we will be free indeed." Another handbill was addressed to the Delaware pilots, stating the case in a way to meet their comprehension, showing the close identity of their interests with that of the

While Goddard was publishing his paper in Philadelphia, some political use was made by Joseph Galloway out of the circumstance that an anonymous letter had been sent him demanding the loan of fifty pounds for a year, with directions to leave it for the writer at a certain time under the five-mile stone on the road from Philadelphia to Chester. Galloway offered fifty pounds reward for the discovery of the author, and Governor Penn offered one hundred pounds for the same purpose. The occasion was embraced to maliciously impute this trifling affair to William Goddard, Galloway's former partner in the publication of the *Chronicle*, but who was now his open enemy. Goddard was arrested and gave bail, but Galloway, ashamed of the business, and without any evidence against Goddard, abandoned the prosecution, and no indictment was found. Goddard specially devoted himself, previous to each election, to the publication of articles against Galloway, but without avail. Indeed, at the election in October, 1772, Goddard, who was a candidate for the Assembly in Philadelphia, was defeated, while Galloway was returned for Bucks and placed in his old position as Speaker of the House. The first direct information that the East India Company intended to send some cargoes of tea to America was received in a letter from London, and published on the 27th September, 1772, in the *Chronicle*. Goddard was a warm friend of the Colonies at this time, and denounced the "pernicious business" in unmeasured terms in his journal. While he was editing the *Chronicle*, Mr. Goddard's mother, Mrs. Sarah Goddard, died in Philadelphia (Jan. 5, 1770), at an advanced age. On the following day her remains were interred in Christ Church burying-ground. Mrs. Goddard was the daughter of Ludowick Uplike, whose ancestors were among the first settlers of Rhode Island. Her brother was for some years attorney-general of the colony. She received a good education, and married Dr. Giles Goddard, of New London, who left her a widow. After her son had been engaged a few years in the printing business, she became his partner, and on removing from Providence to New York he left her in charge of the newspaper and printing-house, which she managed with much ability for two years, at the expiration of which she associated herself with John Carter, under the firm-name of Sarah Goddard & Co. In 1769 she resigned the business to Carter and removed to Philadelphia, where she died in the following year.

William Goddard went to Baltimore insolvent and helpless to begin "anew," as he relates, "on the small capital of a single guinea." He managed to secure the materials in the printing establishment of a widow named Hasselbocht, and added to it the small stock owned by Enoch Story. In May, 1773, he opened a printing-office at the corner of South and Baltimore Streets, where the Sun Iron building now stands, "nearly opposite Mrs. Chilton's," where "printing was done in all its branches." He was encouraged to publish a newspaper, and on July 15, 1773, he issued his prospectus of *The Maryland Journal and Baltimore Advertiser*. On Friday, Aug. 20, 1773, the first newspaper published in Baltimore was distributed throughout the town. The first number was handsomely printed on stout paper, in good, clear type, and contained twelve broad columns. It was a weekly, and the salutatory promised much.

During the publication of his paper in Baltimore Goddard was twice mobbed by the citizens of that town. The first time, in March, 1777, for publishing an anonymous communication reflecting on the conduct of the war by the Americans, and again on the 6th of July, 1779, for publishing Gen. Charles Lee's "Queries, Political and Military." Goddard continued his connection with the *Journal* until Aug. 14, 1792, when he sold his interest to James Angell, a relative. He was elected a member of the Rhode Island Legislature in 1795, and, having changed his residence to Providence, continued to live there until his death, which occurred in December, 1817, at the age of seventy-seven years. Gen. Charles Lee, whom he had endeavored to serve, as we have seen, at no ordinary personal risk, remained his friend and bequeathed him a portion of his landed estate in Virginia. Gen. Lee also made him one of his executors, in which capacity Mr. Goddard came into possession of Gen. Lee's papers. He issued proposals for publishing selected parts of them into three volumes, but for some reason the design was never executed. For many years the papers remained in the possession of the family of Mr. Goddard's only son, the late Professor William G. Goddard, of Providence, R. I.

William Goddard was the founder of the present United States postal

city's commerce and its freedom, and suggesting that if they chose they might make themselves masters of the situation. "We need not point out to you," this insidious and evil-purposing handbill said, "the steps you ought to take if the tea-ship falls in your way. You cannot be at a loss how to prevent, or, if that cannot be done, how to give the merchants of the city timely notice of her arrival. But this you may depend on, that whatever pilot brings her into the river, such pilot will be marked for his *treason*, and will never afterwards meet with the least encouragement in his business. Like *Cain*, he will be hung out as a spectacle to all nations, and be forever recorded as the *damned traitorous pilot who brought up the tea-ship*. This, however, cannot be the case with you. You have proved *scourges to evil-doers, to infamous informers, and tide-waiters*, and we may venture to predict that you will give us a faithful and satisfactory account of the tea-ship if you should meet with her, and that your zeal on this occasion will entitle you to every favor it may be in the power of the merchants of *Philadelphia* to confer upon you. (Signed) THE COMMITTEE FOR TARRING AND FEATHERING.

"N.B.—This ship with the tea on board is called the 'Polly' (Capt. Ayres), and left Gravesend on the 27th of September, so that she may be hourly expected."

A later handbill mentions that the "Polly" is a three-decker, and that the pilot bringing her in may look for a coat of tar and feathers. Still another broadside was for the pilots to present to Capt. Ayres, notifying him that his ship and person were both in danger if he persisted in coming to port. "You are sent out on a diabolical service," he was told, "and if you are so foolish and obstinate as to complete your

service, and his sister, Mary K. Goddard, was the first postmistress of Baltimore. This subject is more fully treated elsewhere in this work.

Miss Mary Katherine Goddard did not accompany her brother to Rhode Island, but remained in Baltimore, where she kept a small bookstore until 1802. After the sale of the paper to Mr. Angell she continued to retain a small share in the property. She died on the 12th of August, 1816, aged eighty years. Miss Goddard was a remarkable woman in many respects. The simple fact that she conducted the *Journal* during the most trying and critical periods of the Revolution, and that she was intrusted by her brother with the sole management of his business when the exigencies of his occupation elsewhere, or the political hostility which occasionally forced him to leave Baltimore, made it necessary for him to intrust it to other hands proves that she possessed extraordinary judgment, energy, nerve, and strong good sense. Miss Goddard had also responsible and difficult duties to discharge as postmistress, but she seems to have been fully equal to the tasks imposed upon her, and, indeed, appears to have had a full measure of her brother's courage, industry, and indomitable will.

William Goddard, while in Philadelphia, fought Galloway bitterly through two elections, and pursued Wharton as vindictively. The latter he dubbed "the Marquis of Barataria," probably in part allusion to the fact that Wharton's father, Joseph Wharton, of Walnut Grove (where the *Mischianza* fête came off), was popularly called, from his haughty ways, "The Duke." It was related of Joseph, the duke, that when he called on Sir William Draper ("Junius" victim) he held his hat in his hand, and the knight, with great complaisance, told him that, as it was contrary to the custom of his society to do so, he would dispense with this mark of respect; whereupon the duke replied that he had his hat off not out of respect for Sir William Draper, but because it was a hot day.

voyage by bringing your Ship to Anchor in this Port, you may run such a Gauntlet as will induce you in your last moments most heartily to curse those who have made you the dupe of their avarice and ambition. What think you, Captain, of a Halter round your Neck, ten gallons of liquid Tar decanted on your Pate, with the feathers of a dozen wild Geese laid over that to enliven your appearance?" "A card" made its appearance at this time, presenting the compliments of the public to Messrs. James & Drinker, and notifying them that they were expected to withdraw from their appointment as consignees of the teas. Still another handbill was circulated among the pilots, giving them a minute description of the "Polly," stating they had been misinformed; she was not a three-decker, but "an old black ship, without a head or any ornaments. The captain is a short, fat fellow, and a little obstinate withal. So much the worse for him; for, as sure as he rides rusty, we shall heave him keel out and see that his bottom be well fired, scrubbed, and paid. His upper-works, too, will have an overhauling, and as it is said he has a good deal of quick work about him, we will take care that such part of him undergoes a thorough rummaging. . . . We know him well, and have calculated to a gill and a feather how much it will require to fit him for an American exhibition." Another long and peppery address of the day is by "Regulus." Indeed, the anonymous authors of the patriotic broadsides of the period drafted a legion of Romans into their service, until there were as many of the *gens togata* as there were Quakers on the banks of the Delaware. Withal, the anti-tea committees had a practical way with them. The stock of tea in town was very small, but they compelled the dealers to fix 6s. 6d. as the maximum price at which the article was to be sold, and they did not tar and feather the "informers" who gave them notice of these prices being exceeded. It is to be noted that all this action was independent of the "Boston tea-party," which did not take place until December 16th.

On Christmas day an express came in bringing word of the arrival of the "Polly," with her obnoxious cargo, at Chester. One of the consignees, Gilbert Barclay, came from London aboard the vessel. He now came up to the city in advance, and was at once waited upon by the committee. As soon as he learned from them the state of affairs he resigned his commission. Three committeemen were now sent to Chester and three to Gloucester Point to intercept Capt. Ayres. He had left Chester, but at Gloucester Point the vessel was hailed and the captain asked to come on shore. He went at once, landed, passed through a lane in the crowd met to receive him, and was taken before the committee and other gentlemen, who explained the popular excitement to him, and warned him of the difficulty and danger before him if he should persist in trying to bring his vessel to the harbor and discharge his cargo. He went to the

city with them, at their request, and soon found proof of what he had been told; indeed, the committee and citizens had enough to do to protect him from the boys, who did not want to be disappointed of their tarring and feathering.

As soon as the arrival of the tea-ship was known, a meeting was called at the State-House for Monday, December 27th, at 10 A.M., "to consider what is best to be done in this alarming crisis." This meeting was the largest that had ever been assembled in Philadelphia. The State-House would not hold the people; they adjourned to the yard, and adopted with enthusiasm the following resolves, brief, sharp, to the point:

"Resolved. 1. That the tea on board the ship 'Polly,' Capt. Ayres, shall not be landed.

"2. That Capt. Ayres shall neither enter nor report his vessel at the Custom House.

"3. That Capt. Ayres shall carry back the tea immediately.

"4. That Capt. Ayres shall immediately send a pilot on board his vessel, with orders to take charge of her and to proceed to Reedy Island next highwater.

"5. That the captain shall be allowed to stay in town till to-morrow, to provide necessaries for his voyage.

"6. That he shall then be obliged to leave town and proceed to his vessel, and make the best of his way out of our river and bay.

"7. That a committee of four gentlemen be appointed to see these resolves carried into execution."

It was further

"Resolved, That this Assembly highly approve of the conduct and spirit of the people of New York, Charlestown, and Boston; and return their hearty thanks to the people of Boston for their resolution in destroying the tea rather than suffer it to be landed."

There were eight thousand persons present at this meeting, but the utmost order and decorum prevailed. Capt. Ayres attended in person, and pledged himself to a literal compliance with the orders relating to him. Two hours after the adjournment of the meeting the tea-ship, having hastily procured supplies, weighed anchor at Gloucester Point and proceeded down the river on her return voyage. The cargo did not break bulk, though there were other consignments to Philadelphia merchants in it besides tea. Capt. Ayres went on board at Reedy Island, he and Mr. Barclay going down the river in a pilot boat, after spending less than two days in the city. Lord Dartmouth wrote a sharp letter to Governor Penn concerning this transaction, expressing his surprise and concern that the provincial government should have made no attempt to resist or oppose the violence done. It was a rebellious act, he said, and might have serious consequences. The Governor explained and apologized, and the government excused him. They knew as well as he that he was utterly powerless. Lord Dartmouth had succeeded Lord Hillsborough as Secretary of State for the colony in 1772. He was a man of ability, a friend to liberal measures, and esteemed to be not ill-disposed towards the Americans. In the midst of these troubles, seeming sincerely desirous to do something to confuse them, and wishing to that end to be well instructed concerning American affairs, he sought an intelligent American correspondent

upon whom he could rely. He had some connection with Mr. De Berdt, whose sister had become the wife of Joseph Reed, and in this way a correspondence was opened between Reed and Dartmouth, which is of the greatest value in enabling us to measure the men and events of these times perspicuously and correctly. Reed was impulsive, frank, had his prejudices and predilections, took his patriotism not at a gulp, but discriminatively, and declining to ask any man's leave in the premises; he was shrewd also, very observant, and wrote like a gentleman of things which he had looked at with the eyes of a gentleman. This correspondence was opened in January, 1772, when Reed wrote to De Berdt that Lord Dartmouth might make himself exceedingly popular by removing the commercial restrictions imposed upon the colonies by Charles Townshend. Reed's first letter direct to Dartmouth (the first at least included in William B. Reed's biography of President Reed) was dated Dec. 22, 1773, three days before the tea-ship arrived. He was on the spot, a deeply-interested spectator, and it is difficult to understand why the ministry should have continued to act as they did, unless stricken with judicial blindness. Speaking of the modified tax policy, Reed wrote,—

"The partial repeal of this Act (7 George III.) instead of conciliating, has widened the breach; it has been thought hard the Government should give up the revenue and keep the tax. In this situation we have been gradually sliding into a clandestine trade, which has increased to a very alarming height. It has been deemed a species of patriotism to evade a law which we could not safely oppose, or submit to, without giving up an essential principle of liberty. If the merchants had confined this illicit trade to the article of tea only, the injury to the Mother Country would not have been so great; but a variety of other articles, such as calicoes, spices, and other East India commodities, have accompanied the tea to a very large amount. And upon a coast of such extent, all the vigilance and care of the custom house can give no effectual check. As a proof of this, your lordship may depend upon it that, although no tea has been imported here from England since 1767, there has been no scarcity, nor has the price been advanced otherwise than by the ordinary course of trade."

Reed goes on to sketch the agitation which arose in consequence of the course of the East India Company, and shows that the various acts and addresses which are given above were all approved by the body of the people, except only the attempt to deter the pilots from taking charge of the ship in the river. That inconsiderate performance, he said, the merchants had endeavored to counteract. He describes in advance the course that would be taken with Capt. Ayres, and said that if it were not submitted to "the consequences may prove very fatal to himself and his vessel." He adds that "the opposition to the Stamp Act was not so general, and I cannot but think any attempt at present to crush it would be attended with dreadful effects. Many reasons have concurred at this time, and upon this subject. Those who are out of trade have been led to think it a point of constitutional liberty deserving a struggle. Those who are in trade have the additional motive of interest, and dread a monopoly whose extent may destroy one-third of their business. For India goods compose

one-third of our importations from England." Can anything be more clear, cogent, and convincing than this exact and temperate statement? Yet it had no effect whatever. "Severities have been tried," wrote Reed. New severities were now resorted to, and the Boston Port Bill was the next act in the drama,—an attempt to punish one place in the colonies for what every settlement in all the colonies had been equally guilty of. Of such a piece of folly and madness the consequences were easy to foretell. Reed himself foretold them. In his next letter to Dartmouth, giving the noble earl an account of the proceedings of December 27th, and writing on that same evening, he says,—

"Your Lordship will judge from these facts how general and unanimous the opinion is that no article subject to a duty for the purpose of raising revenue ought to be received in America. Nor is it confined to this city. . . . Any further attempt to enforce this act, I am humbly of opinion, must end in blood. We are sensible of our inability to contend with the Mother Country by force, but we are hastening fast to desperate resolutions, and unless internal peace is speedily settled, our most wise and sensible citizens dread the anarchy and confusion that must ensue. This city has been distinguished for its peaceable and regular demeanor, nor has it departed from it on the present occasion, as there have been no mobs, no insults to individuals, no injury to private property; but the frequent appeals to the people must in time occasion a change, and we every day perceive it more and more difficult to repress the rising spirit of the people."

Parliament, king, and Council, however, heeded none of these warnings. They soon gave Philadelphia an additional cause of bitter feeling and irritation by the coarse and brutal examination of Benjamin Franklin before the Privy Council, when Wedderburn gave the venerable philosopher precisely the opportunity he desired to make himself the most popular man in America. He had not been a particular favorite with the people of wealth and education in his own province, for they suspected him of being a good deal of a self-seeker and a bit of a demagogue. With the masses, on the other hand, his popularity had been shaken by the appointments, through Benjamin Franklin's influence, of the stamp collectors, John Hughes and William Franklin, and by the persistent assaults of his enemies in connection with those appointments, which had put him on the defensive. But he was still the agent of the province, an eminent citizen of Philadelphia, and the most distinguished man of science his country had yet produced. He was venerable by his weight of years and of distinguished public service, and he was known and venerated all over Europe. To insult and outrage such a man, in such a manner, at such a time, was to outrage and insult the entire colonies. Franklin, in his official capacity, acting for Massachusetts, had delivered to Lord Dartmouth the address of that government asking for the removal of Hutchinson and Oliver. A false issue was raised, a duel and a succession of newspaper altercations, all to divert attention from the real merits of the case. On Jan. 11, 1774, Franklin, who had assumed all the blame attaching to a clandestine exposure of treasonable correspondence, appeared before the Privy Council; on the 29th he

had his hearing. Wedderburn was solicitor-general. He turned the defense of Hutchinson into an assault upon Franklin as the embodiment of American recalcitrancy. Wedderburn, afterwards Lord Loughborough and Earl of Rosslyn, was a Scotch advocate, who had made his way at the bar and in Parliament by mingling equal parts talent, sycophancy, industry, and a fierce, coarse invective that at times rose to eloquence. He knew enough constitutional law to make his services valuable to the court at whose demand his opinions always were unconditionally given. The attack upon Franklin was severe; it made a strong impression, and, though the object of it affected to despise, he still remembered it so vividly that when, in 1783, he signed the treaty of peace at Versailles, he was particular to dress himself in the same suit of clothes which had been worn by him before the Privy Council on Jan. 29, 1774.

Franklin bore himself bravely and with dignity, however, and the sympathy of the people of Philadelphia in particular went out to him. Dr. Rush wrote to Arthur Lee, when the news came, that "Dr. Franklin is a very popular character in every part of America. He will be received and carried in triumph to his house when he arrives amongst us. It is to be hoped he will not consent to hold any more offices under government. No step but this can prevent his being handed down to posterity among the first and greatest characters in the world." (May 4, 1774.) Reed, same day, wrote to his brother-in-law, DeBerdt, that "the scurrilous treatment of Dr. Franklin is highly resented by all ranks of people . . . nothing can exceed the veneration in which Dr. Franklin is now held but the detestation we have of his enemies." To Reed Lord Dartmouth himself wrote that, while he could not approve Franklin's conduct in regard to Hutchinson's letters, he was sorry that what had been said and done "should have contributed to the discontent of the minds of any people in America."

Dartmouth probably would not have believed that feeling could have risen to such a pitch. But in fact the people were intensely irritated, and the least thing made their passions blaze out. Wedderburn and Hutchinson were burnt in effigy on May 3d, after being drawn through the streets in a cart. On the breast of the figure of the solicitor-general was a label:

THE INFAMOUS WEDDERBURN.

A pert prime prater of a scabby race;

Guilt in his heart and famine in his face.

(Churchill allied.)

Similis Proteo, mulet ut fallactor, Catalina,

Hunc vis Britanni cavale.

Appended to which is a diatribe which might have been written by the schoolboy who looked out the quotations. There were other labels also, and Hutchinson was given as many faces as the temple of Janus had gateways. After being displayed to the mob,

these effigies were taken to the coffee-house plaza, hung upon a gallows, and then burnt upon a pile of faggots, upon which gunpowder was sprinkled, to be kindled into flame with the aid of Franklin's own electric battery. The newspapers also were filled with epitaphs and epigrams, appeals and invectives, and Wedderburn's name became a by-word of scorn and reproach.

The bill closing the port of Boston and transferring its custom-house to Salem, was passed in March, and news of it received in the colonies in May. Paul Revere was dispatched from Boston on May 13th to secure the support of Philadelphia to the former city in such a crisis. A meeting was called in Philadelphia at the City Tavern, on May 20th. Of this meeting, as has already been suggested, Charles Thomson and John Dickinson were the leading spirits, though conspicuous parts were taken by Joseph Reed and Thomas Mifflin. The object of Thomson and Dickinson was, by an appearance of great moderation, to secure the sympathy and co-operation of the influential body of the Society of Friends. Dickinson's plan was to petition the Governor for an extra session of the Legislature, and that prevailed, and by means of it, Thomson claimed in his letter to Henry Drayton, every practical point was carried. The Governor indeed refused to convene the Assembly for any such purpose, but called them two or three days later about Indian raids on the border, whereupon they forthwith attended to the business on hand by electing delegates to Congress.

At the meeting at the City Tavern a committee was also appointed to act as a general committee of correspondence, and also particularly to write to the people of Boston, assuring them of sympathy, commending their firmness, declaring their cause that of all the colonies, and promising to stand fast for the right. This committee consisted of John Dickinson, William Smith, Edward Pennington, Joseph Fox, John Nixon, John Maxwell Nesbitt, Samuel Howell, Thomas Mifflin, Joseph Reed, Thomas Wharton, Jr., Benjamin Marshall, Joseph Moulder, Thomas Barclay, George Clymer, Charles Thomson, Jeremiah Warder, Jr., John Cox, John Gibson, and Thomas Penrose. They had discretionary authority given them to act for the people and to call public meetings and correspond with the other colonies. They met next day (Dickinson, Reed, Fox, Nesbitt, Benjamin Marshall, and Penrose being absent) and adopted the draught of a letter, which was delivered to Mr. Revere to take back to the people of Boston. The authorship of this letter is doubtful; Provost Smith claims it; so do the friends of Dickinson. It is firm upon the principle of opposition to taxation, but offers no advice. The letter is rather cold, and its internal evidence is against the idea of its having been written by Dickinson.

The address of the meeting in favor of an extra session of Assembly was fortified by a petition from

nine hundred freeholders; the Governor, however, denied that the peace and good order of the province required any such meeting. Nor were the people of Philadelphia unanimous in opening their churches and closing places of business on June 1st, the day when the Boston port bill went into effect. The Friends gave notice to their own members that to do this would be manifesting an inattention to the principles of their profession. Still, many stores were closed and flags at half-mast. Some sermons were preached in several churches. Christ Church was not opened, but some unauthorized persons entered it and rang a funeral peal upon its muffled bells.

CARPENTERS' HALL.

A general meeting of citizens was called for June 15th, and there was some preliminary caucusing, in order to cut out the work for this mass-meeting; the mechanics met and appointed a committee to co-operate with the merchants' committee. The members of the mechanics' committee were John Ross, William Rush, Plunket Fleeson, Edward Duffield, Anthony Morris, Jr., Robert Smith, Isaac Howell, Thomas Pryor, David Rittenhouse, William Masters, and Jacob Barge. On the 10th a preliminary meeting of representative men of the different classes was held at Philosophical Hall, Second Street, to consult about

business for the mass-meeting. Eight propositions were agreed upon, favoring a general congress of all the colonies and deciding that the representatives of Pennsylvania must be chosen by the Assembly. The Governor's refusal to call the Assembly was to be got round by the members meeting of their own motion. The general meeting was postponed to the 18th, in order to give time to print the propositions in a handbill, so that the citizens might consider them.

When the meeting was held on the 18th, Thomas Willing and John Dickinson presided, and Rev. William Smith made the address. The propositions determined in advance were substantially adopted; it

was resolved that the act closing the port of Boston was unconstitutional, and that it was expedient to convoke a Continental Congress. A committee of correspondence for the city and county was appointed, with instructions to take the sense of the people in regard to the appointment of delegates to a general congress, and also to raise a subscription for the relief of the sufferers in Boston. This committee numbered forty-three; the chairman was John Dickinson; the members were Edward Penington, John Nixon, Thomas Willing, George Clymer, Samuel Howell, Joseph Reed, John Roberts, Thomas Wharton, Jr., Charles Thomson, Jacob Barge, Thomas Barclay, William Rush, Robert Smith, Thomas Fitzsimons, George Roberts, Samuel Ewen, Thomas Mifflin, John Cox, George Gray, Robert Morris, Samuel Miles, John M. Nesbitt, Peter Chevalier, William Moulder, Joseph Moulder, Anthony Morris, John Allen, Jeremiah Warder, Jr., Rev. Dr. William Smith, Paul Engle, Thomas Penrose, James Mease, Benjamin Marshall, Reuben Haines, John Bayard, Jonathan B. Smith, Thomas Wharton, Isaac Howell, Michael Hillegas, Adam Hubley, George Schlosser, and Christopher Ludwick,—the first really representative committee which had been appointed. Under the call of this committee a conference of delegates met in Carpenters' Hall, July 15th, with Thomas Willing in the chair and Charles Thomson

secretary. The actual weight and influence of the province was here gathered, and the convention acted as if conscious of its powers, asserting colonial rights, condemning Parliament, favoring united action and a Colonial Congress, pledging Pennsylvania to co-operation with the other colonies, and requesting the Provincial Assembly (which was already called) to appoint deputies to the Congress.

John Dickinson drew the instructions; the Assembly, when it met on the 21st, assented to them, and appointed Joseph Galloway Speaker, and Samuel Rhoads, Thomas Mifflin, Charles Humphreys, George

Ross, and Edward Biddle deputies of Pennsylvania to Congress. The instructions of the Assembly to these delegates affirmed the principles laid down in the propositions of the Convention.

The first Continental Congress met in Carpenters' Hall on Sept. 4, 1774, when the delegates were present from eleven provinces. Some mystery has been sought to be made about the selection of this place of meeting, but it seems very simple. The Provincial Assembly was in session, so that the State-House could not be had. The Convention had had its session in Carpenters' Hall. The Committee of Correspondence probably met there, and there was besides this a desire to conciliate and court the favor of the trades-people and the mechanics, who, for the first time, were given a place in the late Convention and a representation on the Correspondence Committee. The carpenters were the most influential and best organized of the industrial bodies; they offered their hall, and it was accepted. John Adams, in his diary, says, "At ten the delegates all met at the City Tavern¹ and walked to Carpenters' Hall, where they took a view of the room and of the chamber, where there is an excellent library. There is also a long entry, where gentlemen may walk, and also a convenient chamber opposite the library. The general cry was that this was a good room, and the question was put whether we were satisfied with this room? And it passed in the affirmative. A very few were in the negative, and they were chiefly from Pennsylvania and New York."²

When the Congress met, Peyton Randolph, of Virginia, was chosen president, and Charles Thomson, secretary. The work done by this Congress belongs to the history, not of Philadelphia, not even of the United States alone, but of the world; its sessions were secret, and but few of its proceedings can have any legitimate place in this record. What a body of men that was,—Peyton Randolph, Patrick Henry, George Washington, Richard Henry Lee, Pendleton, Samuel Adams, John Adams, John Jay, Gadsden, Rutledge, Hopkins, Duane, Ward, Lynch, Sullivan, Bland,—the blood leaps up in one's veins as we write their very names! "We are so taken up with the

Congress," writes Reed to one of his correspondents, "that we hardly think or talk of anything else. About fifty have come to town, and more are expected. There are some fine fellows come from Virginia, but they are very high. The Bostonians are mere milk-sops to them. We understand they are the capital men of the colony, both in fortune and understanding." After an organization had been effected, it was proposed to open the sessions with prayer. The motion came from Thomas Cushing, Speaker of the House of Representatives of Massachusetts, but it was opposed by Jay and Rutledge, because of the wide division in religious views,—Quakers, Anabaptists, Episcopalians, Presbyterians, Congregationalists,—and for fear of exciting prejudice or dissension. Samuel Adams arose, however, said he was no bigot, and could hear a prayer from any gentleman of piety and virtue who was a friend to his country. He moved that Rev. Mr. Duché be desired to read prayers

REV. JACOB DUCHÉ.

to the Congress to-morrow. The motion was carried, Mr. Randolph secured Mr. Duché's services, and, "accordingly, next morning"—we quote, or abridge, John Adams' diary—"he appeared with his clerk and in his pontificals, and read several prayers in the established form;" then, after reading a psalm, which seemed exactly fitted to the rumors, just heard, of the cannonade of Boston, Mr. Duché struck out into an extemporary prayer, which has often been quoted, and often praised.³

¹ This City Tavern, late called The Merchants' Coffee-House, was completed in 1773, in the style of the best London taverns. It stood on the west side of Second Street, above Walnut, corner of Bank Alley or Gold Street. When first opened it was looked upon as the finest house of its kind in America, having several large club-rooms, two of which could be thrown together to make a large dining-room, fifty feet long. There was every convenience and accommodation for strangers. The house was opened by Daniel Smith in 1774.

² The beginnings of the Carpenters Guild have already been described in another place. This company was established in 1724, incorporating itself with another guild of the same industry in 1752, the original object of the society being instruction, benevolence, co-operation, and relief. The lot on the south side of Chestnut Street, between Third and Fourth, was bought in 1768, the building begun in January, 1770, and occupied in a year, though not finished entirely until 1792. The library of which John Adams speaks was that of the Philadelphia Library Company, which had moved here from its small room in the State-House in 1773.

³ Mr. Duché was a pretty fair example of the typical sentimental clergyman, full of "gush," without much principle behind it; indeed, with no very clear notions of what principle really is. He was good in his way, well disposed, not vicious, conscientious, but weak, ambitious, vain, and so absurd that his vanity became suicidal. His father, Jacob Duché, was a plain man, a useful citizen, of Huguenot stock, who made money and did some public service of importance in a quiet way. His son, born in 1738, studied at the Philadelphia College, and then went to Class Hall, Cambridge, to finish. He, William White, and Thomas Coombe were all preparing for the ministry at the same time. Young Duché was ordained and licensed in England in 1759, and became assistant minister to Dr. Jennings and Dr. Peters. He became quite a fine preacher and a fine writer, too. He was popular. Miss Sally Eve, in her lively diary, says, "Tom" Coombe tried to be Duché's echo, and she

The Congress was not hurried about its business. It acted slowly and prudently, and so calmly that the people learned to repose upon it. The North Carolina delegates came in on the 14th; on the 15th, John Dickinson was added to the Pennsylvania delegation, and the two months' session did not close until provision had been made for another Congress, to meet in Philadelphia, May 10, 1775. Gallows and Duane attempted a variety of dilatory and obstructive measures, but were baffled, and Congress

from all the colonies for the people of Massachusetts; it took a positive stand against importations, formed an association to that end, adopted a solemn declaration of rights, a memorial to the people of Great Britain and another to the king, and then adjourned. The gentlemen of the city gave the members of Congress a banquet at the State-House, with five hundred covers, during their session. The king's name headed the list of toasts, Hancock's brought up the rear. The entertainment was the finest ever given in the city up to that time. After the session ended the members were again entertained, at the City Tavern, by the Assembly of Pennsylvania. John Adams relates of this dinner that "a sentiment was given,—‘May the sword of the parent never be stained with the blood of her children.’ Two or three broadbrims were over against me at table. One of them said, ‘This is not a toast, but a prayer; come, let us join in it.’ And they took their glasses accordingly.”

The Assembly unanimously approved the proceedings of Congress, and appointed the former delegates to Congress, except John Martin in place of Samuel Rhoads, who had been elected mayor, and Gallo-

way, permitted to withdraw. In May, 1775, when Franklin returned from England, he was straightway elected a delegate, and Thomas Willing and James Wilson were also added to the delegation.

The Committee of Correspondence was still in authority, but their power being questionable, they recommended, in November, that at the ensuing general election a new committee should be regularly chosen for the city, and one also for the county. These committees numbered sixty-seven members for the city and Liberties, and forty-two for the county.

The city, Northern Liberties, and Southwark committee included John Dickinson, Thomas Mifflin, Charles Thomson; John Cadwalader, Robert Morris, Samuel Howell, George Clymer, Joseph Reed, Samuel Meredith, John Allen, William Rush, James Mease, John Nixon, John Cox, John Bayard, Charles Ludwig, Thomas Barclay, George Schlosser, Jonathan B. Smith, Francis Wade, Benjamin Marshall, Lambert Cadwalader, Reynold Keen, Richard Bache, John Benezet, Henry Keppele, Jr., Jacob Winey, Jacob Rush, Joseph Falconer, William Bradford, John Shee, Owen Biddle, William Heysham, James Milligan, John Wilcocks, Sharp Delaney, Francis Gurney, John Purviance, Robert Knox, Francis Hassenclever, Thomas Cuthbert, Sr., William Jackson, Isaac Melchior, Samuel Penrose, Isaac Coates, Blaihtwait Jones, Thomas Pryor, Samuel Massey, Robert Towers, Henry Jones, Joseph Wetherell, Joseph Copperthwaite, Joseph Dean, Benjamin Harbeson, James Ash, Benjamin Loxley, William Robinson, Jr., Ricloff Alberston, James Irvine, William Coates. For Southwark,

REV. JACOB DUCHÉ'S HOUSE.

did all its work well before adjourning. It made the last appeal to Great Britain before resorting to arms. It expressed sympathy and called for material aid

wonders why it is that Mr. Duché sits so long every day to have his hair curled and powdered. Duché had main charge of St. Peter's, the offshoot of Christ Church. He taught elocution in the college, lived in a big house built for him by his father, printed some of his sermons at Franklin & Hall's press, and when the "Letters of Junius" became popular, Duché published his "Letters of Tamoc Caspipina," an acrostic on the title of his office,—a dull sort of book it was, yet with some easy, graceful touches. Some of Duché's hearers thought him an enthusiast and mystic, but he simply yielded to the passing emotion. Duché became chaplain of Congress; he preached war sermons; his vestry dropped the prayer for King George from the Liturgy; his patriotic prayers were printed; then, as Howe drew near Philadelphia, the parson resigned his chaplaincy; he declined to take the one hundred and fifty dollars voted him by Congress; he revived King George's prayer when the British entered the city; was imprisoned one night, and came forth the next morning a loyal subject. Ten days later he wrote a mean, pitiful, every way contemptible letter, to Washington, urging him to desert his cause and betray his companions-in-arms. His brother-in-law, Francis Hopkinson, answered it, as Washington would take no notice of the "ridiculous, illiberal performance." In December, 1777, Duché went to England, his family followed some time after, and his property was confiscated. He published two volumes of sermons, dedicated to Lady Juliana Penn, studied Swedenborg, and got an appointment as secretary and chaplain of an orphan asylum. After the war Duché wrote another pitiful letter to Washington, asking his forgiveness, and begging him not to interfere to prevent his (Duché's) return to his former home. When he did return, in 1792, Washington permitted Duché to call on him. He died Jan. 3, 1798, not much regretted. His weakness was of that degree which never fails to make man miserable. Yet he ought to have had a tougher fibre in him. He was taught in early youth by Francis Allison, at Thunder Hill School. His father was a soldier, commander of the Second Association Regiment (Franklin had the first), he was also a vestryman of Christ Church. His grandfather, Anthony Duché, claimed to have come over, with his wife, to Philadelphia in the same ship with William Penn; he was, anyhow, a Quaker and a sturdy man, whether a "first purchaser" and a "Welcome" passenger or not.

—Elias Boys, Joseph Turner, Abraham Jones, and Thomas Robinson. For Kensington,—Emanuel Eyres and Jacob Miller. For the county of Philadelphia,—George Gray, Samuel Ashmead, Thomas Potts, John Bull, Jonathan Roberts, Jesse George, Samuel Erwin, John Roberts, Frederick Antis, Benjamin Rittenhouse, Thomas Ashton, Melchior Wagoner, James Stroud, Charles Bonsall, Daniel Keaster, Benjamin Jacobs, Joseph Mathers, Jacob Rise, Isaac Hughes, Frederick Weiss, James Deimer, Edward Milnor, John Bringhurst, Archibald Thompson, Isaac Knight, Jacob Styger, Andrew Knox, Abraham Luckens, Henry Derringer, James Potts, John Muck, Edward Bartholomew, Samuel Leech, John Jenkins, Joseph Lownes, Andrew Haney, John Pawling, Sr., John Moore, George Shive, and Alexander Edwards.

These committees entered upon their duties at once. Six sub-committees of inspection and observation were formed, and one committee sat each day at the Coffee-House to watch the arrival of vessels and inspect their cargoes according to the rules of the association formed by Congress. The goods had to be sold in lots or parcels, none less than three pounds or more than fifteen pounds in value. Salt or coal from Great Britain was to be sold at public vendue by cargo, or less, at option of consignee, under direction of the committee. The committee gave importers their election, under inspection, to send back their goods, store them, or sell according to association terms. Citizens were recommended not to buy or use mutton or lamb between January 1st and May, 1775, and no ewe lamb until October 1st. The butchers, sixty-one in number, determined that they would not kill the animals specified within the time mentioned, and signed an agreement to that effect.¹ The object was to encourage home manufactures, by making the raw material plenty and cheap. Other industrial and even political and religious enterprises sprung up on the edge of the war volcano's crater. John Elliott & Co. opened glass-works in Kensington; William Calverly manufactured superior American carpets in Loxley's Court; Richard Wells erected spermaceti works at Arch and Sixth Streets; Hare made American porter; Edward Ryves, Pine Street near Third, made American playing-cards; formulas for making and finding saltpetre were published with significant frequency,—it could be extracted from the tobacco refuse; it could be scraped up in abundance underneath old barns and tobacco-houses, etc. Lumber dealers, fearing a loss of market, sent their timber to Europe in raft-ships, craft made of rough unhewn logs, meant for the saw-mill when their port of destination was reached. The New England Baptists took advantage of the session of Congress and its operation against grievances to bring forward their own,—the discrimination of Massachusetts laws against

their sect. Of course Congress had nothing to do with this, and could not; but the New England Baptists appealed to their co-religionists in Philadelphia; the latter appointed a committee—Robert Strettel Jones, Samuel Davis, Stephen Shewell, Thomas Shields, George Westcott, Alexander Edwards, Benjamin Bartholomew, Rev. William Rogers, A.M., John Evans, John Mahew, Edward Keasby, Rev. Samuel Jones, A.M., Rev. Morgan Edwards, A.M., Rev. William Vanhorn, A.M., Abraham Bickley, Abel Evans, Samuel Miles, James Morgan, and John Jarman—to consider the grievance. This committee consulted the leading Quakers and so fell into the hands of mischief-making Galloway and Israel Pemberton, whom John Adams calls a "wily Jesuit," who tried to make trouble for Congress and perhaps to get up a feud between that body and the Society of Friends. However, the first interview was with the Massachusetts delegation, who told them, sharply enough, that they had no power to alter the Massachusetts statutes, and moreover, that those statutes were not likely to be altered. Then the committee applied to Congress, which bluntly resolved that it was a colony matter, and nobody's business at all in Congress. The last of these schemes was that of William Goddard, the printer, for an independent and American post-office establishment. But Goddard found Congress had its hands too full just now to attend to that matter, and when the mail-service was taken up it was given to Franklin.

Strange time, this, of excitement, feverish anxiety, feverish mental activity. There seemed to be no rest anywhere; all was wakefulness, watchfulness, mistrust, suspicion, contrivance, and invention. The records from January 1st to May 1, 1775, as we gather them from newspapers and the correspondence of the time, are a marvel. Here, one day, a suspected informer or king's man is advertised, handbilled, waited on by a committee, and sent suddenly tramping, with threats—not idle ones, neither, he knows—of fence-rails and tar and feathers ringing in his ears. Here, in the next column, mayhap, the American Philosophical Society pleading for the establishment of an astronomical observatory in Philadelphia. Here, in one place, is almost open war right on us in the Delaware. American schooner "Isabella," from Dunkirk, cargo of contraband wines, teas, gin, silks, etc., seized as she comes up the bay by tide-waiter Francis Welsh; pilot leaves vessel; captain steers her off; Welsh can get no aid anywhere. The Chester justice to whom he appeals refuses warrant; the sheriff promises aid, but takes care not to give it; finally, the vessel sails clear off, putting Welsh ashore at Cape May, and Governor and Council can give him no redress. This is open resistance, and it is approved by the new convention of Pennsylvania delegates in session at the time—Joseph Reed, president; Jonathan B. Smith, John Benezet, Francis Johnston, secretaries—because all resistance is approved by them, and pledges

¹ These sixty-one butchers appear by their names, with very few exceptions, to have been Germans; nine-tenths of them were so, at least.

are given to maintain it. At the same moment, too, the Society of Friends are giving their solemn "testimony" against resistance and violence, in an epistle "to friends and brethren," issued by the meeting for sufferings for New Jersey and Pennsylvania. Some Friends have been carried away by the excitements of the day, but they must be brought back and admonished, "dealt with," in affection and brotherly love. They have joined associations, and given pledges, and engaged in public affairs such as lead them to deviate from our religious principles, which teach us not to contend for anything at all, not even liberty.

It is a part of the divine principles we profess to avoid everything tending to disaffection to the king and the legal authority of his government. We must not approach him but with loyal and respectful addresses, wherefore the testimony is moved "publicly to declare against every usurpation of power and authority in opposition to the laws and government, and against all combinations, insurrections, conspiracies, and illegal assemblies," which includes even Congress. This testimony one Quaker, at least, did not sign, but laughed at,—Samuel Wetherill, the patriot and pioneer in manufactures, who spoke out against the general epistle as an indictment against the whole people, and said the Friends seemed to forget that they too contended a great deal sometimes,—about property-rights, for instance. For his own part, he said, he had learned to make allowances for human infirmities, and confessed that he discovered too many imperfections in himself not to be very tender to those of other people. As to the present situation of public affairs, he thought the Friends ought to be as watchmen on the walls, for there was something due from them to the public cause as well as to the king. He believed in the right of petition for redress of grievance, but he was not going to write a general epistle dictating to all how they should act and think. He left that to wiser men. Without taking open ground on the subject, a great many Quakers thought as Samuel Wetherill did, and quietly contributed all they could to promote the good cause. In the face of impending civil war, however, it would have been contrary to human nature to expect the Quakers to abandon their non-resistance principles and expose themselves to be drafted alternately into the provincial or the royal armies.

The activities and energies and restlessness of the times found outlets in other directions. Preparations were made for bridging the Schuylkill at the Middle Ferry, and for erecting three piers in the Delaware at Reedy Island, besides others at Chester and Marcus Hook, and for this the Assembly voted an issue of six thousand pounds, paper money. The Common Council voted to memorialize the Assembly against the continuance of the semi-annual fairs provided for under the corporation charter. The city had outgrown them, and they had become useless and annoy-

ing. The committee having the memorial in charge—Samuel Rhoads, the mayor; Andrew Allen, recorder; Aldermen, Samuel Shoemaker, John Gibson, James Allen, Amos Strettell, Samuel Powell; Common Councilmen, Edward Shippen, Alexander Wilcox, John Potts, and Peter Chevalier—reported so strongly that they overshot the mark and passed a bill doing away with the fairs for ever, whereas the corporation desired power to revive them, "in case the circumstances of the city and province should appear to require the same." A protest was made, but the action stood. The corporation moved at this time also in favor of erecting a city hall and courthouse on the lot set apart for that purpose in the State-House square. A committee was appointed to look into the matter and inquire the expense. On it were the mayor, recorder, and Messrs. Allen, Shippen, Biddle, and Clymer, of the board.

The new provincial convention took steps to protect the city and get it relief from the counties in case its trade was destroyed by some such measure as the Boston port bill. This convention insisted earnestly upon the enforcement of the non-importation agreements, and sought to build up the domestic resources of the province. Among its recommendations were those of killing no sheep under four years old, the culture of flax, hemp, madder wood and other dye-woods, the use of home manufactures and home printing entirely, the organization of associations for encouraging domestic productions, special attention to the manufacture of gunpowder ("inasmuch as there exists great necessity for it, particularly in the Indian trade"), woolen goods, salt, saltpetre, iron, nails, wire, steel, paper, glass, wool, combs, cards, copper in sheets, kettles, malt liquors, and tin-plates.

These recommendations in favor of American manufactures were eagerly seconded, and some of the results were permanent and important. A society was formed in March to encourage woolen manufactures, Joseph Stiles being the president, James Cannon secretary, Christopher Marshall, Richard Humphreys, Jacob Winey, Isaac Gray, Samuel Wetherill, Jr., Christopher Ludwick, Frederick Kuhl, Robert S. Jones, Richard Wells, Thomas Tilbury, James Popham, and Isaac Howell, managers. James Hazel exhibited, or offered to exhibit, to this association an apparatus to demonstrate the power of machinery,—a clock-work card- and spindle-machine, by which a girl of ten years old could tend forty-eight spindles and card three hundred and sixty pairs of cards. Other cotton- and woolen-machines were at the same time produced by John Hague and Christopher Tully, and the Assembly next year voted fifteen pounds to each. The society fitted up a factory corner of Ninth and Market Streets, invited farmers to bring forward their wool, flax, and hemp, and asked women to come forward and learn the trade of spinning. It would be doing a service to themselves and to their country at the same time, they were told, and the response

was so prompt that in a month there were four hundred spinners employed. Among other contemporary enterprises was the linen-printing establishment of Walters & Bedwell, on the Germantown road, while John Behrent, joiner, on Third Street, manufactured a piano-forte in a mahogany case. The interdiction against the use of tea throughout the colonies went into effect on March 1st. The event was made the occasion of many effusions in verse, the most of them weaker than tea. It is probable, however, that every one had laid in more or less of a stock of tea before the dreaded day, and its loss was not much felt at first.

The Committee of Correspondence gave notice that the India Company would try to introduce tea by means of Dutch merchants and the West India Islands, but they meant to enforce the recommendations of Congress in the premises. The committee, in fact, had become the only effective and authoritative government in the city, county, and province. The ancient forms were kept up, but the power and direction lay with the committee exclusively. They had power to act in any emergency, and the emergency soon came.

April 24, 1775, at five o'clock in the afternoon, an express came galloping in from Trenton with the greatest haste, excitement in his looks, on his lips, and in his train. He rode up to the City Tavern, the people crowding thither likewise, the members of the committee hurrying to meet him, and delivered his dispatch. It was a brief and hurried message, but it had come a long route, and it was big with the fate of a nation. It was a dispatch from Watertown, on April 19th, announcing that Gage's men had marched out of Boston the night before, crossed to Cambridge, fired on and killed the militia at Lexington, destroyed the store at Concord, were now on the retreat and hotly pursued. Many were killed on both sides, and the country was rising. The message had come by way of Worcester, where it was viséd by the town clerk. It had come to Brookline, Thursday 20th, at 11 A.M.; it was forwarded from Norwich at 4 P.M.; it was expressed from New London at seven in the evening. The committee at Lynn received, copied,

and started the rider with it at one o'clock Friday morning; it came to Saybrook before sun-up; at breakfast time another messenger took it up at Killingworth; at eight o'clock it was in East Guilford; at ten in Guilford; at noon, Brandford. It was sent from New Haven with further details on 21st; it was dispatched from the New York committee-rooms four o'clock Sunday afternoon; it came to New Brunswick 2 A.M. Monday; at Princeton at six o'clock; at Trenton 9 o'clock A.M., and indorsed "rec'd the above p. express and forwarded the same to the Committee of Phila." Two days later another express came in, bringing fuller particulars of "the battle of Lexington," as that memorable fight will always be called.

John Cadwalader

The news of Lexington came to Philadelphia too late in the day to spread at once over town. But next morning every one knew it, and, borne by intense feeling, the people assembled in public meeting, as if by common consent, at the State-House. There were eight thousand persons present, but a single will seemed to actuate them. The Committee of Correspondence took charge; their authority was recognized and accepted. A single brief resolution was passed, to "associate together, to defend with arms their property, liberty, and lives against all attempts to deprive them of it," and then, with impatience and eagerness, to action. The time for words was passed. The time for organization, arming, drill, march had come. The enrollment

began at once. The committee besought all who had arms to let them know, so that they might be purchased and secured, and the associators availed themselves of their existing organization to turn themselves forthwith into military companies. It was agreed that two troops of light horse, two companies of riflemen, and two companies of artillery, with brass and iron field-pieces, should be formed right away. Drill began immediately, and the companies were ready to parade by May 10th, when they turned out to receive Congress and also to honor John Hancock.¹

¹ The foot company and riflemen turned out to meet the Southern delegates to Congress at Gray's Ferry. The officers of all the companies mounted, went out to meet the Eastern delegates and Hancock.

So strong was the association and so eager the spirit of the people that it was expected the city and liberties would very soon have four thousand men under arms and fully equipped. Drilling went on night and day, some companies drilling twice a day. In the associators' organization the officers were as follows,—the list is not complete, however:

First Battalion,—John Dickinson, colonel; John Chevalier, lieutenant-colonel; Jacob Morgan and William Coates, majors. Second Battalion,—Daniel Roberdeau, colonel; Joseph Reed, lieutenant-colonel; John Cox and John Bayard, majors. Third Battalion,—John Cadwalader, colonel; John Nixon, lieutenant-colonel; Thomas Mifflin and Samuel Meredith, majors. Among the captains were Peter Markoe, of the light horse; James Biddle, Benjamin Loxley, Thomas Proctor, Joseph Moulder, artillery; Joseph Cowperthwait, the Quaker Blues; Richard Peters, Tench Francis, William Bradford, Lambert Cadwalader, the Greens; with John Shee, John Wilcocks, — Morgan, — Little, — Willing, — Humphreys, — Furman, and Francis Gurney.¹

In June, according to the *Packet* of the 6th, the three battalions, mustering fifteen hundred men, with the artillery company of one hundred and fifty men and six guns (two twelve-pounders and four brass six-pounders), the troop of light horse, and several companies of light infantry, rangers, and rifle-men, "in the whole about two thousand men," marched to the commons and drilled, march, brigade evolutions, manual exercisings, firing and manœuvring "with a dexterity scarcely to have been expected from such short practice, in the presence of the honorable members of the Continental Congress and several thousand spectators."

Silas Deane, in a letter to his wife dated June 3d, gives a description of the Philadelphia troops and their appearance at this time. He mentions that there were about thirty companies of them uniformed, out morning and evening at their military exercises, well armed, and making rapid progress in knowledge of their evolutions. "The uniform," he says,—

¹ The Blues and the Greens were companies organized and under drill before the Lexington conflict. Graydon, in his "Memoirs," says of the Quakers that "notwithstanding their endeavors to keep aloof from the contest, a good number of their young men swerved from their tenets, and, affecting cockades and uniforms, openly avowed themselves fighting men. They went so far as to form a company of light infantry, under the command of Mr. Cowperthwaite, which was called the *Quaker Blues*, and instituted in a spirit of competition with the *Greens*, or, as they were sneeringly styled, the *silk stocking company*, commanded by Mr. John Cadwalader, and which, having early associated, had already acquired celebrity." Joseph Cowperthwait (the correct name) was sheriff at the time he raised this company; John Cadwalader became afterwards colonel of the Third Battalion, then brigadier and commander of Pennsylvania militia; commanded a division at Trenton, fought as a volunteer at Princeton, Monmouth, Brandywine, and Germantown, and in 1778 was offered by Congress the command of general of cavalry. Graydon, in reference to the "Greens," says their feathers were so fine that Mifflin called them aristocrats. They were seventy in number, drilled twice a day, and usually in Cadwalader's yard, he having the kindness to set out his Madeira for the men to refresh themselves on after drill.

"is worth describing to you. It is a dark-brown (like our homespun coat), faced with red, white, yellow, or buff, according to their different battalions, white vest and breeches, white stockings, half-boots, and black knee-garters. The coat is made short, falling but little below the waistband of the breeches, which shows the size of a man to great advantage. Their hats are small (as Jessie's little one, almost), with a red, white, or black ribbon, according to their battalions, closing in a rose, out of which rises a tuft of fur of deer (made to resemble the buck's tail as much as possible) six or eight inches high. Their cartouch-boxes are large, with the word *LIBERTY* and the number of their battalion written on the outside in large white letters. Thus equipped they make a most elegant appearance, as their cartouch-boxes are hung with a broad white horse-leather strap or belt, and their bayonets, etc., on the other side, with the same, which two, crossing on the shoulders diamond-fashion, gives an agreeable appearance viewed in the rear. The light infantry are in green, faced with buff; vests, etc., as the others, except the cap, which is a hunter's cap, or a jockey's. These are, without exception, the genteelst companies I ever saw. They have, besides, a body of irregulars, or riflemen, whose dress it is hard to describe. They take a piece of Ticklenbergh, or tow-cloth, that is stout, and put it in a tan-vat until it has the shade of a fallen or dry leaf. Then they make a kind of frock of it, reaching down below the knee, open before, with a large cape. They wrap it around them tight on a march, and tie it with their belt, in which hangs their tomahawk. Their hats are the same as the others. They exercise in the neighboring groves, firing at marks and throwing their tomahawks, forming on a sudden into line, and then, at the word, breaking their order and taking their parts to hit their mark. West of this city is a large open square of nearly two miles each way, with large groves each side, in which, each afternoon, they collect, with a vast number of spectators. They have a body of horse in training, but as yet I have not seen them out."²

² There is not much to add to Mr. Deane's clear and graphic description of the uniforms of the Philadelphia associators. The riflemen's uniform he gives was the dress of the Pennsylvania wagons; sometimes the frock was made of duck, or Osnaburg, and dyed blue. Morgan's riflemen wore homespun frocks, dyed with butter-nut. Cresap's men appear to have worn the hunter's regular buckskin frock and leggings with fringe. In the early part of the struggle some local companies, already uniformed, went to the front in their parade dress. Thus, Gist's company from Baltimore wore scarlet coats, and so, perhaps, did some of the Virginians. Thompson Westcott, in an article on Revolutionary uniforms in the "Historical Magazine," vol. iv. p. 353, speaks of the erroneous ideas existing in regard to the colors and materials of the uniforms of the Continental troops during the Revolution. "The popular notion is, that the regular colors were blue and buff. Such undoubtedly were the colors of the commander-in-chief and his staff, but the rank and file rarely wore these colors. The prevailing uniforms were brown, mixed up with red or white; and green, with like trimmings." Mr. Westcott says, "I have compiled descriptions of the uniforms of various regiments during the Revolutionary war, as they were advertised in the notices of deserters published in Philadelphia newspapers." The Pennsylvania uniforms, as collected by Mr. Westcott, are as follows:

1776.—Col. John Shee's Third Battalion, associators of Philadelphia: brown regimental coats, white facings, pewter buttons, with "No. 3" upon them; white faced hat, bound with white tape, buckskin breeches. Pennsylvania musketeers, Col. Perry: blue coats, faced with red, white jackets, buckskin breeches, white stockings, and shoes.

Capt. Josias Harmer's company, First Pennsylvania Battalion: brown coats, faced with buff, swanskin jackets.

Capt. Vernon's Cheester County company (Fourth Battalion, Col. Anthony Wayne): dark blue coats faced with white.

Capt. Persifer Fraser's company, Fourth Battalion: brown coat, blue silk facings.

Col. Green's Second Battalion of Rifles (Capt. Cowperthwaite's Lancaster company): green frock and trowsers.

Capt. Jacob Humphrey's company, First Battalion, Pennsylvania Flying Camp: dark hunting-shirt.

First Battalion, Cumberland County: hunting-shirt and leggings.

Capt. Thomas Holme, First Philadelphia County Battalion, Flying Camp, Col. John Moore: brown coat, faced with red, leather breeches, yarn stockings.

Col. Penrose's battalion: short brown coat, of a reddish cast, turned up with red.

Capt. Murray's company of rifles: light-colored hunting-shirt, with fringes.

The troops were reviewed by Gen. Washington on June 20th, and next day he set out for Boston, escorted across New Jersey by the cavalry troop. On June 23d the associators were preached to by Rev. Dr. Smith. They sent in at the same time a petition

to the Assembly, giving an account of their organization into companies, etc., and asking that provision for their regular pay and subsistence should be made, as well as steps taken for the defense of the water-front of the city. The Assembly was practically defunct at this time, however, and the Governor and Council, though they continued to meet until December, to look over accounts, appoint civil officers, etc., had really been devoid of executive power during the entire year. Philadelphia at this time was in an anomalous condition. It was under a royal government which did not dare attempt to discharge any of its functions or enforce any of its laws. It was under a municipal government which scarcely ever looked after the routine of watch, lamp, and street-cleaning supervision. It was under a Governor and Council who did nothing except attend to some border affairs, and not even these until the volunteer committees had been consulted, and an Assembly which simply promised to vote to do what it was ordered. A Congress was in session within its limits which had no direct authority except by popular consent, and did not, except by consent, represent either the colonies or the people, and yet was supreme, levied taxes, raised armies, made war, and organized armies. In Philadelphia the only power of the State resided in a large and unwieldy committee, which had been nominated by acclamation at a town meeting, and only represented the mob. Yet it exercised executive and legislative functions at one and the same time, and in the freest manner, and was obeyed cheerfully and implicitly by all, though it made many mistakes from unwieldiness and inexperience.

Order was, however, soon to be evoked out of all this chaos. Benjamin Franklin arrived in Philadelphia from England on the evening of May 5th. He was heartily welcomed by the citizens. The poets sounded his praises in fustian verse; the harassed leaders took him immediately into their counsels. The Assembly was in session, and next morning, as soon as Franklin's arrival was known, the first thing that body did was to elect him delegate to the Continental Congress which was to meet next week. The choice was a wise one,—Franklin was the man for such an emergency. He was practical, matter-of-fact, had immense business capacity, with an intimate knowledge of details and infinite patience to look after them, and he had moreover, unlike many around him, the courage of his opinions. He knew that the die was cast, that reconciliation was impossible, that the only choice was independence or conquest, and he knew that it was every one's duty to set to work to make the best fight he could. He wrote to Dr. Priestly almost as soon as he landed: "The breach is growing wider, and is in danger of growing irreparable." So, while he did not oppose the plan of Jay and Dickinson for sending a second address to the king, he did not look for any important consequences from that address, and took upon himself the responsibility of

Col. Irwin's battalion: blue coats, turned up with red.
Capt. Isaac Farnsworth's company, Flying Camp: blue hunting-shirt.
Capt. Robert's company of rifles, Second Battalion, Col. Hart: yellowish hunting-shirt.

Capt. Hazlett's company, Col. John Moore's battalion, Flying Camp: brown coat, faced with green, red woven breeches, white jacket, stockings, round hat.

Capt. Andrew's company, Col. Samuel Mill's rifle regiment: black hunting-shirts.

1777, January.—First Pennsylvania Regiment, Col. De Haas: blue coats, faced with white, "I P. B." on buttons.

March.—Pennsylvania armed boats: brown coats, faced with green, letters "I P. B." on buttons, cocked hats.

Second Pennsylvania Battalion: brown coats, faced with green.

Second Regiment, Col. Irvine's: blue coat, scarlet facings, blue waistcoat, regimental hat.

January.—Ninth Pennsylvania Regiment, Lieut.-Col. Najest: brown coats, turned up with red, buckskin breeches.

Fifth Pennsylvania Battalion: blue coat, faced with white, buckskin breeches, blue yarn stockings.

March.—Thirteenth Pennsylvania Regiment: brown coat, faced with buff, light-colored cloth breeches, coarse, white woolen stockings, old wool hat.

Capt. David Woelper's company, German regiment: white hunting-frock and breeches, striped leggings.

April.—Capt. James Wilson's company, First Pennsylvania Battalion: light-colored coat, with red facings.

April.—Col. Humphrey's Eleventh Pennsylvania Regiment: light infantry caps, blue coats, with scarlet capes and cuffs, white woolen waistcoats, new buckskin breeches.

July.—First Battalion Pennsylvania Regulars: brown coats, faced with green.

August.—Col. Walter Stewart's regiment: blue coats, turned up with red, white metal buttons, with "S. P. R." on them.

1778, May.—First Pennsylvania Regiment: blue coats, turned up with white.

Capt. James Wilson's company, same battalion: brown coats, turned up with buff.

August.—Col. Hartley's Pennsylvania regiment: blue uniform coats, faced with yellow, grenadier's light infantry caps.

August.—Col. Richard Butler's Ninth Pennsylvania: brown uniform coat, faced with red, red cuffs and red cape, new cocked hats, white looping.

October.—Col. Thomas Proctor's artillery: blue coat, buff and white facings.

1779.—Col. Benjamin Flowers' First Company Artillery: black coat, faced with red, brown jackets, white buttons, letters "U. S. A." on them, buckskin breeches, white stockings and felt hat.

February.—Gen. Wayne's division: blue regimental coats, lined with white, ruffled shirts, red flannel leggings, and "a sort of cap dressed up with fur."

May.—Third Pennsylvania Regiment: blue coats, turned up with red, white cloth jacket and breeches, old hat, and Continental shirt.

Eleventh Pennsylvania Regiment: long blue uniform coats, faced with buff, small round jackets.

Invalid Regiment, Philadelphia, Col. Lewis Nicola: brown coats, faced with green.

1779.—"As black and red have been pitched upon for that of the American Continental army, it is unreasonable for him (Col. Proctor) to make objection to it."—*Washington to President Reed*, April 5, 1779, vii. "Pa. Archives," 293.

1780.—Col. Hubley's Eleventh Pennsylvania Regiment: blue regimental coat, faced with red, and buff edging, round hat, and black feathers.

Second Pennsylvania Regiment: blue coats, faced with scarlet, round hat, black ferretting.

1782.—First Pennsylvania Regiment, Col. Daniel Brodhead: blue regimental coat, faced with red.

elaborating a careful and complete system of defense and government for Pennsylvania, of which he speedily became the head. Franklin's work in Congress and on errands upon which Congress sent him has no rightful place in this narrative, important as it was. But his work in the Committee of Safety of Pennsylvania is really the history of the defense of Philadelphia during the first year of the war, from the British without and the lords proprietary within. He took the bull of government by the horns and substituted a compact, energetic committee for the unwieldy Committee of Correspondence. That committee was the creation of the associators, and the associators derived all their functions from a public meeting, called by no one in particular, not representing any power in the State, but only the mob of the city. Franklin, in advance of the general adoption of his scheme by Congress as a good system to recommend to all the colonies, got the Assembly to supersede the Committee of Correspondence and appoint in its stead a Committee of Safety, with discretionary powers, which, in a case of emergency, became virtually dictatorial. This new committee thus had an authoritative and responsible existence. It was appointed by the proper legislative body in the regular manner. The first thing the Committee of Safety did was to resolve, "that this House approves the Association entered into by the good People of this colony for the Defence of their Lives, Liberties, and Property." Thus the acts of the Committee of Correspondence were duly legalized, and the Committee of Safety could take up their work and go on with it.

That work had been not badly done so far. The committee had grasped their unexpected civil functions with firm hands. They had ordered exportations to Canada, Nova Scotia, Newfoundland, Georgia—colonies not in the Congress—to be suspended, and had rigidly excluded imports. Blair McClenachan, the largest importer in the city, except Robert Morris, had been summoned before them, to explain a consignment of linen goods. When he had explained he was exonerated, but his captain was denounced as guilty of infamous conduct, and published as an enemy to his country. The committee followed up every suspected or mistrusted person in the community very closely. They were so curious about Joseph Galloway's incomings and outgoings at his place of retirement, his seat of Trevoise, that he was constrained to come out with a card "to the public," to deny the "false reports industriously propagated" against him, declare that he was "incapable of entertaining a thought inimical to the country where all I hold dear and valuable is fixed, and where I am determined to spend the remainder of my life," and to deny categorically that he had any correspondence, direct or indirect, with the British authorities or ministry.

But the associators wanted money, the Committee of Correspondence had none to give them, and this

was the lever with which Franklin worked. The Assembly had already been petitioned by citizens and associators to appropriate fifty thousand pounds to put the province in a state of defense, and the Committee of Correspondence wanted two thousand pounds for their immediate necessities. That was granted when the associators, who had an organization in each ward of the city and every township in the counties, asked to have these companies put upon a regular militia footing, mustered in and given a pay-roll. They also demanded extensive defensive arrangements and the appointment of a new committee with discretionary powers. Joseph Reed signed these resolutions as chairman of a sub-committee of the Committee of Correspondence. George Gray, chairman of another sub-committee, presented them. On the 30th of June the Assembly passed the series of resolutions which lodged the power of the State in the hands of a Committee of Safety. These sanctioned the work done by the association; authorized the Committee of Safety in case of invasion, or danger of it, from ships or armies, to employ the associators in actual service, the House providing for the pay and necessary expenses of such service, such pay not to exceed that given by Congress to the Continental forces. The House called on the city and counties to provide arms and equipments in quantities proportioned to their resources; to organize, arm, and equip minute-men, and it resolved that effective measures should be taken to provide Philadelphia with defenses against a naval attack. It offered twenty pounds per hundred weight for good merchantable saltpetre made within the province within three months. "Resolved, that John Dickinson, George Gray, Henry Wynkoop, Anthony Wayne, Benjamin Bartholomew, George Ross, Michael Swope, John Montgomery, Edward Biddle, William Edmunds, Bernard Dougherty, Samuel Hunter, William Thompson, Thomas Willing, Benjamin Franklin, Daniel Roberdeau, John Cadwalader, Andrew Allen, Owen Biddle, Francis Johnston, Richard Reilley, Samuel Morris, Jr., Robert Morris, Thomas Wharton, Jr., and Robert White, be a Committee of Safety for calling forth such and so many of the associators into Actual Service when Necessity requires, as the said Committee shall judge proper. For paying and supplying them with Necessaries while in Actual Service. For providing for the Defence of this Province against insurrection and invasion; and for encouraging and promoting the manufacture of Salt Petre; which said Committee are hereby authorized and empowered to draw orders on the Treasurer, herein appointed, for the several purposes above mentioned." Seven of the committee were to be a quorum; thirty-five thousand pounds in bills of credit were to be issued under the direction of George Gray, William Rodman, Joseph Parker, and Isaac Pearson, committee, with Sharpe Dulany, Lambert Cadwalader, Isaac Howell, James Mease, Adam Hubley, John

Benezet, Samuel Cadwalader Morris, Thomas Prior, Godfrey Twells, John Mease, John Purviance, and William Allen, "or any three of them" for signers; said bills to be delivered to Michael Hillegas, made treasurer, who is to give bond in ten thousand pounds, and to pay the drafts of the Committee of Safety out of them. These bills were to be liquidated by a tax on all estates, real and personal, in the province.

The Committee of Safety met July 3d, and Franklin was unanimously chosen president, William Govett, clerk. It proceeded to business with the utmost energy, meeting every morning (except Sunday) at six o'clock, so that its sessions might not interfere with those of Congress. It looked after more arms and ammunition, appointed inspectors for such as were in hand, sent for the tax commissioners and assessors, went down to Red Bank with a committee of engineers to select a site for a fort, appointed a committee on boats and machines for river defense, bought all sorts of military materials, from flint brushes up to pine-logs for the *chevaux-de-frise*, looked after medicines, hospitals, military prisons, etc., and set up manufactures, in several places, of fire-arms, cannon, gunpowder, shot, cannon-balls, etc.,—seeking out every activity and energy in the province, to enlist them in the service of the public defense. Franklin's hand is apparent throughout all these various operations. He was a master of detailed work.

Such a controlling hand and cool, sagacious head were needed, for there were a thousand things to do, and very little time to do them in. The general committee had much aid from the local committees, which remained in existence for local executive purposes, and to which new members were elected August 16th, but the business of completing an effective organization made severe demands upon the time of all. The Committee of Safety had two sessions every day, and the local committee sat every day. There were so many things to be looked after, and so many points to guard. Two prisoners, John McAllister and Andrew Stuart, were in jail, under sentence of death, for counterfeiting. In June their friends and confederates, a gang of twenty-five persons, attempted to break into the jail and rescue them. As the door could not be broken down, the desperate ruffians forced their way into the cellar, and, finally, baffled there, set fire to the buildings. The magistrates and citizens hastened to the rescue, the flames were extinguished, and some of the conspirators taken. But this riot warned the committee to have a guard stationed at the jail, in spite of whom, however, McAllister contrived to escape, while Stuart coolly walked out of the prison in the daytime, profiting by the presence of the clergyman who had come to pray with and prepare him for execution. In the latter part of the same month the committee detected the ship "Albion," of Liverpool, in an attempt to discharge a cargo of salt, for the account of Henry Cour and Nicholas Ashton. These Liverpool mer-

chants were forthwith published as enemies of America, and their salt sent back to them. A few weeks later, and it would have been confiscated, as a matter of course.

The Committee of Safety made the utmost efforts at once to procure arms, ammunition, muskets, bayonets, gunpowder, and saltpetre. During the first year of the war these articles, and particularly gunpowder, were perilously scarce, not only in every colony, but at the front. Seven or eight times Washington's army at Boston had not more than twenty rounds of ball cartridges apiece, and no cannon-powder.

The defense of the river front was a subject of as anxious concern as that of arms, and many expedients were practiced until more elaborate devices could be contrived. Franklin, who, for all his shrewdness, was not without his "old granny" notions, recommended the manufacture of a pike to arm the militia with in lieu of muskets and bayonets, just as, a year later, he wrote a serious letter to Gen. Charles Lee advocating the regular employment by the army of bows and arrows.¹ The pike was used to some extent on board the improvised Delaware flotilla, and, as its bearers never encountered any enemy, its merits were never tested. Besides the pikes, and the fort on Mud Island, a boom was prepared for the river, and John Wharton built a sort of gun-boat, which he called a "Calevat"; Emanuel Eyre another gun-boat, which was named the "Bulldog." It was determined, instead of using a boom, to obstruct the river with a *chevaux-de-frise* of logs. At the same time a fleet of gun-boats was ordered and built with remarkable expedition by the shipwrights. Eyre had the "Bulldog" afloat and in service in sixteen days, and Wharton's "Experiment" was launched soon after. By the middle of September the committee had a fleet of thirteen gun-boats—of the gondola or galley sort—in service. This navy, which was under command of the Committee of Safety, had Dr. Benjamin Rush for its fleet surgeon; Dr. Duffield, assistant; John Ross, mustermaster; John Maxwell Nesbitt, paymaster; Capt. Peter Syng, ship's-husband. The boats cost five hundred and fifty pounds each, or seven thousand one hundred and fifty pounds for the fleet. They were propelled by sweeps, or oars, like regular galleys, and each was manned by fifty-three men, besides officers, and carried two howitzers, besides swivels, muskets, and pikes. The vessels were named, officered, and built as follows:

Name of Boat.	Builder.	Captain.	Lieutenant.
Bulldog.	Emanuel Eyre.	A. Henderson.	John Webb.
Franklin.	Emanuel Eyre.	Nich. Biddle.	Thos. Houston.
Congress.	Emanuel Eyre.	J. Hamilton.	H. Montgomery.
Experiment.	John Wharton.	Allen Moore.	Benj. Thompson.
Washington.	John Wharton.	— Dougherty.	Nathan Boys.
Effingham.	Carroup & Fullerton.	Allen Moore.	John Hennessey.
Ranger.	Samuel Bobbins.	J. Montgomery.	Gibbs Jones.
Chatham.	—	C. Alexander.	Robert Pomeroy.
Dickinson.	John Rice.	John Rice.	James Allen.

¹ Sparks, "Franklin's Life and Works," vol. viii. 167.

Name of Boat.	Builder.	Captain.	Lieutenant.
Burke.	Warneck Coates.	James Blair.	John Chatham.
Camden.	— Sherlock.	Richard Eyres.	George Garland.
Warren.	— Marsh.	Saml. Davidson.	Jer. Simmons.
Hancock.	William Williams.	John Moulder.	David Ford.

The fleet, however, according to Silas Deane, cost the province at the rate of £100,000 per annum, and this was scarcely recouped to the Committee of Safety, either in prizes or in security against the enemy.

The Committee of Safety dealt still more severely and sternly than the Committee of Correspondence had done with cases of disaffected persons or those suspected of being dangerous to the patriot cause. The popular side no longer tolerated discussion. Those who were not for it were counted enemies and were watched, and liable to be violently suppressed upon the slightest provocation. Major Skene, of the British army, ventured to show himself in Philadelphia not long after Bunker Hill. He had come out to take command of Ticonderoga and Crown Point, and raise a regiment of loyal Americans. He was a veteran soldier of the old school, had served in Flanders, at Carthage and Porto Bello; at Culloden and Martinique and Havana; under Cumberland, Wentworth, and Amherst; was a loyal and jovial three-bottle man. He heard, *en route*, of the capture of Ticonderoga, tried to slip into Philadelphia unnoticed, and was arrested and put under guard.¹ Skene was exchanged as a prisoner of war, but Tories to the manner born were compelled to recant their errors and confess. Amos Wickersham, for instance, made his written confession (which was published) that he had acted extremely wrong, for which he begged pardon, in making use of rash and impudent expressions with respect to the conduct of his fellow-citizens "who are now engaged in a noble and patriotic struggle against the arbitrary measures of the British ministry"; Mordecai Levy was forced to declare in the same way that his disrespectful speeches about Congress proceeded from "the most contracted notions of the British constitution and the rights of human nature." Better instructed, he asked pardon in the presence of a large crowd in the college yard. Christopher Marshall calls him "the Dutch butcher." John Bergum confessed himself very much to blame for having made use of expressions derogatory to the liberties of the country, and promised to do better in the future. Jabez Maud Fisher was brought before the people at the Coffee-House and made to tell the name of the person who wrote him a letter containing Tory sentiments; and Thomas Loosley was "exalted as a spectacle" at the same place, and made to beg pardon for having vilified Congress. There is a certain grim humor in these punishments which all must have enjoyed except the victims.

¹ Graydon met him, after being captured himself with the garrison of Fort Mifflin, and received some civilities from him. He was a soldier of fortune perhaps above the average of such gentry,—very loyal himself, he yet did not seem to regard it as a crime in the Americans to take up arms in defense of their liberties.

The Committee of Safety placed upon its minutes the regulations adopted by the Continental Congress on July 18th for the enrollment of the militia, all able-bodied, effective men between sixteen and sixty being recommended immediately to form themselves into regular companies of militia, consisting of one captain, two lieutenants, one ensign, four sergeants, four corporals, one clerk, one drummer, one fifer, and about sixty-eight privates (eighty-three rank and file); each company to choose its officers; each soldier to be furnished with a musket carrying an ounce ball, bayonet, steel ramrod, worm, priming-wire with brush, cutting-sword or tomahawk, a cartridge-box with a capacity of twenty-three cartridges, twelve flints, and a knapsack. The companies to be formed into regiments or battalions, and all officers above the rank of captain to be appointed by the Provincial Assembly or convention, or (in their recess) by the Committees of Safety appointed by said Assemblies. The militia to be well drilled and supplied, each man, with a pound of powder and four pounds of ball; one-fourth the militia in each colony to serve as minute-men, always ready for a special call to service; people whose religious scruples forbid them to bear arms are recommended "to contribute liberally, in this time of universal calamity, to the relief of their distressed brethren;" Assemblies to collect stores of ammunition and provide arms; colonies to appoint Committees of Safety and provide coastwise defenses at their own cost. These regulations the Committee of Safety undertook to carry into effect.

They "borrowed" three thousand five hundred pounds from the treasurer of the port-wardens, Peter Reeve. They appointed Franklin, Andrew Allen, Cols. Cadwalader, Wayne, Ross, and Roberdeau, and Maj. Johnston a committee to draw up new rules and regulations for the associators, who had become rather unmanageable. These rules, adopted August 19th, were avowedly framed to promote "just regularity, due subordination, and exact obedience to command." Under them officers were fined five shillings, and privates and non-commissioned officers one shilling, for swearing when on duty, disobedience of orders to be punished by regimental courts-martial. And the same provision was made against officers or soldiers creating any disturbance, drawing on or striking a superior officer, or any person on duty, or using insolent and indecent language, and various injuries entitled officers or soldiers to a court-martial. The duty of regular parade was not to be neglected, on penalty of court-martial, drunkenness on duty punished with fine or censure, at the discretion of a court-martial, and various other penalties were denounced against several offenses of different classes, the conviction to be by court-martial, either general (thirteen members) or regimental (seven members), and a two-thirds vote was necessary to inflict penalties. No penalty could be inflicted at the discretion of a court-martial other than degrading, cashiering, or fining,

the fines for officers not to exceed three pounds, and privates twelve shillings, for a single fault, these fines to be used for relief of sick and wounded.

The Committee of Safety was so successful in collecting, and afterwards in manufacturing gunpowder, that it was able to lend some to the Continental army, to New York, and to New Jersey. Lead was very scarce, so that the leaden weights in the standing clocks of Germantown were finally appropriated. A premium was offered for saltpetre, and instructions published in regard to the methods of manufacturing it from offal, manure, tobacco, etc. The Committee of Correspondence appointed Owen Biddle, George Clymer, John Allen, James Mease, Lambert Cadwalader, and Benjamin Rush a committee to superintend a public saltpetre factory set up in a house on Market Street. Thomas Paine made many experiments towards improving and facilitating the nitre manufacture, and so did many other individuals in a private way,—William Brown, Front Street, Southwark; Capt. William Davis, Front Street; Andrew Porter, Union Street; Jonathan Gostelowe, Hugh Howell, Market Street; Charles Pryer, Union Street; James Sutton, Strawberry Street; William Maris, Water Street; and Master Samuel Bryan, aged thirteen years, who made half a pound of saltpetre. Blair McClenachan, the prominent merchant, was very successful in his attempt to produce nitre.

The new jail, Walnut and Sixth Streets, was turned into a powder magazine and kept under regular guard, but a new powder-house was established and the powder moved into it in August, under charge of Robert Towers, general agent for military stores. The Committee of Safety adopted a seal, "about the size of a Dollar, with a Cap of Liberty, and a motto: *This is my right and I will defend it*, inscribed with Pennsylvania, Committee of Safety, 1775." The pay of the crews of the armed boats was fixed at thirty dollars a month for the commodore, twenty dollars for captain, twenty dollars for lieutenant; surgeon, twenty dollars; surgeon's-mate, twelve dollars; gunner, twelve dollars; boatswain, eight dollars; cook, six dollars; privates, six dollars; boys, four dollars. The weekly ration was as follows:

Seven pounds bread or six pounds flour; ten pounds beef, mutton, or pork; sixpence' worth of roots or vegetables; salt and vinegar; three and a half pints of rum, or beer in proportion. Clement Biddle was awarded the contract for furnishing this ration, at ten and a half pence per ration per diem.

A permanent lookout scout was stationed at Lewes, and pilots were warned not to bring any British armed vessels up the bay. By October 1st the Committee of Safety had spent £87,237 8s. 3d, and so reported to the Assembly. Of this £20,300 was in remittances to Europe for arms, ammunition, and medicine; £8200, spent at home for same purposes; galleys, £7150; *chevaux-de-frise*, £1700; arms, etc., bought or ordered, about £26,000; pay-roll, £8000; freights, £4000; con-

tingent credits for arms, £10,000. What had been accomplished was summed up in one of Joseph Reed's letters to Washington: "Our coast is yet clear; we are casting cannon; and there is more saltpetre made here than in all the provinces put together. Six powder-mills are erecting in different parts. The two near this city deliver two thousand five hundred pounds per week."

Congress now called on Pennsylvania for a battalion of Continental troops, and passed an order directing Committees of Safety to detain and prevent the departure of all persons likely to do injury to the patriot cause. The battalion, recruited mainly in Philadelphia and Chester Counties, was officered as follows: John Bull, colonel; James Irvine, lieutenant-colonel; Anthony James Morris, major; William Allen, Jr., Jonathan Jones, William Williams, Josiah Harmar, Marion LaMar, Thomas Dorsey, William Jenkins, Austin Willett, captains; Benjamin Davis, Samuel Watson, Jacob Ashmead, Peter Hughes, Adam Hubley, John Reece, Frederick Blankenbury, Richard Stanley, lieutenants; Philip Clumberg, Roger Steiner, Jacob Ziegler, George Jenkins, Christian Staddle, Thomas Rogerson, William Moore, Amos Wilkinson, ensigns.

The order of arrest of persons not recognizing the authority of Congress put a stop to an anomalous condition of affairs, such as that of besieging the king's troops in Boston and petitioning the king by order of Congress in Philadelphia; capturing British soldiers at Ticonderoga and provisioning the British man-of-war "Nautilus" in the Delaware. A good many British officers who came in by accident, like Skene, Etherington, and others, were released on parole, and there was a great deal of illicit intercourse between the opposing forces. In August, George Schlosser, a committeeman, had stopped William Conn, an avowed Tory, and taken from him some forbidden goods. Conn replevied the goods by advice of his counsel, Isaac Hunt, who was forthwith summoned before the Committee of Inspection. He was arrogant and impudent, refused to discontinue the suit or apologize, and the associators, angry and impatient, determined to make an example of him. He was seized, put in a cart, and drawn through the streets, a drum and fife playing the "Rogue's March" before him. With tact and prudence Hunt made his apologies, asked pardon, and put himself under the protection of the associators. The procession stopped in front of the house of Dr. John Kearsley, Jr., a good citizen, but bad tempered and a furious loyalist. Frantic with rage at the spectacle before him, he hoisted a window, drew a pistol, and snapped it at the crowd. He was at once seized, disarmed, and, resisting, was wounded by a bayonet in the hand. Hunt was sent safely home, and the mad doctor mounted on the cart in his stead, and made part of the spectacle. Graydon graphically describes his arrival in front of the City Tavern, and how, having

refused to beg pardon, "foaming with rage and indignation, without his hat, his hair disheveled and bloody from his wounded hand, the doctor stood up in the cart and called for a bowl of punch. It was quickly handed to him, when, so vehement was his thirst, that he drained it of its contents before he took it from his lips." Kearsley would not yield; the associators would not permit him to be tarred and feathered, and he was finally let go, to return to his house, where the mob had broken the windows and done other damage.

Hunt left the country a confirmed Tory, and was the father of Leigh Hunt, the poet and critic. Kearsley wrote an account of his wrongs to England, but the letters, carried by one Christopher Carter, were intercepted with others, and the consequence was that Dr. Kearsley, Leonard Snowden, and James Brooks were arrested and confined in the State-House under guard. They were tried by the Committee of Safety, and condemned as enemies. Kearsley was sent to York as a prisoner, and died there during the war; Brooks was confined in Lancaster, and Snowden and Carter were discharged.

The river was obstructed after September 9th with the *chevaux-de-frise*, about forty vessels being allowed to pass out before the last day of grace. A narrow, intricate channel only was left, the secret of which lay with two trusty pilots, who were in the pay of the State, and whose duty it was to bring up vessels with stores and ammunition, privateers, and other authorized craft. The buoys had all been removed from the Delaware, and pilots were ordered to lay up their boats except when on special service. To prevent the enemy from coming up, fire-rafts were built and a floating battery was constructed. In spite of the exemptions in their favor made by Congress, the Quakers, Mennonists, and Dunkards or German Baptists objected to the general order of the enrollment of the militia, and the former society memorialized the Assembly on the subject, taking ground upon the charter, which secured to them, they claimed, a particular immunity. The Dunkards and Mennonists also sent in their memorials declining both to bear arms and be taxed, at least until it was decided who was the rightful Cæsar to whom they should yield tribute.

These petitions were the signal for active hostilities on the part of the patriots. The Committee of Correspondence directed Thomas McKean, George Clymer, Jonathan B. Smith, Benjamin Jones, Sharpe Delany, John Wilcox, and Timothy Matlack to prepare them a remonstrance, armed with which the committee, sixty-two in number, marched two by two to the State-House. The remonstrance thus presented denounced the Quaker address as having an aspect unfriendly to the liberties of America and destructive of all society and government. "These gentlemen," the remonstrance said, "want to withdraw their persons and their fortunes from the service of the country at a time when their country

stands most in need of them. If the patrons and friends of liberty succeed in the present glorious struggle, they and their posterity will enjoy all the benefits to be derived from it equally with those who procured them, without contributing a single penny. If the friends of liberty fail they will risk no forfeitures, but be entitled by their behavior to protection and countenance from the British ministry, and will probably be promoted to office. This they seem to desire and expect." The privates and officers of the association supported the remonstrance with addresses of their own, expressed in vigorous terms, and denouncing leniency to the lukewarm as a fatal mischief. The Assembly could not resist the pressure of public opinion, and in November passed resolutions converting the associators into a regular militia, making defensive service compulsory, and taxing all non-associators £2 10s. above the regular assessment.

Washington was at first the commander-in-chief of the Continental army and navy too. At Boston one or two small vessels, acting under his directions, brought several valuable prizes into Plymouth. In October, however, Congress, inspired, it is probable, by the successful example of Pennsylvania, resolved to take measures to establish a Continental marine. Two vessels, one of ten guns, the other of fourteen, were authorized to be equipped as cruisers, and next month two more, of twenty and thirty-six guns respectively, were ordered to be fitted out. The Committee of Safety of Pennsylvania, thinking a cruiser needed for their service, bought the ship "Sally," but she was immediately sold again to the naval committee of Congress. She became either the "Alfred" or the "Columbus," one of the two cruisers first sent to sea by Congress, when that body shortly afterwards resolved to build thirteen frigates. Four of them were undertaken in Philadelphia, the "Washington," thirty-two guns; "Randolph," thirty-two; "Effingham," twenty-eight; and "Delaware," twenty-four.

The "Alfred" was commanded by Dudley Saltonstall; the "Columbus," by Abraham Whipple; the brig "Andrew Doria," by Nicholas Biddle; the brig "Cabot," by John B. Hopkins; and the brig "Lexington," by Capt. John Barry. This fleet and all the rest of the Continental navy was put under command of Commodore Esek Hopkins. John Adams, a member of the marine committee of Congress, said that Capt. Hopkins was appointed from Providence, one vessel in the fleet being named for his town, and he was the brother of Governor Hopkins. "Alfred" was in honor of the founder of the British navy, "Columbus" for the discoverer of America, "Cabot" for the discoverer of Newfoundland, and "Andrew Doria" for the great Genoese admiral. Capt. John MacPherson, the old privateersman, who was now living in retirement, and rich, at his seat of Mount Pleasant (first called Clunie), opposite Belmont, besieged Congress for the command given to Esek Hopkins, and declared that it had been promised to him by Randolph,

Hopkins, and Rutledge. This is scarcely probable; though, as he was persistent in lobbying and in dining and wining members, some may have said "Yes," to get rid of him. But he could hardly have had such a promise in October, for in November we find he has been pursuing Washington with the same object in view. On the 8th of that month Washington wrote to Reed from Cambridge, "I have been *happy enough* to convince Captain MacPherson, as he says, of the propriety of returning to the Congress,—he sets out this day,—and I am *happy* in his having an opportunity of laying before them a scheme for the destruction of the naval force of Great Britain." MacPherson's "plan" was never accepted, though he proposed to carry it out at his own expense.¹

John Paul Jones was the first lieutenant aboard the "Alfred," under Esek Hopkins, and it is said that his hand was the first to hoist an American flag aboard an American vessel, in Philadelphia, in December, 1775. Capt. Schuyler Hamilton, in his "History of the American Flag," says that this ensign was a rattlesnake coiled upon a yellow ground, with the motto "Don't tread on me." Sherburne ("Life of Paul Jones") says the field consisted of thirteen red and blue stripes, and the rattlesnake was not coiled, but running. Cooper claims a pine-tree, with the snake coiled about its roots. A letter preserved by Force, in the "American Archives," says that the American flag was first hoisted at sea, December 3d, on the "Black Prince." The emblem of the rattlesnake was a colonial thought, often employed before the Revolution, to warn the mother-country that the colonies would resist if the attempt were made to impose on them. It was figuratively used in Franklin's *Pennsylvania Gazette* as early as

1751; in 1754 the figure of the severed snake and the motto, "Unite or die," were used to insist upon the necessity of colonial union against the French and Indians, and in 1775 this snake was made the head of the *Pennsylvania Journal*, and the idea of the resemblance between the colonies and the rattlesnake was

often brought up in the newspapers. Paul Jones' flag may have been Franklin's own contrivance. It was fierce enough to suit a half-pirate like Jones.

But Capt. John Barry, of Philadelphia, in the "Lexington," first put to sea on a regularly commissioned national vessel for a regular cruise. This was in December, 1775. The fleet all sailed, but the others were caught and detained in the ice for six weeks, leaving the capes on Feb. 17, 1776. When they sailed, says a contemporary account, it was "under a display of the union flag,—thirteen stripes in the field, emblematic of the thirteen colonies."²

The first prisoners of war confined in Philadelphia were received in October. They had been wrecked on Brigantine Beach, N. J., in the ship "Rebecca and Frances," and were captured by the people of New Jersey. The sailors were English, and besides them there were Capt. Duncan Campbell, Lieut. Symms, two servants, and twenty-one privates, on their way to New York. They were sent to the old prison, Third and Market Streets. Peyton Randolph, late President of Congress, died on October 22d, at the house of Benjamin Randolph, a carpenter, living on Chestnut Street, with whom the Virginia members had their headquarters, and Randolph and Jefferson lodged. The body was taken to Christ Church, where a funeral discourse was preached by Dr. Duché, and it was then carried to the burying-ground at Fifth and Arch Streets, followed by a simple but imposing procession, the associators and rifle and artillery companies taking part, with members of Congress, the Assembly, and the Committees of Safety and Correspondence.

¹ MacPherson was probably superannuated and tiresome. One of his sons, Capt. William, was adjutant in the Sixteenth British Infantry. He offered to resign, and when his regiment came to this country, in 1779, Clinton permitted him to do so, but would not let him sell his commission. He was afterwards made major in the American army and rose to be brigadier-general. Capt. John MacPherson, Jr., an associator, was on the patriot side from the first, went to the front, was a volunteer in the expedition to Canada, and fell by Montgomery's side in the attack upon Quebec,—the first Philadelphian of consequence killed during the war. The night before his death he wrote a letter to his father saying that, should he fall, "I could wish my brother did continue in the service of my country's enemies." MacPherson, Sr., tired of Mount Pleasant during the war, and sold it in 1779 to Benedict Arnold, who deeded it, in an ante-nuptial settlement, to Miss Peggy Shippen, soon afterwards his wife. Capt MacPherson was an oddity. He invented curious machines, lectured on astronomy, was a ship-broker, editor of a price current, and publisher of the first directory of Philadelphia, probably the most literal book ever published, for whatever answer the captain's canvassers got at the houses where they called, that answer the captain put down, and thus recorded no end of members of the "I won't tell you" family among his I's, and the "What you please" among his W's, to say nothing of "Cross Woman" under C, and empty houses where no answer could be got. In 1785 the captain advertised himself as the inventor of "an elegant cot, which bids defiance to everything but Omnipotence. No bed-bug, mosquito, or fly can possibly molest persons who sleep in it." In March, 1792, he notified Congress that he had discovered an infallible method of ascertaining the longitude, and wished to be sent out as envoy to the king of France, "our good ally," to announce the fact. He died Sept. 6, 1792, and was buried in St. Paul's churchyard.

² John Barry was born in Tacumshane, Wexford County, Ireland, in 1745, and went to sea very young. He came to Philadelphia at the age of fifteen, and soon rose to the command of a ship, and accumulated wealth. When the war commenced he offered his services to Congress, "abandoning," to use his own language, "the finest ship and the first employ in America." He soon acquired great distinction, and after the foundation of the present United States navy, June 6, 1794, Barry was named as the senior officer, and became the first commodore, in which station he died at Philadelphia, Sept. 13, 1803.

Charles Thomson, Samuel Rhoads, Henry Pawling, and Israel Jacobs were not re-elected to the Assembly this year; the first, because his duties to Congress absorbed all his time; the others, because younger and more active patriots were sought. The Assembly, in re-electing the Committee of Safety, made but few and inconsiderable changes.

In the latter part of November, "Lady Washington" came to Philadelphia on her way to the camp at Cambridge. The general-in-chief had sent an express for her, because the friends of the ministry said

(local committee of correspondence) was urged to act and prevent the expected disturbances. With but one dissenting voice it was agreed, after due deliberation, that no ball should be held in Mrs. Washington's honor, nor any other in the future while the existing troubles continued. A delegation was appointed to notify the managers of the ball of this determination, and to request Mrs. Washington not to attend, at the same time expressing the great regard and affection of the committee for her, and "requesting her to accept of their grateful acknowledgment and respect

due to her upon account of her near connection with our worthy and brave general, now exposed on the field of battle in defense of our rights and liberties." Mrs. Washington received the committee with great politeness, thanked them for their esteem and concern for her welfare, and assured them that the desires of the committee were agreeable to her own sentiments. Two days later she left for Cambridge under an escort of associators.

In January, 1776, the Committee of Inspection detected tea in Philadelphia which had been brought from New York. Notice was given that any more such tea found would be sent back. The committee had been invested with discretionary powers in regard to the admission of such articles for sale and their prices. There was much complaint of engrossing and forestalling, and the committee determined to arrest the efforts of monopolists by establishing an arbitrary scale of prices, —rum, 4s. 6d. per gallon, by the hogshead; molasses, 2s.; coffee, 11d. per pound, by the bag; cocoa, £5 per thousand; chocolate, 10d. per pound; pepper, 5s. per pound, by the quantity; loaf-sugar, 14d. per pound; lump-sugar, 10d. per pound; Muscovado, 65s. per hundredweight; Lisbon salt, 4s. per bushel; Liverpool salt, 5s. per bushel; Jamaica spirits, 5s. 6d. per gallon. Persons violating these prices were to be "exposed by name to public view as sordid vultures," preying on the vitals of the country. Congress, it was

John Barry

that she was loyal and had separated from him in consequence of his treason. She was met at the Schuylkill ferry by the troop of light horse and officers of the other companies and escorted into the city. It was proposed to give her a ball, but, as Congress had recommended the people to abstain from "vain amusements," the Assembly programme met with opposition, and threats were even made to attack the City Tavern if it came off. Samuel Adams was conspicuous in his efforts to prevent the entertainment, he and Harrison, of Virginia, having high words on the subject. The Committee of the City and Liberties

said, when these prices were set, ought to open trade with the countries from which the people had been getting their supplies, and Congress accepted the suggestion by determining that goods might be exported to any country except Great Britain, and imported from every country except Great Britain and the East Indies. The importation of slaves was forbidden. The effect of this was to vacate the powers of the Committee of Inspection and make trade free, as far as regulation of prices was concerned.

In other respects, however, their authority was exercised freely, and published recantations attested

the efficiency of their discipline. In March, Herr Juncken was forced to ask pardon publicly and of his own free-will; in April, William Sitgreaves and Peter Ozeas apologized for asking extortionate prices. All these apologies were couched in the humblest language. Capt. McCutcheon was sent to prison for offering to bribe a pilot to bring the man-of-war "Asia" from the Narrows to the Delaware; Arthur Thomas was mobbed for cursing Congress; Thomas Lightfoot and — Mingo, of Germantown, were compelled to answer before the people for their transgressions; Thomas Rogers (of Elbow Lane), Joseph Sermon (of Second Street), Benjamin Sharpless (tanner), Townsend Speakman (druggist), John Drinker (hatter), Thomas Fisher, and Samuel Fisher (of Joshua Fisher & Sons) were "proclaimed enemies to their country, and precluded from all trade or intercourse with the inhabitants," for refusing to take Continental currency.

These offenders were chiefly Quakers, their society being in strong antagonism to the popular cause. The Yearly Meeting issued its "Ancient Testimony" on Jan. 20, 1776, signed by John Pemberton, clerk, a very loyal address, counseling the members of the society not to be shaken in their allegiance, but to unite firmly against every design of independence. Thomas Austin, a member of the Committee of Inspection, became disaffected, was examined before the Committee of Safety, and resigned his seat, while protesting his fidelity to the cause. Joshua Fisher & Son's goods, which had been seized, were sold at auction, and bought by the Committee of Safety. This firm had almost a monopoly of salt, which they imported, and held so high that Congress was compelled to require the Committee of Inspection to set a maximum price.

In January one hundred and five prisoners were transferred from the old prison to the new one, at Walnut and Third Streets. They comprised felons, debtors, prisoners-of-war, and Tories, and six of them broke jail the night after their transfer. Among the Tories was Henry Sylvester Price, locked up for speaking profanely of Congress and wishing the Continental powder-wagons would blow up, Dr. John Smith, the notorious Dr. Connolly (Lord Dunmore's agent), Allen Cameron, Gen. Donald McDonald, chief of the North Carolina Tories, Col. Allen McDonald, and twenty-five more of their set, Col. Moses Kirkland, a South Carolina Tory, captured at sea by Washington's privateersman Capt. Manley, and the British Gen. Prescott, removed from the City Tavern and kept close prisoner in jail on account of the ill treatment bestowed on Ethen Allen and other Continental soldiers captives in Canada. The hardships endured by these captives in the Philadelphia jail were palliated by the assistance they received from the "Society for the Relief of Distressed Prisoners," which systematized relief and gathered up contributions of food and other articles for their comfort.

In February, 1776, Congress directed a solemn commemoration of the death of Gen. Montgomery at the State-House and the German Calvinist Church, where a discourse on the death of the brilliant young soldier was pronounced by Rev. Dr. William Smith before the members of Congress, the Assembly, mayor and corporation, City Committees, associates, and military. The address was so unpopular — John Adams styled it "an insolent performance" — that Congress refused to publish it.

Governor Ward, a delegate in Congress from Carolina, died at this time of smallpox, and was buried in the Baptist churchyard.

May 17th was kept as a fast day by direction of Congress. The Quakers did not close their stores, but the committees issued handbills forbidding the people to molest them. There was a petition presented to the Assembly in April in favor of liberating negro slaves. The Society for Promoting American Manufactures applied to the Assembly for aid, having seven hundred spinners, weavers, and bleachers in their employment. Their efforts were obstructed by the high price of flax, and they asked the Assembly to introduce a system of bounties "on the Dublin plan." A new labor-saving spinning-wheel was also recommended to favor, and the Assembly made some provision for its introduction and more extensive use. The House also granted small bounties to John Marshall, a thread-maker, for a twisting- and throwing-mill, and also to Christopher Tally and Joseph Hague. A proposition to manufacture salt at the sea-shore was made by Thomas Savage, if the Assembly would give him an advance of twelve hundred pounds to set up his vats and machinery, and a manufactory for paper-hangings and playing-cards was at this time started by Edward Ryves, paper-stainer, in Pine Street.

The Committee of Safety was burdened with a throng of multifarious and arduous duties at this period, and their minutes, as they appear in the "Colonial Records," are a curiosity. There were military, naval, civil, and executive duties of the highest importance all devolving on the committee at once. Ammunition and arms were still deficient in supply and far below the urgent demands for them. The Secret Committee of Congress bargained in January to pay Oswald Eve and George Loesch to manufacture gunpowder for them at eight dollars per hundredweight, Congress supplying the nitre. The committee not only distributed directions for making saltpetre by means of handbills, but also appointed Henry Deringer and Marshall Edwards to instruct the citizens of Philadelphia in the process, and offered to make advances of one hundred and fifty pounds each to persons establishing powder-mills within fifty miles of the city, supplying the saltpetre likewise. The mills proposed to be erected in consequence of this bounty were two by George Loesch, one by Dr. Robert Harris, one by Henry Huber, one by John Flack,

one by Thomas Heinberger, one by William Thompson, and one by Dr. Van Leer. The mills of Harris, Huber, Loesch, and Heinberger went into operation. The Assembly provided a public powder-mill besides, and Congress erected a Continental powder-mill on French Creek, in Chester County. Numerous attempts were made at the same time to secure supplies of sulphur from native sources. The Committee of Safety, acting on the suggestion of Louis Nicola, had a new powder-magazine built in April, with a capacity of one thousand barrels. The builders were Isaac Coats and William Melcher, and the site was west side of Fourth Street, opposite the barracks. The furnaces of Morgan Busted, Benjamin Loxley, Samuel Potts, Thomas Rutter, that of James Old, at Reading, and the Warwick and Hibernia furnaces in New Jersey were engaged to manufacture cannon. It was a long while, however, before these experiments in casting succeeded, and Congress lent guns to Pennsylvania.

The province had a gunlock-factory in Cherry St., near Third, superintended by Maj. Meredith; Capt. Wilcocks, Capt. Peters, and Maj. De Haven, and Joshua Tomlinson were paid fifty pounds to set up a mill for boring gun-barrels and making the process public. In May people were requested to bring in all the lead they had to Commissary Towers, who was authorized to pay sixpence a pound for it.

The Committee of Safety had a survey made of the Delaware, with a view to its more extensive fortification. Leave was obtained from New Jersey to construct works on that side of the river; a permanent fort was determined upon at Billingsport; the fort at Fort Island was hurried to completion, and it was decided to fortify Liberty Island, the work being undertaken by Robert Allison and George Worrell. A boom was stretched between two piers, and additions made to the *chevaux-de-frise* by Arthur Donaldson, John Cobourn, and John Rice. To the naval flotilla were added the floating-battery "Arnold," the ship-of-war "Montgomery," the fire-ship "Ætna," and some guard-boats for Philadelphia harbor.

This force soon had a chance to show its mettle. On May 6th, news came by express from Fort Penn that two war-ships, a schooner, and three tenders were coming up the river. The Committee of Safety ordered the gun-boat flotilla, and the "Montgomery" and "Ætna," under command of Commodore Andrew Caldwell and Capt. James Reed, to attack the enemy. His vessels were the frigate "Roebuck," forty-eight, Capt. Hammond, the sloop-of-war "Liverpool," twenty-eight, Capt. Bellew, and their tenders. Capt. Procter, in command of the fort at Fort Island, volunteered for the fight with one hundred of his men, and served on board the "Hornet." The "Montgomery," the Continental ship "Reprisal," Capt. Wickes, and the battery "Arnold," Capt. Samuel Davidson, remained near the *chevaux-de-frise*, in a line with the forts; the boats went down the river to the mouth of Christiana Creek, coming up with the enemy on the afternoon of May 8th. Fire was opened on both sides at once and was maintained with

spirit until dark. The "Roebuck" ran ashore and careened, the "Liverpool" came to anchor to cover her, the province boats withdrew for more ammunition. During this engagement the Continental schooner "Wasp," Capt.

Alexander, which had been chased into Wilmington, came out and captured an English brig belonging to the squadron. The fire-ship was not brought into use, and before morning the "Roebuck" was afloat. The flotilla renewed the attack at five o'clock in the morning, the ships retired, and the Philadelphia navy pursued them as far as New Castle. The officers of the flotilla complained grievously of the supplies furnished them by the Committee of Safety; they were defective in quality and deficient in quantity; the powder was bad, the men had to cut up their clothes and equipments to make the cartridges serviceable, and there were many other defects, so that the officers threw the whole blame of their failure upon the committee. The Assembly investigated the matter, however, and exonerated the committee. The American loss was one killed and two wounded; the British lost one killed and five wounded, and the engagement was palpably not at close quarters. The flotilla people, however, brought up some splinters from the enemy's ships to exhibit at the Coffee-House, and the "Roebuck" and "Liverpool" returned to their stations at Cape May, depending upon New Jersey for poultry and fresh provisions.

Congress and the province were admonished by this skirmish to increase their navies; the Committee of Safety added to the galleys and other vessels named the sloops "Sally," Capt. Martin Wirt; "Salamander," Charles Lawrence; schooner "Lydia," James Simpson; the "Porcupine," Robert Tatnall; "Brimstone," Capt. William Watkins; and "Vulture," Capt. Greenaway, guard-boats; the sloop "Hetty," Capt. Henry Hoover; "Eagle," Capt. Jacob Haul; and "Terror," Capt. Robert Hardie. There were the fire-rafts besides, commanded by Capt. John Hazlewood. The whole force was seven hundred and forty-three men. Commodore Caldwell resigned command of the flotilla soon after the fight with the frigates, and Samuel Davidson was appointed; but this led to such opposition from other officers that he never took command, and was shortly afterwards dismissed the service, not, it appears, from any demerits of his own, but because of the jealousies of rival officers.

The Committee of Safety organized a system of privateers and letters of marque at this time, with the sanction of Congress, creating a Court of Admiralty (George Ross, judge; Matthew Clarkson, marshal; Andrew Robinson, register), and before July there had been commissioned the brig "Hancock," twelve guns, Wingate Newman commander; the "Congress," six guns, Capt. John Kaye, with a crew of thirty men; and the sloop "Chance," six guns and thirty-four men, Captain James Robertson. These two last-named vessels had

already gone out with letters of marque, and were now formally commissioned. In May they took three valuable ships from Jamaica bound to London, with large cargoes of rum, sugar, and molasses, 22,420 pieces of eight, 187 ounces of plate, and a fine turtle, intended to be presented to Lord North. The president of Congress received this tortoise. The privateer "Congress" captured the schooner "Thistle"; the privateer "Franklin," of Philadelphia, took a British storeship with seventy-five tons of gunpowder and one thousand stand of arms; the ship "Lexington," Capt. Barry, captured the tender "Edward"; the "Wasp," Capt. Alexander, took the schooner "Betsy." Meantime, the "Roebuck" and "Liverpool," with their tenders, made many captures of vessels about the Delaware Capes, chasing others ashore.

Two more battalions, the Fourth and Fifth, were

added to the forces of the associators. The latter was a "shirt" or rifle battalion, commanded by Col. Timothy Matlack; Daniel Clymer, lieutenant-colonel; Lawrence Herbert, George Miller, majors. Thomas McKean was colonel of the Fourth Battalion. Drafts of men under marching orders were made from the associators as soon as news came of Clinton's arrival in New York, and the men showed great eagerness to go to the front. The associators were at this time petitioning the Assembly to protect their interests more effectually, allow them compensation for expenditures and lost time and cease discriminating in favor of the non-associators, who really contributed nothing to the cause. The Assembly was, however, tardy to respond, beyond regulating rank and precedence, and acquiring non-associators to surrender their arms. The Assembly thought the opposition to the cause

ought to be conciliated,—the result was that in a few weeks they found the great body of the associators arrayed against them.

The four battalions raised for Continental service were organized and officered in January: John Shee¹ (of Philadelphia), Anthony Wayne (of Chester), Arthur St. Clair (of Westmoreland), and Robert Magaw were elected colonels; Lambert Cadwalader and William Allen (of Philadelphia), Francis Johnston and Joseph Penrose, lieutenant-colonels; and Joseph Wood, Nicholas Hausseger, George Nagel, and Henry Bicker, majors. The First Battalion, Col. Bull, six hundred and eighty strong, was in January or-

dered to march to Canada. Col. Bull resigned on account of difficulties with his officers, and John Philip De Haas was appointed colonel in his stead.

The Committee of Safety, in February, applied to the Assembly to raise a force of two thousand men for the defense of the province, but the House resolved on fifteen hundred men, comprising two battalions of rifles and one of musketeers. Samuel Miles was made colonel of both rifle battalions, the command of the musketmen being given to John Cadwalader, who declined, desiring command of the First

John Shee

¹ Col. John Shee was a prominent merchant of Philadelphia at the breaking out of the war, and rendered distinguished service during the Revolution. He was treasurer of the city from 1790 to 1802, and brigadier-general commanding the Republican Legion. From 1802 to 1805 he was flour inspector, and in 1807 was collector of the port, and probably died while in office.

Battalion. Samuel Miles was born at White Marsh, Montgomery Co., Pa., in 1739. His grandfather was a native of Wales. In his sixteenth year Samuel Miles joined a company of militia and took part in the defense of Northampton County against the depredations of hostile Indians. For his gallantry displayed upon this occasion the Governor commissioned him an ensign in the Pennsylvania forces. He was three years in active service, during which time he was advanced to the command of his company, and he was only once slightly wounded. At the close of the war he married Catharine, daughter of John Wistar, and entered into commercial pursuits in Philadelphia. When the Revolutionary war began he was among the first to show his patriotic ardor, and, during that great struggle, performed distinguished service, and was promoted to brigadier-general. Gen. Miles was deputy quartermaster-general for Pennsylvania, and in 1783 was appointed one of the judges of the High Court of Errors and Appeals. He was an alderman of Philadelphia, a member of the Colonial and State Legislatures, and in 1790 mayor of the city. In October, 1805, he was elected member of Assembly, took sick at Lancaster, and died at his seat, Cheltenham, Montgomery Co., Dec. 29, 1805, aged sixty-six years. Gen. Miles was a zealous Baptist, and took an active interest in everything that tended to advance that religious denomination.

Samuel Atlee, of Lancaster, was appointed commander of the musketmen; Emmor Williams was made lieutenant-colonel, and James Potts and John Patton, majors of the rifle battalions; Caleb Parry, lieutenant-colonel of the musketmen; Ludwick Sprogel, mustermaster, and John Maxwell Nesbitt, paymaster, of all the Pennsylvania forces. Among the regulations was a fine of thirty to fifty dollars for harboring deserters, imprisonment if not paid; and an allowance to inn-keepers of sixpence per meal to marching soldiers; each man to have a pint of cider.

The rifle battalions were marched in June to Sussex, Del., to hold the Tories there in check; and four companies of the musketmen were detailed for service as city guards. The associators wanted Congress to station a Continental general and a few Continental battalions in the city, and named Gen. Mifflin as their favorite. At this time Congress resolved to have formed a flying camp of ten thousand men to serve

until December 1st, six thousand being apportioned to Pennsylvania, three thousand four hundred to Maryland, and six hundred to Delaware. For the command of this force Maryland was to appoint one brigadier-general and Pennsylvania two. The privates of the associators asked Congress, when this resolution was made public, to give them officers whom they could trust. They had not had entire confidence in the Committee of Safety since the "Roebuck" affair, and they wanted to elect their own officers, there being many members of Assembly notoriously hostile to military defense, and to measures necessary for the defense of the people. Such a Legislature ought not to be trusted with the appointment of general to command the associators. This position, boldly taken, was resolutely maintained; the delegates of the associators met in convention at Lancaster, fifty-three

battalions being represented, and Daniel Roberdeau and James Ewing were elected brigadier-generals. "The associators kept up their dignity with great resolution, and would allow of no contempt of their authority. In April they compelled one John Webb, who had been guilty of trampling upon a copy of their articles of association signed by the officers of the Fourth Battalion, to publicly beg pardon for his transgression; and Jacob Reith, having endeavored to prevent persons from signing the articles of association or paying their fines for neglect, was compelled to humble himself in a similar manner. Thomas Lightfoot, of Germantown, for speaking

GEN. SAMUEL MILES.

disrespectfully of Congress, of the associators, and of the Continental currency, was brought to a knowledge of his error by like means."¹

On May 27th the troops then in the city were reviewed on the commons by Gens. Washington, Lee, and Mifflin. There were four associated battalions, the light horse, and three companies of artillery, in all nearly two thousand five hundred men, and two Continental battalions besides. The review was witnessed by the members of Congress and a large number of spectators, among whom were thirty Indians belonging to the Six Nations.

There is a close connection between the events leading to the Declaration of Independence and those which led to the overthrow of the charter government in Pennsylvania. The same men who strove for the

¹ Westcott, "History of Philadelphia," chapter ccxxvii.

overthrow of the proprietary government, struggled also to hasten the Declaration; the same class of men who opposed the one were hostile to the other. A few members, like Reed, favored the Declaration and the modification of the powers of the Assembly without favoring the entire overthrow of the charter. A few, like Dickinson, were ardent Whigs and true patriots, yet did not like changes, and were persuaded that the people could get security for all their rights without upsetting the existing forms.

All these things and many more concerns of the future had been actively discussed in private for many weeks, when Thomas Paine broke the ice with his pamphlet of "Common Sense."¹

¹ The country has not dealt fairly by Thomas Paine. They have been willing to bury even Benedict Arnold's leg, shot off at Saratoga, with the honors of war; but they have never been able to divorce Thomas Paine, author of "Common Sense" and "The Crisis," from Thomas Paine, author of the "Age of Reason." History has nothing to do with the latter, but it cannot neglect the former without lessening its own dignity. Paine was an unpleasant fellow, to be sure, not particularly high in principle, truthful, or decent; he was not well bred, nor had he either the instincts or the feelings of a gentleman. At the same time, he was not near so depraved and scandalous a reprobate as Wilkes, nor more of a drunkard than Pitt, nor were his fanatical ravings worse than Burke's, or his manners so coarse and indecent as Johnson's. Paine's parents were Quakers, his father a staymaker, and he was born at Thetford, Norfolk, Jan. 29, 1736, received a scant grammar schooling, and then was given his father's trade. At twenty he was a staymaker, who had been to sea in a privateer; at twenty-five he had a wife and a place as gauger in the excise; at thirty-two he had married his second wife, was grocer, tobaccoconist, exciseman, member of and debater in a Whig club in Lewes, and an occasional poet of the *Gentleman's Magazine*. He lost his place in the revenue in consequence of complicity with smuggling practices, it is said; at any rate, he was dismissed, and he and his wife separated at the same time, by mutual consent. He went up to London, an adventurer, met Franklin, and was by him advised to come to this country, where, accordingly, he arrived in Philadelphia in the beginning of 1775, at once finding employment as editor of the *Pennsylvania Magazine or American Monthly Museum*, at a salary of £25 (currency) a year. The publisher was Robert Aitken, a Scotch printer and bookseller, who had come to Philadelphia in 1769. Aitken took the popular side during the Revolution, and came near going to the New York prison-ship. The *Magazine* ran from January, 1775, till June, 1776; it had Francis Hopkinson and Dr. Witherspoon among its contributors, and in Aitken's shop Paine met Dr. Rush and others of the literary *quidnuncs* of Philadelphia. On Jan. 15, 1776, Paine's pamphlet of "Common Sense" was published, for which he received very little direct pay. The Legislature, however, voted him £500, the college gave him the degree of M.A., he volunteered in the army, served Congress for two years, as secretary of the Committee on Foreign Affairs, being dismissed for disclosing the secret of Beaumarchais' relations to the government, and the spuriousness of Silas Deane's claims. In 1780 he became clerk to the Assembly of Pennsylvania; in 1781 he went out with Col. Laurens on his mission to Europe to obtain a foreign loan, returning with two and a half millions; in 1782 his "Letter to Abbe Raynal" was published, and in 1787 he returned to England, with his model for an iron bridge. Here he published his "Rights of Man," in reply to Burke's *Reflections* on the French Revolution; and in 1794, while a prisoner in the Luxembourg, the first part of his "Age of Reason" appeared; the second in 1796. He died very wretchedly in 1819, at New Rochelle, where the Legislature of New York had given him a farm of three hundred acres. Congress had voted him three thousand dollars for his services. His pen was the most vigorous and had the most practical force of any wielded during the Revolution. He took in a situation at a glance, and wrote of it in a common-sense way, so that the people found or fancied themselves uttering their own private thoughts. There never have been more effective "tracts for the times" published than the nineteen numbers of "The Crisis," the first appearing Dec. 19, 1776; the last, April 19, 1783. His faults as a writer were those of his character,—vanity, intemperance, and a degree of recklessness. His merits were "very great. He had the art of

This pamphlet was published by Robert Bell, bookseller in Third Street. Bell was a Scotchman, who had been bookseller in Dublin for several years, having George Alexander Stevens for his partner. He came to Philadelphia in 1766, first setting out as book auctioneer. In 1772 he reprinted Blackstone, five volumes, octavo, and was so successful that he issued a second edition in quarto, besides editions of Robertson's "Charles V.," and Ferguson's "Essay on Civil Society." Paine, according to Wharton, was Bell's clerk when "Common Sense" was published. The war broke up his business, and he resumed his trade of itinerant auctioneer of books, traveling from New Hampshire. He died in Richmond in 1784, a good

THOMAS PAINE.

business man, fair and upright and companionable, but eccentric and fond of big words, calling himself "provedore to the sentimentalists," and addressing his subscribers as "intentional encouragers, who wish for a participation in this sentimental banquet" of Blackstone! The sale of "Common Sense" was so rapid, and it excited such a sensation throughout the country, that new editions were called for. Bell advertised a second on the 29th of January, another was offered by William and Thomas Bradford, to which the author appended a note declaring that Bell's second edition was unauthorized; he had received no profit from the first. Bell owed him fourteen pounds, and there were thirty pounds profits to his share, the half of which he meant to devote to the purchase of mittens for the Pennsylvania troops ordered to Canada. Bell replied in kind, disparaging the pretensions of the "anonymous author" to be considered father of the entire work, and denouncing Paine, "the foster-father author," as not the real one, yet as pretending so, and boasting of it in every ale-house.

saying a familiar thing in a familiar way, and at the same time imparting to it great spirit and freshness. He could sometimes introduce an apposite story almost as well as Franklin. His wit was ready and apposite enough. . . . It was this word and a blow, this powerful expression in ordinary symbols, which gained Paine the ear of the public during the Revolutionary war. His phrases put American resistance in an incontrovertible form."—*Duyckinck's Cyclopaedia of American Literature*, I. 200.

The allusions of Bell grew out of the fact that Paine's pamphlet was really a collation and condensation of matters and opinions everywhere the subject of conversation, and that Dr. Rush and some others claimed to have had at least a share in the paternity of "Common Sense." Rush, in a letter quoted in Cheatham's ignoble life of Paine, says that he called upon Paine at this time and suggested to him the propriety of preparing our citizens for a perpetual separation of our country from Great Britain by means of a work of such length as would obviate all objections to it. Paine read the sheets to Rush as he composed them, and Franklin and Samuel Adams also saw the manuscript. Franklin altered nothing beyond striking out a sentence; Rush suggested "Common Sense" for the title, instead of "Plain Truth," as Paine had proposed to call it. John Adams, in his diary, says, "In the course of this winter there appeared a phenomenon in Philadelphia,—a disastrous meteor. I mean Thomas Paine. He came from England, got into such company as would converse with him, and ran about picking up what information he could concerning our affairs; and, finding the great question was concerning independence, he gleaned from those he saw the commonplace arguments, such as the necessity of independence at some time or other; the peculiar fitness of it at this time; the justice of it; the provocation to it; our ability to maintain it, etc. Dr. Rush put him on writing on the subject, furnished him with the arguments that had been used in Congress a hundred times, and gave him his title." But all this is afterthought on the part of John Adams. A month after the book was out he wrote to his wife, "I sent you from New York a pamphlet entitled 'Common Sense,' written in vindication of doctrines which there is reason to expect that the further encroachments of tyranny and depredations of oppression will soon make the common faith; unless the cunning ministry, by proposing negotiations and terms of reconciliation, should divert the present current from its channel." The stale arguments, the retracting of which Adams makes so light of, are here obviously fresh and pointed enough.

There can be no doubt, in fact, that Paine wrote "Common Sense," and wrote it without assistance and without much prompting. His mind was strong, original, he saw clearly, and he wrote as neither Adams nor Rush could pretend to do. The author of "The Crisis" was the author of "Common Sense," and no one else could have written such papers, though many would have liked to be able to do so.

There can be as little doubt of the strong and instantaneous impression made upon the whole community of the United Colonies by this pamphlet, of which one hundred thousand copies were shortly in circulation. Rush says it was published "with an effect which has been rarely produced by types and paper in any age or country." "I think," said Dr.

Ashbel Green, in his autobiography, "that this pamphlet had a greater run than any other ever published in our country. It was printed anonymously, and it was a considerable time before its author was known or suspected. In the mean time large editions were frequently issued, and in newspapers, at taverns, and at almost every place of public resort, it was advertised, and very generally in these words: 'Common Sense, for eighteenpence.' I lately looked into a copy of this pamphlet, and was ready to wonder at its popularity and the effect it produced when originally published. But the truth is, it struck a string which required but a touch to make it vibrate. The country was ripe for independence, and only needed somebody to tell the people so with decision, boldness, and plausibility." Paine did this, and the attempts to detract from his merits in doing it will recall to the sensible reader the fable of Columbus and the egg. All such things look simple when they are done. The merit and the art consist in having set the example.

The excitement caused by this pamphlet in Philadelphia may be measured by the numbers of replies and rejoinders it provoked, both for and against independence. Among these pamphleteers was John Adams himself, who did not approve Paine's views about government. One of the first of these replies, written by one of the Allens, was called "Plain Truth," "wherein is shown that the Scheme of Independence is Ruinous, Delusive, and Impracticable; that, were the Author's Associations respecting the Power of America as Real as Nugatory, Reconciliation on Liberal Principles with Great Britain would be Exalted Policy; and that, circumstanced as we are, Permanent Liberty and True Happiness can only be obtained by Reconciliation with that Kingdom. Written by Candidus, etc." This was printed by Bell, and was dedicated by the author to John Dickinson. "Rationalis," another answer to "Common Sense," was bound up with "Plain Truth," and the reply of "Cato" to "Common Sense" followed next. Another pamphlet of the day was "The True Interest of America," impartially stated in certain strictures on a pamphlet entitled "Common Sense." By an American. Printed and sold by James Humphreys, Jr., corner of Black Horse Alley and Front Street. The author of this calls Paine's work "one of the most artful, insidious, and pernicious pamphlets I have ever met with. It is addressed to the passions of the populace at a time when their passions are much inflamed."

The controversy to which Paine had given articulate speech soon began to be heard in the affairs of Philadelphia and the province. An important election was impending, the Whigs renewing their efforts to get control of the Assembly. New committees of inspection had been elected throughout the province on February 16th. For Philadelphia, the number elected was seventy-six; Northern Liberties and

Southwark, twelve each. The term of service was six months, and these committees, renewed fresh from the people at such short intervals, felt themselves truly the people's representatives. The City Committee, almost as soon as it met, recommended the holding of a provincial conference on April 2d, to counteract the lukewarmness and unfriendliness of the Assembly, in which three interior counties—Bucks, Chester, and Lancaster—had a controlling majority, while Philadelphia, in spite of its large population, was allowed only two burgesses to represent it. The partial and unjust rules for the government of the associators were loudly complained of also. To quiet these complaints and counteract the alarming movement for a conference the Assembly increased the representation of Philadelphia to four, ordered the election for May 1st, increased the State forces, and voted an issue of eighty-five thousand pounds in bills of credit. This arrested the movement for a convention for the time being.

The friends and enemies of the Assembly, however, the conservatives and liberals of the day, kept up the war of pamphlets with vigor: "Cato" (Rev. Dr. William Smith) defended the legislative body, aided by "Moderator," and both denounced the proposition of independence; on the other side of the question, "Cassandra" (James Cannon), "Leather Apron" (a reminder of Franklin's Junto), and "Forester" (Tom Paine) spared neither their opponents nor the cause upheld by them. "Leather Apron" accused "Cato" of seeking to keep the government in the hands of "gentlemen," and asked, "Is not one-half of the property in Philadelphia owned by men who wear leather aprons? Does not the other half belong to men whose fathers or grandfathers wore leather aprons?" The people who were now hesitating, vacillating, and procrastinating were neatly hit off in a squib called "The Progress of an American's Creed for obtaining a redress of grievances and bringing about a reconciliation with Great Britain," in which the mental confusion of men like Dickinson, who were always proposing peace measures while acting war, is keenly exhibited.

As election-day approached the excitement increased and the canvass became eager. The Whigs met, April 19th, at William Thomas' school-house, Videll's Alley, with Christopher Marshall, the Quaker patriot and diarist, in the chair, and James Cannon, secretary. The "moderate men," and the Tories also, had their meetings. The Whigs agreed to support George Clymer, Col. Roberdeau, Owen Biddle, and Frederick Kuhl, while the Moderates and Tories united upon Samuel Howell, Andrew Allen, Alexander Wilcox, and Thomas Willing. The election handbills were sharp and spiteful, and the election was hotly contested, but the Whigs were beaten, George Clymer being the only one of their candidates elected, and he, perhaps, because all the Tories would not vote for Thomas Willing, who was half a Whig

himself and was Robert Morris' partner. The vote was:

<i>Whigs.</i>		<i>Tories and Moderates.</i>	
George Clymer.....	923	Samuel Howell.....	941
Frederick Kuhl.....	904	Andrew Allen.....	923
Owen Biddle.....	903	Alexander Wilcox.....	921
Daniel Roberdeau.....	890	Thomas Willing.....	911

In Christopher Marshall's invaluable diary the election is thus described: "Stayed till past ten, the sheriff having proclaimed 'to close the polls in half an hour.' This has been one of the sharpest contests, yet peaceable, that has been for a number of years, except some small disturbances amongst the Dutch, occasioned by some unwarrantable expressions of Joseph Swift, viz., that 'except they were naturalized they had no more right to vote than a negro or an Indian;' and also, past six, the sheriff, without any notice to the public, closed the poll and the doors and adjourned till nine to-morrow. This alarmed the people, who immediately resented it, flew to the sheriff and the doors and obliged him to open them again and continue the poll till the time above prefixed. I think it may be said with propriety that the Quakers, papists, church, Allen family, with all the proprietary party, were never so happily united as at this election, notwithstanding Friends' former protestation and declaration of never joining with that party since the club or knock-down election. Oh! 'tell it not in Gath, nor publish it in the streets of Askalon, how the testimony is trampled upon.' Marshall himself was a "hickory Quaker," and full of fight.

This triumph of the unpopular party exposed them to immediate, serious, and incessant attack from all the elements of the opposition, and determined the patriots to overthrow the proprietary government, the Assembly, and the charter. The Committee of Inspection led the assault, and they doubtless derived much encouragement and many hints from Congress, which was anxious to pull down all the old colonial and proprietary governments. The committee began by recommending "the Justices of his Majesty King George the Third's Court of Quarter Sessions and Common Pleas" to exercise no more authority until a new government was framed. This would be in compliance with the resolutions of Congress against oaths of allegiance, and a judge could not qualify a grand juror while he was in opposition to the king and obedient to Congress. The committee also reflected upon office-holders in general as preferring salary to the public good, and upon the Quakers, now the strenuous upholders of extreme authority, who a little while ago made it a duty and merit of conscience not to bow to any.

The objects and aims of the Whigs in Pennsylvania were formulated precisely in John Adams' resolution which Congress adopted on May 10th. "That it be recommended to the respective Assemblies and Conventions of the united colonies, where no government sufficient to the exigencies of their affairs has been

hitherto established, to adopt such government as shall, in the opinion of the majority of the people, best conduce to the happiness and safety of their constituents in particular, and of America in general." The adoption of this resolution led to a struggle between the Whigs and the Tories and Moderates in Pennsylvania for the advantage in the formation of the new government. The latter thought the Assembly ought to have charge of the matter; the former stood out for a convention of members to be elected. They had their meetings, protested against the pretensions of the Assembly, and resolved that a provincial convention should be soon held. There was a public meeting called to meet at the State-House Monday morning, May 20th, at nine o'clock. It was rainy weather, but four thousand people were present. Maj. John Bayard, chairman of the Committee of Inspection, stated the object of the assemblage, Daniel Roberdeau was made chairman, and Thomas McKean made the principal address, declaring the Assembly to be unworthy of confidence. They had never rescinded the instructions of Nov. 9, 1775, to the delegates in Congress, to oppose or reject any proposition for separation or change of government. They had refused to do this when petitioned by the people. No faith could be put in the Assembly, Mr. McKean said, because the members were chiefly officeholders under the crown; they certainly had no authority to form a new government. This fact the meeting emphasized by adopting a protest, and passing resolutions also denouncing the "instructions," declaring that the present House was not elected for the purpose of forming a new government, and to attempt to do so would be to assume arbitrary power; that the existing government is incompetent, and that a provincial convention ought to be chosen by the people.

This protest was presented in the Assembly on May 22d. The Moderates, a few days later, presented a remonstrance against the protest, which, it was said in the *Gazette* in June, had received six thousand signatures. The Philadelphia County Committee of Inspection sided with the Moderates and took ground against the protest and against disunion. The Assembly acted cautiously. The protest and remonstrance and resolution of Congress were referred to a committee, who made no report, but the instructions of November 9th were rescinded and the delegates in Congress were authorized "to concur with other delegates in such measures as may be for the liberties and safety of America."

The city committees meanwhile were very active in exerting all the influences they could bring to bear to help the movement towards independence. They canvassed among the people and the armed battalions, inducing the latter to take votes on the general subject of new or old government. On June 18th there was a conference at Carpenters' Hall of the Committees of Safety. The delegates to this conference were

elected by the Committees of Inspection and Observation in each county. For the city and liberties of Philadelphia they were, Benjamin Franklin, Thomas McKean, Sharpe Dulany, John Cox, John Bayard, George Schlosser, Christopher Ludwick, Jonathan B. Smith, James Milligan, Benjamin Loxley, Timothy Matlack, Jacob Schreiner, Joseph Deane, Jacob Barge, Dr. Benjamin Rush, Christopher Marshall, Sr., Joseph Moulder, Francis Gurney, Samuel Cadwalader Morris, William Coats, Samuel Brewster, Joseph Blewer, William Robinson, George Goodwin, and William Louman. For the county of Philadelphia, William Hamilton, Henry Hill, Robert Lewis, Jr., Enoch Edwards, Joseph Mather, James Potts, Matthew Brooks, Robert Loller, Edward Bartholomew, Frederick Antis, and John Bull. Col. Thomas McKean was elected president of the conference, Joseph Hart, vice-president, and Jonathan B. Smith and Samuel Cadwalader Morris, secretaries. The Patriotic Society presented their impeachment of the conduct of the Committee of Safety, in the matter of the encounter of the galleys with the "Roebuck," and because the loyalty of many members of the committee to the cause of the people was questionable. The decision of the conference was, that it was necessary to call a provincial convention to form a new government, and that this convention should emanate from the people; that provision should be made, in accordance with the will of Congress, to raise four thousand five hundred militia for the flying camp, and that no person elected as delegate to the convention should take his seat or vote until he had professed his faith in the Christian religion, the Trinity, and the plenary inspiration of the Scriptures. This test caused much dissatisfaction.

After the adjournment of the conference, on June 25th, a dinner was given to the members at the Indian Queen Tavern, on Fourth Street. Gen. Wooster was among the guests. The toasts drunk were to "The Congress," "The free and independent States of America," "Washington," "The Army and Navy," "A wise and patriotic convention to Pennsylvania on the 15th of July," "Lasting dependence to the enemies of independence," etc. It is obvious that the adoption of the Declaration of Independence was assumed for a fixed fact, and much greater anxiety was felt in regard to the complexion of the Constitutional Convention of Pennsylvania, which was to meet on the 15th proximo. The committees next day issued particular instructions to associators to exercise great care in the election of delegates, selecting good men, and eschewing all such as were in the proprietary interest.

While Pennsylvania was on the brink of this crisis, Congress had gradually brought itself face to face with the question of independence and the expediency of an immediate declaration of it, and the instant severing of all ties and ligaments binding the united colonies to the mother-country. It is not necessary

in these volumes to recite over again that thrilling and brilliant page of American history. There are, however, ambiguities in the connection of Pennsylvania and Philadelphia with the events of that momentous period which ought to be cleared up, if it can be done.

When Congress met on May 10, 1775, eleven colonies were represented (there were no delegates from Georgia and Rhode Island) by delegates having diverse and uncertain powers. All had been chosen before the clash of arms occurred at Lexington. They were compelled to meet all the time new and unexpected contingencies, and these were often not covered at all by their credentials. As the year wore on the members consulted with people at their homes, and in many cases obtained new instructions, or had new instructions forced upon them by the colonial Assemblies or Conventions. Rhode Island sent its first delegates to Congress on May 15th; Georgia's delegates came in in September. In the first instance, in every case, the credentials gave power to seek redress of grievances and reconciliation on the basis of English liberty. It was not until January, 1776, that the Council and Representatives of Massachusetts, in electing and instructing new delegates, suggested vaguely an idea of government independent and secure against the powers and acts of the British administration. The instructions of November 9th to the Pennsylvania delegates explicitly commanded them to "dissent from and utterly reject" any proposition leading to or likely to end in separation. John Morton was Speaker of the Assembly at this time; he signed these instructions and forwarded them to the delegates.

But with the beginning of 1776 a great change had begun to work. It was with great difficulty, after Lexington and Bunker Hill, that John Dickinson and John Jay had procured the consent of Congress to the second petition to the king. That paper, written by Dickinson, had been forwarded to England by Richard Penn, one of the proprietaries. He delivered it to Lord Dartmouth on August 21st, and asked for an audience on the subject on August 23d. On that day the king issued a proclamation declaring the colonies in rebellion, and invoking all the forces of the empire to suppress the rebellion. The petition was flung aside without notice. Howe was sent to supersede Gage in Boston; Dartmouth himself was supplanted by Lord George Germaine, and the bargain was consummated for sending the soldiers of Hanover, Darmstadt, and Hesse across the ocean to help conquer the Americans. The news of these things began to be received in Philadelphia about November 1st. At the same time Washington forwarded news of the burning of Falmouth. The king's arms seemed to be checked in their progress everywhere; the colonies were a unit; their levies and musters prospered, and Congress assumed a bolder tone, while the Moderates became propor-

tionately discouraged. The press and the people simultaneously took up the cry of independence; the only question was as to the expediency of particular times and methods. The correspondence of the day between the patriots teems with the one idea of permanent separation and independent government. As George Mason said, speaking the sentiment of Virginia, "When the last dutiful and humble petition from Congress received no other answer than declaring us rebels and out of the king's protection, I from that moment looked forward to a revolution and independence as the only means of salvation." From "that moment" the revolution went forward with irresistible impulse, and the spirit of union dominated more and more over the spirit of disaffection, doubt, and hesitancy.

In December armed Virginia resisted and broke Dunmore's power. Then came Paine's pamphlet crystallizing the thought of independence and shaping it into a visible, tangible object. In April, 1776, Chief Justice Drayton, of South Carolina, charged the Court of General Sessions to the effect that "The Almighty created America to be independent of Great Britain: to refuse our labors in this divine work is to refuse to be a great, a free, a pious, and a happy people." This idea of a special Providence making use of British tyranny to cement together a free people got abroad and obtained general currency. Samuel Adams urged independence and a confederation from day to day, with the persistency of Cato demanding the destruction of Carthage. The camps around Boston took up the idea so absolutely that prayers for the king became distasteful. Adams was opposed by Dickinson, Jay, Morris, and the Assemblies and conservative influences of all the middle colonies, but he had the earnest support of the best and ablest leaders everywhere,—John Adams, Hawley, Gerry, Sullivan, Warren, Thornton, Greene, Ward, of New England; Franklin, Rush, McKean, Reed, of Pennsylvania; Chase, Johnson, Carroll, Tilghman, of Maryland; Lee, Wythe, Henry, Jefferson, Mason, Washington, of Virginia; Harnett, of North Carolina; and Gadsden, of South Carolina. These all agree with Paine that "the period of debate is closed; arms, as the last resource, decide the contest. The appeal was the choice of the king, and the Continent has accepted the challenge. . . . Everything that is right or reasonable pleads for separation . . . our strength and happiness is Continental, not provincial. . . . The time hath found us. The general concurrence, the glorious union of all things, prove the fact."

The feeling spread rapidly, in Congress and out of it. The refusal of Congress to print Dr. Smith's eulogy of Montgomery was in consequence of his representing that body to be in favor of continuing in a state of dependence on Great Britain. Massachusetts sent Gerry to supplant Cushing. The commission sent by Congress to Canada was on the basis of separation and independence. Congress next ad-

vised the local authorities to disarm the Tories, and authorized the equipment of privateers, and Franklin wanted a declaration of war to accompany the resolutions in favor of letters of marque. Congress next threw open the ports of the country to all nations, and opened correspondence with foreign powers. Silas Deane was sent out in March, and in his instructions the probability of independence making a French alliance desirable was freely stated. The proclamation for the general fast (March 16th) is couched in the language of an independent power; in April, Franklin was able to say that nothing was lacking but general consent to form Congress into a supreme legislature. "The novelty of the thing," he said, "deters some; the doubt of success, others; the vain hope of reconciliation, many. Every day furnishes us with new causes of unceasing enmity and new reasons for wishing an eternal separation; so that there is a rapid increase of the formerly small party who were for an independent government."

Massachusetts had set up an independent constitution by the people in July, 1775, and it was perfected in January, 1776. In the same month New Hampshire adopted a republican constitution and did away with the forms of royal authority. South Carolina, in spite of the large loyalist population, adopted a republican constitution in March upon the memorable basis that "the consent of the people is the origin, and their happiness is the end of government." On May 15th Congress recommended that all the colonies should follow the example of these three. This was succeeded by members of Congress asking instructions on the subject of independence. North Carolina's Provincial Congress, pressed as it was by Clinton on one side and Tories on the other, on April 13th instructed its delegates in Congress to concur with delegates from the other colonies in declaring independence and forming foreign alliances. Next Rhode Island acted, instructing Stephen Hopkins and William Ellery to promote the strictest union and confederation between the united colonies. Massachusetts followed May 1st, and May 10th putting the question of independence to a vote of the people. The Virginia convention met at Williamsburg on May 6th, a body of illustrious men, "rich in revolutionary fame." The resolutions in favor of independence, drawn by Edmund Pendleton, advocated by Patrick Henry, were unanimously adopted May 14th, and the declaration of rights was agreed to June 12th. The resolutions, published in the *Pennsylvania Evening Post* of May 28th, declared "that the delegates appointed to represent the colony in the General Congress be instructed to propose to that respectable body to declare the united colonies free and independent States, absolved from all allegiance to, or dependence upon, the crown or parliament of Great Britain." These resolutions were carried to Congress by their mover in the convention, and formed the basis of the final action of that body.

On Friday, 7th of June, Richard Henry Lee, of the Virginia delegation, offered the following resolution:

"Resolved, That these united colonies are, and of right ought to be, free and independent States; that they are absolved from all allegiance to the British Crown, and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved."

The resolution was seconded by John Adams, of Massachusetts.

Tradition relates, says Lee's biographer, that he prefaced his motion with a speech, setting forth the resources of the colonies and their capacity for defense. He dwelt on the advantage to be derived from an independent position in dealing with foreign powers, and "urged the members so to act that the day might give birth to an American Republic." The motion, offered in the train of the resolution, included the force of that, a proposition that it was expedient forthwith to take effectual steps for forming foreign alliances, and that a plan of confederation should be prepared and submitted to the respective colonies for their consideration and approbation. The consideration of the motion and resolutions (described in the journal as "certain resolutions respecting independence") was postponed to the next day, June 8th (Saturday). Members were "enjoined to attend punctually at ten o'clock, in order to take the same into their consideration." On that day John Hancock presided. The resolves were at once referred to the committee of the whole, Benjamin Harrison, chairman. They were debated with animation until seven o'clock in the evening, when the committee rose, reported progress, and asked leave to sit again on Monday. At that day's session Edward Rutledge moved to postpone the question for three weeks, and the debate was again sustained until evening. James Wilson, Robert R. Livingston, Rutledge, John Dickinson, and others, while they admitted the impossibility of the colonies being ever again united with Great Britain, were opposed to adopting Lee's motion at that time. They were fearful of the consequences of the lack of unanimity in the colonies. John Adams, Lee, Wythe, and R. H. Lee ably combated this position. But, as Jefferson said, "It appearing in the course of these debates that the colonies of New York, New Jersey, Pennsylvania, Delaware, Maryland, and South Carolina were not yet matured for falling from the parent stem, but that they were fast advancing to that state, it was thought most prudent to wait awhile for them." It was agreed in committee of the whole to report to Congress a resolution, which was adopted by a vote of seven colonies to five. This postponed the vote on the resolution for independence to Monday, July 1st, "and in the meanwhile, that no time be lost in case the Congress agree thereto, that a committee be appointed to prepare a declaration to the effect of the first said resolution." This committee, chosen the next day by ballot, consisted of Thomas Jefferson, of Virginia; John Adams, of Massachusetts; Benjamin Franklin, of Pennsylvania; Roger Sherman, of

Connecticut; and Robert R. Livingston, of New York. At the same time it was resolved that a committee be appointed "to prepare and digest the form of a confederation to be entered into between these colonies." This committee, appointed June 12th, consisted of Josiah Bartlett, of New Hampshire; Samuel Adams, of Massachusetts; Stephen Hopkins, of Rhode Island; Roger Sherman, of Connecticut; Robert R. Livingston, of New York; John Dickinson, of Pennsylvania; Thomas McKean, of Delaware; Thomas Stone, of Maryland; Thomas Nelson, of Virginia; Joseph Hewes, of North Carolina; Edward Rutledge, of South Carolina; and Button Gwinnet, of Georgia. A committee to prepare a plan of treaties to be proposed to foreign powers was composed of John Dickinson, Benjamin Franklin, Benjamin Harrison, and Robert Morris.

The Virginia resolutions had a strong influence on the action of other colonies. The Assembly of Connecticut, on June 14th, instructed its delegates in favor of independence, confederation, and foreign alliances; New Hampshire, June 15th, voted in favor of declaring the thirteen colonies free and independent States, and pledged lives and fortunes to the support of the measure. June 21st the Provincial Congress of New Jersey superseded the Provincial Convention, and directed the delegates in Congress to join with the other delegates in the most vigorous measures for supporting the just rights and liberties of America, and, if necessary or expedient, "we empower you to join with them in declaring the United Colonies independent of Great Britain," confederating and making foreign alliances. On the other hand, Delaware and Pennsylvania hesitated. Maryland, influenced by Eden's popularity, the proprietary control of affairs, and the large sway of a wealthy land-holding interest, renewed in May (21st) its previous instructions against independency, and nullified the resolutions of Congress of May 15th. The popular leaders determined not to abide by this decision, but to take the sense of the people. County meetings were held, resolutions passed in favor of independence, and condemning the convention. Another convention met at Annapolis, and on June 28th it recalled the instructions against independence, and authorized the delegates to concur with the delegates of the other colonies in declaring the united colonies free and independent States, and in forming a confederation. In Georgia the instructions were ambiguous; they did not direct delegates to support a policy of separation, but neither did they forbid it. In New York action was delayed, uncertain, and balked by imminent external danger and bitter internal strife. The Provincial Congress, after repeated solicitation, finally notified the delegates in Congress that they were not authorized to vote for independence, that Congress declined to instruct them on that point, and that "it would be imprudent to require the sentiments of the people relative to the question of inde-

pendence, lest it should create division and have an unhappy influence."

Pennsylvania was the battle-ground of the conflicting opinions. The discussions of the question of independence had nowhere been so actively carried on. The press of Philadelphia reproduced everything on both sides; here were Franklin, Paine, Congress, Dickinson; here were the proprietary government and the Quakers. The independence cohorts were active, well armed and equipped, and they had the preponderance in numbers, at least in Philadelphia; but the opposition had many veterans in its ranks, and it was strongly intrenched. There were the Moderates, besides,—Morris and Dickinson, who were in favor of independence, but not now; Charles Thomson, in favor of the Declaration, but wishing to retain the old charter, the charter government, and the Assembly. Here were the Germans, seeking political privileges denied them on account of their birth, but opposed to independence. It needed a revolution to get order out of this chaos. The Assembly, after much goading and urging, adopted, on June 14th, a series of instructions rescinding those of November, and authorizing the delegates, in consequence of enumerated recent acts of king, ministry, and Parliament, "to concur with the other delegates in Congress in forming such further compacts between the united colonies, concluding such treaties with foreign kingdoms and States, and in adopting such other measures as, upon a view of all the circumstances, shall be judged necessary for promoting the liberty, safety, and interests of America." This, too, was signed by John Morton. The word "independence" does not occur in the paper of instruction; the word "reconciliation" occupies a prominent place. On June 24th the Conference of Pennsylvania, after a strong preamble, declared that "we, the deputies of the people, assembled in full Provincial Conference, do, in this public manner, in behalf of ourselves, and with the approbation, authority, and consent of our constituents, unanimously declare our willingness to concur in a vote of the Congress declaring the United Colonies free and independent States."

Counsels so divided in a crisis so sharp could have but one sequel. One party or the other must rule Pennsylvania, and the patriot party determined to rule. A revolution was necessary, but it was effected without bloodshed, and we may give the results here in advance of the regular chronicle. The Assembly had been in a state of confusion and uncertainty ever since it rejected the 15th of May resolves of Congress. Half the time the Whigs prevented a quorum by absenting themselves. There were but thirty-five members present when Speaker Morton signed the instructions of June 14th. Joseph Reed attended no more sessions after June 8th. He had sought to save the charter, but he now saw that all efforts to that end were useless. The people would

never forgive the charter on account of the Assemblies acting under it and the ambiguous position in which the province was placed in regard to independence. As William B. Reed said, the effect of such instructions "might have been anticipated. Of the seven Pennsylvania delegates in Congress on the vote of the 1st of July in committee of the whole, three voted for independence, and four against it, and on the 4th two of those who voted adversely to independence being absent, the vote of Pennsylvania was accidentally, and by a majority of one, given in its favor." This was the doom of the charter and the proprietary government. On the day of election of members of the Provincial Conference, out of which the new government was to spring, the Assembly adjourned till the 26th of August. Then the Speaker and seventeen members were present. The Conference had long since developed into the Convention. The Convention had matured, but had not yet published the new Constitution, and it had quietly, and as a matter of course, assumed all the power of government. The rump Assembly adjourned from August 28th to September 23d. On the 26th, twenty-three members being present, a member whose name is not given in the journal, moved a series of resolutions denouncing the proceedings of the Convention. They were carried under the previous question. "The House then rose" and passed out of existence. The charter government of Pennsylvania was no more.

But this is anticipating. The people had decided in favor of a declaration of independence, and that it should be made promptly. The form and language of the declaration had yet to be determined. The committee appointed to prepare the declaration brought in a draft of a form on June 28th. It was read and laid upon the table. The committee had requested Jefferson to prepare the form, and he did so. His manuscript was submitted separately to Franklin and to Adams, and each made a few verbal alterations. Then the paper was read in a meeting of the committee and accepted without further alterations. This is the whole history of the production of the Declaration of Independence, unless we choose to lose ourselves in the quicksands of legend and tradition, where malignity and ignorance are the only guides and equally untrustworthy.¹

¹ The day has gone by when the question of the authorship of the Declaration of Independence can be raised as a question in which the historical critic has any interest. The similarities and identities so laboriously traced are all capable of rational explanation without making it at the expense of Jefferson's character. That character is so much better understood now than of old that there is no need to call up George Mason's ghost to prove that Jefferson did not rob him. The ingenuity is as impotent and futile as it is base and mean which will persist in claiming for Hamilton the authorship of Washington's Farewell Address, for Edward Everett the composition of Daniel Webster's letter to the Chevalier Hulsemann, and in distributing to the Mecklenburg Declaration, to George Mason, to the Virginia's Bill of Rights and Constitution, to Jay's Address to the English People, to Drayton's Charge, and to the Virginia Instructions the most material parts and most pregnant phrases and sentences of Jefferson's Declaration of Independence.

On the same day that Jefferson reported to Congress the committee's draft of the Declaration, Francis Hopkinson, one of the five new members from New Jersey, presented the instructions he and his fellow-delegates had received to support independence. The Congress, when it met in Independence Hall on the 1st of July, consisted probably, according to Bancroft, of fifty-one members. Some of them met for the first time. Some were just entering public life, while others were gray and bent under the cares of protracted service to the State. It was a body full of individuality and contrasting character. It is but seldom we will find in a body of fifty members three such merchants as John Hancock, Robert Morris, and Thomas Willing, such divines as Witherspoon, such a genius as Franklin, such masters of political science as Jefferson and John Adams, such orators as Rutledge, Pendleton, Lee, such lawyers as Dickinson, McKean, Paca, Adams, Chase, Stone, Wythe, Nelson.

In accordance with the resolution of postponement Congress went into committee of the whole House to consider the resolution of independence offered by R. H. Lee. After due deliberation the chairman of the committee (Harrison) reported Lee's resolution, which, at the request of South Carolina, was not acted upon until the next day. July 2d the resolution was adopted, and the Declaration was taken up in Committee of the Whole. It was again discussed on July 3d. On Thursday, July 4th, Mr. Harrison, from the committee, reported the Declaration of Independence. It was adopted, and copies were ordered to be sent out to the several Assemblies, Conventions, Committees or Councils of Safety, etc., throughout the country, and to the commanders of the Continental troops, so as to have it everywhere proclaimed. As soon as the Declaration was adopted Franklin, Jefferson, and John Adams were appointed a committee to prepare a device for a seal for the United States. In the words of Judge Drayton at the time,— "A decree is now gone forth not to be recalled, and thus has suddenly risen in the world a new empire, styled the United States of America."

The traditions concerning the debate on Lee's resolution and on the Declaration of Independence are not many nor startling. The proceedings were with closed doors. The secretary's record is but a meagre memorandum of business, dry as a docket-entry in the court's minutes. Few speeches were made, and none have been reported. Only John Dickinson wrote down in outline a sketch of his own remarks upon the first day. When the resolution came up Lee himself was absent at Williamsburg. There was silence for many minutes when the question was called and until the new members from New Jersey, Richard Stockton in particular, showed themselves importunate for a discussion. Then all eyes were turned upon John Adams, and, at the suggestion of Rutledge and other members, he recapitulated the

arguments. He spoke, as he said, like one feeling himself oppressed with the weight of the subject and the momentousness of the occasion, and John Dickinson replied, with all the force, earnestness, and grace in which he was so rich. He desired the Assembly to witness the integrity, if not the policy, of his conduct, he said. The issue would be settled by arms, not votes, and he did not believe the Declaration would add a single soldier to the armies. Dickinson, in fact, believed that defeat was certain, and that the country ought not to commit itself to a position where defeat would be ruin also. The difference between him and Adams was one of temperament chiefly. Adams had hope and faith; it was natural and inevitable for Dickinson to look upon the dark side. Adams rejoined to Dickinson, and now James Wilson, Dickinson's own colleague, and who had been co-operating with him throughout, rose and said that he meant to obey the instructions of the conference of committees and would vote for independence. Paca, McKean, Rutledge, perhaps others, spoke, but the occasion was one for thought rather than utterance, and far too solemn and weighty for oratorical display, "a scene," said George Walter, one of the delegates from Georgia, "which has been ever present to my mind."

The trial vote of July 1st was indecisive; the committee rose and reported to the House, and, by agreement, the final vote was postponed until next day, in the vain hope of securing unanimity. New York had been excused from voting; the votes of South Carolina and Pennsylvania were given in the negative, and the two delegates from Delaware tied. Nine colonies voted yea. During the night McKean sent express for Cæsar Rodney, of Delaware, to help him outvote Read, and the next day Rutledge brought the South Carolina delegates to vote yea, while Pennsylvania's *pro forma* affirmative was secured by the absence of two members.

The fact of the adoption of the Declaration was ordered to be published on July 5th. Next day it was printed on broadsides, and sent to the Assemblies. It was printed with great accuracy in the *Pennsylvania Evening Post*, Saturday, June 6th, signed by order of Congress, John Hancock, president, and Charles Thomson, secretary. It appeared in the *Maryland Gazette*, July 11th; *Continental Journal* (Boston), July 18th; and *New Hampshire Gazette*, July 20th.

July 2d, the day of the adoption of Richard Henry Lee's resolution, is the real independence day. John Adams wrote to his wife next day: "The 2d of July, 1776, will be the most memorable epoch in the history of America." But the 4th was the day of the formal adoption of the formal public declaration of reason for the act, and Congress resolved to celebrate that day as the official birthday of American independence. This was secured by a resolution adopted July 19th, to the effect that "the Declaration passed on the 4th be fairly engrossed on parchment, with the

title and style of 'The unanimous Declaration of the thirteen United States of America,' and that the same, when engrossed, be signed by every member of Congress." The journal further says, August 2d, that "the Declaration being engrossed and compared at the table, was signed by the members."

PRESIDENT'S CHAIR, AND THE DESK UPON WHICH THE DECLARATION WAS SIGNED.

The signers, however, are not identical with the members who voted on July 2d and 4th. The act of Congress was the substantial matter, not the official assignment of reasons for it, prompted by (in Jefferson's words) "a decent respect for the opinions of mankind." The members of Congress on July 4, 1776, were as follows, the date given being that of their last certificate:

NEW HAMPSHIRE. Feb. 29, 1776.—William H. Whipple, John Langdon, Josiah Bartlett.

MASSACHUSETTS. Feb. 9, 1776.—John Hancock, Samuel Adams, John Adams, Robert Treat Paine, Elbridge Gerry.

CONNECTICUT. Jan. 16, 1776.—Roger Sherman, Oliver Wolcott, Samuel Huntington, Titus Hosmer, William Williams.

NEW YORK. May 11, 1776.—Philip Livingston, James Duane, John Alsop, William Floyd, Lewis Morris, John Jay (who, with those whose names follow, attended May 15th), Henry Wisner, Philip Schuyler, George Clinton, Francis Lewis, Robert R. Livingston, Jr.

NEW JERSEY. June 28, 1776.—Richard Stockton, Abraham Clark, John Hart, Francis Hopkinson, John Witherspoon.

PENNSYLVANIA. Nov. 3, 1776.—John Morton, John Dickinson, Robert Morris, Benjamin Franklin, Charles Humphreys, Edward Biddle, Thomas Willing, Andrew Allen, James Wilson.

Lower Counties on the DELAWARE. May 11, 1775.—Cæsar Rodney, Thomas McKean, George Read.

MARYLAND. Sept. 13, 1775.—Matthew Tilghman, Thomas Johnson, Jr., Robert Goldsborough, William Paca, Thomas Stone, John Hall.

VIRGINIA. Sept. 13, 1775.—Richard Henry Lee, Thomas Jefferson, Benjamin Harrison, Thomas Nelson, George Wythe, Francis Lightfoot Lee. Feb. 23, 1776.—Carter Braxton. (The Legislature had elected

new delegates on June 30th, but the certificates were not presented until the 28th of August.)

NORTH CAROLINA. *May 11, 1775.*—William Hooper, Joseph Hewes. *October 13.*—John Penn.

SOUTH CAROLINA. *April 24, 1776.*—Thomas Lynch, John Rutledge, Edward Rutledge, Arthur Middleton, Thomas Heyward, Jr., Thomas Lynch, Jr.

GEORGIA. *May 20, 1776.*—Lyman Hall, Button Gwinnett, Archibald Bullock, John Houston, George Walton.

RHODE ISLAND. *May 14, 1776.*—Stephen Hopkins, William Ellery.

Of the above-named members the following did not sign the Declaration: John Langdon, Titus Hosmer, James Duane, John Alsop, John Jay, Henry Wisner, George Clinton, Robert R. Livingston, Jr., Philip Schuyler, John Dickinson, Charles Humphreys, Edward Biddle, Thomas Willing, Andrew Allen, Matthew Tilghman, Thomas Johnson, Jr., Robert Goldsborough, John Hall, John Rutledge, Thomas Lynch, Sr., Archibald Bullock, John Houston.

John Langdon, appointed agent of prizes for his State, June 25th, was probably not present on July 4th; Titus Hosmer and William Williams were alternates for Sherman, Wolcott, and Huntingdon, in case of their failure by sickness or other cause. Williams signed on August 2d, nevertheless, though Connecticut was only entitled to three delegates. Alsop was probably not present; he was an opponent of independence, declaring, in a letter of July 16th, that the instructions of the New York Provincial Congress were against his judgment and inclination. He was willing to serve the cause, but resigned his seat when the door was closed to reconciliation. John Jay was in the Provincial Legislature of New York on July 4th, and had no opportunity to sign. It is not certain that he would have voted for the resolution of July 2d. James Duane was also in the Provincial Congress, and Gen. Schuyler was absent in the field. Robert R. Livingston was on the committee to draw up the Declaration; his presence, however, is not ascertained, he also being a member of the Provincial Congress. Henry Wisner was in Congress on July 4th, but appears to have been in New York on August 2d. Edward Biddle, of Philadelphia, died during the session of a lingering disease, which probably disabled him at the time of the Declaration. John Dickinson was the victim of his own timidity and hair-splitting irresolution. Charles Humphreys was, like Dickinson, opposed to the Declaration, and so was Thomas Willing. Robert Morris was equally opposed, and resolute and outspoken in his judgment of the inexpediency of the measure at that time, as his letters witness; but he signed, nevertheless, in a hand bold and characteristic as Hancock's. He was the sort of a man to bend to accomplished facts, and not, like Dickinson, let opportunity vanish in the fog of dubitation. Andrew Allen, who had been a prominent Whig, a member of the Committee of Safety, became fright-

ened and hung back. When he lost his re-election to Congress in consequence, he deserted the American cause, went off to Trenton to put himself under the protection of Gen. Howe, and withdrew to England, dying there. His property was confiscated and sold. Robert Goldsborough and John Hall, of Maryland, were both superseded in the new appointment of delegates from that colony made on July 4th. These delegates took their seats July 18th; hence neither Hall nor Goldsborough signed on August 2d. Tilghman and Johnson were members of the new delegation; it is not known whether they were present or absent. The elder Lynch, of South Carolina, was in bad health, and his son acted in part as his alternate. John Rutledge was doing both civil and military duty in his own State,—member of the Constitutional Convention and commander-in-chief of the State militia. Archibald Bullock was attending to his official duties as president of the Council of Georgia. He convened that body upon receipt of news of the Declaration, and read the instrument before them.

Something further needs to be said about the vote of Pennsylvania. That was carried for independence on July 2d by a majority, not of the delegation, but of members in their seats. According to a letter of Thomas McKean's, in the *Freeman's Journal* of June 16, 1817, Dickinson and Morris were present, but did not take their seats on that day. That left only five members in their seats; Franklin, Morton, and Wilson voted for Lee's resolution; Humphreys and Willing voted against it. The tombstone of John Morton, in the graveyard of the Episcopal Church at Chester, erected to him in 1845 by some of his relatives, has an inscription to the effect that, "In voting by States upon the question of the independence of the American Colonies, there was a tie until the vote of Pennsylvania was given, two members from which voted in the affirmative and two in the negative. The tie continued until the vote of the last member, John Morton, decided the promulgation of the glorious diploma of American freedom." This claim is not well founded. There is no contemporary evidence for it. There was no tie of States for the vote of Pennsylvania to loose, the vote of the colonies being nine to four. In the Pennsylvania delegation Morton's vote did no more than Franklin's or Wilson's to give the majority to independence. The opportunity for Mr. Morton's vote to be of value and critical consequence on July 4th grew out of the withdrawal of John Dickinson and Robert Morris. They were opposed to the Declaration. They were present, but did not take their seats, because they were willing to sacrifice their convictions to the appearance of unanimity. If Charles Thomson judged Dickinson aright, in his letter to William Henry Drayton, this sort of self-abstention and of securing the accomplishment of an end while ostensibly opposing it, was characteristic of him. When Pennsylvania and South Carolina had been secured, the con-

INTERIOR VIEW OF INDEPENDENCE HALL, 1876.

currence of New York was still wanting before the Declaration could be described as the unanimous measure of the thirteen colonies. The convention of New York at White Plains furnished the needed and convenient instructions to the New York delegates, but, as we have seen, John Alsop resigned rather than submit to that sort of dictation.

There are conflicting accounts of the signing of the Declaration. Jefferson, in his memoirs, and in other of his writings, declares that the instrument was signed generally on the 4th, and again on August 2d. If so, the manuscript must have been lost. John Adams wrote, on July 9th, that, "As soon as an American seal is prepared, I conjecture the Declaration will be superscribed by all the members." Thomas McKean says that "probably copies with the names then signed to it were printed in August, 1776." "One of the signers," says Frothingham, "Thornton, was not a member until November 4th. But the list is otherwise incorrect. The early lists, in law-books and other works, omitted the name of McKean, which is not in the list printed by Ramsay in 1789, nor in the journals of Congress, published by authority, by Folwell, in 1800."

McKean, in his letter to Dallas (1796), says no one signed on the 4th of July. By the secret journals of Congress it appears, he says, that Congress, on July 18th, directed the instrument to be engrossed on parchment and signed by every member. This was done on August 2d. McKean's name was left out of the printed journals by accident, and he had trouble to get it restored.

The names of signers and persons mentioned as signers, who were not members of Congress on July 4, 1776, are Matthew Thornton, of New Hampshire, admitted Nov. 4, 1776; Dr. Benjamin Rush, Col. George Ross, George Clymer, Col. James Smith, and George Taylor, all of Pennsylvania, and all admitted July 20, 1776; Charles Carroll of Carrollton, and Samuel Chase, both of Maryland, admitted July 18, 1776. Neither Robert Morris nor George Read, of Delaware, voted for independence on the 1st, 2d, or 4th of July, yet they both appear as signers. Morris, in his well-known, manly letter to Joseph Reed, of July 20th, after giving the reasons for his votes, says,—

"I did expect my conduct on this great question would have procured my dismission from the great council; but I find myself disappointed, for the convention has thought fit to return me in the new delegation, and although my interests and inclination prompt me to decline the service, yet I cannot depart from one point which first induced me to enter the public line. I mean an opinion that it is the duty of every individual to take his part in whatever station his country may call him to in times of difficulty, danger, and distress. While I think this a duty, I must submit, although the Councils of America have taken a different course from my judgment and wishes. I think that the individual who declines the service of his country because its counsels are not conformable to his ideas makes a bad subject. A good one will follow if he cannot lead."

Mr. Read's objection to the Declaration was that it was premature. His opposition to independence did not cost him the confidence of his constituents, who

re-elected him to Congress and honored him with many high appointments.

Jefferson himself explained many of the circumstances given above in connection with the signing of the Declaration of Independence. It was his work; the original report submitted was in his handwriting, with no material alterations. He was chairman of the committee to prepare it; young as he was, his admitted mastery with the pen had secured to him the largest number of ballots. An able State paper was demanded, and Jefferson was the fittest person for the task, particularly so, as Bancroft has aptly said, "from the sympathetic character of his nature, by which he was able with instinctive perception to read the soul of the nation, and having collected in himself its best thoughts and noblest feelings, to give them out in clear and bold words, mixed with so little of himself, that his country, as it went along with him, found nothing but what it recognized as its own." He wrote "from the fulness of his mind, without consulting one book." "His genius for political science," says Frothingham, "and his talent of compressing sentiment into maxims, enabled him to embody so faithfully the current thought of his countrymen as to mirror the soul of the nation. This, and not originality, is the crowning merit of this immortal paper." "To say that he performed his great work well," is Daniel Webster's weighty judgment, "would be doing him injustice; to say that he did it excellently well, admirably well, would be inadequate and halting praise. Let us rather say, that he so discharged the duty assigned him, that all Americans may well rejoice that the work of drawing the title-deed of their liberties devolved upon him."

The house in Philadelphia where the Declaration was written has been the subject of inquiry; its site is part of the local history of these great events. Nicholas Biddle, in his eulogy of Jefferson, delivered before the American Philosophical Society, April 11, 1827, was the first person to make an investigation of the subject. Jefferson, he said, when charged with the task by Adams, repaired to his lodgings and set to work. These lodgings he had selected, with his characteristic love of retirement, "in a house recently built on the outskirts of the city, and almost the last dwelling-house to the westward, where, in a small family, he was the sole boarder." That house, enlarged by the addition of a fourth story, and changed for business purposes, was until early in 1883 a warehouse standing at the southwest corner of Market and Seventh Streets, and on the second story were the rooms of Jefferson, where the Declaration of Independence was written. Dr. James Mease had written to Jefferson on the subject, and the latter answered, Sept. 16, 1825, that he "lodged in the house of a Mr. Graaf, a new brick house, three stories high, of which I rented the second floor, consisting of a parlor and bedroom ready furnished. In that parlor I wrote habitually, and in it wrote this paper particularly.

The proprietor (Graaf) was a young man, son of a German, and then newly married. I think he was a bricklayer, and that his house was on the south side of Market Street, probably between Seventh and Eighth Streets, and, if not the only house on that

HOUSE WHERE JEFFERSON WROTE THE DECLARATION OF INDEPENDENCE.

part of the street, I am sure there were few others near it."

Graaf, as Jefferson spells it, was Jacob Graff, Jr., bricklayer, son of Jacob Graff, Sr., brickmaker. June 1, 1775, he bought of Edward Physick and wife a lot south side of High Street, west side of Seventh Street, fronting thirty-two feet on High Street, and running back on Seventh Street one hundred and twenty-four feet to a ten-feet alley. Here he built¹ a three-story brick house, the door of which was in the middle of the building, on Seventh Street, the entry and stairs dividing the building in the centre, and the stairs going directly up opposite the door on Seventh Street

¹ On the corner. A writer in *Potter's American Monthly* (May, 1876) contends that the house was on the western half of the lot and next door to the corner. But Mr. Westcott, in his "Historic Mansions of Philadelphia," shows conclusively that Graff's house was the corner one, and that the one next the corner was not built until twenty years after the writing of the Declaration.

The fact is settled beyond dispute by the following entries in the private diary (manuscript) of Jacob Obillzheimer, who bought the house at the southwest corner of Seventh and Market Streets in 1777:

"1796, January 10. Cloudy forenoon. Edward Wells came to see me; conversed with each other concerning the house he is to build for me next spring, in Market Street, adjoining the southwest corner of Seventh and Market.

"1796, April 11. Thursday. . . . Mr. Barge laid the foundation-stone at the house I am going to build adjoining the southwest corner of Seventh and Market Streets.

"1796, April 28. Mr. Lybrand, the carpenter, put the first floor of joist, next to my house at Market Street.

"1796, July 9. Saturday. . . . Had the raising supper on the second floor of the house adjoining the house at the southwest corner of Market and Seventh Streets, which was begun in April last, intended for a store."

to the second floor. It was a retired situation, but still near the State-House. When Jefferson came to Philadelphia he lodged first with Benjamin Randolph, on Chestnut Street. On May 23d he took the rooms at Graff's, paying thirty-five shillings sterling per week. He had the whole second floor for his use, the front room, facing on Market Street, for his parlor, and the back one his bedroom. His meals he took chiefly at Smith's City Tavern on Second Street. While in the city Randolph, the joiner, made him a writing-desk from Jefferson's own design. It was fourteen inches long by ten inches broad, and three inches deep. This desk, on which the Declaration was written, Jefferson presented, in 1825, to Joseph Coolidge, Jr., husband of his granddaughter, and it is now in Boston.

Christopher Marshall, in his diary, under date of July 2d, has this line,—

"This day the Continental Congress declared the United States Free and Independent States."

On the 6th he writes of attending a committee meeting in Philosophical Hall:

"Agreed that the Declaration of Independence be declared at the State-House next Second Day. At the same time the King's Arms there are to be taken down by nine Associates, here appointed, who are to convey it to a pile of casks erected upon the commons, for the purpose of a bonfire, and the arms placed on the top. This being Election Day, I offered the motion. . . . July 8.—At eleven went and met Committee of Inspection at Philosophical Hall; went from there in a body to the lodge; joined the Committee of Safety (as called); went in a body to State-House yard, where, in the presence of a great concourse of people, the Declaration of Independence was read by John Nixon. The company declared their approbation by three repeated huzzas. The King's Arms were taken down in the Court-Room, State-House, same time. . . . I went and dined at Paul Fook's. . . . Then he and the French Engineer went with me on the commons, where the same was proclaimed at each of the five Battalions. . . . There were bonfires, ringing bells, with other great demonstrations of joy upon the unanimity and agreement of the declaration."

Such appears to have been all the celebration which took place at the time in Philadelphia. Fable has supplied much else, but it is no more than fable. In Council of Safety, in the minutes for July 6th, we find,—

"The President of the Congress this day sent the following Resolve of Congress, which is directed to be entered on the Minutes of this Board:

"In Congress, 5th July, 1776.

"Resolved, That Copies of the Declaration be sent to the several Assemblies, Conventions, and Councils of Safety, and to the Several Commanding officers of the Continental Troops, that it be proclaimed in each of the United States, and at the Head of the Army.

"By order of Congress. (Signed) JOHN HANCOCK, Presid't."

"In Consequence of the above Resolve, Letters were wrote to the Counties of Bucks, Chester, Northampton, Lancaster, and Berks, Inclosing Copy of the said Declaration, requesting the same to be publish'd on Monday next, at the places where the Election of Delegates are to be held.

"Ordered, That the Sheriff of Philad'a read or Cause to be read and proclaimed at the State-House, in the City of Philadelphia, on Monday, the Eighth day of July, instant, at 12 o'clock at noon of the same day, the Declaration of the Representatives of the United Colonies of America, and that he cause all his officers, and the Constables of the said city, to attend the reading thereof.

"Resolved, That every Member of this Committee in or near the City be ordered to meet at the Committee Chamber before 12 o'clock on Mon-

day, to proceed to the State-House, where the Declaration of Independence is to be proclaimed.

"The Committee of Inspection of the City and Liberties were requested to attend the Proclamation of Independence, at the State-House, on Monday next, at 12 o'clock."

The sheriff of Philadelphia at this time was Thomas Dewees. The reader of the Declaration, as Marshall witnesses, was John Nixon (not Capt. John Hopkins, as Watson wrongly supposes), who was a member of the Committee of Safety. Col. John Nixon was born in West Chester, Pa., and was an ardent and most efficient friend of America in the revolutionary struggle. He was for some time an alderman of Philadelphia, and commanded a regiment on Long Island and at Valley Forge. He was a director of the Bank of Pennsylvania, and upon the establishment of the Bank of North America was its president, continuing in this office until his death about Jan. 1, 1809.

The place of reading the Declaration of Independence was the old "observatory," erected by the American Philosophical Society to observe the transit of Venus from in 1769. It was a rough frame scaffolding or stage, standing midway on the line of the eastern walk, between Fifth and Sixth Sts.,—"that awful stage in the State-House yard," as John Adams calls it. Mrs.

Deborah Logan, who lived in the Norris mansion at the time, says she distinctly heard the reading from the garden of that house. "The bells rang all day and almost all night," says John Adams, "and even the chimers chimed away,"—alluding to the chimes of Christ Church, the congregation of which were suspected of lukewarmness to the Revolutionary cause, even when they were not accused of open devotion to Toryism.¹

The welcome extended to the Declaration was en-

thusiastic in nearly every part of the country. The formal proclamation was made a holiday occasion at every point of public assemblage. The newspapers of the day teem with accounts of their celebrations, yet in all the chief features each one was like all the rest,—“the civil authorities were present. The military paraded, bearing the standard of the United States. The salutes were often by thirteen divisions. The population gathered as on gala-days. The Declaration was read amidst the acclamation of the people, mingled with the roll of drums and the roar of cannon. Then followed the feast and the toasts, and in the evening bonfires and illuminations, with

the removing or destruction of the emblems of royalty.”²

The Congress held its sessions, during all these memorable proceedings, in a room on the first floor of the eastern end of the central building of the State-House, thenceforth forever known as Independence Hall. The building and grounds were the property of the State until 1818, when they were sold to the city for \$70,000. About 1800, persons in authority in Philadelphia, the city commissioners it is supposed, actuated by the restless American spirit of innovation and blinded by bad taste and utter imperviousness to the force of venerable association, undertook to “modernize” and

remodel the interior of this sacred chamber. As Mr. Westcott says (“Historic Mansions”), “They tore out the ancient panelling, wainscotting, car-

citizens who were good Whigs were much opposed to it; however, they were soon reconciled to it.”

Mr. Biddle confounds July 4th, the day of the Declaration, with July 8th, the actual day of the reading. His statement that “very few respectable people” were present, is presumed to refer to people of wealth, family, and position. In this particular Mr. Biddle agrees with Mrs. Deborah Logan, who also heard the reading. “The first audience of the Declaration was neither very numerous or composed of the most respectable class of citizens.”

The name of “General ***,” who spoke against the Declaration, is stated to be “entirely obliterated and illegible in the manuscript.” In all probability Gen. John Dickinson was meant.

² Frothingham, p. 648.

¹ In the “Autobiography of Charles Biddle” he says, “On the memorable Fourth of July, 1776, I was in the old State-House yard when the Declaration of Independence was read. There were very few respectable people present. General *** spoke against it, and many of the

ried off the carvings and old furniture, and modernized the apartment so that it would be fit for use as a court-room. About the same time the plain front doorway in the centre of the building was torn out, and something 'prettier' substituted, with pillars, round arch, and mouldings. There was not even originality in this change, the substitution being merely a copy of the western doorway of St. James'

INDEPENDENCE HALL IN 1778.

Episcopal Church, Seventh Street, above Market Street."

The reception to Lafayette in this room in 1824 opened the eyes of the community to the sacrifices of association and propriety which had been made with these alterations. The Pennsylvania Historical Society began its work about this time, and Watson's *Annals* were published in 1830, all tending to promote the taste for local history and revive the sympathy for ancient associations. In the last-named year petitions were sent to the Common Council asking the restoration of Independence Hall to its original condition, and that the apartment, in the future, should be devoted to dignified purposes only. In 1833, twelve hundred dollars was appropriated to carry this out, and John Haviland, architect, was charged with the work. He used the old material as far as it would go, and restored the original appearance of the room with some few exceptions, portraits and relics of the Revolutionary period being added, the old Liberty bell among other things, and since then Independence Hall has been a Mecca for the sons of American liberty. As Edward Everett said in his Fourth of July oration of 1858, "That old hall should forever be kept sacred as the scene of such a deed. Let the rains of heaven distill gently on its roof and the storms of winter beat softly on its door. As each successive generation of those who have been benefited by the great Declaration made within it shall make their pilgrimage to that shrine, may they not think it unseemly to call its walls Salvation and its gates Praise."

CHAPTER XVII.

PHILADELPHIA DURING THE REVOLUTION.

PART II.—FROM JULY 4, 1776, TO THE END OF THE BRITISH OCCUPATION.

ON the 8th of July, 1776, the day of reading the Declaration of Independence, an election was held at the State-House for members of the Convention to form a Constitution for the State. The delegates elected to this Convention were,—from Philadelphia City, Benjamin Franklin, Frederick Kuhl, Owen Biddle, George Clymer, Timothy Matlack, James Cannon, George Schlosser, and David Rittenhouse. From Philadelphia County there were Frederick Antis, Henry Hill, Robert Loller, Joseph Blewer, John Bull, Thomas Potts, Edward Bartholomew, and William Coats.¹ Benjamin Franklin was elected president of this Convention; George Ross, vice-president; John Morris, secretary; Jacob Garrigues, assistant secretary. As soon as it was organized, the Convention assumed a degree of executive and legislative power not contemplated in the call for the election, and which practically superseded the Assembly, deposed the Governor, and ignored the existence of the propri-

¹ Owen Biddle was a descendant of William Biddle, one of the proprietors of West Jersey, and long time member of Council for that colony. Owen was born in Philadelphia in 1737. He was brother to Clement Biddle, and with him signed the non-importation agreement of 1765. He was member of Committee and Council of Safety, and delegate to Provincial Conference in 1775; member of the board of war in 1777; of the Convention of 1776; and in 1777 deputy commissary of forage. The enemy burnt his residence during their occupation of Philadelphia. It was where Girard College grounds now are. Owen Biddle was a member of the American Philosophical Society, and took a deep interest in scientific subjects. He died 10th March, 1799. Joseph Blewer was born in Pennsylvania, his parents English. At the outbreak of the war he was a captain in the merchant service, and was appointed on the navy board, besides holding many other responsible posts in those critical times, among them a place on the committee to arrest the Quakers and Tories suspected of disaffection, and membership of Assembly in 1779-80. He became port-warden of Philadelphia, and died Aug. 7, 1789. John Bull was born in Providence township, Philadelphia Co., 1730, and joined the provincial service as captain in 1758. He had command at Fort Allen, was with Forbes at the capture of Du Quesne, and did important service in negotiating with the Indians. After the French war he owned the Morris plantation and mill. He was delegate to the Provincial Conferences of January and June, 1775; member of Convention July, 1776, and Pennsylvania board of war, 1777. In 1775 he was appointed colonel of the First Pennsylvania Battalion, but resigned; was commissioner to treat with Indians at Easton in 1777; had command of the Billingsport fortifications, and became adjutant-general of the State. His barns were burnt and stock carried off by the British, and he succeeded to the command of the Second Brigade of Pennsylvania militia when Gen. Irvine was captured, afterwards being engaged in erecting the defenses of Philadelphia, acting as commissary of purchases; after the war served in the Assembly, and ran for Congress. Col. Bull lived to be ninety-four years old. James Cannon was a native of Edinburgh, Scotland, born 1740, educated at the High School, immigrated to Philadelphia, 1765; became tutor in the college. He was a leader of Whigs and associators, secretary of the Manufacturing Society, etc., wrote the "Cassandra" letters, and had great influence. He had

etary government. The suggestion of Congress to organize a new government had been complied with fully; it was a time of revolution, and the Convention revolutionized the provincial government by

much to do with the text of the State Constitution of 1776; was justice of the peace, member of Council of Safety, and became Professor of Mathematics in the University, dying in 1782. George Clymer was born in Philadelphia, of English parents, March 16, 1739, was brought up by William Coleman, his uncle; in 1767 was member of Common Council; active in the tea-meeting; chairman of committee; alderman in 1774; delegate to Provincial Conference in 1775; member of Committee of Safety, of Convention of 1776, and of Continental Congress in July that year, thus signing the Declaration. He was member of Congress also in 1777; commissioner to treat with Indians in 1778; in 1780 again member of Congress, and one of the founders of the Bank of North America; served in Assembly 1785-88; member of Convention to frame Federal Constitution, and in 1788 elected to First Congress of United States. In 1791, Washington made him collector of excise for Philadelphia; in 1796 commissioner to treat with Cherokee and Creek Indians; retired from public life; was president of Pennsylvania Bank and Academy of Fine Arts; died Jan. 23, 1813. William Coats, born in Philadelphia County in 1721; educated at Friends' school; served in provincial militia; member of Provincial Conference of 1775 and Carpenters' Hall Conference; of Committee of Inspection for Northern Liberties; and Convention of July, 1776. He was major in First Battalion of Philadelphia associators, and saw much active service; was in battle of Princeton; member of Assembly in 1777; made prisoner by British in 1778, and confined in Philadelphia jail; exchanged in 1779; justice of the peace in 1778; member of Assembly in 1779, and died Jan. 24, 1780, a gallant and tireless soldier. Henry Hill, son of Richard Hill, born in 1732 on his father's Maryland plantation; bred a merchant, and settled in Philadelphia, engaging extensively in the Madeira wine trade, his father, a wealthy Quaker, having removed to the island in 1750. "Hill's Madeira" was one of the choicest brands in the Philadelphia market. He was justice of the peace for Philadelphia in 1772; member of the Carpenters' Hall Conference of 1775 and of the Convention of 1776; commanded a battalion of associators during the Jersey campaign of 1776; in 1780 subscribed five thousand pounds for relief of the Continental army; member of Assembly, 1780-84, and of Executive Council, 1785-88; died, September, 1798, of yellow fever. Frederick Kuhl, native of Philadelphia; member of Committee of Inspections in 1775; manager of the American Manufactory; member of Constitutional Convention and Justice of the peace; in 1784 member of Assembly; in 1791 trustee of the University. Robert Loller, born in Philadelphia (now Montgomery) County, 1740; farmer, but had classical education; taught school at Chestnut Hill in 1772; member of Carpenters' Hall Conference and the July Convention; major in battalion of associators; fought at Trenton, Princeton, and Germantown, hurt in latter battle; military surveyor and commissioner to arrest Tories in Delaware in 1777; member of Assembly, 1777 to 1789; register of wills, 1789; associate judge, 1791; died October, 1808, and buried in Abington Presbyterian churchyard; surveyor and conveyancer by occupation; endowed Hatboro' Literary Institute with eleven thousand dollars. Timothy Matlack, Quaker parents, born in Hadfield, N. J., 1730; Free Quaker; member of Carpenters' Hall Conference and of July Convention; appointed Secretary of State from 1776 to 1783; active associator; member and secretary of Council of Safety; after the war the committee presented him with a silver urn for his patriotic services; member of Continental Congress, 1780-81; commissioner of flying camp; in 1800 made master of the rolls till 1809; then prothonotary in Philadelphia; died at Holmesburg, 1829, aged ninety-nine years. Thomas Potts, born at Colebrookdale, Philadelphia Co., May 29, 1715; engaged in iron business in Philadelphia with his uncle, Thomas Yorke; member of Assembly, 1775; captain of Continental riflemen 1776; colonel of battalion of associators; member of Convention of 1776; active in Jersey and Pennsylvania campaigns; member of Assembly, 1776-77; after war, pioneer in Pennsylvania iron mining, giving his name to Pottsville; died March 22, 1785. George Ross, vice-president of the Convention, son of Rev. George Ross, minister of the Established Church, born in New Castle, Del., May 10, 1730; classically educated, studied law, began practice in Lancaster; 1768-75, member of Assembly; active Whig and leader; member of Provincial Conference, 1774; member of First Continental Congress; raised company of associators in 1775; president of Lancaster Military Convention, July 4, 1776; member of Provincial Convention, July 15, 1776, chosen vice-president;

assuming that it derived all necessary powers from the people to reconstruct the institutions of Pennsylvania from the foundation. New delegates to Congress were elected. Upon application from Congress the common prison was removed to its former quarters in the old building corner of Third and Market Streets, and the use of the new one at Sixth and Walnut Streets given to Congress for the custody of State prisoners and prisoners of war. Thomas Dewees, the sheriff, doubting the authority of the Convention to make such changes, applied for an indemnity to protect him from the consequences of such act. He was directed to comply and to apply to the commanding officer of the City Guard for a guard for the old jail. This patrol and guard had been instituted early in July at the request of the officers of the associators. There were three patrols, each having a separate district assigned to it, each composed of a commissioned officer and four privates, who traversed the streets from eleven o'clock at night until daybreak, not superseding, but assisting and supplementing, the city watch. The chief guard-house was adjoining the prison, Market Street above Third. A guard was stationed at the State-House, and the patrol service was apportioned among the associator companies then in the city.

On July 23d the Convention elected a Council of Safety to discharge the executive duties of the State government, thus dissolving the Committee of Safety. The new Council was composed of David Rittenhouse, Samuel Mifflin, Jonathan B. Smith, Timothy Matlack, Samuel Morris, Jr., Owen Biddle, James Cannon, Samuel Howell, Nathaniel Falconer, Frederick Kuhl, Thomas Wharton, Jr., Henry Keppele, Jr., Joseph Blewer, George Gray, John Bull, Henry Wynkoop, Benjamin Bartholomew, John Hubley, Michael Swope, Daniel Hunter, William Lyon, Peter Rhoads, David Epsey, Joseph Witzell, and Samuel Moore. David Rittenhouse was appointed chairman, and Jacob S. Howell secretary.

On the 25th the Convention adopted a resolution approving of the Declaration of Independence. It prohibited tavern-keepers from taking out licenses from officers of the old government, continued the Committees of Inspection, offered bounties for volunteers for the "flying camp," and ordered four new

sent to Congress; signed Declaration; Indian commissioner at Pittsburgh in 1776; judge of Admiralty Court, 1779, and died July that year. George Schlosser, son of Rev. George and Sophia Jonnetta (Ellwesten) Schlosser, born at St. Arnhal, Saarbruck, Nassau, Germany, 1714; came to Philadelphia in 1751; became successful merchant; deputy to Provincial Convention of 1774; January, 1775; Carpenters' Hall Conference, 1775, and Provincial Convention of July, 1776. Schlosser was one of the Philadelphia Committee of Observation in 1775; lent the State two thousand dollars in 1778; worked with Stephen Girard and Peter Helm against the yellow fever of 1793, and died in 1802, aged eighty-eight years. Col. Frederick Antis (or Antes), of Philadelphia County; commanded one of the associators' battalions, in active service; was member of the Provincial Convention of 1776, of the Council of Safety, etc.; justice of the peace, judge of Common Pleas and Orphans' Court; commissioner to survey the Upper Delaware, etc.]

battalions to be raised, Philadelphia's quota to be six hundred and twenty-eight men. Provision was made for returning deserters to their ranks and for disarming non-associators. As there were no courts in existence, an order was passed discharging debtors from confinement on the surrender of their property for the benefit of their creditors, those in confinement on *mesne process* upon giving proper security. All criminals were discharged also, except those guilty of capital offenses and "practices against the present virtuous measures of the American States." Commissioners were appointed for the several counties, those for Philadelphia being George Bryan, James Young, Jacob Schreiner, John Bull, Henry Hill, and Peter Knight, who had power to hear and determine the cases of all persons in prison. An ordinance was passed decreeing the penalty of death for counterfeiting Continental money. Justices of the peace were appointed by the Convention, and the members of the Council of Safety were declared to be vested *ex officio* with the authority of magistrates. For the city and county of Philadelphia the following justices were commissioned: Benjamin Franklin, John Dickinson, George Bryan, James Young, James Biddle, John Morris, Jr., Joseph Parker, John Bayard, Sharpe Delaney, John Cadwalader, Joseph Cowperthwaite, Christopher Marshall the elder, Francis Gurney, Robert Knox, Matthew Clarkson, William Coats, William Ball, Philip Boehm, Francis Caspar Hasenclever, Thomas Cuthbert the elder, Moses Bartram, Jacob Schreiner, Joseph Moulder, Jonathan Paschal, Benjamin Paschal, Benjamin Harbeson, Jacob Bright, Henry Hill, Samuel Ashmead, Frederick Antis, Samuel Erwin, Alexander Edwards, Seth Quee, Samuel Potts, Rowland Evans, Charles Bensel, and Peter Evans. Before assuming the functions of their office, these justices were required to take an oath of allegiance to the State of Pennsylvania and renouncing the authority of George III.

An ordinance was passed against speaking, writing, obstructing, or opposing "the measures of the United States for the defense of the freedom thereof," any one magistrate having power to hold to surety for good behavior upon this charge, and two or more to commit, without bail, for such time as they might determine, or during the war. Another ordinance condemned non-associators to pay a personal fine of twenty shillings per month per capita, and a tax of four shillings per pound on the annual value of their estates. The Convention appointed under this law to carry it into effect for Philadelphia City and County the following officers: *Commissioners for city*, Jacob Morgan, Joseph Moulder, and Jacob Bright; *for county*, Thomas Potts, Samuel Erwin, and John Williams; *assessors for city*, Michael Shubert, Benjamin Harbeson, William Will, and William Hollingshead; *for county*, John Brown, William Robinson, Samuel Ingle, Andrew Knox, Henry Derringer, and Isaac Hughes.

The last act of the old Provincial Assembly, besides a protest against the usurpation of the Convention, was to vote one thousand pounds to Governor Penn and eleven thousand pounds in salaries to other of the old provincial officers. The Convention took no notice of the expiring Assembly, but adopted the new Constitution and adjourned, having completed its labors, on September 28th.

The new Constitution provided for an Assembly, to be elected annually, and a supreme executive council, composed of twelve members, chosen by districts, to hold their offices for three years. The Assembly was to appoint the delegates to Congress, the supreme executive council exercising all the powers needed for the public safety and the proper execution of the laws. Members of the Assembly could not be re-elected more than four times in seven years. The official oath was to support the Constitution, to act faithfully, to subscribe to a belief in one God, Creator, Governor, rewarder of the good and punisher of the wicked, and in the divine inspiration of Scripture. The Constitution could not be altered for seven years, but at the expiration of that time a council of censors was to be elected, who were to consider and balance all the benefits and defects of the system. If they thought amendments were needed, they had power, with the consent of two-thirds the voters, to call a Convention to meet two years afterwards.

The new Constitution encountered opposition as soon as published. Franklin's plan (for it was his) of a single legislative body was denounced, and so also was the requirement of a profession of religious belief. It was too explicit, and at the same time too loose, as it would admit deists, Jews, Mohammedans, and other enemies of Christianity. There were other objections, and the newspapers teemed with communications for and against the instrument from the pens of "A Friend of Christ," "Orator Puff and Mr. Easy," "Casea," "Scipio," "Lucius," "A Real Friend of Christ," "Cassius," "Andrew and Benjamin," "Montesquieu," etc. A town-meeting was even held at the State-House on October 21st, Col. John Bayard presiding. A series of resolutions analyzing and criticising the Constitution, which had been agreed upon previously at Philosophical Hall, were submitted, and debated by Thomas McKean, John Dickinson, and others, in opposition to the Constitution, and James Cannon, Timothy Matlack, Dr. Young, and Col. Smith, of York County, in favor of it. The resolutions were adopted at an adjourned meeting, but they accomplished nothing. The elections were duly held under the Constitution at the time specified. The anti-constitutional ticket prevailed in both city and county by a majority more than double. The delegates elected to the Assembly on November 5th were Joseph Parker, Robert Morris, George Clymer, Michael Shubert, John Bayard, and Samuel Morris, Jr.; and at a meeting of the voters

electing them, and who were opposed to the Constitution, a series of "instructions" was adopted, commanding them, in effect, to make radical changes in the Constitution, or make what was really a new and entirely different instrument. This violent action was not approved, however. Other meetings were called, and meantime public attention was directed to the critical military situation. The members of the Assembly organized under the new Constitution, without heeding the instructions, and the Constitution continued to be the supreme law.

In the mean time, independent of military crises and political excitements, there were many other things to disturb the equanimity of Philadelphians. There was scarcity or an uncertain and fortuitous supply only of many articles of necessity. Salt, in particular, was very scarce, and yet must be had at any price. It had become the most precious of commodities, more inquired for than either gunpowder or saltpetre, and the government sought to remedy a difficulty in regard to the supply, which was aggravated by the efforts of the forestallers and engrossers. The capitalists and leading business men were Quakers. They were not well affected towards the patriot cause; they preferred hard money or goods to Continental and Pennsylvania currency, and they bought and stored away salt in utter disregard of the needs of the community. It would be premature here to discuss the distresses growing out of a degraded and depraved currency, since the crisis had not yet come; but it is evident that depreciation had already set in with sufficient force to affect the prices of all articles in daily use. We may judge from Christopher Marshall's diary and other contemporary records that the stringency in price and scarcity of some classes of articles began about the time of the Declaration, and that from that date onward it was impossible for the committees to regulate prices by any fixed or arbitrary scale.

We find Marshall speaking of the committee's having settled the prices of salt and tea "for the present" on June 1st at a meeting at Philosophical Hall. Marshall had the granting of permits to buy such articles of prime necessity. His diary speaks of his wife's anxious quest along the wharves for the winter's supply of firewood—twenty-nine shillings for hickory, twenty shillings for oak, etc. "August 31, paid ten pounds for eleven and a half cords of oak firewood. Paid for hauling, carrying, and piling, forty-two shillings ten and a half pence. September 2d, Been fixing the quantity of salt to be sold to each county, being what was Messrs. Shewell and Joshua Fisher and Sons'. 7th, Yesterday arrived a Bermudian vessel with two thousand five hundred bushels of salt. 8th, it is said that two more vessels are just come in with salt; quantity, it's said, two thousand bushels. . . . October 7th, a vessel from Bermudas with salt. . . . 12th, two vessels arrived with salt within these two days past, and yet it's said some

are selling it at three dollars per bushel (so inhuman are some of our citizens to poor people). . . . a wonderful Ordinance published in *Evening Post*, No. 270, inviting all masters of vessels coming with salt to sell it to them for fifteen shillings per bushel. O rare Council of Safety! . . . 14th, two more vessels, it's said, with salt. . . . 17th, another vessel, it's said, arrived yesterday with twenty-five bushels of salt from Bermudas. . . . On the twenty-first, arrived a schooner with twelve hundred bushels of salt, it's said," etc. etc. Rev. Henry M. Muhlenberg's diary, under date of Friday, November 8th (written in Reading), says,—“Bought a quarter of pork for the family, cost thirteen shillings sixpence. There is complaint upon complaint heard among the inhabitants in town and country. The finest salt, which before the war could be got for two shillings per bushel, has risen already to twenty-five shillings, and not easily gotten. A pair of shoes, which cost seven shillings sixpence, now costs fifteen shillings. A pound of butter, which at its highest prices was one shilling, now costs two shillings and two shillings sixpence. Wool three times as dear as before the war. Linen, which could be purchased for three shillings per yard, now costs nine shillings to twelve shillings. A pound of meat, which cost fourpence to fivepence, now costs eightpence to tenpence. A cord of wood, which used to cost previously one pound, now costs two pounds; and flour is beginning to rise in price, because the last crop did not turn out well, and the rich Quakers are purchasing large quantities, as they would rather store up wheat than Continental paper. So the Lord by degrees allows our bread to become dear that we may not become independent.” Sunday, December 1st, Muhlenberg wrote that F. M. had been to the city, and reported a frightful state of things there. “There is a great scarcity of salt. The people push and jostle one another wherever there is the smallest quantity to be found about town. The country people complain and threaten because they suppose there are hidden stores of salt in Philadelphia. Next to bread salt is the greatest necessary of life, and it seems as if the government had more care for the articles of death than of life. There is great pains taken to provide saltpetre and powder, but a magazine of salt is forgotten.”

It is apparent from these figures that the enhancement in the price of salt was many times greater than that of other articles of consumption. The Committees of Safety and Inspection took such measures as occurred to them for preventing the storing away of salt for higher prices. Stephen and Joseph Shewell had hoarded four thousand and fifty-nine bushels, in defiance of regulations, selling only at twelve shillings per bushel for coarse salt instead of 7s. 6d., and two shillings per half-peck for fine salt instead of twelve pence. They were brought before the committee, refused to apologize, were published as enemies of the country, and all their stock was seized. Three thou-

sand bushels, belonging to Joshua Fisher & Sons, had been seized under similar circumstances in 1775. The committee made a general distribution of these seizures at the June prices, the quantity reserved for Philadelphia being two hundred and seventy-nine bushels of fine and ninety-eight and one-half bushels of coarse salt, three thousand bushels of fine and one hundred and six of coarse salt being reserved for Philadelphia County. Congress also passed resolutions at this time intended to prevent the monopoly of salt. There had been salt-works set up at Tom's River, guarded by the military, but these yielded nothing so far, and in December the Council of Safety withdrew all restrictions on the price and traffic in this article of necessity.

The Tories and disaffected gave great trouble after the Declaration of Independence, and when the Howes had issued their proclamations of amnesty to individuals, upon beginning their march into the Jerseys. Congress was in part to blame for this, since they received Gen. Sullivan as a *quasi* ambassador from Lord Howe, and also sent John Adams, Benjamin Franklin, and Edward Rutledge as commissioners to ascertain his powers to treat. The weakness of Congress at this time, however, the broken and enfeebled condition of the army, the apparently irresistible advance of Sir William Howe's fierce forces, and above all, the example set by the Quakers and many of the leading families of the province and city, had a still greater effect. This was the period when the Allens, Galloway, patriots whose courage failed them, and many more of the most influential citizens went over to the enemy. It was not until 1778, however, that there was any general attempt to call these deserters from this cause to account, either in their persons or estates. In the meanwhile arrests were being made every day. Arthur Thomas and his son, Arthur Thomas, Jr., were imprisoned by order of Congress for assisting the Tory leader, Col. Kirkland, of South Carolina, to escape, and warrants were out for the elder and younger John Hatton for the same offense. Alexander Maurice, of New Castle, William Sutton, of New York, and James McConaughy, of Chester, were imprisoned in the new jail as suspects, and in October they were reinforced by thirty-three Tories, brought on from New York. John Biles, of Northern Liberties, was imprisoned for treason. James Thompson, of Oxford, made to apologize for imprudent language. John Baldwin, cordwainer, Joseph Fox, late barrack-master, and Jonathan Reynolds were published as enemies for refusing to take Continental money. Capt. Hare, of the Continental army, was brought before the United States treasury board for buying specie at a premium in Continental money. Twelve canisters of illicit tea, on the sloop "Sally," Capt. Ball, from St. Croix, were thrown into the Delaware by Capt. Heysham, Simpson, and John Leamington, under orders from the Committee of Inspection. These committees, however, were dissolved in September.

The Tories were encouraged by the withdrawal of the committees to new aggressions and insolence, until finally a public meeting was called to consider their conduct. Thomas McKean was chairman, and John Chaloner clerk of this meeting, held at the Indian Queen, November 25th. It appeared that Tory clubs were in the habit of meeting at taverns and singing "God Save the King." The result was a number of arrests and penalties, more or less severe. Among those committed were James Prescott, William Smith, Richard Footman, Joseph Stansbury, Samuel Jeffries, David Shoemaker, Joel Zane, Robert Burton, Leatherbury Barker, William Barker, William Bagwell, Littleton Townsend, William Redding, Daniel Bancroft (spy), and one Cunningham.

The Quakers, in the latter part of December, when all believed that Howe would be in Philadelphia in a very few days, issued their usual "testimony," urging upon the faithful a patient spirit in order to enable them with Christian firmness and fortitude "to withstand and refuse to submit to the arbitrary injunctions and ordinances of men who assume to themselves the power of compelling others, either in person or by assistance, to aid in carrying on war," etc.

The State navy built two new galleys, the "Delaware," built at Kensington, by William Williams, and commanded by Henry Dougherty, and the "Convention," captain, John Rice. Arthur Donaldson built the new floating battery, the "Putnam," the captain of which was William Brown. Twelve fire-raft boats were ordered; Thomas Seymour was commissioned as fleet commodore, Samuel Mifflin having declined to serve. The Continental frigate "Washington" was launched in August, and the fleet of privateers greatly increased. Among those newly commissioned were "General Mifflin," brigantine, John Cox, Chaloner, and others owners, 12 guns, 90 men, Capt. John Hamilton; "General Putnam," brigantine, Matthew Irwin and Benjamin Harbeson owners, 12 guns, 90⁴ men, Capt. Charles Ferguson; "Jupiter," sloop, N. Low & Co. owners, 14 guns, 95 men, Capt. Francis Illingsworth; "Congress," sloop, John Bayard and Joseph Déan & Co. owners, 6 guns, 40 men, Capt. William Greenway; "General Thompson," Edmund Beach & Co. owners, 6 guns, 12 men, Capt. Connell; "General Lee," brig, John Bayard, Henderson & Co. owners, 12 guns, 90 men, Capt. John Chatham; "Speedwell," ship, John Maxwell, Nesbitt & Co. owners, 10 guns, 25 men, Capt. Thomas Bell; "Friendship," sloop, John Wilcocks & Co. owners, 6 guns, 20 men, Capt. Robert Collings; "Industry," brig, Blair McClenachan owner, Capt. Michael Barstow; and "Rutledge," brig, Alexander Gilson owner, 12 guns, 60 men, Capt. James Smith.

These letters of marque and privateers and those at sea before them were very successful. The "Hancock" sent into Portsmouth, Va., a large ship that had once carried twenty guns, with a cargo of seven hundred hogsheads of sugar, two hundred hogsheads

of rum, and other valuables; a British transport with two hundred and fifty Hessian soldiers aboard; a Jamaica ship with five hundred hogsheads of sugar and five hundred dollars; another sugar-ship; another with logwood and mahogany; with three brigs sent into Philadelphia,—eleven prizes in all for one vessel. The "Congress" took the ship "Richmond," with a two thousand pounds cargo; the "Chance" brought in the ship "William," cargo of rum and sugar; the "General Montgomery" took the large ship "Thetis," which went ashore in Delaware Bay; another prize, a large ship also, reaching port safely. The Continental ships were successful also: the "Reprisal," Capt. Wickes, the vessel which took Franklin out to Nantes as minister to France, sent in a ship, a brig, and a schooner; the "Lexington," Capt. John Barry, captured an armed sloop; the "Providence" took the "Sea Nymph"; the "Sachem" took the brigantine "Three Friends"; the "Andrew Doria," Capt. Nicholas Biddle, took a ship and five brigs; the "Independence" took the sloop "Sam," with twenty thousand dollars and two and one-half tons of ivory; and the "Wasp" brought in a fine ship, which was burnt in port.

The blockaders made many prizes, but did not succeed in closing the port. The "Nancy," Capt. Montgomery, a ship of the province, with arms and ammunition, was closely chased at Cape May, showed fight, aided by Capts. Barry and Wickes, but finally was run ashore and blown up, saving part of her arms and gunpowder. The British sailors were boarding the vessel at the moment of the explosion, and many lives were lost. Other vessels were captured by the blockaders,—the "Roebuck," "Kingfisher," and "Orpheus," with six tenders,—but a good many vessels came through with arms and other military stores.

The campaign of 1776 in the field was not only extremely disastrous to the American arms, but it transferred the field of operations from Boston to the vicinity of Philadelphia. The necessity for the evacuation of Boston was no sooner perceived by the British government than they determined to seize upon New York. Their plan was, holding this city as a naval and military rendezvous, to connect it by a line of posts with Albany and Canada, from which New England could be harassed in the rear. The colonies severed at this point, New Jersey could be overrun and a new *cordon sanitaire* established by means of the Delaware and Chesapeake Bays, while independent expeditions might easily overrun the South. In advance of the evacuation of Boston Clinton had looked into New York, but found Charles Lee there to watch him, and Lee, with his flying corps, followed Clinton down the coast to Charleston, where Moultrie and Gadsden defeated him, and Sir Peter Parker.

Boston was evacuated March 17, 1776; Washington's army reached New York April 14th, and now

efforts were made to defend that city with new levies of troops drawn in part from the Middle States. Pennsylvania had already been called on to contribute her battalions to the expedition towards Canada under Sullivan. She was now called upon again to send troops to take part in the battle of Long Island and the defense of Fort Mifflin, to form a flying camp in New Jersey, and finally to muster all her levies of minute-men, militia, and associators to prevent the line of the Delaware from being broken.

The student of Washington's military operations will have noticed that the American general, in the course of this year (1776), established the "quadrilateral" upon which all his subsequent operations rested. The line, with respect to the Hudson, extended from Newburg to Morristown, with West Point for the final rally and last stand. For the Delaware and Schuylkill peninsula it extended from Trenton to the "safe place" or rendezvous at Germantown and Chestnut Hill round to the Perkiomen, with a final retreat, if necessary, to the Cumberland Valley and the valley of Virginia, where Washington said he could carry on the war for twenty years. The "safe place" above Germantown was really the central point, the pivot of the greatest military operations of the war. Here the campaign of Trenton and Princeton was planned; here the army was swung around to meet Howe at Brandywine; here again it waited to decide between New York and Yorktown for the closing campaign; here was the outpost of Valley Forge; and the key that held Howe prisoner in Philadelphia until the Monmouth retreat ended almost in a fox-chase. The manœuvres and military movements from the Perkiomen to the Brandywine, in the peninsula between the Delaware and the Schuylkill, are part of the proper history of Philadelphia. Of other movements we need particularize nothing, except so far as concerns soldiers who were themselves citizens of Philadelphia.

Henry P. Johnston's Centennial volume, describing "the campaign of 1776 around New York and Brooklyn," a work published by the Long Island Historical Society, gives an excellent summary of the part played in that struggle by the soldiers of Pennsylvania: "Her troops," he says, "participated in nearly every engagement, and had the opportunity in more than one instance of acquitting themselves with honor. Besides her large body of 'associators,' many of whom marched into New Jersey, the State sent four Continental regiments, under Cols. Wayne, St. Clair, Irvine, and De Haas, to Canada, and eight other battalions, three of them Continental, to the army at New York. Of these, the oldest was commanded by Col. Edward Hand, of Lancaster. It was the first of the Continental establishment, in which it was known as the rifle corps. Enlisting in 1775, under Col. Thompson, it joined the army at the siege of Boston, re-enlisted for the war under Col. Hand in 1776, and fought all along the continent from Massachusetts to South Carolina, not

disbanding until peace was signed in 1783. Hand, himself a native of Ireland, and like many others in the service, a physician by profession, had served in the British army, was recognized as a superior officer, and we find him closing his career as Washington's adjutant-general and personal friend. The two other regiments raised on the Continental basis were commanded by Col. Robert Magaw, formerly major of Thompson's regiment, and John Shee, of Philadelphia. The remaining battalions were distinctively State troops, and formed part of the State's quota for the flying camp. Col. Samuel Miles, subsequently mayor of Philadelphia, commanded what was known as the First Regiment of Riflemen. Unlike any other corps, it was divided into two battalions, which, under their enlistment, in March, aggregated five hundred men each. The lieutenant-colonel of the first was Piper, of the second, John Brodhead. The majors were Paten and Williams. Another corps was known as the First Regiment of Pennsylvania Musketry, under Col. Samuel John Atlee, of Lancaster County, originally five hundred strong, and recruited in Chester and the Pequea Valleys. Atlee had been a soldier in his youth in the frontier service, afterwards studied law, and in 1775 was active in drilling companies for the war. Mercer, who knew a good soldier when he met him, wrote to Washington that Atlee was worthy his regard as an officer of "experience and attention," and his fine conduct on Long Island proved his title to this word of commendation from his superior. How much of a man and a soldier he had in his lieutenant-colonel, Caleb Parry, the events of Aug. 27th will bear witness. The three other battalions were incomplete." In speaking of the death of Col. Parry in the description of the battle, Mr. Johnston says, "The men shrunk and fell back, but Atlee rallied them, and Parry cheered them on, and they gained the hill. It was here, while engaged in an officer's highest duty, turning men to the enemy by his own example, that the fatal bullet pierced his brow. When some future monument rises from Greenwood to commemorate the struggle of this day, it can bear no more fitting line among its inscriptions than this tribute of Brodhead's,—'Parry died like a hero.'"

Shee's, Magaw's, and Lambert Cadwalader's commands were the defenders of Fort Washington, and the survivors became prisoners of war when that untenable post surrendered. The story, as told by Alexander Graydon, may still be read with interest, though it is not told without prejudice. After this disaster, Washington had but the poorest third of his army left him, and that melting rapidly by desertions and the expiration of terms of enlistment. One-third had been lost on the field by disease, wounds, and capture; one-third was inert and idle under Lee on the east side of the Hudson, and Lee would not bring it up because he wanted a separate command to himself, and expected that Howe would secure it for him by speedily

dispersing Washington's feeble remnants. The latter was retreating towards the Delaware, with Howe pressing upon him. His rear left New Brunswick as the van of Cornwallis' entered the town. He made a night march to Princeton, then, leaving a rear guard there under Stirling, the general hurried to the Delaware, and prepared to defend that line, scarcely hoping to succeed. He sent Reed to the New Jersey authorities to hurry up the levies, and Mifflin to Philadelphia to rouse Congress and the provincial authorities to the critical character of the emergency. Reed met with but scant success. "The defenseless Legislature" of New Jersey, says Sedgwick, "with their Governor, William Livingston, at their head, wandered from Princeton to Burlington, from Burlington to Pittstown, from Pittstown to Haddonfield, and there, finally, at the utmost verge of the State, dissolved themselves, on the 2d of December, leaving each member to look to his own safety, at a moment when the efforts of legislators would be of no avail, and when there was no place where they could safely hold their sessions." The Jersey yeomanry were not fully roused to take the field until they had bitter experience of the impartial rapine of the Hessians visited upon all, Whig and Tory, male and female, alike. Mifflin prospered better. He was eloquent and could speak plainly, and tell the truth bluntly. "His countrymen," he wrote to Washington, "appeared to be slumbering under the shade of peace, and in the full enjoyment of the sweets of commerce." He gave them a talk, several of them, and, as he said, these talks were "well seasoned." Washington retreated across the Delaware at Trenton, secured all the boats for seventy miles up and down the river, and prevented Cornwallis and Grant from crossing immediately.

The delay thus gained undoubtedly gave a year's respite to Philadelphia and saved the cause from the peril of immediate total wreck. But the situation was still as desperate as it could well be. Apathy was seen on one side, disaffection and treason on the other. Men like Lee and Gates were selfishly conspiring; men like George Clinton were puzzled and complaining; almost every one looked upon the Revolution as "a ruined enterprise." The loyal Jerseymen were supine. "Sorry am I to observe," wrote Washington, "that the frequent calls upon the militia of this State, the want of exertion in the principal gentlemen of the country, and a fatal supineness and insensibility of danger, till it is too late to prevent an evil that was not only foreseen, but foretold, have been the causes of our late disgraces. If the militia of this State had stepped forth in season (and timely notice they had), we might have prevented the enemy's crossing the Hackensack. We might, with equal possibility of success, have made a stand at Brunswick, on the Raritan. But as both these rivers were fordable in a variety of places, it required many men to guard the passes, and these we had not." As for the disloyal Jerseymen, there were legions of them. Gov-

error Livingston characterized the population of his own village of Elizabethtown as being made up of "unknown, unrecommended strangers, guilty-looking Tories, and very knavish Whigs."

Howe's proclamation brought the people flocking in and determined hundreds in adjacent colonies to wait for the opportunity of submission. "On all sides," says Gen. W. W. H. Davis,¹ "this period was considered the most critical. In Europe the cause of the colonies was thought to be lost. In England Franklin was said to be a fugitive, or had come to offer terms. The English government believed that Cornwallis would sweep the American army from the field in the spring, and thus end the quarrel. At New York all was gayety, and wine and dance and song went round in exultant glory over the anticipated defeat of the patriots. The haughty Britons seemed to forget that there was a Providence on this side of the Atlantic, and that in a just cause He was not always on the side of the strongest battalions.

"Circumstances conspired to make this the most trying time of the Revolution. Several prominent men, among the most ardent patriots at the beginning of the struggle, were growing lukewarm, or had already made their peace with the king. Samuel Tucker, president of the Convention which framed the Constitution of New Jersey, had made his submission under Howe's proclamation. On this side the Delaware, Joseph Galloway, the three Allens, and others had followed his example. John Dickinson, so zealous and patriotic at the breaking out of the war, feeling that the Declaration of Independence was premature, refused a seat in Congress from Delaware. . . . But Washington and a compact body of patriots did not grow faint-hearted in the darkest hour."

Washington reached Trenton on Dec. 3, 1776, and on the 8th he was already across the river with his rear-guard. He had sent Col. Hampton in advance from New Brunswick to collect boats, and with the request to Putnam to collect lumber and build rafts, and to Congress to order all boats to be secured and brought over to the west side. Washington's headquarters were in George Clymer's house, afterwards Morrisville, a site in later years suggested for the capital of the United States. He had been on the west side of the river before, examining the topography of the country, the condition of the fords and ferries, and seeking the means to repel an enemy attempting to cross the river in force. Greene, Putnam, Maxwell, and Ewing were instructed to collect all boats and destroy such as could not be secured on the west side, from New Hope down to Philadelphia. The fords were all heavily guarded, a brigade at every one, and Washington had already selected that "strong ground

near Germantown" where he expected to make his final stand in case the enemy forced the passage of the river. This point, Trenton, Red Bank, Valley Forge, and the field of Brandywine, were all within a radius of forty miles from the steeple of the State-House in Philadelphia, where the Declaration of Independence had been proclaimed. Historic ground!

It is now proper to inquire, with more detail, what troops Philadelphia was contributing for her defense. Congress, on July 3d, by request of the Provincial Convention of New Jersey, addressed the Committee of Safety of Pennsylvania, asking for as many troops as could be spared, to be sent to Monmouth Court-House, to be placed under the commander-in-chief, to hold in check the troublesome Tories of Amboy and defend the approaches from Staten Island. One battalion of five hundred riflemen, under Lieut.-Col. Brodhead, was at once sent forward to Bordentown. The resolutions for the flying camp were passed July 2d; until it could be formed the Philadelphia associators were asked to come forward. A conference was held at the State-House of the officers of the five city battalions,² the members of Congress from New

² The regular battalions were State militia under pay, in contradistinction to Continental regiments, which were officered and paid by Congress, and the battalions and companies of associators, who were volunteers, not paid unless mustered into actual field service. To neglect these distinctions will cause confusion. The "Pennsylvania Archives" give two muster-rolls of "men in actual pay, officers included, in the service of the Province of Pennsylvania." These rolls are made up to July 1, 1776, and Aug. 1, 1776, respectively, from the muster-rolls as follows:

¹ "Washington on the West Bank of the Delaware, 1776:" read before the Historical Society of Pennsylvania Jan. 12, 1880.—*Pennsylvania Magazine*, vol. iv. No. 2.

York, New Jersey, and Pennsylvania, and the Committees of Safety and Inspection, Thomas McKean presiding. It was resolved to march by companies to Trenton, the three regular Pennsylvania battalions

Proctor's company was the first Pennsylvania artillery during the Revolution. Thomas Proctor was born in Ireland in 1739, came to Philadelphia with his father, Francis Proctor; married to Mary Fox, Dec. 31, 1760; was by trade a carpenter. Oct. 27, 1775, Proctor applied to the Committee of Safety to be commissioned captain of an artillery company to be raised for garrisoning Fort Island. He was commissioned that day and given authority to raise his company. In December he had ninety men at Fort Island. Aug. 14, 1776, Proctor's command was raised to a battalion of two hundred men, two companies, one commanded by John Martin Strobogh, the other by Thomas Forrest, Proctor commanding battalion as major. On July 31, 1776, Proctor's muster-roll showed one hundred and fourteen men and twelve musicians; three were sick in town, seven on furlough, three recently discharged as apprentices. The roll that day was,—Captain, Thomas Proctor; first lieutenant, Hercules Courtenay; captain-lieutenant, Jeremiah Simmons; second lieutenant, John Martin Strobogh; lieutenant fire worker, Francis Proctor; quartermaster-sergeant, John Webster; corporal and company clerk, Patrick Duffy; sergeants, Charles Turnbull, Jacob Parker, John Stephenson; corporals, William Ferguson, Thomas Healy, George May; bombardiers, David Shadaker, Nicholas Coleman, David Flisk, William Turner, Robert McConnell, John Holden, George Bourk, Nicholas Burr; gunners, Thomas Newbound, Jacob Climer, Isaac Bunting, John Reynolds, Thomas Kennedy, Francis Bell, Michael Amerlin, Henry Sulter, Jacob Harkishimer, Owen Williams, Daniel Forbes, William Fitch, Henry Love, George Jeffries, David Wilson, Thomas Wiggins, Samuel Newton, William Newbound, William Chynton, James Cookley, James Norris, Andrus Cressman, George Whiteside, Ephraim Reece; with sixty-nine matrosses, six musicians, one fifer, and five drummers. At this time Proctor was energetically sending out recruiting parties and increasing his force, with the view to detach one company to the relief of Washington. On December 1st the second company, under Capt. Forrest, with fifty privates and two brass six-pounder guns, marched to Trenton to join Washington, and by Christmas-day the entire brigade was ready to obey the general's command. Forrest and his section of guns took part in the battle of Trenton, and captured Rahl's Hessian band of music that he loved so well. Knox wanted to annex Proctor's command to the Continental artillery, but on Feb. 6, 1777, he was commissioned colonel, with instructions to recruit an entire regiment of artillery. Part of Proctor's command was captured at Bound Brook; the regiment was under Wayne at Brandywine, engaged in the artillery duel with Knypphausen at Chadd's Ford, and Proctor had his horse shot under him, and lost his guns and caissons when Sullivan was routed. It was one of Proctor's guns, under Lieut. Barker, that was brought up to batter Chew's house at Germantown during that battle, and the remnants of the regiment wintered at Valley Forge. On Sept. 3, 1778, Proctor's regiment was drafted into the Continental army as part of Pennsylvania's quota, and he received his commission as colonel of artillery, United States army, May 18, 1779, and marched to Wyoming, shattering the British and Indians with shell, round-shot, and grape at the battle of Newtown. Proctor was in Wayne's Bergen Neck expedition, satirized by André as the "Oow Chase."—

"And sons of distant Delaware,
And still remoter Shannon,
And Major Lee with horses rare,
And Proctor with his cannon."

Proctor and President Joseph Reed were always at dagger's point with one another, Proctor's Irish blood making him independent and obstinate, while Reed was querulous and irritable both from natural perversity and disease. In 1793, Proctor was commissioned, by Governor Mifflin, brigadier-general of Pennsylvania State troops, and marched against the whiskey insurgents at the head of the First Brigade, eighteen hundred and forty-nine men. After this war he became major-general of Philadelphia militia. He was sheriff of Philadelphia County in 1783-85, and city lieutenant of Philadelphia in 1790, commissioner to treat with the Miami in 1791, and died in 1806. A part of his regiment of artillery, the company under Capts. Douglas and Ferguson, has maintained its organization down to the present day as the Second United States Artillery. (See *Pennsylvania Magazine*, vol. iv. No. 4, p. 454, et seq., "A Sketch of General Thomas Proctor.")

forming part of the force, and all to remain in the field until the flying camp should be formed.

The associators were not well prepared for field service, only looking to be called on for operations near home. They responded promptly, however, and the Committee of Safety busied themselves to secure the needed supplies. The good women of the town looked after lint and bandages; awnings, sails, and canvas were sought for tents; clock and window weights were collected to be cast into bullets; six cannon were procured and brought on from New York, and one hundred thousand stand of arms ordered to be sent to New Jersey. Congress advanced one hundred thousand dollars to the committee to expedite the preparations, and persons competent to forge cannon, make guns and locks, or assist in building *chevaux-de-frise*, were restrained from going into the field. The arms of non-associators were seized for the public use, and public provision was made for the support of the families of associators who were poor. The committees for this service were, for the First Battalion, Isaac Coats, William Moulder, Jacob Schreiner; for the Second, Moses Bartram, Caspar Guyer, Ephraim Bonham; for the Third, George Meade, Richard Dumois, Robert Bailey; for the Fourth, George Green, Frederick Dushon, Peter Knight; for the Fifth, John Hart, John Titternary, William Drury. These committees received their funds from the Committee of Safety, and attended to their duties faithfully.

The associator battalions marched into New Jersey about the middle of July, and took the lines in and near Amboy, to watch the British on Staten Island. In this camp were the First Battalion, Col. John Dickinson; the Second, Col. John Bayard;¹ the Third, Col. John Cadwalader; the Fourth, Col. Thomas McKean; the Fifth, the rifle battalion, Col. Timothy Matlack. There was still another associators' battalion in Philadelphia, the Sixth, John Bull, colonel; Robert Corie, lieutenant-colonel; George Wright, Thomas Rees, Dr. Abel Morgan, majors; John Becker, standard-bearer. A county battalion had Jonathan Paschall for colonel.

¹ John Bayard was born on Bohemia Manor, Cecil Co., Md., Aug. 11, 1738, a descendant of Peter Bayard and Augustine Herman. He was an active merchant in Philadelphia at the outbreak of the Revolution, and took a prominent part on the side of the colonies. He was a member of the Provincial Congress of July, 1774, and of the Committee of Sixty of the associators, member of the Provincial Convention of January, 1775, and was elected major of the Second Battalion of City Associators; in 1776 his firm, Hodge & Bayard, was engaged in privateering, furnishing Congress with arms, etc., while he in person acted for the Committee of Safety in superintending the building of powder-mills. Mr. Bayard was member of the Carpenters' Hall Conference, and in September, 1776, of the Council of Safety; in October he presided over the meeting in opposition to the Constitution, and took his seat as member of Assembly. In the winter of 1776-77 he made the Trenton-Princeton campaign at the head of his battalion, and was very zealous and earnest in procuring reinforcements for Washington. In March, 1777, Bayard became a member of the State Board of War, and was one of the State Committee to visit the Valley Forge camp. He was Speaker of Assembly in 1778, official auctioneer and revenue commissioner in 1780, member of Supreme Executive Council in 1781, member of Congress in 1785. He removed to Brunswick, N. J., became mayor and judge of Common Pleas, and died in 1807.

Col. Dickinson's battalion was stationed at Elizabethtown, Bayard's at Amboy, with Samuel Mifflin's artillery park, comprising the First Philadelphia Artillery, Capt. Benjamin Loxley; Second, Capt. Joseph Moulder; Third, Capt. Joseph Stiles; and two New Jersey companies. The other battalions of associators were stationed at Woodbridge, Elizabethtown, and intervening points; the regiments of Cols. Miles and Atlee and the battalion of Lieut.-Col. Brodhead supporting them. Capt. Loxley's journal of the events of this campaign is still in existence; it gives little information, reciting simply the routine of ordinary camp-life, with the enemy's fleet and army in sight to compel discipline, vigilance, and sobriety.

The flying camp formed but slowly; only two hundred and seventy-four men had mustered by August, and the associators began to grow uneasy and impatient, while desertions became frequent. The Pennsylvania State Convention issued a proclamation against deserters, giving them eight days to return to camp, after which a reward of three pounds each was to be paid for their apprehension. At the same time a bounty of three pounds was offered for every volunteer to the flying camp. Gen. Washington, and Gen. Roberdeau, their more immediate commander, both issued addresses to the associators, to urge the need of their remaining in camp. Roberdeau's language was pointed and effective. The men who wanted to go, the men who had families, were the very men, he told them, who ought above all to stay. "Here is the spot to make your defense. If you have a mind to keep the enemy from ravaging your country, fight them on the seashore. . . . There is no difference in effect between retreating and being defeated. Consider it well, gentlemen. Think for your country's good; look but across the water; and for your honor's sake never let it be said that an army of sixpenny soldiers, picked up from prisons and dungeons, freed from transportation, the whipping-post, and the gallows, fighting in the worst of causes and for the worst of kings, bore the fatigues of war with stouter hearts than you."

The associators were sent home by Gen. Roberdeau about the end of August, the flying camp having been organized and other troops concentrated on the menaced lines.

The officers of the flying camp for Philadelphia were: Robert Lewis, colonel; Isaac Hughes, lieutenant-colonel; John Moore, major; Enoch Edwards, surgeon; Marshal Edwards, second major; Solomon Bush, adjutant; Archibald Thompson, George Smith, Henry Derringer, Jacob Laughlin, Rudolph Neff, Aaron Levering, Christian Snyder, Henry Pawling, Joseph Jones, captains; Marshal Edwards, Solomon Bush, Samuel Swift, William Wilson, Caspar Doll, Samuel Haines, Grandus Schlatter, Mordecai Morgan, David Schrack, Stephen Porter, Thomas Rossiter, first lieutenants; William Armstrong, Leonard

Doll, James Hazlet, George Bringham, Matthew Holgate, Jesse Roberts, Alexander Hall, Peacock Major, second lieutenants; Andrew Bard, William North, William Knox, Abraham Duffield, Nathaniel Childs, Alexander Wright, James Potts, Rees Manna, ensigns. In October the officers of the flying camp from Pennsylvania at Amboy, Woodbridge, and Elizabethtown were Moore, McAlister, Clotz, Read, Allison, Lavitz, Henderson, and Slough, colonels; and Tea, Laurence, Cunningham, Montgomery, Watt, and Swope, lieutenant-colonels.

The associators were required to furnish their quota of men towards the volunteers in this flying camp. The various military movements filled the city with stir and bustle at this time. Troops were daily marching in from the interior, from Maryland, Virginia, and other States, and most of these soldiers tarried a few days in the city to see the sights. They were quartered in the barracks, where Maj. Lewis Nicola was in charge as superintendent. Some soldiers were quartered in the college, and notice was given in August that the churches would be occupied if necessary.

The regulations for the barracks in the Northern Liberties called for reveille to be beaten at day-break, troop at 8 A.M., long roll at 9, retreat at 8 P.M., tattoo at 9 P.M. Each officer's room was furnished with a pine table having a drawer, two chairs, an iron pot, a bucket, pot-hooks and crane, andirons, shovel, tongs, ash-box, and bedding. Each room for non-commissioned officers and privates had a pine bedstead with wooden bottom for two men, canvas bed filled with straw, bolster-case, pine table, two benches, pots, etc., and a rack for firelocks.

The Committee of Safety placed the battalions of Cols. Miles and Atlee at the service of Congress; they were marched to Long Island and fought in the battle there with the Continental regiments of Shee, Magraw, and Lambert Cadwalader. The death of Lieut.-Col. Parry was the severest loss the Pennsylvania troops had yet sustained. Lieut. Charles Taylor, Second Rifles, and Lieut. Joseph Moore, of the Musketmen, also fell in this action. Cols. Atlee and Miles and Lieut.-Col. Piper were captured. The other casualties were as follows: First Battalion of Rifle Regiment, First Lieut. William Gray, prisoner; John Spear, John Davis, George West, Second Lieut. Joseph Freischbach, William Macpherson, Third Lieut. Luke Broadhead, Dr. John Davis, nine sergeants, four drummers and privates, all prisoners; Joseph Jacquet, missing. Second Battalion of Rifles, Third Lieut. Charles Taylor, killed; prisoners, Capt. Peebles, First Lieut. Matthew Scott, Daniel Topham, Joseph Brownlee, six sergeants, one drummer, forty privates; missing, Second Lieut. Charles Carneghan and David Sloan. Battalion of Musketmen, Michael App, missing; prisoners, Capt. Francis Murray, Thomas Herbert, John Nice, Joseph Howell, Lieut. Walter Finney, Ensign W. Henderson, Alexander

Huston, Septimus Davis, with one sergeant, one drummer, and seventy-five privates.
